As is known, a union of non-Russian peoples enslaved in the U.S.S.R. has been formed in exile. This is the Paris bloc. It was formed to carry out political activities more effectively. This bloc is making efforts to unite with the union of satellite peoples (the Assembly of Captive European Nations), which is sponsored by the Free Europe Committee.

A few words may be added about the so-called coexistence. First of all, the very idea of coexistence is, under the present circumstances, erroneous and misleading. There can be no coexistence of two systems which are based on fundamentally different principles. In this case, on one side there is a free society of men built on principles of democracy and freedom, and on the other, a society ruled by a dictatorial-totalitarian regime. Moreover, Communist totalitarianism shows a clear tendency to expand, having as its ultimate goal, world domination. To this end all possible means ranging from propaganda to direct subversive activities and violence are being used. In this respect, it should be also borne in mind that countries of the free world are easily accessible to all the means of Soviet "peaceful" aggression, while countries of the Soviet bloc are practically closed to any infiltration of the ideas of democratic countries. By this very nature, the Russian communism is bent on destruction of any rivaling political system. Thus, in any arrangement of coexistence, communism will tend to put its partner out of existence.

Racine (Wis.) Journal-Times Favor National Primary

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. PROXMIRE. Mr. President, the Racine Journal-Times has recently made one of the most eloquent and concise arguments I have read anywhere for a

national primary. In part, the Journal-Times argues:

But the best argument for a national presidential primary is the same on that old Bob La Follette used more than a half century ago: It would return to the people of the country not only their right to choose a President, but the right to choose the men who would be candidates for President. Today, the voters just do not have that right; it is usurped by the politicians, some of them responsible to no one but State political machines.

I ask unanimous consent that this thoughtful, full-of-commonsense editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Racine Journal-Times, Mar. 31, 1960]

A NATIONAL PRIMARY?

Senator WILLIAM PROXMIRE'S proposal that the United States hold a national presidential primary, simultaneously in all States, deserves more consideration than it will get. The major political leaders of the major political parties have shown little enthusiasm for the present, limited system of State presidential primaries, and they are not likely to look with favor on its nationalization.

In one respect, PROXMIRE is bucking a trend. The presidential primary, even as a State institution, has been losing favor steadily. Students of Wisconsin political history will recall that this particular electoral institution originated here, in 1905, after Senator Robert La Follette, Sr., had his progressive delegation to the Republican National Convention of 1904 rejected in favor of a "stalwart" Republican delegation. Knowing that he had popular support, La Follette asked for and got a popular election of presidential convention delegates. By 1916, half of the States of the Union had adopted a similar system. However, 20 years later, the presidential primary began to slip in popular appeal, and State after State gave up their primaries, until only 17 States and the District of Columbia have them today.

Admittedly, the present presidential primary system has its faults, and its chief weakness is the fact that the candidates are reluctant to use it, unless they must prove a particular political point to demonstrate their own votegetting ability. As only 727 of the 1,521 votes at the Democratic Convention and 624 of the votes of the Republican Convention come from States holding primaries, the "primary States" could not control either convention if they voted together, which they don't.

But the weaknesses of the present State-by-State primary system are not necessarily the weaknesses of a national primary. In fact, a national primary may be the remedy for the faults of the present system.

Today, candidates have two major objections to the presidential primary system: First, it is a mankiller; the problem of having to conduct a very personalized, handshaking campaign in several States from March to June is a tremendous physical strain, and its takes place before the regular summer and autumn campaigns. Second, this is expensive campaigning; estimates that a single State primary campaign may cost a candidate and his backers up to $75,000 are proving quite modest.

A national primary would have these answers to those problems: The campaigning could be nationwide, using major campaigning media, as the presidential campaign itself does; this would reduce the necessity of the street-corner type electioneering we see now in the spring. The cost would continue to be high, but it would be spread across a national effort, rather than concentrated, State by State, in a series of minor campaigns that may not produce an effective result.

But the best argument for a national presidential primary is the same one that Old Bob LaFollette used more than a half century ago: It would return to the people of the country not only their right to choose a President, but the right to choose the men who would be candidates for President. Today, the voters just do not have that right; it is usurped by the politicians some of them responsible to no one but State political machines.

A national primary would, of course, take the glamor, even the principal purpose, out of the national conventions. That would be a very small loss, as anyone who has attended these political circuses knows. The Nation as a whole has only become conscious of the evils of the convention system in recent years, when the use of television brought the whole Nation to the convention floors. We recall well the reaction of a citizen who had this experience for the first time about 8 years ago and said:

"Is this the way we nominate candidates for the highest elective office in the world?"

Health Problems of Senior Citizens

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. McNAMARA. Mr. President, the Senate Subcommittee on Problems of the Aged and Aging has been holding hearings this week on the health problems which face 16 million senior American citizens.

We have heard important and illuminating testimony on the extent of health needs, the problems of financing health care and the kinds of health services older persons require to live not only longer but healtheir and happier.

I expect to present a detailed report on the health problems of older persons at the conclusion of these hearings and to introduce legislation which will provide a program of balanced health services for a healthier-dignified life in retirement.

I thought—however—that it would be of interest to the Members of the Senate to have a few of the highlights of these hearings as they are going on.

Mr. President, I ask unanimous consent to insert at this point a memorandum which—in brief fashion—highlights some of the testimony of the witnesses.

There being no objection the memorandum was ordered to be printed in the RECORD, as follows:

DR. JOHN D. PORTERFIELD, DEPUTY SURGEON GENERAL, U.S. PUBLIC HEALTH SERVICE

Of the 10 million persons in the Nation who have heart disease—4 million, 40 percent—are 65 or older. At any given time, some 750,000 persons have cancer and most of these are persons who are over 65. Almost 3 million persons have diabetes and the elderly have more than their proportionate share.

This is also true of the 5 million who suffer from arthritis and the 6 million who are affected by related rheumatic disorders.

Forty-nine percent of those who are 65 or older are limited in activity—compared to 21 percent of all ages. Only 3 percent of all ages have limitations of mobility—compared with 19 percent of those who are over 65.

WALTER P. REUTHER, PRESIDENT, UNITED AUTO WORKERS

"Mr. Flemming has indicated on a number of occasions, that his Department has been continuing to explore ways to meet the undeniable need of older people for help with their medical and hospital bills. In the last few weeks the press has been full of accounts of struggle inside the Republican administration about what action shall be taken on this politically explosive subject.

"But as in so many other questions where Goverment spending is being balanced against human welfare—the people have apparently lost again. The New York Times of Thursday, March 24, reported Mr. Flemming's comment: 'All the administration has endorsed is exploration.'

"In spite of our capacity for the highest standards of health—we Americans are not the healthiest people in the world. The life expectancy of older citizens in our country is less than in a great many countries including Canada, Cyprus, Denmark, West Germany, Iceland, Israel, Japan, the Netherlands, Norway, and Sweden," Mr. Reuther declared.

DR. JAMES Z. APPEL, MEMBER, BOARD OF TRUSTEES, AMERICAN MEDICAL ASSOCIATION

"Physicians themselves are doing what they can as individuals to soften medical expenses for persons over 65 with modest resources," Dr. Appel said.

The indigent are cared for by public welfare—religious and fraternal programs—as well as donated services by the doctors.

State medical societies and physicians should take action to expedite the development of low cost voluntary health insurance and prepayment programs for the elderly with low family incomes.

The AMA also recommends that physicians accept reduced compensation for their services.

GUY R. JUSTIS, DIRECTOR, STATE DEPARTMENT OF PUBLIC WELFARE, COLORADO

Each old age pensioner in Colorado receives $106 a month less any income he may have in cash or kind. In addition he receives necessary hospitalization, nursing home care, surgery, and physician visits paid for out of a $10 million medical care fund administered through Blue Cross and Blue Shield.

JERRY VOORHIS, EXECUTIVE DIRECTOR, GROUP HEALTH ASSOCIATION AND COOPERATIVE LEAGUE OF AMERICA

"Our organization would take the position that while voluntary health plans of every sort should do everything possible to provide protection for the health of our older citizens, it is probably impossible for them to do this in any adequate way without assumption of at least a portion of the financial responsibility by some governmental unit, Federal, State, or local," Mr. Voorhis asserted.

DEAN DOUGLAS BROWN, DEAN OF FACULTY AND ECONOMICS, PRINCETON UNIVERSITY

"Subsidation of private insurance carriers by the Government from taxation to permit them to provide health insurance to aged persons at less than true cost is a most clumsy-hybrid arrangement which involves overwhelming administrative difficulties and excessive costs," Dean Brown said.

"It seems to me that it is far better to have what is 'insurance within insurance' under the OASDI program with costs averaged over the whole working lives of all participants," he advised.

DR. JAMES DIXON, PRESIDENT, ANTIOCH COLLEGE, YELLOW SPRINGS, OHIO

"The evidence all indicates that if one uses the health status of the employed person as a norm—the older person is disadvantaged relatively and absolutely in terms of services and their availability. I share entirely Dean Brown's feeling concerning the use of the social security mechanism as the appropriate device at this point of time in our country under the present circumstances to begin to meet this problem," Dr. Dixon said.

DR. MICHAEL DACSO, DIRECTOR, DEPARTMENT OF PHYSICAL MEDICINE, GOLDWATER MEMORIAL HOSPITAL, NEW YORK

In order to prevent excessive institutionalization disabilities must be prevented.

Physical disability is preventable even if the disease causing it cannot be corrected. For example, in many, if not all heart diseases, physical incapacity caused by heart disease can be prevented.

A great deal more research will have to be done in this field as well as in training disabled persons to the point of self-sufficiency, Dr. Dacso emphasized.

JAMES CAREY, PRESIDENT, INTERNATIONAL UNION OF ELECTRICAL RADIO AND MACHINE WORKERS

"Investigation shows that the majority of our retired elder citizens depend almost entirely upon Federal old-age insurance benefits for subsistence.

"While people seek desperately to put a few dollars aside for their old age—only one person in six who retires at age 65 has as much as $5,000 in savings," Mr. Carey said.

"Costs of voluntary health insurance continues to rise at the rate of 10 percent a year. It now costs about $15 a month for the average retiree to cover himself and his wife for Blue Cross and Blue Shield. For most retirees who depend on old-age benefits this is an impossible price tag," he stated.

HON. ARTHUR FLEMMING, SECRETARY, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Estimates indicate that 42 percent of the aged—approximately 6½ million persons—have some health insurance and that 50 percent of the aged would have coverage by 1965 and about 68 percent by 1970.

"Nevertheless, even though we do experience continued progress in this area, I believe we will still be left with serious problems. There will still be aged persons whose policies provide inadequate protection. Also there will still be aged persons who will have no protection but who would be willing to participate in voluntary programs if provided with policies at rates they could afford to pay.

"This administration is acutely aware of the need for approaching these problems with a sense of urgency," Secretary Flemming said.

An intensive study is currently being made of the problem, the subcommittee was told.

"In an effort to arrive at sound conclusions we are now consulting not only with experts in the Government—but also with outside experts and groups—and with State officials. I expect to complete these consultations within the next 2 weeks. I will then move at once to develop a specific proposal within the executive branch," Secretary Flemming said.

On April 7, the Washington Post published a perceptive editorial summarizing a number of important facts developed in these hearings and concluding with the following statement:

"The one practical way to provide insurance against the health hazards of retirement years is to let people pay the premiums in the form of social security taxes while they are earning wages and are able to do so. This is precisely how they now provide retirement income for themselves under the social security program—and this kind of protection is made compulsory because the lack of it would have a disastrous social impact. Those who denounce this proposal as 'socialistic' without proposing any workable alternative are foolishly doctrinaire.

"They might just about as sensibly oppose as socialistic the Nation's public schools, fire departments and parks because these represent communal efforts financed through taxation. One of the fundamental purposes for which the U.S. Government was established was 'to promote the general welfare.'"

The subcommittee has scheduled additional hearings on the general problem for next Monday, Tuesday, and Wednesday, April 11, 12, and 13.

It will devote extensive attention to one of the crucial questions in this area; namely, the extent to which private insurance is meeting the problem and can be expected to do so in the future. Executives of profit and nonprofit insurance groups plan to participate in these hearings and to give us the benefit of their experience in this field to such a large segment of American society.

Members of Congress and Their Families Will Visit New York City, May 13, 14, and 15

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

Mr. VAN ZANDT. Mr. Speaker, the annual congressional tour of New York City on May 13, 14, and 15 for Members of Congress and their families has been perfected. The tour includes an evening at Roosevelt Raceway, a visit to the United Nations, Empire State Building, Chinatown, and an inspection tour of the New York harbor. There is also the opportunity to go to Broadway theaters.

A copy of the official announcement, which recently was sent to Members of both branches of Congress, is as follows:

NEW YORK CITY 3-DAY CONGRESSIONAL TOUR, MAY 13, 14, 15—MAKE YOUR RESERVATIONS TODAY—DIAL EXTENSION 4576, ROOM 1104, HOUSE OFFICE BUILDING

Tour includes United Nations, Fifth Avenue, Broadway theaters, Empire State building, harbor trip, and Chinatown.

SCHEDULE OF EVENTS

Friday, May 13: 9:45 a.m., daylight time, party will leave Washington via the Pennsylvania Railroad. Luncheon in the dining car. We arrive Penn Station, New York City, 1:45 p.m., and buses will take us directly to pier where we board sightseeing steamer for New York harbor tour. At 4 p.m. buses leave pier for Paramount Hotel. At 7 p.m. buses leave for Roosevelt Raceway, buffet dinner and an evening at the races. At 11 p.m. buses leave racetrack for Hotel Paramount.

Saturday, May 14: 8:45 a.m., leave hotel for the United Nations and at 10:45 a.m. we leave for New York city hall and reception by Hon. Robert F. Wagner, mayor of New York City. At 1 p.m., we arrive Idlewild Airport for luncheon and Capital Airline tour. At 4:30 p.m. we return to Hotel Paramount.

Saturday night will be open for members of our party to go to restaurant, night club, or theater of their choice.

Sunday, May 15: 11 a.m. we leave hotel for Empire State building tour. At 12:45 p.m. we leave for Chinatown reception and luncheon guests of the Chinese Consolidated Benevolent Association. At 6 p.m. daylight time our train leaves Pennsylvania Station for return to Washington. We suggest party meet at West Gate track 13 at least 10 minutes prior to leaving time. Dinner will be served in dining car en route home. We arrive Washington 10 p.m. daylight time.

Expense: $39.50. Children 5–12, $34.50.

National Library Week

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. WILLIAMS of New Jersey. Mr. President, everybody, it seems, is talking about national purpose of late. There is much honest confusion and, I am afraid, probably some lack of facts, too. At a time when every American should be giving some thought about the goals of his Nation and the goals that he should have as an individual citizen, it might not be amiss to remind ourselves that a good starting place for our ruminations might be our own municipal library. From words written in the present or past we may receive cues for our future conduct and thought.

I was very glad to note, therefore, that the Asbury Park Press, in its April 5 issue, had a few words to say about National Library Week and the pleasant habit of reading.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Asbury Park Evening Press, Apr. 5, 1960]

NATIONAL LIBRARY WEEK

This is National Library Week. Other of the many special weeks we celebrate are devoted to enterprises and products which are of interest to segments of the population. But Library Week draws attention to a worldwide institution which is of vital interest to every citizen, whether he knows it or not.

Libraries contain the stored-up knowledge of the past. They contain the history of man's experimentation and constant striving. In this form of the written word they offer all the tools which any individual needs to prepare himself for his career. They provide the knowledge which makes it possible for a person to explore in advance the possibility of success for some new venture which has taken form in his imagination. They offer the facilities for cultural development, for a knowledge of the arts, of the sciences, and of recreation.

It is one of the tragedies of our life that with all this wealth at hand so relatively few avail themselves of it. How many people who regret their limited knowledge of history, of art, or of science realize that the remedy for their shortcomings lies a short distance down the street within the walls of the public library? And how many people confronted with a boring evening make use of the antidote for that boredom which is contained in a library card?

No truly educated person ever achieved that status without books. His formal schooling may have been limited but books have it in their power to supply the deficit. And no man was ever justly called ignorant so long as he loved books. So long as public libraries are available no one has a right to expect sympathy when he deplores the limited advantages which were his in youth.

Reading of books is both profitable and pleasurable. It is a pleasant habit-forming activity. The more one reads the more he enjoys reading. And the better the books he reads the more his appetite is whetted for still better literary fare. Books are friends and those who associate with them come to love them.

For those who never acquired the pleasant habit of reading we suggest that they celebrate National Library Week by visiting their nearby library and borrowing a book. Any book will do. Just acquire the habit of reading and time will take care of the matter of quality. But read.

Wiretapping Ban Aids Criminals

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. KEATING. Mr. President, the New York Herald Tribune yesterday carried an editorial emphasizing the need for a Federal law clarifying the present muddled wiretap situation. The editorial properly emphasizes the need for careful restrictions on the use of wiretapping evidence. However, it also makes the important point that New York's own laws on the subject represent "a sensible balance between protecting the rights of the individual against abuses and enabling law enforcement agencies to proceed more effectively against crime."

On Wednesday I introduced a wiretap bill—S. 3340—which would make it clear that no provision of the Federal law is intended to preclude the operation of State laws permitting wiretapping under the safeguards of the court order. This editorial indicates the strong need for enactment of such a provision if we are to avoid jeopardy to law enforcement in New York and other States with similar laws. I hope that there will be early consideration of this bill and that action to relieve New York's plight will be taken before Congress adjourns.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Apr. 7, 1960]

BANNING WIRETAPS HELPS THE CRIMINALS

Some 20 years ago the people of New York engaged in a lot of serious debate about the validity and necessity of wiretapping as an aid to law enforcement agencies in fighting crime.

The result was a sensible balance between protecting the rights of the individual against abuses and enabling the aforesaid agencies to proceed more effectively against crime. We allowed official wiretapping, but only on court authority and for good cause. And there is to this day no authentic cause for regret.

Now, however, the Federal courts have upset things considerably by various decisions hinging on a fuzzy 31-word clause in the 1934 Federal Communications Act which reads:

"No person not being authorized by the sender shall intercept any communication and divulge or publish the existence, contents, substance, purport, effect, or meaning of such intercepted communication to any person."

This has been ruled to mean, among other points, that wiretap evidence cannot be used in Federal trials. But a number of States, including New York, operate otherwise with notable success.

Whether the law actually makes wiretapping a Federal crime is anybody's guess. Certainly it doesn't keep the FBI from tapping, even though the fruits are prohibited from evidentiary display.

But all the New York prosecutors, and Police Commissioner Kennedy as well, fear that this Federal restriction is on the way to being extended to the State courts. In short, that criminal law enforcement (at least the substantial part dependent on wiretap investigation) will be crippled.

It is easy enough to quote Justice Holmes on wiretapping being "dirty business," and that would certainly apply if there were no controlling safeguards. But New York has shown what can be done. We see no reason why District Attorney Hogan and Commissioner Kennedy, among many, should be deprived of an effective weapon against crime.

Before the courts proceed any further with nullification, let Congress clear the air with a law that backs up New York. For surely the country hasn't got to the point where crime is to be protected.

Resolution of St. Mark's Home and School Association

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. WILEY. Mr. President, we recognize that the battle against inflation is a continuous one. The establishment of a realistic fiscal program, however, cannot be accomplished by wishful thinking; rather, it will require the cooperation of government, consumers, labor, industry, and all others in our society.

Through sound buying, spending, borrowing, and savings practices, the citizens of our country themselves can make an effective contribution to not only combating inflation, but to our economic progress.

Effective anti-inflationary measures, however, can be adopted only if there is a recognition of its threat, and a willingness by our citizens to undertake effective action to halt its spiral.

Recently, I was privileged to receive from Mrs. Lawrence Ruetz, of Kenosha, Wis., president of St. Mark's Home and School Association, a resolution adopted by that fine organization on the need for effective measures for combating inflation.

Representatives of real grassroots thinking on this significant problem, I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF ST. MARK'S HOME AND SCHOOL ASSOCIATION

Whereas for nearly two decades, and particularly following World War II, the United States has experienced a sharp inflation of its currency, which inflation is still continuing; and

Whereas during the last decade the value of the U.S. dollar has been reduced more than half; and

Whereas if this trend continues it will seriously affect our economy, destroy our position as a leader in world affairs, aid Russia's avowed intention to destroy us as a democracy, and may even destroy the form of government under which we now live; and

Whereas such inflationary trend has already reeked havoc upon many of our citizens who depend upon fixed incomes such as pensions and other like means of income, and has debilitated the savings of the older citizens who have frugally prepared for their old age and further inflation will reek even further havoc upon them; and

Whereas one of the causes of such inflation has been the Federal Government's policy of refusing to live within its income, borrowing money for current expenses and increasing the legal debt limit; and

Whereas during times of war it may be necessary for the Government to borrow in order to meet extraordinary expenses, but to continue to do so in times of peace is against the rules of sound economy and against our tradition as a Nation; and

Whereas our Government, by pursuing a policy of thrift and frugality can, we believe, live within its income, balance its budget and reduce its indebtness, and by pursuing such a policy reduce the heavy burden of taxes as well;

Now, therefore, we do hereby resolve that we urge our elected Members of the Congress of the United States to use their voices, influence, and votes to reduce waste and extravagance in Government, to cease borrowing additional moneys with which to meet current expenses, to work for a balanced budget, and to refuse further raises in the debt limit except in cases of extreme emergency.

Dated at Kenosha, Wis., this 21st day of March, A.D., 1960.

ST. MARK'S HOME AND SCHOOL ASSOCIATION,
By MRS. LAWRENCE RUETZ,
President.

Attest:
MRS. EDWARD W. JEANNAT,
Secretary.

Malaria World Health Day Target

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. WILLIAMS of New Jersey. Mr. President, within the past few years we in this Nation and others elsewhere in

the world have gradually come to realize the value of a global campaign aginst disease of all kinds. On April 7, World Health Day, the Camden (N.J.) Courier-Post discussed "a venture without precedent in history"—a worldwide campaign to stamp out malaria.

Such an effort is worth the attention of everyone concerned with the elimination of human suffering and waste of human resources.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MALARIA WORLD HEALTH DAY TARGET

Eradication of malaria has been called a "challenge to all the world." But that is the challenge concerted international forces are taking up this year. Never before have these forces been deployed on such a scale against a single disease.

And today, World Health Day, is designed to recall to all peoples the urgency of this great undertaking.

The present worldwide campaign to stamp out malaria is a venture without precedent in human history. Never before have doctors, engineers, laboratory workers, and helpers of all kinds been mobilized in such large numbers in so many different countries to combat the same evil.

Never before has a scheme been launched that so intimately affects the living conditions of such vast numbers of the earth's inhabitants.

This year, 1.2 billion human being are living under the constant threat of malaria. It is not a spectacular disease. Its victims show no wounds or mutilations to excite our pity; it comes upon them as they sleep, in the stillness of the night, carried by a silent attacker, the mosquito.

The ultimate aim of the antimalaria campaign is to eliminate the disease, to wipe it off the face of the globe, never giving up until the very last case in the remotest corner of the earth has been tracked down.

Described as the world's most costly disease, malaria is estimated to account for from 10 to 15 percent of the infant mortality rate in tropical countries where its inhabitants have become resigned to it.

Without a dissenting voice the 90 members of the World Health Organization have resolved to pool their knowledge and resources to eliminate the disease from the globe.

Physical deterioration from malaria makes a sufferer an easy prey to other dangerous diseases.

Today, according to Dr. M. G. Candau, Director-General of WHO, we know how malaria is transmitted and by what mosquitoes. We know how the malaria parasite behaves within the human body, and how it causes a fever that may lead to death. We have found effective ways of destroying the mosquitoes and we possess drugs that successfully attack the parasites within the human body. The techniques for fighting malaria are continually becoming more powerful and precise.

But we also know that the deadly mosquitoes have found ways of fighting back—that is why speed is essential. The campaign against malaria must be carried through while the weapons still remain effective.

Candau tells us there are still 56 countries where no effort has yet been made to subdue the malaria monster.

"The world antimalaria campaign evidently calls for large numbers of trained workers of many kinds, quantities of equipment and supplies, considerable financial investment and efficient administrative machinery," Candau said. "It is even more important, however, that the governments engaged in the campaign should pursue it with conviction and with the determination to succeed."

The eradication of malaria is, indeed, a challenge to all the world. In an era when man thinks he is about to set foot on the moon, he should on his own planet be capable of stamping out one of his oldest and most destructive enemies.

Night Life in Washington

EXTENSION OF REMARKS
OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. ERVIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Night Life in Washington," written by Charles McDowell, which appeared in the Richmond Times-Dispatch of March 4, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIGHT LIFE IN WASHINGTON

(By Charles McDowell)

It was 12:25 a.m. and Senator ERVIN, of North Carolina, who had been speaking for an hour and a half, was beginning to get to the point of his speech on the floor of the U.S. Senate. He was against the civil rights bill.

Senator ERVIN was standing behind a desk piled high with books and sheafs of papers. His legislative assistant sat beside him, occasionally handing him documents from a fat briefcase. The Senator looked fresh and happy and quite capable of making the 4-hour speech that was expected of him by his southern colleagues.

Senator EASTLAND of Mississippi, was relaxing a few seats away, his feet on a desk. Senator EASTLAND was playing question man for Senator ERVIN. The way the southerners were working the filibuster, a question man was always on hand to ask long questions every 20 minutes or so to rest the speaker's voice. Whenever Senator EASTLAND got up to ask a question, his shirttail showed below his coat. He had pulled it out for comfort.

Senator ELLENDER, of Louisiana, came into the Chamber from the darkened cloakroom, took a seat at the rear, and watched Senator ERVIN intently. He was checking on his man's condition, looking for signs of weariness. Satisfied that his man was in good shape, Senator ELLENDER returned to the cloakroom. But he wouldn't go any farther from the floor than that because he was team captain for the current 24 hours and it was his job to be there to cope with any parliamentary tricks by the opposition, make substitutions, and keep in touch by telephone with the coach, Senator RUSSELL, of Georgia, who was hidden away in a hotel downtown.

Senator ERVIN paused for a moment to take a sip of water. Then he said, "You know, this is the funniest organization I ever belonged to." He said the Senate had passed all sorts of fair labor standards legislation, and yet here he was violating the 40-hour week and not getting time and a half. He looked across the Chamber at Senator JAVITS, of New York, smiled, and said he supposed this kind of work was necessary for "some of us who are trying to save the Confederacy as well as the Union."

Senator JAVITS smiled back at him and returned to signing a stack of mail on his desk. Senator COOPER, of Kentucky, who had been motionless at his desk for nearly an hour, stirred slightly and may have smiled; we couldn't tell from our angle in the gallery.

Senator ERVIN and his question man and Senators JAVITS and COOPER were the only Senators on the floor. The last two were playing watchdogs for the majority, the Senators in favor of a civil rights bill. The watchdogs' job was to see to it that the speaker kept talking and didn't rest illegally.

A pair of stenographers took turns recording Senator ERVIN's remarks. The Senate Parliamentarian was reading a paper-back novel. A clerk was reading a hard-back novel. The other clerk on duty was drawing excellent five-point stars, one after another, on clean sheets of paper and then throwing them away. A sleepy page boy was sitting on the carpeted steps to the rostrum staring at a French grammar book.

It was nearly 1 a.m. now, but there were still several hundred citizens in the public gallery watching the world's greatest deliberative body, and there were perhaps a dozen of us in the press gallery.

ELMER J. HOFFMAN, a large freshman congressman from Illinois, who was curious about filibusters, came into the Chamber and sat down on a sofa at the rear. Members of the House have the privilege of the floor in the Senate so long as they keep quiet and stay out of the way. Representative HOFFMAN went to sleep within 10 minutes. He began to emit long, resounding snores, and a teen-age girl in the gallery began to giggle.

Senator ERVIN grinned and kept talking.

At 1:05 a.m. the question man, Senator EASTLAND, arose stiffly, asked the Speaker to yield for a moment, and said to the sleepy-eyed acting president of the Senate, Senator MUSKIE, of Maine, "Mr. President, I suggest the absence of a quorum."

This meant that Senator ERVIN could quit talking and rest until 51 Senators appeared on the floor and answered to their names. The majority had about that many of its troops sleeping on cots in nearby rooms, in the old Supreme Court chamber and in their offices. Bells began to ring throughout these regions and grumbling, dull-eyed Senators rolled out of bed and groped for shoes.

The basic strategy of the 18 filibustering Senators, working in well-organized relay teams, was of course, to keeping talking indefinitely to prevent a vote on the civil rights bill. The strategy of the majority was to keep the Senate in round-the-clock session, day after day, to wear the filibuster down. The counterstrategy of the filibusterers was to demand quorum calls at all hours of the night to get the majority out of bed and break its spirit.

Slowly and grimly, the rumpled Senators straggled into the Chamber. Senator BENNETT, of Utah, still had on yellow bedroom slippers. Senators KERR and ANDERSON leaned on each other for support. Senator MORTON of Kentucky yawned mightly and bumped into Senator WILEY of Wisconsin. Senator SYMINGTON was wearing a dark blue, turtleneck pajama shirt under his suit coat and several friends—in the bleary gaiety of the dead of night—suggested he looked like a gangster.

Having answered to their names, the Senators drifted away to bed again, several stopping by Senator ERVIN's desk to mutter and laugh. Soon he began to speak again.

Of the 18 filibusterers, only 5—members of the "on-duty" Ellender team—had answered the quorum call. The others were sound asleep in their beds, secure in the knowledge

that they were not helping the majority to raise a quorum. Some, like Coach RUSSELL, were keeping their sleeping places secret so even the Sergeant-at-Arms couldn't find them if he were sent out to drum up the necessary 51 Senators.

At 2:50 a.m. Senator ERVIN was still talking, but his 4-hour shift was coming to an end. Already Captain ELLENDER was on the sideline warming up his next man, Senator OLIN JOHNSTON of South Carolina. Senator JOHNSTON was crisply dressed, freshly shaved and bright of eye. He had been asleep for the past 10 hours, and he had a speech he could hardly carry in both arms.

A Serious Problem Exists

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was reprinted in the March 14, 1960, edition of the Medford Mail Tribune. It discusses the need for legislation which would help provide medical care to older citizens. The editorial originally appeared in the Bend (Oreg.) Bulletin:

OPPOSITION NOT ENOUGH

The Forand bill has been in the news of late. Recently, Senator JOHN S. KENNEDY, of Massachusetts, introduced a piece of legislation which has become known as the Kennedy bill. Both have the same general purpose. Both have been greeted with cries of anguish from some groups.

The Forand and Kennedy proposals are designed to provide additional protection under health-care plans for persons over 65. Blue Cross, Blue Shield, and the various commercial insurance companies have been loath to cover this age bracket in the past.

Insurance companies which have carried plans for older persons have—in many cases—done so only with restricted policies at considerably higher rates than those paid by the rest of us.

One can't particularly blame insurance companies. As persons get older they are more susceptible to some diseases. They recover from illness less quickly. In other words, their medical expenses are likely to be high. Insurors traditionally have charged higher rates for higher risks.

At the same time, one must sympathize with the oldsters involved. At a time when their incomes are being reduced through inadequate retirement plans and provisions, they are asked to increase the amount of those incomes which they spend for medicine, doctors, and hospitals.

Both the Forand and Kennedy bills would have the Federal Government help pick up the difference. Representative FORAND, first on the scene with his bill, would handle the problem through amendments to the basic Social Security Act.

FORAND would set up a program whereby some 16 million persons eligible for social security payments would be entitled to receive a limited amount of hospital, surgical, and nursing home treatment under a Government-managed program.

Opposition to the proposal is led by the American Medical Association, which traditionally sees that old bugaboo "socialized medicine" behind every bush. Other opposition comes from insurance companies—not hard to figure that one out—and various farm and business groups.

Yet the Forand bill—and the later Kennedy proposal—remain attractive to many persons, particularly those who are over 65.

The AMA and other groups opposing the legislation do so as a traditional position to all such proposals. They have followed the same line for many years.

This is no longer enough. A serious problem exists—serious for the senior citizen whose income has been reduced—and some solution must be found for it. Blind opposition to proposed solutions is not enough.

The Milwaukee Journal—The Best Big-City Metropolitan Newspaper in America

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have an article recently printed in a Kentucky newspaper printed in the Appendix of the RECORD.

There being no objection the article was ordered to be printed in the RECORD, as follows:

NEW YORK, N.Y., April 3.—What are the 15 daily newspapers in the United States "most superior for news coverage, integrity, and public service?"

A poll of the Nation's newspaper editors conducted by scholastic magazines selected the following, in order of preference:

1. The New York Times.
2. The Christian Science Monitor.
3. The Milwaukee Journal.
4. The St. Louis Post-Dispatch.
5. The Washington Post and Times Herald.
6. The Courier-Journal.
7. The Wall Street Journal.
8. Atlanta Constitution.
9. Chicago Tribune.
10. Des Moines Register.
11. The Kansas City Star and Times.
12. The Baltimore Sun.
13. The Miami Herald.
14. Chicago Daily News.
15. Los Angeles Times.

The poll was conducted in connection with a special issue on "How To Read Newspapers," published annually by Practical English, one of the scholastic magazines for high school students.

The poll was taken in two parts, the magazine publishers said. First, a list of all newspapers in cities with 200,000 population or more was sent to all editors of daily newspapers in the United States. Editors were asked to check the 12 newspapers that, in their opinion, were "most superior for news coverage, integrity, and public service." Room was allowed for write-in votes.

A runoff ballott was then drawn up, including newspapers that polled at least 12 votes. Write-in candidates with two or more votes were also included. More than 335 editors voted in the final runoff ballot.

The results of the runoff showed such a close vote that 15 newspapers were chosen instead of 12.

Mr. PROXMIRE. Mr. President, I call attention to the fact that the No. 1 paper, the New York Times, and the No. 2 paper, the Christian Science Monitor, are not metropolitan papers. They are primarily national or even international papers. Both serve a constituency throughout the length and breadth of this country. They are fine newspapers but there are peculiar advantages which both of them have as national newspapers that put them in a special category.

This brings us to the No. 3 paper listed—the Milwaukee Journal—this means, Mr. President, that in a nationwide poll of newspaper editors—judging on a standard of "news coverage, integrity, and public service," the Milwaukee Journal led every big city newspaper in America.

In my five primary and five statewide campaigns in Wisconsin, this great newspaper has never supported me; so I feel I can pay tribute to it without any feeling of obligation; but simply because I am convinced that this very great newspaper is one of the most important institutions in making the city of Milwaukee and the State of Wisconsin far better informed, and more conscious of our moral and social obligations than we could possibly be otherwise.

In recent days the unique qualities of Wisconsin have often been discussed and analyzed in connection with the exciting presidential primary that took place in our State. Largely because the Journal stayed aloof from this race, she was ignored in attempts to get at the character of the people of our State. This was a serious error, Mr. President, because the characteristics of comprehension of the issues, insistence on morality in government and the assumption of social responsibility—these characteristics are unusually strong in Wisconsin people—exactly because this great newspaper has been coming into hundreds of thousands of Wisconsin homes day after day for many years quietly and surely building these qualities.

Statement of George J. Burger Before Senate Small Business Committee

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by Mr. George J. Burger, vice president of the National Federation of Independent Business, before the Senate Small Business Committee on March 22, 1960.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUISNESS, BEFORE SENATE SMALL BUSINESS COMMITTEE, MARCH 22, 1960

Subject: Small Business Administration.

I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740–742 Washington Building, Washington, D.C.

We are a national organization composed exclusively of small, independent business and professional people. We have the largest directly supporting membership of any business organization in our country. We have membership representation in federation chapters in almost all of the Nation's congressional districts, including Alaska and Hawaii.

I am also more than pleased to advise the committee that during the past year or so our membership has shown a consistent increase nationwide.

From the first moment that the Congress established the Small Business Administration in 1953—shortly thereafter, at the direction of our head office, I personally conferred with regional offices of SBA in certain major cities throughout the Nation. In one of these conferences—in the Kansas City regional office—it developed at that time there were some serious misinterpretations of the administration of the Small Business Administration Act, and upon my return to the Washington office I arranged for a conference with the then Administrator.

Due to this conference, the facts developed called for a second conference a few days later with Treasury, Commerce, and SBA officials. The record will show that due to these joint conferences the regulations affecting the administration of the act were changed, resulting in all small business being able to enjoy benefits under the Small Business Administration Act, as Congress originally intended.

From that point on, Mr. Chairman, following the instructions of our head office, similar visits were made nationwide by me, conferring with the regional directors in many areas throughout the Nation.

At this point it is to be noted that in my appearance before the House Banking Committee May 9, 1958, Congressman PATMAN, chairman of the House Small Business Committee, and third-ranking majority member of the House Banking Committee, made this observation:

"Are you going to cover the entire country with similar surveys? I wish you would, because it would be very interesting and revealing."

Then again in 1959 I conferred with regional offices in the following cities: San Francisco, Portland, Seattle, Minneapolis, Detroit, and Cleveland, such visits taking place in October-November 1959.

Prior to my conferences I submitted a memorandum to the various regional directors asking them to compile the information on the following questions, and that the answers be ready during the time of my conference with them:

1. What has been their experience in the issuance of certificates of competency?

(a) Is the Army, Navy, and Air Force cooperating in the COC program?

(b) How successful have the small-business concerns been in the completion of awards received under COC's?

2. What is their experience of small-business concerns receiving subcontracts in the weapons system?

3. Do they find that small business has difficulties in getting the names placed on qualified manufacturers lists, and on qualified bidders lists?

4. Do they believe that there should be a unified code of regulations for procurement in the civilian procurement field by General Services Administration and in the defense procurement field by the Department of Defense?

Let it be understood for the record that exceptional consideration and cooperation was extended to me by the regional directors in the various visits, the fullest cooperation extended—and in each instance these conferences lasted many hours.

During my visit in the San Francisco regional office, at the request of that office—they had a visit from a delegation of industrialists from Japan—I would say business representatives of a dozen or more from Japan—so being in the San Francisco area at that time they requested that I address that group, giving them the information on the Small Business Administration and the overall problems facing small business in our economy. I must say it was a very delightful experience.

Mr. Chairman, I will not take the time to include in this statement the complete answers furnished to me to the questions enumerated above, but my files will be available to the staff to review on the complete answers. Therefore, I will highspot what might be considered the overall of these visits, to some degree.

It is to be noted that as to the overall on question No. 1 I might state the answer would be: "The question sometimes comes to mind as to whether or not the military procurement agencies are notifying Small Business Administration in all instances where COC procedure should be instituted."

The summarized answer to question No. 2 would be: "It has been the experience of this regional office that large prime contractors of the Government have the tendency to hold on to all work possible which can be performed in their own plants."

Some report large contractors will not subcontract to small business when their own facilities are operating below capacity. They will offer subcontract opportunities to small business only when they are operating at full capacity or when certain components may have a nuisance value which would make them prefer to subcontract such items.

It is to be noted in many of these conferences that I attended, as they report, the recent hearings of the Senate Small Business Committee, and the House, have caused some concern among the large prime contractors.

On question No. 3, the summarized answer, as they report, is: "Many small business concerns have difficulty in getting their names placed on qualified manufacturers lists and bidders lists."

On question No. 4: "We firmly believe that there should be a uniform 'bid form' used by both military and civilian procurement agencies of the Government."

In one of the conferences the comment was made as to the necessity of decentralization in the operation of the Small Business Administration. In other words, the comment was: "More power in operation of the agency at the local level."

Also a comment was made that I believe has considerable merit—that SBA in Washington should take a more direct stand on many economic problems helpful to small business, and it is interesting to note that when I received that suggestion I then discussed this subject in other visits with SBA officials and I might state that there was a concurrence in the recommendation.

It would be my belief that when legislation is introduced to aid small business—that is, where it has been the practice of many congressional committees to send such legislation to the Department of Justice, the Federal Trade Commission and the Department of Commerce for their views, that same action should be taken on such legislation in requesting the views of the Small Business Administration. I believe this is something that the committee should take under consideration.

It was my observation in my visits in 1959, in these many conferences, that there was increased activity of the personnel in carrying out the original intent of the Congress.

In some of the conferences it was brought out as to the complaints they were receiving from small business as to the operation of post exchanges, ships stores, and commissaries. In some areas demands were being made on the SBA for some corrective action to be taken by the Government.

We believe this is a subject matter that should be developed by the Senate Small Business Committee in cooperation with the Small Business Administration. The expanded operations of these activities in the continental United States may be found to be going beyond the original intent of the Congress when they were established.

Mr. Chairman, I made it my business, in these interviews, to closely check into the number of loan applications being received by the various regional offices. In most instances the reports were that there was a declining number of applications. It would strike me that this is a healthy situation, and it was remarked in many of the visits that if the trend continued the appropriations to SBA on loans would be adequate unless there was a sudden upward surge in applications.

It is significant to note that in one conference an Army specialist for small business was present, and he remarked that in his opinion small business lacked managerial ability to carry out a Government contract. I, in no uncertain terms, answered that charge most definitely, and, Mr. Chairman, this leads me up to a recommendation that should be considered for the overall good of the Small Business Administration, and in most conferences there was concurrence as to the recommendations; namely, that the small business specialists in the armed services should be placed in the exclusive employ of the Small Business Administration.

It is significant and important to note that in one comment made by an SBA official he concurred with this with the exception that before they were transferred to SBA employment that a close screening should be made of these business specialists.

I think that recommendation should be considered for the overall good of SBA in its help to small business.

It is our opinion that up to this point, during its short existence (7 years in June) that the Small Business Administration has served a most essential need for small business particularly as to financial aid for small business. It is our understanding approximately 20,000 small businesses have been able to save themselves through the help of SBA, and it would appear to me from my many conferences that banks are taking a more cooperative attitude with SBA in participating loans.

Criticism reaches us every now and then, and no doubt also reaches Members of Congress, as to delay experienced in processing loan applications. Where these are reported to us, giving us the facts, we immediately take appropriate action on these complaints either in our personal visits with regional offices or through communication. In the majority; of cases we find that the responsibility does not rest with the agency, but, on the other hand, through the failure of the applicant, directly or indirectly, to furnish complete required information to SBA at the time of the original filing.

It is our hope and trust that the report I am making will be helpful to the committee, and that the committee will follow through on the findings and recommendations.

We try to present to the committee a fair and impartial view of our observations due to these many conferences in the various regions of SBA during the life of the agency.

The "China Problem" Reconsidered

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. ENGLE. Mr. President, our distinguished colleague in the House of Representatives, CHESTER BOWLES, has presented a penetrating analysis of the present situation with regard to American relations with Red China, in the April 1960 issue of Foreign Affairs magazine.

Providing us with a very realistic approach to the problem in an article entitled "The 'China Problem' Reconsidered," Representative BOWLES makes certain recommendations about ways we can "start to move off dead center in East Asia."

This is exactly the kind of thought-provoking assessment of the needs of U.S. Far Eastern foreign policy I had in mind when I made an address on this subject on the floor of the Senate last May. While my conclusions were not the same as Representative BOWLES' in every instance, we share the common belief that this country must develop a more flexible policy in Asia if we are to contribute to the stability of the free nations in that area. CHESTER BOWLES has made a major contribution to American thinking on a very complex problem and I commend his article to my colleagues.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE "CHINA PROBLEM" RECONSIDERED

(By Chester Bowles)

In the autumn of 1949, after 22 years of bitter and protracted struggle, Mao Tse-tung and his Red armies finally established Communist rule over mainland China. The initial American reaction was division and confusion. It has remained so to this day. We still are certain only of what we will not do about China. We will not give formal recognition to the government in Peiping. We will not agree to Chinese Communist membership in the United Nations.

For too long now we have remained at the mercy of events set in motion by leaders in Taipei and Peiping. We have neglected to make constructive use of the periods of uneasy, calm between recurring crises. We have failed to take into account adequately the long-range forces which seem certain to shape future developments. Has the time not come to face the fundamental realities of our "China problem"? Until we do, we shall continue to be severely hampered in our relations with all of Asia.

Under present conditions, debate over recognition of Communist China by the United States is largely a dead-end street. If we should propose an exchange of Ambassadors, Mao Tse-tung would surely ask if our recognition extended to Communist sovereignty over the Province of Formosa. And when we replied that it did not, his response would inevitably be a contemptuous refusal of our offer. A similar outcome can be predicted if we proposed that "both Chinas" be admitted to the United Nations. Chiang Kai-shek would also reject such a proposal. The stalemate would persist.

This means that the two primary questions which have caused such deep discord here in America are not at the moment solvable. At some later stage we may find it useful to test the peaceful intentions of the Chinese Communists by proposing that both sides accept a situation which neither we nor they can alter short of war. But until then, let us bypass the question of formal relationships and focus on the immediate and, perhaps, obtainable.

If there were no other reason to seek a fresh perspective on Communist China, the crucial issue of disarmament would in itself be enough. For it is clear beyond doubt that no disarmament plan can have meaning without her participation. She possesses not only the world's largest army but a potential capacity for the production of nuclear weapons. Nor is there any reason to believe that we can hold the Soviet Union accountable for Peiping on this matter. Either we must give up any thought of reaching an agreement on a safeguarded system of worldwide disarmament or search for ways to influence the course of events in the China theater.

While we may be almost totally unable to affect short-term developments in Communist China, our capacity to influence other aspects of the China problem is greater than we seem to realize.

Formosa (Taiwan) offers a case in point. The island is rich and its economic development has been spectacular; yet its political position remains precarious, not only in regard to mainland China but also in its relations with the whole arc of free Asia from India to Japan. This is so because Formosa's political status is founded on a myth that Chiang Kai-shek, who was driven from the mainland 11 years ago, remains the ruler of 650 million Chinese. This myth—rejected by most Asians, by our NATO allies, by our closest friends the Canadians, and by a large number of Americans—is supported only by three or four Asian governments under heavy pressure from Washington, by our Department of State and by some Members of Congress. Perpetuation of the myth will increasingly isolate Formosa at a time when its leaders should be striving in every way to identify their future with the mainstream of thought and action in free, non-Communist Asia.

Americans and Nationalist Chinese alike should now strive to find a common ground with their allies and friends, and to relate their policies more rationally to the forces which I will shape events in Asia during the next decade. Such policies, I believe, may be based on the following assumptions:

1. That the Peiping government, although beset with difficulties, is in firm control of mainland China.

2. The mainland China, with an inadequate resource base, spiraling population, ruthless Communist leadership and intense nationalist spirit, will develop fiercely expansionist tendencies directed toward the weaker neighboring states to the south.

3. That a primary aim of American policy should be to prevent the armed expansion into southeast Asia which Chinese Communists leaders may be tempted to undertake.

4. That any effective disarmament program will ultimately require Peiping's participation.

5. That in the present circumstances no negotiation of our major differences with the Peiping Government seems likely to be productive.

6. That the 8 million Formosans and the 2 million mainland Chinese on Formosa have the right to a secure, independent existence and to cultural development outside the Communist orbit; and that such an evolution on Formosa is in the interests of the American people.

7. That for the time being Formosa's independence will continue to depend on American military guarantees and economic assistance.

8. That in the long run the security and prosperity of the people of Formosa will depend on the orderly political growth of the non-Communist nations of Asia, particularly India and Japan, and on their attitudes toward the Formosa Government.

9. That if ever it becomes practicable it will be in our national interest to restore our traditionally friendly ties with the Chinese people on the mainland.

Let us now examine, within the framework of these assumptions, the realities with which American policy must grapple.

II

Formosa, an island of 14,000 square miles of lofty mountains and fertile valleys, has hovered on the edge of Chinese history for several hundred years. In the mid-17th century, when the invading Manchus displaced the Ming emperor in Peiping and overran China, Formosa served as a refuge for adherents to the Ming régime, much as it now serves Chiang Kai-shek. In 1683, after 40 years of fitful struggle, the Manchus finally annexed the island and made it for the first time a province of China. In 1895, following the Japanese victory over China, Formosa passed under the rule of Tokyo and remained there until its liberation by American forces 50 years later.

Today political power in Formosa rests exclusively with the Generalissimo's authoritarian Nationalist Government. The 2 million mainlanders who fled with Chiang across the Formosa Straits in 1949 provide most of the Central Government's staff and account for two-thirds of his army of nearly 600,000 men. For a decade, American policy in regard to Formosa has largely focused on this Nationalist Chinese ruling minority. Yet in the long run it is the 8 million native Formosans who will shape the island's fate. We hear very little about their wishes, hopes, and fears. One of them, writing in this review recently, noted that there are no independnet Formosan newspapers and no recognized Formosan political parties.[1]

Some observers have suggested that the ultimate solution in Formosa may be to hold a plebiscite. As a practical matter, however, a plebiscite would almost certainly be rejected by both the Taipei and Peiping Governments. We, therefore, can only guess what most Formosans really want. Several significant facts can nevertheless be cited.

For nearly two generations prior to 1945, Formosans knew only Japanese rule. Although most of them speak the Fukien dialect of southeast China, they were educated in Japanese schools. Because the island prospered, many of them had come to feel closer to Tokyo than to the mainland. But 15 years of Nationalist rule have brought significant changes. Time, proximity, and education are creating, among the younger ages in particular, a gradual amalgamation of the island's Chinese and Formosan communities. There may slowly be emerging a new national identity predominantly Chinese by culture but Formosan in outlook.

This process has been aided by several important economic and political developments which critics of Chiang Kai-shek often neglect. Since 1949 the Nationalist Government has taken a series of constructive steps which it failed to take while it was on the mainland. Among the most important is its recognition of the decisive importance of the villagers who, as in all Asian nations, not only constitute the majority but also control the food supply and hence provide

[1] Li Thian-hok, "The China Impasse: A Formosan View," Foreign Affairs, April 1958.

the economic and political key to orderly growth. Under Chiang's direction, a reform program which limits land ownership to 10 acres and substantially reduces rentals has been combined with a competent rural extension service, easy credit, and an expanded fertilizer industry. The result has been a sharp increase in the output of rice and cotton per acre and an easier and more prosperous life for the peasants. Formosan living standards are now the second highest in Asia, surpassed only by Japan.

The internal political situation has also improved since the bloody 1947 uprising against the misrule of a carpetbagging Nationalist Governor. To be sure, the national government is still run almost entirely by mainlanders. The assembly has 1,576 members, of whom only 26 are Formosans. Yet there has been some progress toward democratic participation by Formosans. In the provincial assemblies and county administrations, for instance, the islanders hold large majorities through reasonably free elections. The mayors of most towns are also native Formosans.

For over 30 years in victory and defeat the Generalissimo has almost singlehandedly held the Kuomintang together. But though he is robust at 73 he cannot rule forever. Formosa's future depends on the stability of the government which will survive his passing from the scene.

As long as the United States maintains adequate sea and air power in east Asia, and the will to use it, there is only one way in which Mao Tse-tung can establish his sovereignty over Formosa and that is by a coup d'état which would depose Chiang or his successor and place in power a new island government prepared to come to terms with Peiping.

This development is improbable but not impossible. For 10 years the 2 million Nationalists on Formosa have been told that sooner or later Chiang's army—backed by massive American military support—would invade the Fukien coast and start the long-promised reconquest of the motherland. An increasing number of them have come to understand the practical impossibility of such a venture. Meanwhile, Peiping's propaganda broadcasts have skillfully played on their nostalgia and promised them forgiveness for their past sins, a hearty welcome home and even privileged positions in the new China. At the same time, Peiping has offered Formosa a special status as an autonomous area.

The persuasiveness of these appeals has been cut, of course, by reports of the way the communé system is working on the mainland and by Peiping's actions in Tibet. Yet the pull of the homeland still contributes to the potentially unstable political situation.

On the mainland, powerful totalitarian forces are reshaping Chinese society, remolding Chinese thought, and rewriting Chinese history within the constructing framework of the Lenin-Stalin-Mao ideology.

An independent Sino-Formosan nation can offer the contrast of a modernized non-Communist Chinese society, free from mass regimentation, with an increasing measure of political liberty and with expanding economic opportunities for all citizens. In building such a society the younger generation of Taiwanese and Chinese can find a common sense of purpose and at the same time supply a cultural base for the 13 million overseas Chinese.

III

How can we adjust our policy to foster such a development?

Let us accept the fact that Formosa's adoption of an affirmative new role in non-Communist Asia cannot be stage managed by American policymakers, however well supplied with good will and dollars. Nor can it be arbitrarily imposed on the Formosan majority by the Nationalist refugees from the mainland. Our role must be that of a genuine friend. The native Formosans, the Nationalist Chinese, and the world generally must be convinced that our objective is not to create a military base for the invasion of the mainland but to encourage the orderly growth of a new, independent nation.

In this perspective, our exposed position on Quemoy and Matsu makes very little sense. As Secretary of State Herter said on September 29, 1958, in a speech at Atlantic City: "Anyone can see from looking at the map" that these islands "are not strategically defensible in the defense of Formosa * * *" despite the fact that the Nationalist Chinese "have a fixed devotion to these islands which is almost pathological." In spite of this the State Department still hesitates to bring its tactics into harmony with such realities. So long as our position remains unclear we leave the initiative to others and expose ourselves to the possibility, if not the probability, that once again we will face the unhappy choice of retreating under fire or attempting to stand firm on a militarily untenable position.

On the one hand, we should encourage the neutralization of the offshore islands immediately adjacent to the Chinese coast. In their present status they serve only to keep alive the myth that a Nationalist invasion of the mainland is imminent and thereby give Peiping a handy excuse for "counter" hostilities.

On the other hand, our assurance that we will offer all-out military opposition to a Communist attack on Formosa itself should be substantially strengthened and extended to include any measures necessary to deter a coup d'état. In the event of such a coup, we should institute an economic and naval blockade to deny the Peiping Government effective occupation.

It might well take some time for Formosa's position in the United Nations as an independent nation to become accepted. Once this happened, its security would be backed by the organization's full guarantees. In the meantime our unilateral military commitment to defend the island must be unequivocal. We can no more abandon the people of Formosa than we can those of West Berlin.

As our military obligations in the area are gradually brought in line with the realities, we shall be able to reduce our military grants substantially. The savings can be profitably diverted into a further expansion of the Formosan economy.

The solid industrial and agricultural base now in process of creation will be a long step toward economic self-reliance. If the resulting economic benefits are directed largely to the peasants and workers instead of to the Nationalist minority already at the top of the economic pyramid, orderly political growth will be further stimulated. Private capital investment in Formosa should also be vigorously encouraged. If the island's independent future could be made more sure, increased capital would become available from Hong Kong.

American policy and American funds should also be directed toward the development of Formosa as a cultural center for non-Communist Chinese everywhere. Substantially increased assistance to Formosan colleges from public and private American sources can be an important first step in that direction. Scholarships for overseas Chinese to study on Formosa as well as scholarships for both Chinese and Formosans to study in the United States should also be increased. Similarly, more fellowships to enable talented American students to follow Chinese studies in Formosan institutions would help create the basis for a new partnership. Despite our long association with the Chinese, too many Americans are ignorant of their history and culture.

Finally, and of the utmost importance, every effort should be made to persuade the Nationalist Government to adopt a more realistic approach to their non-Communist fellow Asians. Formosa's future as an independent nation is tied to the future of free Asia and particularly to those two great geographic and political anchors, India and Japan. Unhappily, many Nationalist leaders have shown nothing but contempt for those free Asian governments which do not share their own doctrinaire interpretation of the world conflict. Instead, they often seem to speak and act on the assumption that a third world war is inevitable and that anyone who fails to agree is a Communist dupe. And, of course, such an assumption is basic to the myth of mainland reconquest. A wide gap therefore exists between the Nationalist Government and most of the peoples and leaders of non-Communist Asia. We should do all we can to close this gap and thus diminish Formosa's present political isolation.

Now what of "the other China," the giant on the mainland? Here our field for creative action is inevitably more restricted.

The Chinese Communist Government today is embarked upon a gigantic effort to industrialize its 650 million people on a resource base which is woefully inadequate. There seems to me to be three possible results of this experiment.

The Chinese Communists may be impelled by the harsh economic limitations of their position to modify their policies gradually, reduce their objectives, and seek to relieve their food and other shortages through peaceful foreign trade. In view of their intense, deeply rooted and doctrinaire Communist nationalism this development appears unlikely in the foreseeable future.

A second possibility is that they will seek to resettle part of their swelling population in the vast expanses of the Soviet Union bordering on China. But a large-scale development of these inner Asian regions of severe and uncertain climate would not be easy, and it is hard to imagine the conditions under which the Soviet Union would accept a great influx of Chinese settlers.

The third possibility is expansion into southeast Asia, with its wealth of underpopulated, food-rich countryside, as well as the great reserves of oil, tin, rubber, and other resources which China badly needs. Our objective must be to create a military, political, and economic barrier sufficient to discourage any such attempt.

For us to indulge in threats of atomic war would merely frighten the non-Communist Asian nations and further feed the fires of aggressive Chinese nationalism. It is vital, however, that we make clear in temperate language and through diplomatic channels our total commitment to defend southeast Asia against Chinese attack. And unlike an attack on Formosa, a Chinese thrust southward would also bring into play the existing guarantees in the United Nations Charter.

Ultimately, however, the fate of the non-Communist nations of south and southeast Asia will be determined by two factors which we can influence only indirectly: first, by their own economic and political stability and by their willingness to oppose any infringement on their sovereignty; and second, by the willingness of the two principal nations of the region, India and Pakistan, to add their weight more and more to the balance against Chinese aggression.

The role of India is of particular importance. Indeed, it is fair to say that an India which is politically stable and developing economically, and which works in harmony with the rest of non-Communist Asia, is the key to the ultimate balance of power in Asia and the Middle East as well. The recent Chinese probings of the Indian border regions have underscored both the significance of India and the dilemma she faces. Nor

has the lesson been lost on India's neighbors. Indeed, the attitudes in free Asia seem to be moving closer together in face of the common danger.

By wise and sensitive diplomacy we can contribute to this development. In the military sense, our role should be one of quiet readiness for any emergency, much as the British Fleet gave meaning to the Monroe Doctrine during our neutralist 19th century. Our direct economic assistance should give the highest priority to those nations which are willing and competent to help themselves and to devise programs to stabilize raw material prices at levels fair to the producers.

We undoubtedly have the strength to play our proper role in Asia; the question is whether we have the necessary tact, subtlety and flexibility. Let us, to begin with, put aside some of our own doctrinaire preconceptions and and examine realistically the complex nature of the Sino-Soviet relationship.

Deep potential differences exist between Chinese and Russian communism as a result of the radically different cultures, experiences and leaderships in the two countries. These are magnified by the fact that the two societies are at different stages of development—the one industrialized, with rich resources and an abundance of land; the other with a shortage in agriculture, inadequate resources and a burgeoning population.

Because of these differences we may assume the the Soviet Union and Communist China view the cold war from quite different perspectives. The Peiping Government utilizes the present tense situation in East Asia to fan the nationalistic fervor of its people, divert attention from internal difficulties and assure continued economic assistance and military support from the Soviet Union. When Moscow professes a desire to lessen tensions with the non-Communist world, there is every reason to believe that Peiping tends to pull hard in the other direction.

No outsider can be sure of the present nature or future development of the Sino-Soviet alliance, but certainly it is an infinitely complex and delicate arrangement. The assumption that it is rigid, monolithic and unchangeable is out of date. In view of this, recent efforts of State Department spokesmen to score debaters' points by depicting Mr. Khrushchev as leader of the world Communist movement and twitting him for not keeping China in line are naive and self-defeating. Let us realize that Communist alliances as well as Communist nations are subject to the eroding effects of economics, nationalism and history.

Between 1919 and 1933 the United States had no diplomatic relations with the Soviet Union. Yet during that period thousands of Americans traveled in Russia and thereby increased both our knowledge of developments there and the Russian people's awareness and understanding of us. It seems to me that today we should be striving by all reasonable means to establish people-to-people contacts with mainland China. It may be useful as a first step to offer a fresh approach to the exchange of correspondents with Red China. We are badly in need of the facts and perspective that able American reporters can give us, and we have no reason to be embarrassed by what Chinese journalists may see in America.

Such a two-way exchange has been obstructed so far both by Peiping and by our State Department. It would be wishful thinking, of course, to assume that our attempts to reopen communications with the people of China will be welcomed by Peiping. In many ways, the Communists serve their own interests best by keeping us their public enemy. It is up to us, however, to remove all technical obstacles to the travel of correspondents still existing on our side so that responsibility for the continuing communications barrier will clearly rest with Peiping.

But the freer flow of news is only the beginning. Educators, politicians, businessmen—all the many Americans who could profit by a first-hand understanding of the Chinese revolution and who could transmit their understanding to the rest of us—should be allowed access to the mainland by our authorities, with reciprocal privileges for the Chinese. A by-product of such contacts would almost surely be the freeing of the five Americans charged with espionage and still held in Chinese prisons.

As I have already pointed out in regard to trade, it would be unrealistic at this stage in China's development to expect the doctrinaire Communist government in Peiping to attempt to meet its steadily growing food and raw-material needs by major purchases overseas. Yet in the longer perspective it seems clear that China's only practical alternative to an effort to seize the material and land resources of Southeast Asia by force is to embark on a greatly expanded trade program. Since world peace will depend on which road China ultimately chooses, this question deserves the most urgent attention of American policymakers.

Only when we start to move off dead center in east Asia, beginning with the creation and implementation of imaginative policies based on the reality of two Chinas, will we start to exert a constructive influence on the shape of events to come. And as we do so, is it too much to hope that the sheer magnitude of the war danger in east Asia may gradually bring a degree of at least tacit cooperation between the United States and the Soviet Union in that area? Despite our profound ideological and political differences and aims we seem to have a common interest in the development of a less precarious military, economic, and political balance of power in Asia.

Nationalist extremists on Formosa will not be happy about the policies which I have suggested, and the Communists in Peiping will denounce them violently. The patriotic but quite unrealistic Formosan nationalists who demand that we push Chiang aside and help them set up their own government will reject them also.

At this point, our policy should be directed toward proving these things to the Chinese Communist leaders: One, we will oppose by all necessary means any movement of theirs into southeast Asia. Two, we will not allow them to overrun Formosa either by direct attack or by subversion. Three, our military installations on Formosa are not designed to aid or abet a nationalist attack against the mainland. Four, Formosa is to remain a free entity and all its people should eventually be consulted as to its form of government.

If we adopt these objectives, it is possible that as the prosperity and stability of Formosa become evident the Peiping government may grudgingly come to accept the island's independence as one of the facts of life in non-Communist Asia.

Commendation for Representative Al Ullman of Oregon

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent editorial which appeared in the April 1960 issue of Northwest Ruralite. It recognizes the good work by my hard-working friend and able colleague from eastern Oregon, AL ULLMAN, on behalf of the people of his district and other areas:

GOOD MAN

Word leaks back to us from Washington, D.C. that, after two terms in the House of Representatives, Oregon's Congressman AL ULLMAN of the Second District is rising rapidly in skill and stature.

Mr. ULLMAN went to the House 4 years ago as one of the pioneer fighters for the Federal Hells Canyon project. In that battle and since, he's demonstrated aggressiveness and imagination. By formal education he's well equipped to analyze resources and fiscal problems. He knows, for example, that the heart of the interest rate problem lies in broad Federal financing policies, rather than in a strict, special interest approach; and he has helped greatly in mustering House strength against plans for more inflationary money cost measures.

Farmers and small businessmen all over Oregon should take note of this.

The Military Mission

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Friday, April 8, 1960

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative and interesting article entitled "The Military Mission," which appeared in the April issue of Air Force magazine and Space Digest, so that all Members of Congress may have the opportunity to read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MILITARY MISSION

(By John F. Loosbrock, editor, Air Force magazine and Space Digest)

When we began Space Digest in November 1958 we chose the editorial path of what Associate Editor Bill Leavitt termed "space realism."

We believe that our peaceful pursuit of tomorrow's goals in space is best insured by living safely through today on earth. We also believe that the Lord, in His wisdom, knew that man would not have to be born with wings if he wanted to fly through the air nor with a self-contained earth environment if he wished to venture farther. So He did man a much greater favor. He gave man reason—an intellectual key with which to unlock the secrets of the universe. And He gave man a will—the freedom of choice with which to stimulate the brain to do man's bidding.

Using these tools man has flown through the air, to every cranny of the globe. And man has sent his instruments into space, to be followed ultimately and inevitably by man himself. But at the same time man's free will has led his brain into paths of mischief, of theft and murder, of war and pillage. He has created instruments of destruction which can, in the twinkling of a historical eye, erase the accomplishments of hundreds of centuries. This is the paradox of good and of evil, of peace and of war, as

impossible to separate one from another as to part man's will from his intellect.

Surely, against the backdrop of history, it is no longer possible to argue logically that there is little need for this Nation to exploit the military potential of space and to exploit it with urgency, diligence, and imagination. If we do so, and thereby gain an honorable and lasting peace, the road will automatically be open to peaceful exploitation. If we do not, someone else inevitably will, and we will find ourselves in a world shaped by those bold enough to become our masters.

This is not an attempt to degrade the scientific achievements of U.S. satellites. They have been manifold. But it is specious reasoning to pretend that we can profitably separate peaceful space from military space. Like the earth upon which we walk, the sea over which we sail, and the atmosphere through which we fly, space holds great advantages for both military and civilian use, and it is dangerous and misleading to try to split the two.

Our first national duty is to preserve a free world, from which spacecraft of the future may take off with serenity and to which they can return with confidence. This is the only possible way to insure the achievement of our national goal of utilizing space for peaceful purposes. The horse must be put before the cart.

How, then, do we use space for national survival and eventually for controlled peace in a better, richer world?

One of the best ways is to increase our knowledge of the enemy's actions through reconnaissance, surveillance, and improved communications. But before blindly leaping into space to meet these requirements, the military planner must take a cold look at the advantages and disadvantages. He doesn't go into space because it's there, as a mountain climber does, but rather because it allows him to do things there that he cannot better do anywhere else. Space is an extremely hostile environment. It is difficult and expensive to operate within. One must have a real need to go there before it is worth the effort.

On the other hand, space as an operational medium offers several real, measurable military advantages:

It offers greater altitude and longer line of sight.

Once you are in it, or your devices are in it, the effort required to stay there is quite small. You get a free ride, so to speak, once in orbit.

Space offers the opportunity to pass over enemy territory without violating national sovereignty or committing a hostile act.

By seizing upon these advantages this country can immeasurably better its deterrent position by reducing the vulnerability of the retaliatory force—both manned aircraft and missiles. With an acknowledged missile gap approaching, we need earlier warning against surprise missile attack. Another 15 minutes—the time it takes to drink a hot cup of coffee—would make all the difference in the world.

With 30 minutes' warning—instead of 15—SAC's manned bombers would be off and winging for Russia before the missiles came crashing in upon them; our liquid-fueled ICBMs plus the IRBMs in Western Europe would be topped off and ready to go; NATO's tactical air forces would be airborne, ready to supplement SAC on close-in targets; our national decision-making machinery would gain precious time to assess the situation; and those civilians fortunate enough to possess a fallout shelter could take cover. We would achieve an immeasurably stronger military posture.

We have the technical capability to do this No breakthroughs are needed, beyond the mental breakthrough required to pursue military space programs with the kind of intensity, funding, and priorities accorded the intercontinental ballistic missile program over the past few years.

The military space system closest to attainment is Midas (missile defense alarm system). Midas, a product of collaboration between the Air Force's Ballistic Missile Division and Lockheed, is a satellite bearing infrared, heat-seeking sensors which will locate and track ballistic missile firings anywhere in the world.

Even the brief, 5-minute "glimpse" afforded by the powered portion of ballistic missile flight will allow computers on the ground to compute the trajectories.

Beyond Midas is Samos, a photo-reconnaissance satellite, also a Lockheed product. It will furnish visual evidence that may indicate an attack is imminent. It is designed to provide strategic warning of an impending attack, rather than tactical warning that an attack has been launched.

To be ready in time to be of value, Midas and Samos demand support, both in terms of understanding of their underlying concept and in providing funds, facilities, and people. Neither is an isolated, one-shot satellite, but a complete system, involving several satellites in orbit simultaneously and, equally important, supporting electronic data-processing and communications systems on the ground. These include long leadtime items that must be developed and produced under the concept of concurrency.

Neither Midas nor Samos is the end of the line in its field. Each has great growth potential—Midas in the form of more definite warning and pinpointing of targets through improved infrared techniques; Samos in the shape of better picture resolution, wider fields of coverage, improved picture processing—all designed to get more and better information into the commander's hands more quickly.

Beyond early warning and reconnaissance—the immediate needs—lie communications satellites to better utilize the information derived, satellites to garner weather information (both meteorological weather and the so-called electronic weather which affects electromagnetic communications systems), and satellites to aid in navigation and aerospace traffic control.

As the size requirements for military satellites increase there will be a need for bigger boosters, and for new concepts in booster design—something that is cheap, easy to build, recoverable for other shots. And when satellites get beyond a certain weight—some say 5,000 pounds, others, 10,000—it will be possible to replace some of the electronic equipment with the human hand, eye, and mind—to change course, perform in-flight maintenance, to provide the commander on the ground with human judgment as well as raw information. Satellites could be kept operating longer, space-borne electronic equipment could be less complicated, photos could be developed and interpreted on the spot.

This is the military mission in space, these and other systems yet unforeseen.

Their achievements will make it possible for the free world to keep the peace on earth. Armament control and reduction will begin to make sense. Improved communications and travel will further shrink the globe. International funding could provide enough money for peaceful "far-out" space exploration and exploitation on a scale large enough to be rewarding. Inevitably and inexorably benefits of a peaceful nature will flow across an earth protected from destruction.

Remarks by Mayor Robert F. Wagner Honoring Rabbi Harold H. Gordon

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the remarks by Mayor Robert F. Wagner at a testimonal dinner in honor of Rabbi Harold H. Gordon's 25th anniversary in the rabbinate and 13th anniversary with the New York Board of Rabbis. Mayor Wagner delivered his remarks at the dinner which was held on March 24, 1960, at the Roosevelt Hotel in New York City.

His remarks follow:

REMARKS BY MAYOR ROBERT F. WAGNER IN HONOR OF RABBI HAROLD H. GORDON'S 25TH ANNIVERSARY IN THE RABBINATE AND 13TH ANNIVERSARY WITH THE NEW YORK BOARD OF RABBIS

Rabbi Gordon, Rabbi Golovensky, Rabbi Mowshowitz, Governor Rockefeller, honored guests, ladies and gentlemen, I am happy to be with you this evening and to extend the greetings of the people of the city of New York as well as my own on this happy occasion, this testimonial dinner in honor of Rabbi Harold H. Gordon. This occasion marks his 25th year in the rabbinate and his 13th year—his "Bar Mitzvah"—with the New York Board of Rabbis.

It has been my great fortune during the years of my incumbency as Mayor to learn at firsthand of the work of the New York Board of Rabbis and of Rabbi Gordon in particular. The office of the mayor of the largest city in the world has had many occasions to work closely with the board, the largest representative rabbinic body in the world, serving the largest Jewish community in the world. We have found it easy and natural to work with you.

We have worked together in many areas and our combined efforts have done much to help the men and women of this great metropolis. Since the departments of correction, health, and welfare are served by New York Board of Rabbis' chaplains, my office is in constant touch with you when you recommend chaplains for the agencies of our New York City government. Many of your corps of 120 chaplains serving 180 voluntary and municipal hospitals, mental and correctional institutions, city prisons, homes for the aged, convalescent homes and youth shelters, serve in institutions operated by the city of New York and supervised by its departments. We know the great work that they do, visiting the sick, distributing religious and inspirational literature and conducting religious services on the Sabbath, high holy days, and religious festivals. Your program is the most outstanding of its kind and is a model for similar programs throughout the country.

The Institute for Pastoral Psychiatry, sponsored and maintained by the New York Board for Rabbis for the past 11 years, remains to this day the only one of its kind in America. As a training school for rabbis and rabbinical students, it provides them with a greater insight into their role as spirtual leaders with particular emphasis in the area of pastoral counseling. To a community beset with many problems, such understanding is invaluable. I feel proud that

Bellevue Hospital, our own city institution, is being used as the training ground for this work.

Your advice and counsel have been helpful to me as mayor of the city of New York in many areas. You have not hesitated to speak out on social and economic issues as they arise, whether it is a continuing problem of juvenile delinquency, divorce, revision of our discriminatory immigration and naturalization laws, or a question of civil rights. In our efforts to combat juvenile delinquency, we have organized the clergy throughout the city and have asked them to help us. The New York Board of Rabbis has been prominent in its representation on this body, the mayor's committee of religious leaders to help combat juvenile delinquency. To the work of this committee, you have effectively brought to bear the wisdom and knowledge of your tradition for the benefit of all citizens of this great city.

You have always served as watchman for the Jewish community and you continue to do so, endorsing that which is beneficial and opposing what is harmful. You have never hesitated to raise your voices on the social and economic issues as they arise, and in true prophetic spirit speak out on matters that are of importance not only to the Jewish but also the general community.

In the field of mass education through radio and TV, your sponsorship of religious programs of interest to all faiths of our city is a step forward to closer relationships between peoples of all faiths.

Our honored guest, Rabbi Gordon, I have had the pleasure to meet on many occasions over the years. He has become a familiar figure at the public functions in which I have had the honor to participate. His tremendous contributions to the welfare of our community as a whole and his sincere interest in obtaining the greatest good for all citizens of this city regardless of race, creed, or color, is well known to me. It has been my great pleasure to consult with him on a number of occasions on matters of deep concern not only to the Jewish community but to all the citizens of this great metropolis.

As a member of the mayor's committee on scholastic achievement, Rabbi Gordon has done invaluable service in helping this committee make available to the needy students of both public and parochial schools, 4-year college scholarships.

Recently I had the honor and the pleasure to break ground for the proposed international synagogue and Jewish center at Idlewild International Airport. This romantic project is the brain child of Rabbi Gordon, and, in addition to acting as secretary of the project itself, he is one of its leading spirits.

He is a veteran of World War II and we can all take pride in the role he played in that conflict. His congregation was spread over a 25,000-mile area in the North Atlantic and he flew over a quarter of a million miles serving them. His service to men of all faiths during this conflict earned him the affectionate title of "the Flying Chaplain."

He still travels widely and from time to time I will receive a card from somewhere in this universe, but so far removed from us here that it would seem to come from outer space. The card is signed by Rabbi Gordon and he tells of some interesting visit to some Jewish community far away. I am certain that he has brought comfort and joy to those who were privileged to come within his purview in the far-flung communities of the world.

Finally I should like to say that I know that the greater part of the program of the New York Board of Rabbis was set in motion in 1946. That was the year when Rabbi Gordon first came to work for the board. That was also the year when the Federation of Jewish Philanthropies of New York, an organization which has done so much for our community, added another glorious chapter in their richly endowed book of good deeds, by giving financial assistance to the New York Board of Rabbis.

I want to express the thanks of the citizens of this city to the NYBR for your 79 years of service to the community, to you who serve the whole Jewish community as religion itself serves the whole human being. Without religion and faith and spiritual understanding, we are imperfect human beings. Without the strength and support that our city receives from the NYBR, we would be an imperfect municipality.

To Rabbi Gordon, who is now celebrating his 25th anniversary in the rabbinate, I want to wish the best of everything in the future. I look forward to that day 25 years hence when he will be celebrating his 50th anniversary, and I hope that I will be available and that you will invite me to participate.

Again, my good wishes and congratulations to our guest of honor and to all of you whom he serves on this anniversary celebration.

Thank you.

At the conclusion of his remarks Mayor Wagner presented to Rabbi Gordon, on behalf of the city of New York, a citation, the text of which follows:

CITY OF NEW YORK.

Know all men by these presents that I, Robert F. Wagner, mayor of the city of New York, do hereby cite for distinguished and exceptional service Rabbi Harold H. Gordon, dedicated international religious leader who, for a quarter century, has magnanimously served the Jewish people and, indeed, all peoples; scholar, humanitarian; strong friend of the weak and unfortunate; champion of Jewish rights; beloved and conscientious citizen who contributes much to the welfare of his home community, the city of New York.

In witness whereof, I have hereunto set my hand and caused the seal of the city of New York to be affixed this 24th day of March 1960.

ROBERT F. WAGNER.

Four Negroes and the Vote

EXTENSION OF REMARKS
OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. WILLIAMS of New Jersey. Mr. President, as we near the final days of a long discussion about voting rights in the South, we may well appreciate any words which give a fresh reminder of the importance of the objects we seek. Leon W. Lindsay, in the Christian Science Monitor of April 6, has given us such a reminder in a vivid article.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Apr. 2, 1960]

FOUR NEGROES AND THE VOTE

(By Leon W. Lindsay)

Many Negroes in the South exercise the right to vote; many more do not. Why don't they vote? The reasons appear to range from apathy to register hocus-pocus to actual intimidation. But if Congress passes a voting rights bill this year, at least the legal ruses and intimidation may be eliminated, and perhaps eventually the apathy.

Having been brought up in a rural Deep South community, I tend to think of this impending event in terms of individual Negroes I have known. What will it mean to them? Will they vote wisely? Is the ballot a strong enough lever to pry them loose from an economic system that has kept some of them in the status of lackeys? Will it be more meaningful to the generation now approaching voting age than to their parents?

Giving fictitious names, let us try to see what this most basic of democratic tools might mean to four of my rural neighbors.

We meet them across the counter of my family's country store over which flows more conversation than foodstuffs—conversation being so much cheaper.

In conversations with Phillip Denson, I learn to associate one term peculiarly with him: self-satisfaction. Phillip is the young father of five children and husband of a teacher in the Negro school in our community. He is not formally educated, but I have found that he reads more widely than most of his friends and that he is capable of discussing the significance of the bomb almost as knowledgeably as his favorite ballplayer's batting average.

But Phillip is careful in certain fields to refrain from becoming personally involved. He has set himself certain bounds and is content to stay within them.

Phillip's self-satisfaction stems from steady employment, comparatively good income, home ownership, and a wife who not only makes more than he does but whose family background and professional position give both her and Phillip a great deal of prestige. Phillip is quick witted and industrious. His employer knows he can depend upon Phillip, and they have a good relationship.

Phillip's wife votes in every election. In some southern communities perhaps she couldn't, though she is a schoolteacher and a member of a family that was free and owned property even before the Civil War. But in this community certain standards of education and family background by custom prevent a Negro's being kept off the voting rolls. Phillip could vote, but he disdains it. He is satisfied to influence his wife's vote on the one hand, and on the other hand to publicly malign all politicians.

What will Phillip do when all his friends and neighbors begin to exercise the newly guaranteed privilege? He will probably vote, too, for he will find that to do otherwise would eventually undermine the prestige and superiority he owns. And, I am sure, Phillip will be a well-informed voter.

Phillip has a 12-year-old son. Hardly the age to vote, his chief concern today is whether he will, after graduating from the four-room, four-teacher, seven-grade rural Negro school, ride a segregated school bus to a segregated high school in town, or whether the pressure for integration will provide him the kind of equal opportunity he feels he deserves.

At times I think Harold is a budding politician, himself. Eager, optimistic, friendly, intelligent, and shrewd, he seems always able to barter me out of an inordinate amount of goodies in return for some joyous little task such as restocking a shelf of canned goods.

You can be sure Harold will vote when the time comes. Already he has surpassed his father, and in some ways even his mother. He will, one feels, be ready for more demanding duties of full citizenship than the mere casting of a ballot.

Two of my regular customers during the time I worked in the store come to mind when considering the Negro and the vote. Both Randolph Carter and Leroy Edmunds

are cotton farmers—sharecroppers, or as we call them, half-hands. They farm parcels of river-bottom land on a nearby plantation. Out of what they produce, half goes automatically to the landowner, about one-quarter usually goes to pay the landlord for seed, insecticide, and for day laborers who might be needed to help "chop" (thin out the cotton plants and hoe out the grass) and pick cotton. This leaves about one-quarter for the half-hand—or does it?

Randolph is prosperous for a half-hand; he has three grown daughters, two of voting age, and his wife to help cultivate and harvest his crop. Aside from payment for seed and insecticide, he has little else to settle for, since his family is able to do most of the labor. Therefore, he is able not only to harvest one-quarter of the crop free and clear, but perhaps even more. This means that he clears enough in good years to tide his family over from one crop season to another without borrowing and even without seeking outside work. He has time for long conversations by the store heater during the winter.

Leroy's lot is different. With a wife and three preschool-age children, he has no family assistance with his crop. This means that he is not able to work as large a parcel land as Randolph, and that more than one-fourth of his crop goes to pay for seed, insecticide, and extra labor. And that is not the end of it; he clears so little on his crop even in good years that he annually goes into debt to his landlord for advances for food, medical bills, clothing, and so forth. During the off season he works as often as possible cutting railroad crossties, but since the off season is in rainy winter, much working time is lost.

The chronic and embarrassing burden of debt has driven many of Leroy's contemporaries to leave the farm—to go to the nearest town, or to Chicago, or Houston, perhaps. But Leroy stays on, despising the land he is shackled to, but loving it too much to desert it, one feels. Leroy says little, but his habitual glowering at his shoetops tells much of the struggle within him.

Leroy has never voted, though he has been eligible by age through three general elections. Randolph told me about his one experience at the polls. Once he lived on a plantation where the half-hands were duly registered and summoned to the polling place on election day. There they cast their ballots for the "right" candidate. Illiteracy was no barrier in that election—there was someone to guide each hand in marking a ballot.

Neither Randolph nor Leroy has tried to register. Perhaps it's because of some kind of apathy on their part. It could be, possibly, fear. Maybe they still remember that a few years ago white men threatened to meet with shotguns any Negroes who showed up at the polls. Of course, there were Negroes who voted in that election—and they were not met with shotguns. But for many the threat was enough, and continues to be enough.

How do these men react to disfranchisement? Neither man is illiterate. Each reads his Bible, and Randolph is a deacon in the church. Randolph, ebullient in good humor, tries to shrug it off. ("One crook ain' no diffrunt from 'nuther. We gits the same treatment, so what do we care who is the guv'ment?"). But I know him well and can see the hurt under the sarcasm.

Leroy cannot hide his bitterness. If he were voluble, he would rant. However, he just mutters and stares at his shoetops.

Will they vote under Federal protection? I think they will. Doubtless, they will vote as wisely as some white men, less wisely than others. There are others who will never vote, just as there are whites who do not vote.

Will the vote solve Leroy's problems? Not directly, but it could well serve to lift his vision from his shoetops. It may do much to cut through the disdain of Phillip and the rueful sarcasm of Randolph, to make them even more useful individuals than they now are.

But perhaps it will mean the most to Harold, and perhaps it is Harold who can be expected to make the most of it.

"Equal Opportunity in Housing"—Address by Harris Wofford, Jr., Associate Professor, Notre Dame Law School—Part 1

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. BRADEMAS. Mr. Speaker, I am very pleased to introduce in the CONGRESSIONAL RECORD an excellent address on the subject of "Equal Opportunity in Housing" by Harris Wofford, Jr., associate professor at the Law School of the University of Notre Dame.

The address was delivered on Equal Opportunity Day, November 19, 1959, in South Bend, Ind., at an observance sponsored by the South Bend Urban League and Hering House Community Center, Inc. November 19 marks the anniversary of Abraham Lincoln's Gettysburg Address.

Professor Wofford has a distinguished background in both public and private life. He has practiced law in Washington, D.C., and has more recently been serving as legal assistant to the Reverend Theodore M. Hesburgh, C.S.C., president of the University of Notre Dame and a member of the U.S. Commission on Civil Rights. Professor Wofford served on the staff of the Commission.

As a research assistant to our distinguished colleague, the Honorable CHESTER BOWLES, in 1957, Professor Wofford accompanied Mr. BOWLES to India, Pakistan, Afghanistan, the Soviet Union, Poland, and Yugoslavia.

Professor Wofford holds a degree from the University of Chicago and has bachelor of laws degrees from Yale University and Howard University Law Schools.

He was largely responsible for the organizing of the Conference on Civil Rights held at the Notre Dame Law School on February 14, 1960.

Part 1 of the text of Professor Wofford's address follows:

EQUAL OPPORTUNITY IN HOUSING

(Address on Equal Opportunity Day, November 19, 1959, South Bend Urban League and Hering House Community Center, by Harris Wofford, Jr., associate professor, Notre Dame Law School)

You don't know how glad I am to be here and on time. I was so late to two recent talks on the Civil Rights Commission's report that I was beginning to fear that fate was against me or the report. The story of being bogged down by snow in Peru, Ind., last week, on the way to McCormick's Creek State Park, to talk to Indiana educators on the Commission's findings about school desegregation, is perhaps a good beginning tonight. An oldtimer at the gas station in Peru where we bought some chains to get us through the snow insisted that we should hole up in Peru for the night and let time take care of the roads. And my wife and I were almost fainthearted enough to do so. But the president of the association that was waiting to hear my talk gave us the moral leadership to keep on going. In McCormick's Creek, he said, it was just raining softly. "Drive safely, but keep on driving," he urged. And we did and got through, an hour and a half late. Which shows, as Justice Frankfurter once said and as the Commission on Civil Rights has paraphrased in its report, "It is not time alone that helps, but the constructive use of time." Without the help of sand thrown on the road and some plowing by the State of Indiana, the chains we bought, and the moral leadership of the association president on the telephone, we would not have reached our destination.

This problem of civil rights will take more time, but we are already late enough. We need further assistance from our Government for it is as Justice Brandeis once said, "the potent, the omnipresent teacher" that "teaches the whole people." We need moral leadership from the President of the United States. And we need to keep on driving toward our destination, the full equality of opportunity promised by the Constitution.

There is one other moral in this story. Shortly after we left Peru the snow stopped and turned to slush and then there was only soft rain and we knew the worst had passed. It may be that we passed the worst of the present civil rights storm in Little Rock, but we will not know this until the drive is over. Even when equal opportunity is everywhere established in law and duly enforced there will probably remain the soft rain of private prejudice. This will seem bad enough, of course, and those who never knew the kind of legal discriminations now facing American citizens in some parts of this country will not really believe that things could ever have been so bad.

OUR SELF-EVIDENT TRUTHS

This talk, I hope, will not only be on time, but be at the right time in the right place. For a discussion of the report of the Commission on Civil Rights ought to be appropriate at a meeting called by the South Bend Urban League and the Hering House Community Center on Equal Opportunity Day. On this day 96 years ago this Nation through Abraham Lincoln dedicated itself to the unfinished work of fulfilling the underlying promise of the U.S. Constitution. That promise, solemnly made to the world in the Declaration of Independence, renewed in the preamble to the Constitution, again declared by Lincoln at Gettysburg, enacted as the law of the land in the 13th, 14th, and 15th amendments to the Constitution, and then elaborated by decisions of the Supreme Court and enforced through acts of Congress and the actions of many Presidents rises out of the fundamental proposition that all men are created equal. The very fact that 96 years after Lincoln spoke at Gettysburg the Congress and the President found it necessary to establish an official Commission on Civil Rights, to investigate denials of the right to vote by reason of race and other denials of the equal protection of the laws guaranteed by the 14th amendment, such as enforced segregation in public schools or in housing; the fact that the South Bend Urban League is in existence with so much unfinished work to do in securing equal opportunity here in South Bend; the fact that we can still refer to the equal protection of the laws as a promise—all this demonstrates that, Benjamin Franklin to the contrary notwithstanding, the truth that all men are created equal is not self-evident, at least not yet to enough

of the people to turn the promise into a reality.

In clarifying this basic principle of our Constitution it might help to recall Lincoln's explanation that the Founding Fathers "did not mean to say all were equal in color, size, intellectual, moral development, or social capacity." But they did consider all men equal in their God-given and hence unalienable civil rights. "They meant," said Lincoln, "to set up a standard maxim for free society, which should be familiar to all, and revered by all; constantly looked to, constantly labored for, and even though never perfectly attained, constantly approximated, and thereby constantly spreading and deepening its influence and augmenting the happiness and value of life to all people of all colors everywhere." Enforcement of these equal rights, said Lincoln, would "follow as fast as circumstances should permit." Or, as the present Supreme Court puts it, "with all deliberate speed." But you may say, the men at Philadelphia said this in 1776, yet slavery continued for 87 years; and Lincoln said it again 1863, the year of emancipation, yet the promise of full first-class citizenship is still not fulfilled, 96 years later. That is a long time to wait.

THE GAP BETWEEN PROMISE AND REALITY

The report of the Civil Rights Commission states that "The gap between the great American promise of equal opportunity and equal justice under law and its at times startlingly inadequate fulfillment in practice has * * * been a major—and probably a creative—factor in American history from the beginning of the Nation." But that is not a sufficient answer. The only adequate answer is that this gap between our words and our acts must now become a spark-gap. And at this late date I think that is just what is happening. The tension in the American mind and in American laws has become so great that a flash of illumination is now taking place. The 1954 and 1955 school decisions of the Supreme Court, the 1948 and 1953 housing decisions of the Court, the 1957 Act of Congress to protect the right to vote, the several Presidential Executive orders in the last 10 years establishing the Federal policy of equal opportunity in employment, the many State and local laws prohibiting discrimination in employment, housing, and public facilities, and now the report of the Commission on Civil Rights—all these are part of an electric current now running through our body politic, awakening the conscience of the Nation, and stirring us into action. I would like to add to that list South Bend Mayor Edward F. Voordes' Proclamation of Equal Opportunity Day this November 19, adopting the words of President Eisenhower that "every American who helps, even in the smallest way, to make equality of opportunity a living fact, is doing the business of America."

Tonight I want to discuss what the Commission's report has to suggest for the constructive use of time, on one of the three problems of discrimination the Commission studied. But in focusing on housing I do not mean to imply that Indiana and South Bend have no other problems of civil rights. Nor did the Commission intend to isolate voting, education and housing as the only important aspects to be studied. Now that its life has been extended for 2 years the Commission is studying two other central problems: discrimination in employment and in the administration of justice. In the conclusion of its report last September the Commission stressed "the organic nature of the problem as a whole." Improvement in no one factor alone will suffice, for as the Commission pointed out:

"If the right to vote is secured, but there is not equal opportunity in education and housing, the value of that right will be discounted by apathy and ignorance. If compulsory discrimination is ended in public education, but children continue to be brought up in slums and restricted areas of racial concentration, the conditions for good education and good citizenship will still not obtain. If decent housing is made available to nonwhites on equal terms but their education and habits of citizenship are not raised, new neighborhoods will degenerate into slums."

This organic nature of the problem is no news for the urban league, which has long been working to promote equal opportunity along the whole broad front and to raise both standards of living and standards of citizenship. For the urban league knows from personal experience what the Commission found in its housing study, "that the low-income and employment status of a majority of Negroes is a central fact in the discrimination in housing." Therefore, your current program here to open new opportunities in employment is one constructive use of time that contributes also to opening of new housing opportunities.

THE GOAL IN HOUSING

Let us be clear about our goal in housing. It is not imposition of an artificial pattern of integration by which Negroes are scattered equally, willynilly throughout a community. Rather our aim must be, as President Eisenhower told Congress, "to assure equal opportunity for all of our citizens to acquire, within their means, good and well-located homes." As the Commission's report stated, "there may be many Americans who prefer to live in neighborhoods with people of their own race, color, religion, or national rigin." Mr. Roy Wilkins, the executive secretary of the NAACP, testified in the Commission's New York hearing that there are "colored people in Harlem who wouldn't move out of Harlem if you gave them a gold-plated apartment." There are still some members of national-origin groups—Swedes, Germans, Poles, Italians, Irish, to name a few—who choose to live in the same vicinity with others of their group.

What is at issue is freedom of choice. If, as the Commission's report puts it, "some Americans, because of their color, race, religion, or national origin have no choice but to grow up and live in conditions of squalor and in rigidly confined areas, then all America suffers."

After hearings in New York, Chicago, Atlanta, and Washington, D.C., field surveys in a number of other cities, and reports from State advisory committees in most States, the Commission found such a denial of freedom of choice and equal opportunity in housing to exist throughout the country. Let me read part of the Commission's unanimous finding:

"A large proportion of colored Americans are living in overcrowded slums or blighted areas in restricted sections of our cities, with little or no access to new houisng or to suburban areas. Most of these Americans, regardless of their educational, economic, or professional accomplishments, have no alternative but to live in used dwellings originally occupied by white Americans who have a free choice of housing, new or old. Housing thus seems to be the one commodity in the American market that is not freely available on equal terms to everyone who can afford to pay. It would be an affront to human dignity for any one group of Americans to be restricted to wearing only hand-me-down clothing or to eating the leftovers of others' food. Like food and clothing, housing is an essential of life, yet many nonwhite American families have no choice but secondhand homes. The results can be seen in high rates of disease, fire, juvenile delinquency, crime, and social demoralization among those forced to live in such conditions. A nation dedicated to respect for the human dignity of every individual should not permit such conditions to continue."

THE AFFRONT TO HUMAN DIGNITY

You can see that the central point in this finding is the affront to human dignity. The affront takes two forms: First, the very existence of slums in which some Americans have to live, and, second, the denial to colored Americans of higher incomes of the equal opportunity to better housing in better neighborhoods that is available to other Americans. Slum clearance, public housing, and urban renewal, if carried out with primary attention to the pressing housing needs of lower-income residents, can remedy part of the problem, but only part. A large portion of the slums in our central cities are inhabited by Negroes. If the housing conditions of the present Negro residential centers are improved, but the possibility of living elsewhere—in the suburbs, for instance—is closed to Negroes, then they will continue to call these areas "ghettoes."

The term "ghetto" originated in Venice where the Jewish section was surrounded by a high wall, and entry and exit were regulated by means of an iron gate called in Italian "ghetto." As the Commission's report states, "In this country, the Constitution would prevent any such public manifestation of discrimination. But the invisible barriers to equal opportunity for Negroes are manifest when a Jackie Robinson, with a high income and the respect of the country, cannot find a satisfactory suburban home in the State of New York."

It is this shutting of the door of opportunity to other Americans that is compounding the housing problem of Negro Americans. They, like most newcomers to the cities, like the successive waves of foreign immigrants before them, most of them initially at the bottom of the social, educational, and income ladder, naturally first concentrate in the oldest and worst sections of the cities. But white immigrants who learned the American language and had an American haircut became Americanized—and part of their Americanization was a gradual dispersal among the whole community. As they prospered they were able to move outside these original areas of concentration to better homes and better neighborhoods, and this was a great incentive to them—an incentive for hard work, for saving, for education.

The testimony of Cardinal-Designate Meyer of Chicago posed the uncomfortable question which every American community must ask itself. There are, as the Archbishop of Chicago said, many Negro Americans, "teaching in the classrooms of our universities, pleading cases in our law courts, performing operations in our hospitals, and in short doing work that only the highest intelligences most perfectly trained are capable of." He asked: "Has this new and rapidly increasing Negro middle class been able to choose its place of residence as the children of our European immigrants were able to do? Does the fully competent Negro person have the option we alluded to above? Unfortunately, the only honest answer we can give it, at best, is a qualified no." Cardinal-Designate Meyer stressed that "it is the restrictions against the most capable and self-reliant portions of the Negro population which call the loudest for remedy and which must be rectified most speedily."

The Record in Civil Rights: Republican Promise Versus Republican Performance

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. BOWLES. Mr. Speaker, few freshman Members of this body have ever made such a distinctly favorable impression in and out of the Congress as has the talented and conscientious Member from the Third District of Indiana, my good friend, JOHN BRADEMAS.

Typical of the effective leadership he has exhibited on many public questions are his outstanding contributions to our national thinking on the divisive issue of civil rights.

At the Democratic Midwest conference in Detroit on March 25, he persuasively stated the case for executive leadership if we are to move ahead steadily and soberly toward genuine democracy for all Americans. I call the attention of my colleagues to the text of Congressman BRADEMAS' address, The Record in Civil Rights: Republican Promise Versus Republican Performance. Mr. BRADEMAS' speech follows:

THE RECORD IN CIVIL RIGHTS: REPUBLICAN PROMISE VERSUS REPUBLICAN PERFORMANCE

(Text of an address by Congressman JOHN BRADEMAS, Democrat, of Indiana, at Democratic Midwest Conference, Sheraton-Cadillac Hotel, Detroit, Mich., March 25)

Unquestionably the most memorable experience in my first year in Congress was hearing the magnificent address delivered by Carl Sandburg to a joint session of Congress on the 150th anniversary of the birth of Abraham Lincoln.

I vividly recall the moving and deliberate reading by Sandburg of the opening lines of Lincoln's House Divided Speech of 1858: "If we could first know where we are, and whither we are tending we could better judge what to do, and how to do it."

I do not know a better way to begin a discussion of civil rights than with Lincoln, for somehow this entire problem is represented by that one tragic hero of our history.

ABRAHAM LINCOLN: "WE CANNOT ESCAPE HISTORY"

"Fellow citizens," Lincoln once warned Congress, "we cannot escape history." And we of the Prairie States, of the land that was frontier in Lincoln's time, we cannot escape him. For everywhere we go in our politics today, we find Lincoln coming back. Listen, for example, to these words from a letter Lincoln wrote in 1855 to a Kentucky friend:

"Our progress in degeneracy appears to me to be pretty rapid. As a Nation we began by declaring that 'all men are created equal, except Negroes.' When the know-nothings get control, it will read 'all men are created equal except Negroes and foreigners and Catholics.' When it comes to this, I shall prefer emigrating to some country where they make no pretense of loving liberty."

"If we could first know where we are * * *," said Lincoln. Where are we, this 100th year after his election?

WHERE ARE WE IN CIVIL RIGHTS?

Where are we in completing the great unfinished work he left us, the work of translating into reality the bold statement of the Declaration of Independence that "all men are created equal"? Where are we in civil rights?

It is nearly a century now since slaves became citizens, since the Constitution guaranteed to them the equal protection of the laws and the right to vote. No man who appreciates the complexity of human behavior will deny that time and patience are usually the sine qua non of great change. But a century is a long time to wait.

And where is Lincoln's party, the party whose Representatives in Congress were too busy last month making Lincoln Day speeches back home to sign their names to a discharge petition to force the civil rights bill out of the House Rules Committee?

Where is the Republican Party on this most crucial domestic issue confronting the American people today?

REPUBLICANS IN CONGRESS HELP WEAKEN CIVIL RIGHTS BILL

Having just come from the civil rights debate in Congress, I saw with my own eyes the skillful and cynical way in which Republicans in the House contributed to the erosion of an effective civil rights bill. I do not refer to any single dramatic rejection of civil rights, although there was one occasion when the Republicans in mass joined the Dixiecrats to strip the bill of any voting rights section at all. But I am talking about a steady, persistent effort to weaken meaningful legislation to protect the right to vote and equal opportunity in education and employment.

Day after day, on vote after vote, the majority of the Republicans in Congress either abstained on crucial civil rights votes or voted with their Southern Democratic friends who, it can at least be said, do not when home tell their constituents how hard they're working to pass a strong civil rights bill.

REPUBLICAN "OPERATION EMASCULATION"

This Republican "operation emasculation" is not on rollcall votes so much as on voice votes and teller counts—on the votes that in large part determine the shape of a bill, the votes that the folks back home don't know about.

It is easy to vote for a civil rights bill on the final rollcall. Practically everyone north of the Mason-Dixon line, Republican and Democrat, did so yesterday.

But why is the bill coming out of Congress this year likely to be a weaker bill than the Nation needs? Because when the House was sitting as the Committee of the Whole, when the crucial amendments were being voted on, the votes not recorded by name in the press, the Republicans voted with the "Dixiecrats."

Normally the Republican-Southern conservative coalition operates behind the scenes and quietly. Its cynicism sometimes shows as, for example, when a Congressman who opposes a Federal housing bill offers an amendment requiring racial integration in public housing. He realizes that the conservative Southerners will abstain in order to let the amendment pass and so make it impossible for their liberal southern colleagues to vote for the housing bill as a whole.

Some of you may recall the dramatic moment last year when this cynical effort to kill the housing bill failed because in order to save it Congressman CHARLIE DIGGS, of Michigan, and BILL DAWSON, of Illinois, and the other two Negro Democratic Members of the House courageously led our troops down the aisle to vote against such a rider.

EISENHOWER ADMINISTRATION ASKS FOR WEAK CIVIL RIGHTS BILL

But such close victories in Congress cannot prevail against the Republican-Southern coalition when the coalition is in control of the White House—when a Presidential veto awaits one progressive measure after another.

It is therefore important to understand that it is not simply the GOP-Dixiecrat coalition in Congress that resulted in an inadequate civil rights bill in the House this week. The Eisenhower administration itself recommended a weak bill.

Bowing to the pressures of the coalition, the White House did not even urge on Congress the so-called title III that was stricken from the 1957 Civil Rights Act, the title authorizing the Attorney General to bring equitable suits to enforce constitutional rights, including the right to desegregated schools.

The Eisenhower administration itself proposed this same measure a few years ago and time has only proved the necessity of granting such authority to the Department of Justice. The burden of enforcing the guarantees of the Constitution of the United States ought not to be borne completely by a private organization like the NAACP. According to the Civil Rights Commission, the average cost of one desegregation lawsuit is $15,000.

NOTRE DAME CONFERENCE BACKS TITLE III AUTHORITY

At a civil rights conference at the University of Notre Dame last month, many of the leading constitutional law experts from the major law schools of the Middle West agreed strongly and unanimously that Congress should enact title III authority for the Attorney General into law.

The Eisenhower administration made no effort to win over Republicans in the House or Senate to this proposition and it went down to defeat in both Houses.

The same charge of hesitation and vacillation can be brought against the Republican administration with respect to the central issue in the current civil rights debate—the voting rights provision.

The Commission on Civil Rights, which produced such an extraordinarily able report, was, I remind you, President Eisenhower's own Commission and therefore had not a single northern or liberal Democrat on it. It was headed by a distinguished Republican, John Hannah, president of Michigan State University. That Commission strongly recommended a bill to empower the President himself to appoint Federal registrars to enroll Negro voters when State registrars refused to do so.

U.S. CIVIL RIGHTS COMMISSION CALLS FOR FEDERAL REGISTRARS

Having found the U.S. Government "under present law to be helpless to make good the guarantees of the U.S. Constitution," the Commission declared "some direct procedure for temporary Federal registration" to be necessary—some direct procedure that avoids what the Commission described as "the delays inherent in litigation."

"The burden of litigation involved in acting against each new evasion of the Constitution, county by county, and registrar by registrar, would be immense," said the Commission.

What was the administration response? For months it said and did nothing. It poured occasional cold water on the Commission's plan. Then, when mounting pressure from Democratic Members of Congress to adopt the registrar proposal made clear that the administration could no longer defend its previous pallid civil rights recommendations, when the findings by its own Civil Rights Commission of mass disfranchisement proved too politically explosive, when it became evident that some legislation had to be proposed to enable the Federal Government to guarantee the right to vote—what did the Eisenhower administration do?

ADMINISTRATION OPPOSES FEDERAL REGISTRARS

It came up with a scheme for more court litigation and court-appointed referees.

I hope profoundly, as I know you do, that the referee plan will get the job done that needs so sorely to be done, insuring the right to vote to millions of American Negro citizens now effectively disfranchised.

But I want to make very clear that the liberal Democrats of the House and Senate have done their best to win a stronger and better measure in accord with the recommendations of the Civil Rights Commission. Much of the credit for this effort in the House of Representatives goes to two extremely able and dedicated freshman Democrats, Congressmen JIM O'HARA, of Michigan, and BOB KASTENMEIER, of Wisconsin. Although first termers, they showed vigorous leadership during the course of the civil rights fight in the House these last several days.

CONGRESSIONAL DEMOCRATS SUPPORT FEDERAL REGISTRARS

As you may know, last week Congressman KASTENMEIER proposed and brought to a vote in the House Senator HENNING'S Federal enrollment officer plan, which combines both judicial and administrative approaches. The Hennings-Kastenmeier proposal is a dual trigger plan whereby either a Federal court or the Civil Rights Commission—which is to say, either a judicial or an executive official—could make the initial finding that a voting registrar or other State or local official had deprived persons of an opportunity to register. The President would then be advised and empowered to appoint Federal enrollment officers—registrars—actually to register disfranchised Negroes on a large scale.

But the Republican southern coalition voted this proposal down.

The liberal Democrats in the House then proposed an amendment to the Attorney General's plan to provide that once the pattern or practice of discrimination had been found, the disfranchised Negro would not have to go through the indignity of applying to the local registrars who had been found to be discriminating—they could come directly to the Federal court referee for registration. But the heirs of the party of Abraham Lincoln refused to accept even this improvement.

CONGRESSMEN KASTENMEIER, O'HARA OF MICHIGAN SHOW LEADERSHIP

We did succeed, just barely and in large part due to the articulate leadership of JIM O'HARA, in winning enough Republican votes to pass his amendment assuring a Negro swimming in the sea of this litigation the right to vote provisionally and to have his vote impounded, pending final determination of his application on appeal.

Surely this amendment will make the plan more effective. But you should have seen how many Republicans either abstained or voted against this obviously strengthening amendment.

Of equal significance was a technical amendment authored by Congressman WILLIS, of Louisiana, an amendment that placed more burdens on the back of the Negro applicant with respect to what he must do and prove to get registered—an amendment that could serve no good purpose, an amendment which even the Attorney General and the Republican leadership opposed. Yet probably a majority of the Republicans who voted, and not many did, voted with their southern colleagues.

REPUBLICAN PARTY OPPOSES CIVIL RIGHTS COMMISSION PROPOSALS

Hear, then, the reading of the first lesson, the story of how a Commission on Civil Rights proposes and the Republican Party disposes.

Against the fundamental finding of the Commission and against the overwhelming advice of constitutional law experts who made clear that this problem was more appropriately a responsibility of the executive branch, the Republicans pressed for adding more weight to the backs of the already heavily burdened judicial branch of our Government.

The entire posture of the Republicans in this matter is another example of the effort of this administration to sweep its political problems under the judicial rug. As Prof. Paul Freund, of Harvard, said in a memorandum to Senator KENNEDY, "The Commission plan brings the President into the process of safeguarding the right to vote. The Justice plan seems designed to shield the President from any such participation."

REPUBLICANS WOULD ADD MORE BURDEN ON COURTS, SHIELD EXECUTIVE

"There is reason to believe," says this leading constitutional law scholar, "that the Federal judges have been shouldering more than their fair share of responsibility in this general area and that in all fairness the executive branch should lend its weight to the discharge of this national responsibility."

This was, I might add, the predominant view of the law teachers at the Notre Dame Conference on Civil Rights.

Yet the administration turned its back on this body of legal opinion to adopt the approach that requires Negroes to go through a court process to register. How many white people would get registered to vote if they had to go through court litigation and the possibility of cross-examination on the witness stand rather than taking 5 or 10 minutes to complete an application form?

I do not suggest that we judge the Republican record on civil rights on the basis of their actions on this bill alone. This is only the top of the iceberg, the part that shows. What doesn't show but which the Civil Rights Commission saw was what the Commission described as the disappointing record of the administration in using and testing the power granted in the 1957 act to protect the right to vote.

In over 2½ years the Attorney General has brought only four suits under this provision and all these only after the Civil Rights Commission or the press had brought the facts to light.

GOP OFFERS ONLY PLATITUDES ON SCHOOL DESEGREGATION

The lack of imaginative leadership in the field of school desegregation is, if that is possible, still more tragic. Adlai Stevenson incisively summed up the failure of the administration to show the way when he said there has been nothing between the platitudes and the bayonets.

The President has talked a great deal about law and order but he has never used the majesty and dignity of his great office to help the American people understand the nature of the problem, the constitutional and moral principles involved and the variety of possible solutions.

This year when I spoke to the freshmen at Howard University in Washington, D.C., one Negro student asked me why it was not better to have Republicans in control of Congress because of the opposition of southern Democrats to civil rights legislation. It was a fair question but I am bold to say I think my reply was fair, too. I told him that by and large the Republicans simply didn't believe in effective civil rights action, and when I reminded him that in all President Eisenhower's 7 years in the White House he had not once made a nationwide television plea for action on the most burning domestic issue of our day, I was greeted with a volcano of applause.

The Negro students of our country are very perceptive in assigning the blame in this matter where it belongs.

STATE DEPARTMENT HITS SOUTH AFRICAN SEGREGATION BUT PRESIDENT HESITANT ON U.S. SEGREGATION

It is particularly ironic that, while the President hesitates to condemn segregation in the United States, our Department of State this week in the most blunt language deplored the violence used by South African police against Negroes who demonstrated against segregation in that country.

"In this and like communities," Lincoln said, "public sentiment is everything. With public sentiment, nothing can fail; without it, nothing can succeed. Consequently he who moulds public sentiment, goes deeper than he who enacts statutes or pronounces decisions. He makes statutes and decisions possible or impossible to be executed."

What has President Eisenhower done in these crucial years since the 1954 decision to mould public sentiment? He says that this is a problem of the minds and hearts of men but what has he done to reach their minds and hearts? It is no adequate response to say that he sent in troops to enforce the law when he says he hasn't even told his wife what he thinks about the Supreme Court's desegregation decision.

I direct your attention to the sit-in demonstrations throughout the South. President Eisenhower said that he did not want to make any judgment about the lunch-counter demonstrations "because I'm not in a position to."

Responds the brilliant New York Times correspondent, James Reston, "Why isn't he?" One hundred years after Lincoln's election, adds Reston, an American President "ought to be willing to say at least a word for the Negro trying to eat a hamburger next to a white man in Atlanta."

FATHER HESBURGH SAYS LAW HELPS CHANGE MINDS AND HEARTS

And while I have indicated my awareness of the truth in the contention that ultimate solutions must come from individual minds and hearts, I must here repeat what the Reverend Father Theodore M. Hesburgh, president of the University of Notre Dame and a distinguished member of the Civil Rights Commission, said about the role of legislation in arriving at these solutions. Said Father Hesburgh "Law, defining the goals and standards of the community, is itself one of the great changers of minds and hearts. In this democracy, law points the way toward ultimate freedom and justice for all Americans, everywhere in our land."

But this is only part of the story of the Republican record in civil rights. The other part concerns the economic and social measures necessary to lift the level of living of all the disinherited sectors of our population—the measures of economic and educational advancement required if we are to tap the full creative potential of the people of our land.

The President's Commission on Civil Rights addressed itself to this problem as well. "Prohibiting discrimination in voting, education, and housing, or other parts of our public life will not suffice," said the Commission. "The demoralization of a part of the nonwhite population resulting from generations of discrimination can ultimately be overcome only by positive measures. The law is not merely a command and government is not just a policeman. Law must be inventive, creative, and educational."

CIVIL RIGHTS COMMISSION CALLS FOR ACTION IN HOUSING

The Commission suggested some positive measures. In housing, it found that the "disabilities of colored Americans are part

of a national housing crisis involving a general shortage of low-cost housing."

"Since colored people comprise a rising proportion of the city dwellers with lowest income, these slums are becoming increasingly colored," the Commission noted. From this finding, the Commission concluded "that for decent homes in good neighborhoods to be available for all Americans, two things must happen: the housing shortage for all lower income Americans must be relieved, and equality of opportunity to good housing must be secured for colored Americans."

I am sure all of us here can agree with the Commission that "equal opportunity in housing will come more readily as part of a great program of urban reconstruction and regeneration." But we must equally be aware of the way in which the effort of a Democratic-controlled Congress to frame an adequate program for slum clearance, urban renewal, and low-income housing has been frustrated and indeed twice vetoed by a Republican administration unwilling to make the investment which prudence and sound economics indicate.

PRESIDENT IGNORES CIVIL RIGHTS COMMISSION HOUSING PROPOSAL

Nor has the Executive order calling for an end to discrimination in all Federal housing programs, which the Civil Rights Commission urged the President to issue last September, yet seen the light of day. In these 8 gray years there has been little inclination to undertake the great program of urban reconstruction and regeneration which the Commission held to be essential to the promotion of human rights throughout the country.

The same negativism that has characterized the administration attitude toward housing holds true of education. The Commission report stresses the necessity of improving the facilities for public education as part of the solution to the difficulties posed by desegregation.

"Better teachers and better schools," says the Commission, "will go a long way to facilitate the transition in public education."

NIXON TALKS FOR EDUCATION BUT VOTES AGAINST IT

But again the contrast between Republican promise and Republican performance is eloquent. Only a few days after a Chicago speech on January 28 in which he said, "Inadequate classrooms, underpaid teachers, and flabby standards are weaknesses we must constantly strive to eliminate," Vice President NIXON cast a tie-breaking vote in the U.S. Senate to kill a bill to provide Federal funds for both classrooms and teachers' salaries.

Nor has the administration taken any action on the proposal by Commission Chairman Hannah, Father Hesburgh, and Commissioner George Johnson that Federal aid to colleges and universities be conditioned on the practice by those institutions of nondiscrimination.

The Executive actions which the Commissioners proposed in housing and education require no lengthy congressional debate, no court litigation. They require only a President with a will to act. As Father Hesburgh told the Notre Dame Conference on Civil Rights, "this is a simple thing that could be accomplished tomorrow morning if those in power would decide to do something about it."

GOVERNOR WILLIAMS OF MICHIGAN URGES PRESIDENTIAL LEADERSHIP ON CIVIL RIGHTS

Governor Williams, whose profound dedication to human rights inspires us all, has made this same plea to the President in a first-class article in the February 18 issue of the Reporter magazine. He specifies the many powerful avenues of action the President could pursue tomorrow morning if he were determined to make a moral breakthrough on this problem—the kind of action President Roosevelt began with his wartime Fair Employment Practices Committee and that President Truman continued with his Executive orders calling for equal opportunity in the Government service, the armed services, and in the field of Government contracts.

Once again to quote the Civil Rights Commission: "To eliminate discrimination and demoralization, some dramatic intervention by the leaders of our national life is necessary."

CHESTER BOWLES SAYS CIVIL RIGHTS A NATIONAL PROBLEM

We Democrats of the Middle West cannot pretend that we have done all that we should have done or that our part of the United States is practicing what we so often preach. As CHESTER BOWLES so well reminds us, civil rights is not a regional but a national problem.

Nonetheless, good starts have been made—laws against discrimination in employment and housing in our cities and States, and not laws only, but agencies and commissions working to bring light rather than heat into these difficult areas of our public life.

The Civil Rights Commission reported that there were 13 States and 34 cities with laws against discrimination in some field of housing, but I understand that Michigan and Minnesota are the only two States of the Middle West on the list. We lag badly behind the pioneer States of Connecticut, Colorado, Massachusetts, New York, and Oregon.

MIDWEST HAS CIVIL RIGHTS PROBLEMS IN OWN BACKYARD

So we have work to do. We will be far stronger in our struggle to protect the right to vote in Mississippi and to encourage desegregation of the schools in the Deep South if we more squarely face up to the tests peculiar to our own part of the country—equal opportunity in employment and housing and the problem of de facto school segregation because of residential racial concentrations.

It ought to be clear to all of us who live in the Middle West that we will be more effective in the fight for civil rights throughout our Nation and that we will obtain a stronger platform on civil rights at Los Angeles and more resolute action from the next Democratic administration if we accept fully our own moral and political responsibility here at home.

So that, in shorthand, is where we are.

Whither are we tending?

MATIN LUTHER KING: "IF YOU HAVE WEAPONS, TAKE THEM HOME"

"The wind of change is blowing," Prime Minister Macmillan warned the Parliament of the Union of South Africa. It is blowing not only on that continent just now emerging onto the stage of world events, but it is blowing in this country, too, in the massive Negro demonstrations at lunch counters, in the passive resistance symbolized by a Martin Luther King, who tells his people in soft but fearless words: "If you have weapons, take them home. If you do not have them, please do not seek to get them. He who lives by the sword shall perish by the sword."

This is a dedication and a spirit that will not be easily overcome. Its intensity is a measure of the change that is upon us. But it is not a change that should take us by surprise. For it is a change which means simply that the gap between the noble promise of our Constitution and its fulfillment in the life of our country is at last being closed.

EARLIEST CHAMPIONS OF CIVIL RIGHTS WERE SOUTHERNERS

For the American dream is now to become a reality for colored Americans as well as white ones. The dream which Thomas Wolfe of North Carolina put into these words—and let us remember that both the author of the Declaration of Independence and the earliest champions of civil rights, the men who got the first 10 civil rights adopted as our Bill of Rights, were southerners—that dream is alive and at work in the minds and hearts of southerners today, black and white, and of northerners, too.

It is this dream which it must be the primary purpose of the Democratic administration of 1961 to shape into reality, the dream and promise described by Thomas Wolfe:

"To every man, regardless of his birth, his shining, golden opportunity, to every man the right to live, to work, to be himself and to become whatever things his manhood and his vision can combine to make—this, seeker, is the promise of America."

Loyalty and Disclaimer Affidavit in the National Defense Education Act

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, April 8, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a further series of articles and editorials from student publications regarding the loyalty oath and disclaimer affidavit in the National Defense Education Act.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the Simmons College News, Mar. 18, 1960]

WHAT'S WRONG WITH LOYALTY OATHS?

Not many people approve of the loyalty oath and affidavit provisions in the National Defense Education Act. Members of the academic community at large who have spoken at all, have insisted firmly that section 1001(f) is very bad indeed.

Although most students walk around spouting this altogether correct judgment, one suspects that they really do not understand what it is that makes loyalty oaths and affidavits "bad." What can be wrong in making a written affirmation of our loyalty, when we are expecting to borrow money from the taxpayer's pocket?

Loyalty oaths and affidavits are offensive because they violate the relationship between the individual and the Government established in the Constitution. Every American is guaranteed freedom of speech, thought, and belief. This individual does not exist to serve the needs of the government; the Government exists to serve the needs of the individual. In this relationship, a set of laws is set up in order for the Government to protect the individual. Most crimes punishable by law are infringements of these "Thou shalt not * * *" laws. (N.B. commit murder, park in a tow zone.)

A COMPACT

Thus we have made an agreement, for our own safety, not to do certain things. At the same time we are guaranteed some inalienable rights. Implicit in these rights is our freedom to choose any other manner of speech, thought, or action that we please. These choices have nothing to do with the law. The law does not tell us what to say, think, or do; it simply tells us what we cannot do if we expect to enjoy the services of the Government.

The affidavit which appears in section 1001(f) of the National Defense Education Act states that the loan recipient "does not believe in, and is not a member of, and does not support any organization that believes in or teaches; the overthrow of the U.S. Government * * *." In other words, the affidavit passes judgment on a person's belief.

When a student is required to sign such a statement, he is not just saying that he won't plan to overthrow the Government. He is in effect admitting that it is all right for the Government to tell him what he must believe, as well as what he must not do. It may seem as though we belabor an obscure point. Yet this point nevertheless violates the agreement between the individual and the Government which has heretofore guaranteed intellectual freedom. A requirement of belief or conviction conflicts with our basic tradition of intellectual noninterference.

STUDENTS DON'T OPPOSE LOYALTY

We do indeed wish to show our loyalty, but we do not wish to be forced to show our loyalty by signing oaths. Says presidential aspirant JOHN KENNEDY: "I would be concerned, if we cannot eliminate this provision, about the United States of America. Never before have we tried to legislate orthodoxy in our colleges. Never before have we sought to put college students in jeopardy for their private beliefs. Never before have we assumed a scholar is disloyal until he swears to the contrary."

"Surely this is not the way to 'catch up' with new Russian excellence—by imitating their objective of teaching students what to think instead of how to think * * *. Do we really believe that loyalty can be reduced to an automatic formula, coerced and compelled instead of inspired?"

When the Kennedy-Clark bill comes before the Senate this month, it will advocate only the removal of the affidavit. (Supporters of the bill feel it will be impossible to pass legislation calling for removal of both oath and affidavit.) The oath is not opposed as heavily. It states the following: "I do solemnly swear that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and the laws of the United States against all its enemies, foreign and domestic."

JUST AS BAD

Although all civil servants are required to take a similar oath, it is fully as objectionable in principle as the affidavit. In a person's American citizenship, his "faith, allegiance, and support" is assumed. A man's loyalty is always taken for granted according to law until he is convicted of treason. Although a citizen may not do certain things, there is nothing he is compelled to do for the specific purpose of proving his loyalty.

Presence of the oath (as well as the affadavit) in the NDEA implies disloyalty—it would not be included if there were no question. Yet an assumption of guilt is not ever made in a court of law before a person is tried. He is innocent until proved guilty. Thus a student who receives loan money should be assumed loyal until proved disloyal. He should not be required to state his loyalty.

Because our Bill of Rights distinguishes our Government from totalitarian governments, we must prevent ourselves from destroying our own freedoms. We therefore deplore the oath and affadivit, we support the Kennedy-Clark bill which will remove the affidavit, and we implore our Congressman to vote for it. Furthermore, we insist upon the removal of the loyalty oath from all contracts which the Government now administers.

[From the Skidmore College News, Mar. 17, 1960]

SKIDMORE JUMPS TO NDEA CALL

(By Betty Garman)

The NSA board reports a great response to the efforts it made last week to educate the campus about the National Defense Education Act.

Hoping to encourage students to write directly to Washington stating their views, NSA distributed 703 postcards in a total of 18 hours, and over 400 copies of information about the NDEA were picked up by students at campaign headquarters in the mailroom.

Approximately 400 students signed the petition to be sent to Senators KENNEDY and CLARK. The board feels, however, that the petition will be meaningful only if a majority of the student body signs; it will be circulated again this week.

The actual success of the campaign cannot be measured in the quantity of material distributed. It will only depend on the responsibility of each student to carry through her stated desire to write a letter. Post cards and letters should be mailed as soon as possible, for the debate on the NDEA will probably follow soon after civil rights.

It is also important that each person write her Representative in Congress for only 10 percent of the lower House has chosen sides at present. The Senate is nearly assured the 52 votes necessary to pass the legislation. However, the strength of the Senate stand may determine the Representative vote.

[From the Eastern Michigan University Echo, Mar. 10, 1960]

POSTSCRIPT: LOYALTY OATHS

"For here we are not afraid to follow truth wherever it may lead, nor to tolerate error so long as reason is free to combat it."
—THOMAS JEFFERSON.

Student council's action against the loyalty oath of the national student defense loan program last week seems to have been the stirring rod necessary to perk up student reaction on an issue of national importance.

Judging from the letters received by the Echo this week, which are printed on this page, the council's position is not cheered unanimously by all EMU students.

We would have been concerned had the council attempted to convey the idea that their opposition to the loyalty oath reflected unanimous student body approval. They, of course, did not do this. The person who proposed the motion assures us that the statements to be sent to Members of Congress stipulate that the opinion expressed is that of the council only.

We welcome the action of the EMU branch, American Association of University Professors, which backs the council's resolution against the oath.

And we're happy to see students voice their opinions, whatever they be. For the record, we'd like to reiterate our stand on loyalty oaths:

As has been pointed out, under the program, college students—and only college students—are forced to have their loyalty questioned among all civilian groups which receive Government loans or aid.

Nobody else—from the farmers who get loans for their crops to members of REA co-ops to big publishers of magazines and newspapers (including the Daily Worker) who are subsidized by the Government Post Office to persons receiving Government insurance under the FHA program—has to sign the loyalty oath required of college students.

If the oath were an across-the-board affair—where anyone receiving Federal loans had to sign—objections wouldn't be so strenuous. But why are college students singled out? Why is the loyalty of college students suspect?

More important, however, is the fact that the loan program can inhibit free speech, investigation, and thought. Kentucky's venerable Senator COOPER put it thus in Senate debate on the oath.

"Why then are we asking these college students to prove their loyalty? Is it because we distrust them? Is it because we distrust the teaching in our colleges? Is it because we distrust a free system of education—the search for ideas, and the search for truth?

"These young boys and girls will change their minds time and time again while they are in college. A few of them may become Communists. Among the hundreds of thousands who go to college under this bill there may be a dozen, or there may be 20, or 30—or there may be 50—who will become Communists. But there will be 200,000—if this is the full number expected in the program who will be loyal to this country.

"The very essence of our system is that it is free—freedom of ideas, freedom of search for the truth. We must believe that the free system of education will win out over conformity—the conformity of communism."

The belief that the loyalty oath is necessary to help trap Communists through perjury is frowned upon by President Eisenhower's Secretary of Health, Education and Welfare, Arthur Flemming. In calling for the repeal of the loyalty oath, he points out that "laws designed directly and specifically" are already on the books to deal with anyone "receiving assistance under this act (who) is identified as a person who is in violation of our internal security laws."

[From the University Daily Kansan, Feb. 17, 1960]

MURPHY AND THE OATH

(By Doug Yocom)

We doff our hats to Chancellor Franklin D. Murphy for his stand on the loyalty oath and non-Communist affidavit.

He said his own opinion is that the loyalty oath is "unnecessary and improper" in regard to student loans. He gave the university's stand as being:

"The money is being given to the student on an individual basis. Therefore, it is strictly left up to the student to decide whether he wants to sign the papers or not."

This is only fair. After all, a recent survey of 379 KU students showed that 47 percent felt they were not familiar enough with the loyalty provisions of the National Defense Education Act to form an opinion on the oath. The university should not refuse the NDEA loans with almost one-half of the students not knowing why. It would be equally unfair to outlaw the loan fund when 29.5 percent of the 53 polled said they opposed the oath but believed KU should continue using the fund.

Dr. Murphy has stated the official university stand on accepting the Federal loans is based on the individual's own decision. If a student feels the loyalty provisions of the loan are objectionable, he has to answer to his own conscience.

Technically, the loyalty provisions can be divided into two separate parts. The loyalty oath asks the student to once again go through the formality of swearing allegiance to the U.S. Government. The disclaimer affidavit asks the student to swear he is not a

member of a subversive organization or any organization "that believes in or teaches the overthrow of the U.S. Government by force or violence or by illegal or unconstitutional methods."

We can see no purpose in the disclaimer affidavit. A card-carrying Communist would not have any qualms against swearing falsely to the document. And who determines what organizations are subversive? The affidavit does not specify the organizations that are disloyal. Could we be convicted of perjury if an organization we joined today would become labeled as subversive tomorrow? The affidavit does not say. The state is belittling the individual by striking blindly in hopes of finding a few subversives.

There is another danger in having the affidavit. The Federal Government could decide to extend the provisions of the oath. It might read "are you now or have you ever been in a group which openly discussed Marxism?" Or, equally as ridiculous, "are you in favor of recognition of Red China?"

Our wrath descends upon the loyalty oath as much as the disclaimer affidavit. It is an honor to recite the Pledge of Allegiance to the American flag or blend our monotone voice to the music of "The Star-Spangled Banner." Doing either is an American tradition.

But the loyalty oath implies that Uncle Sam does not trust the judgment of American youth. If we, after 15½ years of education, are not mature enough to distinguish communism from socialism or fascism or democracy, it is doubtful we will ever be able to make these judgments. Forcing us to give out allegiance so we can obtain a few dollars is putting patriotism on a material basis. We place our loyalty alongside any professional patriot in the American Legion. But we resent anyone trying to buy it. Loyalty is difficult to judge in terms of dollars and cents.

[From the Montana State University Kaimin, Jan. 22, 1960]

THE OATH RETURNS TO HAUNT

That old bugaboo, the loyalty oath, is back with us again, only this time it's after students, not "evil Red professors." Many had thought this unpleasant episode in academic history would have been interred with the skeletons of the anti-Americans during the early 1950's. Many had hoped that its implications that those who didn't sign were Communists and traitors would have been forgotten. No, not yet.

This time the oath is required of all students receiving financial aid from the Federal Government under the terms of the education act. Several colleges and universities have refused to accept Federal funds as long as the oath remains a part of the requirements for receiving aid. Others, have accepted the funds grudgingly, indicating the disapproval of the loyalty oath requirement.

Recently President Eisenhower told a press conference that he did not approve of the inclusion of the loyalty oath requirement in the Education Act saying "when we begin to single out any group of citizens and say, 'this is a matter of legal compulsion,' I can see why they are resentful."

That is exactly the point. The oath implies that those required to sign it are suspect of their loyalty to the United States.

It's hard to understand why Congress would repeal the Taft-Hartley Act's requirement of an anti-Communist oath by union officials and at the same time defeat Senator JOHN KENNEDY's motion to delete the loyalty oath from the Education Act. Can it be that our Nation's principal internal enemies lie within ivy-covered walls and sulk in ivory towers?

The oath is an insult and defeats the purposes of the Education Act, to train specialists essential to the defenses of our Nation. But what Communist, or other subversive would hestitate for a moment to sign such an oath?

There is only one solution to the problem created by the oath and that is to bury it.

The only use the oath was to serve as a foundation for the dreams cherished by a few who dearly hoped that it would scare away anti-Americans (Communists, segregationists, integrationists, etc., ad nauseam).

[From the University of Kansas Daily Kansan, Dec. 9, 1959]

DON'T QUESTION OUR LOYALTY

(By George DeBord)

Section 1001(f) of title X of the National Defense Education Act of 1958 sits like a tin can on a fence post.

Nobody can pass it by without throwing a rock.

Educators and students from Maine to Oregon are taking potshots at this section, the so-called loyalty oath.

The American council on education opposes the affidavit for a number of reasons. The council calls it discriminatory, unfair, inappropriate, superfluous, and ineffective, and says it involves Government interference in institutional affairs.

Each argument is well supported.

But these are just so many words in a controversy already muddled by weighty writing. We think the president of Harvard University got to the heart of the objections when he said:

"Arguments for the requirement reveal an unwarranted lack of confidence in American young men and women, in American education, and in free inquiry."

In support of the oath a Minnesota student wrote the following to the university's newspaper:

"Perhaps I may sound a little old-fashioned in this era of liberal freethinkers, but I am a proud American citizen and even a little bit patriotic.

"I would be more than glad to sign any kind of paper stating this."

We are equally proud to be Americans, but will line up behind the Harvard man to cast the next stone at this can of distasteful stew.

We object to the loyalty oath for the very reason the Minnesota student supports it. As Americans we cherish the right to think and do as we please. We will fight any intrusion upon this right.

The oath, in effect, asks us to guarantee the Government that we are loyal citizens. This is like telling a man he must prove his love for his mother. It is an insult.

The question becomes a matter of principle. We maintain that we are good Americans and do not have to prove it to anyone.

The insecure thinking behind the oath—thinking that spreads distrust among our people—this we feel is the real threat to our freedom.

We do not fear the few Communists who are in this country. We fear the men who preach patriotism while they destroy the trust that is essential to our unity. For this unity is the real source of our strength.

No Nation can hope to survive, that is, built on a foundation of paper.

[From the University of Washington, Nov. 30, 1959]

OATH REQUIREMENT PROTESTS TOO LATE

(By Mary Richardson)

Two of the Ivy League "giants," Harvard and Yale, have announced their withdrawal from the Federal student loan program as a protest over the loyalty oath requirement. The two universities join the ranks of six other schools who have refused to accept the oath on the grounds that it violates the principle of academic freedom.

Certainly these institutions have a right to protest the Government's demand for a loyalty affidavit. And just as certainly the eight schools involved have little real need of the funds they are relinquishing in the name of educational liberty.

All the schools who have wtihdrawn are extremely well-endowed colleges and universities. On the other hand—and may we utter an unhappy sigh here—the University of Washington is not. In common terms, "We sure could use the money." Consequently, it would be unwise for the university to consider a similar withdrawal.

We are not saying, however, that we should not protest the forcing of the loyalty oath upon students. To the contrary, we feel that the original lack of protest was a basic factor in the inclusion of the oath.

The inadequate number of public complaints allowed the requirement to be left in the bill when it was passed by Congress. And students alone were not to blame—even many of the faculty members on this compus last spring would not make a statement concerning the oath.

The oath itself seems like a kind of window-dressing, a holy-holy attempt to permit only the good and the pure to get an education on Government funds. The truth of the matter is that little faith can be put in such oaths.

Students—and faculty—on this campus should let their protests be known. Only by making our feelings public can we expect any action to remove the oath from the loan program.

National Library Week—Union County, N.J.

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mrs. DWYER. Mr. Speaker, the public library has been called the university of all the people. This week, National Library Week, is an appropriate occasion for the Congress of the United States to recognize the irreplaceable role of the library in all our lives. We who represent the people here at the seat of the National Government should be especially aware of the special contribution libraries make in bringing the information and understanding on which the people must rely in the work of self-government.

Under a previous consent, Mr. Speaker, I am including as a part of my remarks a most informative article which appeared in the April 4 issue of the Plainfield (N.J.) Courier-News, and which describes one of the finest public libraries in our area, the Plainfield Public Library and Reading Room.

I also include an editorial from the April 7 issue of the Summit (N.J.) Herald which I believe sums up briefly and cogently the real and lasting value

of libraries—as "treasuries" which "open our minds to other views."

The articles follow:

[From the Plainfield (N.J.) Courier-News, Apr. 4, 1960]

LIBRARY ALL THINGS TO ALL PLAINFIELDERS

(By Teresa Polychronis)

Did you know that the Plainfield Public Library and Reading Room has something to offer every man, woman and child in this area? Whether you work, or keep house, or go to school, you will find something in line with your interests, hobbies and needs.

Go over to the library one of these days (it's at the corner of Park Avenue and West Eighth Street), look around and talk to one of the librarians. Chances are you might decide that a whole "world" can be found in that old Job Male building and its annex, the Carnegie building.

The library, with reason, has been called: A problem solver, a how-to-do-it expert, a recreational center, an entertainer, a meeting place, a study hall, an art gallery, a consultant, a house of knowledge, a preserver of the past, a conserver of the present and a builder of the future.

"Our library can be more things to more people than most public libraries and can cater to more interests because private funds help us to do things we couldn't do otherwise," Lynniel A. Moore, the director, said today.

Although the library is tax supported, it benefits greatly from moneys left to it in its early days by far-sighted Plainsfielders.

"Not only is our library a public library," Moore explained, "but we have had to build up a collection which ordinarily falls into the realm of a university library because of a large student population here."

"Many have commented that this service is unusual," he added.

"Why does it have so much variety?"

"We have had to build up many collections because there are so many community groups and because the community is so active culturally," he answered.

The library's services are not limited to Plainfield residents. It includes the entire area, since residents of other communities can join for a fee. One membership is good for a family.

Perhaps one of the library's most widely known services is the circulation of materials. However, you may not know that more than books, pamphlets, and magazines are included. Also available for the asking—if one has a library card—are motion picture films, recordings, portfolios (mostly of prints and art reproductions) and vocal music scores.

The library also maintains a rental collection, including best sellers and other popular books.

What about the library's special collections?

Besides the standard reference facilities one finds in a college library, the Plainfield library has a genealogy collection, Plainfield history and New Jersey history collections, a large collection of scientific books and periodicals (maintained by the Babcock Fund), a large Americana collection (maintained by the Tyler Fund).

The library has microfilms of the Courier-News and former Plainfield newspapers going back to 1837, the New York Times, and the Saturday Review. Bound copies of the New York Times, published during the Civil War, are shelved in the basement.

Less well known is the library's extensive art collection. Moore said it very often is lost to the public because of space limitations which forbids a proper display.

Besides operating a children's library, with a children's librarian and staff, the library regularly conducts story hour and film programs for the youngsters.

Among activities for adults are great books discussions groups, and film programs. Concerts and art and photography exhibits are regular occurrences at the library.

Rooms within the library are available for public meetings. Many local groups, ranging from the Camera Club to political parties meet there.

Have you or your family or your club or church members ever wondered where you could get information you need right away?

The library staff answers questions and prepares reading lists and bibliographies. They are available to answer anything and everything within their power, except contest questions.

Besides local inquiries, the library receives many questions from other communities and States.

Did you know the library can help you improve your business operations or provide you with vocational guidance materials?

The library is building up a service to local businesses. Among the materials acquired so far are Thomas' "Register of Manufacturers," a complete set of Moody's "Manual of Investments," Standard and Poor's "Financial Records," Barron's "Financial News," Kiplinger's "Changing Times," industrial directories for New Jersey and New York areas and Philadelphia; a complete file of Plainfield city directories, a commercial atlas and manuals on subjects such as stocks, bonds, industrials, public utilities, investments, banks, insurance, real estate.

Among its other collections are books in foreign languages, how-to-do-it books, college catalogs, career and vocational guidance materials, instruction on how to pass examinations (gneral and civil service), consumer reports and comparative purchasing information, and a file on community organizations (with current officers listed).

Here are some of the things the library does for the community:

It cooperates with local schools in teaching students how to use a library and making reference materials available to them, in working closely with school libraries and in helping set up school libraries. The Clinton School PTA receives assistance in operating a library at the school.

Special libraries in the area, such as those at Muhlenberg Hospital, Union Carbide, American Cyanamid, Ethicon, receive cooperation from the Plainfield Library. And, the library helped plan a library for the new Neighborhood House building.

Library staff members speak to community groups. They also help organizations by setting up exhibits. During the Plainfield Art Association's exhibit last year, art books and materials were featured in the library. An exhibit on the Hawaiian Islands was tied in with the chamber of commerce's Hawaii day. They are cooperating with the Plainfield Council of Church Women on their current program on Africa.

Services to individuals even range to evaluating books in their private collections.

The library periodically plans special displays to inform and stimulate interest in other countries, special events, commemorations, writers, and the like.

You could continue endlessly to account the highlights of the world within the local library's walls. Then, you could take off from there and show how it is a channel through which the greater world comes to you the individual. But, it might be more fun for the individual to explore and to discover all these things for himself.

[From the Summit Herald, Apr. 7, 1960]

LIBRARIES POINT THE WAY

The current observance of National Library Week underscores the constant reminder that through reading comes understanding and through understanding comes truth.

Libraries throughout the State and Nation this week are bringing home the fact that the strength of our Nation is founded in the minds and hearts of its citizens. The knowledge that lies within books has been instrumental in shaping our society, our customs, our laws and our inalienable right to be free men.

This week local residents can take advantage of this observance of National Library Week by visiting the city's local facilities where displays and exhibits point the way to better understanding through reading. This week furnishes an excellent opportunity to highlight the total resources of our own library. Those who wish to be better acquainted with the amount of reading materials available, would do well to stop into the library and peruse. We are sure all will find something of interest whether it be in the field of fiction or non-fiction.

Reading takes on many mantles. Some read for pleasure, while others read for relaxation. Others read for education. But all in effect, read for one purpose, and share a common experience * * * the realization that they are opening their minds to other views.

This week, take time out from the routine matters of day to day living and visit the library. We are sure there will be found a vast treasury, more valuable than money or gems. The treasury found will be knowledge and truth. Both open the door to better understanding of ourselves, our neighbors and the nature of things which surround us.

A Thoughtful Doctor Speaks His Mind

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 7, 1960

Mr. PORTER. Mr. Speaker, Dr. James Brooke of my hometown, Eugene, Oreg., is a thoughtful man. Too often, in my opinion, our doctors have no time for taking thought. They are too busy treating their patients and keeping up with new developments. Dr. Brooke is an outstanding example of a doctor who not only superbly practices his profession but takes time to give its problems careful consideration.

His remarks before the health section of the West Central Oregon District Conference on Aging which was held in Eugene in January are worth the attention of every person interested in helping aged persons. Under a previous consent I am including them here:

It is something of a paradox to have a successful effort of the medical profession produce a sociological problem of national scope. Medicine by controlling infant mortality, maternal mortality, wiping out the scourge of pneumonia, and so forth, has enabled such a number of people to attain a ripe old age that now we are faced with the problem of what to do with them. One problem begets another, and perhaps the present one is somewhat like that of the Queen of Babylon's cats.

In considering rehabilitation of the aging, we first must answer three fundamental questions:

1. What do we mean by aging?
2. Rehabilitation from what?

3. Rehabilitation to what?

1. No one has as yet given us a good definition of aging. Age has many connotations. Do we mean chronological age? If so, we have a wide spread of functional capabilities. One 70-year-old may have much less functional capacity than an 80-year-old. Do we mean physiological age? If so, we should note that some bodies are old in the twenties, whereas others retain youthful attributes into the eighties and perhaps later. Do we mean mental age? If this is so, some people would be eternally youthful. Do we mean emotional age? Or just what do we mean by aging? If we consider age as a chronological thing exclusively, then we have defined ourselves a problem. We have artificially created the "problem" we set out to solve. By defining age as the years beyond 65, we have committed one of the most physiologically and biologically foolish errors a supposedly intelligent society could commit. We have turned our backs on much painfully accumulated scientific knowledge and spurned simple ordinary commonsense. This categorizing of our "over 65" population as aged is a most grievous unkindness. Compulsory retirement because of age and age alone is utterly unrealistic, and the empty appellation of "senior citizen" is a sorry substitute for the self-respect which comes from leading a useful productive life. We are all accustomed to adapting ourselves to waning physical capacities. Why should it be otherwise when one has greater experience over a longer period? Perhaps it might be well for us to consider another type of age, functional age. Although medical science has made it possible for many more people to live to their seventies and eighties, there actually hasn't been much added to the lifespan. A 70-year-old's life expectancy is only 1.3 years more now than it was many years ago. We haven't "added to life" appreciably. All we've done is produce a large number of 70-, 80-, and 90-year-olds for a society not prepared to receive them. We must know more about the physiology of aging tissues to understand why one aged person becomes a human vegetable and another one retains a certain measure of his bodily faculties. If we are to deal with a large number of older people, we need to know more about what makes them tick, how fundamentally an old heart, or blood vessel, or brain differs from a younger one. We need geriatric research hospitals just as we now need pediatric hospitals not just old folks homes. If older persons differ from the standard human animal as much as the infants and children do, then let's devote some specialized efforts at solving the peculiar problems of this group. And one of the first problems to solve is that of a definition of what constitutes an aging person.

2. Rehabilitation from what: To invoke rehabilitation a disability must exist. What specifically are the disabilities peculiar to the aging? In general, they are due to degenerative processes involving the central nervous and musculo-skeletal systems. Apathy, depression, mental confusion, forgetfulness, and loss of memory for recent events mark the former. An unceasing torrent of complaints about the joints marks the latter. The general widely recognized principles of rehabilitation will apply to any disability regardless of age except those peculiar to the aged, and there they partly apply. The reason they don't wholly apply is because we simply don't know enough about the biological raw materials we are working with to employ accepted procedures effectively. We should ascertain what disabilities are:

a. peculiar to the aging, and

b. different in the aging than in the younger.

Then we can intelligently apply the broad, well-developed principles already at hand.

3. Rehabilitation to what: The objectives of rehabilitation must be defined. What do we seek to accomplish with our rehabilitation of the aging? Do we wish to restore physical vigor the better to seek somewhere, someplace, somehow a job not denied because of age? Do we intend to make these older people physically self-sufficient the better to pursue nonproductive make-work activities? Do we wish to rescue them from the kindly apathy and gentle confusion which engulfs them so that they can better appreciate their current status as a beloved but vexing problem? One generation cannot see through the eyes of another. Perhaps we should ask these people what they want instead of rather arrogantly planning for them. Maybe they should work out their own solution to the problem of being considered a problem. I suspect that this might be a good idea. Assuredly, many more old folk are killed by kindness and solicitude than we realize. The happiest people seem to be those who are in the process of overcoming adversity. Perhaps instead of putting our aging populace on a honored and expensive shelf, we should remove the artificial barriers to self-support and self-respect and require more than years alone to merit veneration.

Rehabilitation has two components: Physical restoration and mental adaptation. They are like love and marriage; you can't have one without the other. Physical restoration of the aging is a swiftly developing field and it will develop even faster when we can learn more about the fundamental physiology of aging tissue. But good physical restoration is only a cold, technical, medical triumph unless it yields an increase in human happiness. The other portion of rehabilitation is up to society not medicine, which in this case has outstripped the social scientist. I have a few anachronistic suggestions on this score:

1. Eliminate the age barrier to employment.

2. Quit overcoddling our older people. Add a few drops of tincture of Darwin to the sticky-sweet sirup of socialism we are now attempting to swallow.

3. Establish a few more geriatric research hospitals for study of the fundamental physiology of aging instead of more "old folks" home.

4. Start preparations for retirement early but make retirement only a change of occupation consistent with waning physical and mental vigor.

5. Settle this whole thing the standard American way by (a) composing a lot of slogans and forgetting about it, or (b) appointing a committee and forgetting about it.

Thank you.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

3140

Appendix

Address by Hon. Alexander Wiley, of Wisconsin, Over Radio Station WGN, Chicago

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. WILEY. Mr. President, in further regard to the economic situation, I was privileged to participate this weekend in a special broadcast series over WGN, Chicago.

In the broadcast, I reviewed a number of ways in which, in my humble judgment, constructive efforts could be made to further strengthen our country.

These included: First, encouraging more of our people to invest in our economy; second, as previously stated, to revise our tax system; third, effectively combat inflation; and a number of other general ways in which we can improve the economy.

Reflecting upon this great challenge before the American people, I ask unanimous consent to have the text of the broadcast printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

WILEY URGES PUBLIC TO "INVEST IN AMERICA"; STRESSES NEED FOR HOOVER-TYPE COMMISSION FOR OVERHAUL OF TAX SYSTEM; OUTLINES SEVEN PROGRAMS FOR STRENGTHENING ECONOMY

(Excerpts of address prepared for delivery by Senator ALEXANDER WILEY, Republican, of Wisconsin, over radio station WGN, Chicago, April 3, 1960)

Friends, I welcome the opportunity to discuss with you a number of issues confronting our country and the world.

As citizens, you and I face daily decisions on a wide variety of issues affecting the personal lives of ourselves and families; community projects and programs; issues at the State level; national and international developments that relate to our security, progress and outlook for the future.

Briefly, now, I would like to review challenges in the domestic economic picture that, I feel, are of special interest to all of us.

As a people we face such problems as:

Does the bread winner earn enough take-home pay to meet the family bills?

Is it possible to afford to send eligible children to school, and to college?

Do self-employed folks in business and professions retain enough income to meet needs and obligations?

Do we have opportunities to enjoy enough of the good things created by the free enterprise system?

For the answers to these questions, we must turn a microscopic eye on our domestic economy to determine (1) how it is meeting the needs of our people; (2) where it may be failing; and (3) what can be done to further improve the economic outlook for all of us?

WILEY SAYS: INVEST IN AMERICA

Question. Senator WILEY, what can we do toward a better, stronger economy for the future?

Answer. First, I believe we need to further educate the American people on the merits, benefits, and opportunities provided by our free enterprise system. All too often it is taken for granted that our economy has created the highest standard of living and the greatest agriculture and industrial output in the history of the world.

As citizens of a free country, it is important that we do everything possible to further strengthen our system.

Question. How would you suggest this be done?

Answer. A major contribution can be made by encouraging more people to invest in our economy.

Today, there are more than 12 million shareowners of publicly owned corporations in this country. These shareowners, represent not just the rich, but a broad cross section of our people, including modest income individuals such as workers, housewives, teachers, professionals, and many others.

To encourage such investment, I have introduced a resolution in Congress to authorize and request the President to proclaim April 24 through 30, 1960, as National Invest-in-America Week.

By observance of such a week, Americans can reaffirm their belief in the power of work, savings, and investments to create new business and better job opportunities for all our citizens.

This is particularly important since our free system is now on trial globally in a battle of survival against communism.

NEEDED REVISION OF OUR TAX SYSTEM

Question. What are some further recommendations for strengthening our economy?

Answer. Secondly, I believe we must carry out a sound, fair, top-to-bottom revision of our tax system. As you and I well know, taxes—direct and hidden—take one of the biggest bites out of our income.

In themselves, also, taxes can be inflationary—driving up prices, and thus further reducing the buying power of our dollars.

Unfortunately, the great demands on Uncle Sam—particularly the hight cost of a space age defense—dims the outlook for early relief from Federal taxes at the present time.

In view of this fact, I believe this provides a good opportunity to undertake a complete—and much needed—overhaul of the tax structure.

We recall, of course, that over the past months, the Ways and Means Committee of Congress has held hearings on various aspects of this system. However, these studies have not as yet, in my humble opinion, been of a sufficiently broad scope to really do the job.

That is why I am again urging enactment of my bill, S. 1885, for establishment of a Hoover-type commission to revise the tax system.

Question. Just what would you do, Senator WILEY?

Answer. The purpose would be to iron out inequities; plug loopholes; if possible, establish a fairer distribution of the tax burden; and, overall, encourage tax policies that would stimulate, not stunt, economic growth and opportunity for individuals, as well as businesses and enterprise.

The Commission, comprised of competent individuals from both private and public life, would also aim at reflecting new light on such aspects of our tax system as (1) the interrelationship of Federal, State, and local taxes; (2) the impact of the present system on individuals and enterprises; (3) "rooting out" taxes that may be discriminatory; and (4) generally assuring that the system allows incentive to earn, grow, expand, and enjoy the fruits of labor.

Question. What taxes would be involved?

Answer. Although the whole system should be scrutinized, special studies should include—

Taxes on job-creating businesses and industry, particularly those included in the small business category;

Treatment of retirement benefits;

Possible tax adjustments to help meet the increasingly high costs of education, and thus help to fill a national need;

Depletion allowances for oil, gas, and other similar resources;

Treatment of working mothers under the tax laws;

Deductions for business expense accounts;

Excise taxes continued long beyond their wartime purposes;

Capital gains taxes.

In addition there are a great many other areas of taxation which deserve careful reconsideration.

We recall that it has been traditionally stated that "the power to tax is the power to destroy."

In our own system, we need to assure that our taxes do not destroy individual incentive and progress in our economy. Rather, the system must be designed to assure that taxes are imposed only to meet real needs of our people—and, insofar as necessary, these be fairly proportioned, according to sound principles in the best interests of the economy.

Question. Now, what are some of your other recommendations for strengthening the economy, Senator WILEY.

Answer. Although these cover many fronts, they should include:

Third. Improving job opportunities for our working force of almost 69 million workers, of which nearly 4 million are still unfortunately out of jobs.

Fourth. Encourage realistic Federal spending policies, including a balanced budget and, if possible, a surplus to begin reduction of the national debt. This also involves—

Carefully restricting Federal programs to proper limitation of Federal responsibility so as to prevent undue competition on the money market or to create unnecessary competition with private enterprise; and

Further educating our people to the realism that demands for more and more services by the Federal Government can only postpone the time for a lessening of the tax burden.

Question. What else should be done?

Answer. Fifth, assuring a competitive climate in which businesses, industries, and other enterprises—both small and large—have an opportunity to prosper and make their contribution to our economic life;

Sixth. Encourage management and labor to plan cooperatively together for the common good, and to work together against the destructive powers of inflation; and

Seventh. Public encouragement should be given to nongovernmental sectors of the economy to increase productivity, guide production into items of greater durability, and less obsolescence, and lower prices.

Overall, the Government, as well as consumers, labor, industry, and all others, have a proportionate responsibility not only for sharing in the efforts to combat inflation, but also to promote economic health for the country.

Question. How can this be accomplished, Senator WILEY?

Answer. Through sound buying, borrowing, spending, and saving practices by consumers.

By labor making only realistic demands for pay and better working conditions based among other factors upon increased productivity.

And by industry establishing realistic pricing and profit practices on commodities.

And prospects for an ever-brighter future can be fulfilled only if there is full cooperation of all segments of the economy, with planning based on realistic economic principles, not wishful thinking.

CONCLUSION

Senator Wiley, thank you very much for this fine review of ways for strengthening our economy.

I have welcomed the opportunity to present these ideas to you.

If you folks listening in have any comments on these proposals, I would be glad to hear from you. Also, if you feel that some of the recommendations have merit—for example, the invest-in-America and tax revision proposals—you might want to directly contact Members of Congress—in addition to myself—to express your interest in them.

Many thanks for listening.

After the First Quarter

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. WALLHAUSER. Mr. Speaker, prophesies are easy to make, statistics are easy to maneuver, but results cannot be gainsaid.

The first quarter of 1960 has been one of the most prosperous and highly productive in our history.

The following editorial which appeared in the New York Times of April 10, 1960, gives great emphasis to the fact that 65 million Americans have jobs and vast purchasing power.

The editorial writer points out that there does not seem to be any fundamental reason for a change in confidence of a prosperous future on the part of our citizens and I commend the editorial to my colleagues:

AFTER THE FIRST QUARTER

Now that the first quarter of 1960 has entered history, businessmen and economists are engaged in assessing the outlook for the rest of the year. That the 3 months just concluded constituted one of the most prosperous and highly productive periods in this Nation's annals is, of course, clear. Steel production averaged well over 90 percent of capacity; fears of inflation were widely reduced; the net outflow of gold declined; the list of economic indicators which have something pleasant to tell us about January, February, and March is long indeed.

But in business, as in life, the problems and prospects of the future tend to be more important than the achievements of the past. So it is not surprising that many observers are now more concerned with the question marks that seem to hang over the economy's future than they are about the good news still appearing about the first quarter. The high optimism which marked most forecasts at the beginning of the year has been significantly reduced.

The rise in inventories, the recent fall of the steel production rate to under 90 percent of capacity, the decline in the index of new orders prepared for the National Association of Purchasing Agents are among the factors causing disquiet. The stock market responded strongly to pleasant tidings about recent automobile sales, but the automobile industry itself is reported planning a 13 percent cut in new car production this quarter.

In a dynamic economy like ours, however, it would be unwise to overemphasize the fact that some indicators are falling. There are other factors at work—for example, the favorable trend in the rate of interest. Moreover, this is an election year, one in which we can be particularly confident that the administration will be extraordinarily alert to assure that Government policy on credit and related matters does not become a drag on the economy. But, far beyond that, the basic fact is that some 65 million Americans have jobs and vast purchasing power. For 20 years now those who have had confidence in a prosperous future have done well indeed and there seems to be no fundamental factor on the scene which would suggest any reason for a change in the foreseeable future.

Rampart Canyon, Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. BARTLETT. Mr. President, one of the most challenging projects confronting the United States is the Rampart hydroelectric project on the Yukon River, which is capable of producing 3,700,000 kilowatts of prime power. A most interesting discussion on this vast undertaking was presented to the Fairbanks, Alaska, Chamber of Commerce last month by Mr. Harold L. Moats, who is assistant to the chief of engineering in the division for civil works, Alaska District of the Corps of Engineers. I ask unanimous consent that the text of Mr. Moats' speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to have this opportunity to give the Fairbanks Chamber of Commerce a report on the status of the Corps of Engineers' work on the Rampart Canyon Hydroelectric Power Investigation.

The responsibility of the Corps of Engineers in the field of hydroelectric power stems from two main sources; the first, authorized by the River and Harbor Act of March 3, 1925, directed the Corps of Engineers and the Federal Power Commission to prepare and submit to Congress an estimate of cost of such examinations, surveys, and other investigations as, in their opinion, may be required of those navigable streams of the United States, and their tributaries whereon power developments appear feasible and practicable, with a view to the formulation of general plans for the most effective improvement of such streams for the purposes of navigation and the prosecution of such improvements in combination with the most efficient development of the potential water power, the control of floods and the needs of irrigation.

The response to this act, a report published as House Document No. 308, 69th Congress, 1st session, and enacted into law in the River and Harbor Act of January 21, 1927, provided the framework for water resource planning. This basic law, clarified and amended by subsequent legislation, has been a major factor in the development of the many multipurpose projects in the southern 48.

Second, the Flood Control Act of 1948, as amended by the Flood Control Act of 1950, specifically extended the above coverage to Alaska, directing a study of Harbors and Rivers of Alaska with a view to determining the advisability of improvements in the interests of navigation, flood control, hydroelectric power and related water uses, and stating that Federal investigations and improvements of rivers and other waterways in Alaska, for navigation, flood control, hydroelectric power and allied purposes shall be continued under the jurisdiction of and shall be prosecuted by the Army under the direction of the Secretary of the Army and the supervision of the Corps of Engineers.

This direction has resulted in a series of interim reports covering the State of Alaska. These reports have recommended some 15 navigation or flood control projects, 7 of which have been completed, 3 are to be advertised in the near future and the remaining 5 await appropriation of funds.

The President's budget for fiscal year 1961 contains $100,000 to start design work for the $10,800,000 flood control projects here in Fairbanks.

A major part of the work directed by the Flood Control Act of 1948 has been a preliminary evaluation and cataloging of the hydroelectric power potential of this great State. We have made this preliminary evaluation of some 169 possible sites having a potential installed capacity of about 19 million kilowatts.

This seems to be only a big number until you realize that the total installed generating capacity of all the hydroelectric plants in the United States is just over 25 million kilowatts. The individual capacity of these 169 sites range from a few thousand kilowatts to what can be the largest single generating plant on the North American Continent and probably in the world.

The last of these interim reports covering the Yukon and Kuskokwim Rivers was completed by our office in Anchorage in December 1959 and is being reviewed by higher headquarters. It will probably be released to the public in about 6 months. This report includes the major hydroelectric sites of Alaska which, when fully developed, will have an installed capacity of about 11,300,000 kilowatts. The largest of these sites is Rampart Canyon. Senator ERNEST GRUENING introduced a resolution into the Senate Public Works Committee last spring requesting a full-scale report on the hydroelectric capabilities of Rampart. On April 24, 1959, the committee directed the Corps of Engineers to make such a study.

Let me review for a moment the preliminary information which we had accumulated in our original evaluation of this important resource. I want to stress that this information has been developed from field reconnaissance, map study, and the use of existing precipitation and streamflow records and is

subject to correction and adjustment as more information becomes available.

The Rampart Canyon site on the main stem of the Yukon River can be developed to produce about 3,700,000 kilowatts of prime power. The installed capacity would be 4,760,000 kilowatts. A concrete gravity dam 1,300 feet long at present water level, 2,700 feet long at the crest and 500 feet high, will develop a usable head of about 440 feet. The regulated flow would be about 118,000 cubic feet per second.

Big figures alone mean little to most of us; let us relate them to others that most of us have seen.

At Rampart Canyon the dam, with only about three-fourths of the volume of the dam at Grand Coulee, will impound enough water to warrant an installed capacity of 4,760,000 killowatts; about two and one-half times the present installed capacity at Grand Coulee.

The area and capacity of the reservoir is interesting. The reservoir will cover an area of about 10,700 square miles or an area about 10 percent greater than Lake Erie. Due to the great area of the reservoir, it is anticipated that the seasonal drawdown will be under 4 feet. The total reservoir storage will be about 1,300 million acre-feet, better than 40 times the storage at Lake Mead behind Hoover Dam.

There are many interesting areas of speculation that open up as we study this tremendous project.

What, if any, will be the effect of this large reservoir on the climatic regime? It is almost certain that this area of water would increase the precipitation to some extent. The water mass would cause the mean annual temperature to rise—how much we cannot say—but assuming that it might be 2 or 3 degrees, it is interesting to note that a few days longer growing season would enhance the agricultural potential of the region.

It has been said that the reservoir area contains enough timber to sustain a small pulpmill during the filling period.

The short but extremely pleasant summer weather of the region might well induce recreational activities here that would compare favorably with those at some of the popular reservoirs in more populated areas.

Let us look more closely at the structure itself. The dam will be a gravity structure with adequate fish-handling facilities. Cargo-handling facilities would be constructed in lieu of locks.

Power could be developed by generators ranging in size to a possible maximum of 280,000 kilowatts.

It is anticipated that ultrahigh voltage transmission, probably about 500,000 volts could serve ice free industrial sites at Valdez, Cordova, Anchorage, Whittier, and Seward. Fairbanks and other interior communities, as well as many mining operations, will be served by conventional transmission lines.

Congress provided $49,000 to start the detailed studies in fiscal year 1960. The major portion of this money is being used to make detailed maps of the damsite area and to prepare a plan for the necessary foundation investigations. As a first step, last fall we sent three geologists to the site to look over the geological formations and to plan a drilling program.

It is anticipated that this study will require 3 or 4 years to complete and that the total cost of the Corps of Engineers portion of the report will be over $500,000. In addition to our study the Fish and Wildlife Coordination Act requires an analysis of the impact of the project on fish and wildlife be made by the Federal Fish and Wildlife Service, to be included with our report.

This concludes my report to you on the status of our work on the project.

I would like to leave one thought with you: Rampart Canyon is important to Alaska. It is a key that might unlock our mineral resources, but even more important, it could attract raw materials from all over the world for basic processing here, utilizing the low-cost power that would be available at tidewater ports.

Disquisition of a Philosopher

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. GEORGE. Mr. Speaker, Col. R. L. Thompson, the editor of the Moran Sentinel, generally writes a full page of homespun editorials for his weekly newspaper published in Moran, Allen County, Kans.

On Thursday, March 24, the colonel expressed his thoughts with respect to virtue and sin and concluded that even the wisest of men are often without virtue. This disquisition of Colonel Thompson, I am sure Mr. Speaker, will be of real interest to other Members, and I ask that it be included in the extension of my remarks.

The editorial follows:

VIRTUE AND SIN

That odd creature we call man has always been curious to learn what makes him tick decently and what makes him tick indecently.

The struggle of philosophers to penetrate the unknowable and establish the truth has been going on for many centuries, yet today they are just as far apart in their judgments as they were 2,500 years ago.

The ethical sciences have always engaged the thoughts of our best minds, but there is yet no sound evidence that the will of man is really free; and there is no sound evidence that it isn't. The ancient philosophers were never able to agree on what produced good and evil in men and the modern thinkers are still sharply divided upon the subject.

Socrates, who was born in 469 B.C., was probably the first man to advance the theory that the behavior of an individual is controlled by his own history, which gave birth to the doctrine of determinism.

Socrates wrote nothing himself but his pupil Plato who wrote about him made it plain that his old teacher believed that knowledge and virtue were one and the same thing and that a man full of wisdom was incapable of performing an amoral act.

Plato himself, followed Socrates for a time but as he grew older he began to entertain misgivings and drifted in the direction of free will. This was also true of Plato's pupil Aristotle who wrote that "if we are unable to trace our acts to any other origins than those within ourselves, then acts of which the origins are within us themselves depend upon us, and are voluntary."

But Aristotle seems to have been unsure of himself for later on he wrote that "the origins of an act are not in the will, for the agent may be forced into acting by external compulsions or misled into it by ignorance," which is an echo of Socrates.

Most ancient thinkers such as Tertullian, the lawyer, Origen and Irenaeus also believed that man was the master of his own acts.

The determinists had easy sailing for a long time, and it was many years before Augustine came along to challenge them and to preach the doctrine of grace and original sin. This occurred in A.D. 387 when Augustine embraced Christianity and was baptized after years of wobbling.

Augustine also met with opposition in the person of Pelagius, a learned Irishman who adduced the argument that man could not be free to act as he wished with old Adam in him and corrupting him at every turn. He was the first to advance the belief that grace and original sin on the one hand and free will on the other were irreconcilable, and it was many years before the popes were able to induce the faithful to forget Pelagius whose polemics never received the attention they deserved.

Augustine answered him not with logic but with such eloquence that his theories were made official by the Council of Carthage in 418.

But even today, with at least half of the civilized world believing that sin can be wiped out by the grace of God, determinism is by no means a dead doctrine. In one of his recent books Bertrand Russell, esteemed the world over as a philospher and mathematician, argues that "knoweldge is virtue" and thus stands where Socrates stood nearly 25 centuries ago.

It would be interesting to know precisely what meaning Earl Russell attaches to the word virtue. If he means that the possession of wisdom is in itself virtuous he is certainly correct but if he means that only wise men can lead exemplary lives, he has missed the mark.

An examination of the history of obscure and prominent men alike will reveal that the uninformed as well as the judicious can and do lead well ordered lives. It will also reveal that the very wise are capable of scandalous acts.

There is no doubt at all that men of superior intelligence generally conduct their lives upon a higher plane of moral decency than ignorant men, but this is not always the case. Men of no learning at all have been known to lead impeccable, though not necessarily admirable, lives.

Until he died only a few years ago, the author of this disquisition had an uncle who was looked upon correctly by his contemporaries as a puritan of lofty rectitude. He could neither write nor speak a grammatical sentence and he was unread for he had only two books in his house, the Bible and Tom Sawyer.

How much of his time he gave over to reading, I do not know, but he could not discourse upon the Bible with much coherence, and he missed most of the humor in Tom Sawyer.

During his long life which ended at 84, it is a positive certainty that he never violated the ascetic moral code that his mother established for him when he was only a small boy. He paid his bills promptly and contracted none that he could not pay promptly; he did not swear, smoke, or chew tobacco; he attended church regularly, always remaining for Sunday School; he never tasted whisky in his life and there never was a deck of cards in his house. He believed it was immoral to attend picture shows, and he never ate a meal in his adult life without first saying grace. The cruel hand of misfortune was upon him constantly, yet he never complained, and regularly thanked God for what he called "His gracious favors."

But was this uncle a virtuous man in the sense that so-called intellectuals look upon virtue today? In the behavorist sense, certainly; in Russell's philosophical sense, no.

What was his contribution to the world in which he lived? Precisely nothing. Did he ever have a new idea? He never did. Was he capable of changing his mind when obviously mistaken? He was not. Was his mind hermetically sealed to reason? It was. Was he capable of making other men happy? He was not. On the contrary, it was often unpleasant to be in his presence. I went to see him often in his old age and it nearly always meant sitting through a long

lecture on the evils of tobacco and rum. If he were alive at this minute and knew that I was engaged in composition late of a Sunday afternoon he would telephone to upbraid me for desecrating the Sabbath.

Here was a man of iron will who had countless attributes that demanded respect but almost none that evoked admiration. He believed what he wanted to believe. The truth about life held no interest for him and he did nothing to foster it.

The genuinely virtuous man, so it seems to me, is not only the fellow who behaves well but contributes something to world enlightenment and does not bring grief to other men. Earl Russell is certainly such a man. He has given the world humor and he has given it wisdom and knowledge in a dozen great books which will amuse men and make them think for many long ages to come. His life has been eminently successful and worthwhile and hence eminently virtuous.

Returning to free will against determinism, what the philosophies seem to forget or ignore is the simple fact that the average human being gives very little thought to either sin or virtue. He obeys only those impulses which bring him pleasure.

The thief steals because he finds satisfaction in living without working. Many of them are wise and successful and are never caught but no one would call them virtuous men. The liar lies because he enjoys deceiving people, and he is in the same case. The uncle just mentioned derived satisfaction out of being good just as Russell finds pleasure in writing sensible books to improve the minds of men who are not as smart as he is.

What is abhorrent and sinful to one man often brings satisfaction and a sense of virtue to another. Cheating people was certainly repugnant to John D. Rockefeller, but Jay Gould, who was equally wise, derived genuine delight out of robbing widows and orphans, bribing legislatures and cheating friends. It has been said after he unloaded $5 million worth of worthless stocks on a gullible public that he laughed for weeks. He no doubt looked upon himself as a virtuous man.

Thus we see that the theory that only the wise are capable of virtue is palpably full of holes. Oscar Wilde had one of the finest minds of his day but it would be stretching the truth to the breaking point to say he had a spark of virtue in him. Francis Bacon was full of wisdom but he was a very evil man. Easily the wisest man of this generation was Joe Stalin but he was also the most wicked.

Just what impels men to sin and virtue is only a guess. All we are sure of is that the wise and the ignorant alike are capable of both.

Treasury Tests the Long-Term Bond Market

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. KEATING. Mr. President, I have always been a firm supporter of the President's position in calling for the removal of the 4¼ interest rate ceiling on long-term Treasury bonds. I was heartened recently when the Ways and Means Committee approved a compromise plan allowing this ceiling to be partially removed. In this same light, the developments of recent weeks indicating that this compromise may not be voted upon this year are disappointing and I certainly hope incorrect.

Mr. President, because the money market has improved and funds are now available at lower rates, those who favor retaining the 4¼ ceiling have been saying—"see, we told you so." The Treasury has not stood still in the face of this challenge. Department officials responded in a straightforward manner by issuing new 25-year bonds at the 4¼ ceiling.

The results of this sale have been widely discussed. I was very pleased to note that the editors of the Washington Post in an editorial which appeared this morning take the position that the results of this issue were disappointing and that they very clearly indicate the need to raise the unrealistic and existing interest rate ceiling on long-term Treasury issues. Mr. President, I ask unanimous consent that this excellent and informative editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 11, 1960]

THE SQUEEZE CONFIRMED

The Treasury's testing of the long-term Government bond market was a bold move politically. This is true even if Senator DOUGLAS and others are right in arguing that the test was not as vigorous as it might have been. And the gamble has paid off, we think, for advocates of Treasury-sponsored legislation to lift the 4¼-percent ceiling on bond interest rates. The disappointingly small subscription to the 25-year, 4¼-percent issue tends to show that any substantial lengthening of the average maturity of the Federal debt in prosperous times—when the effort ought to be made—will remain very difficult unless the ceiling is raised.

This does not mean that better procedures for bond marketing are unnecessary. Mr. DOUGLAS and his colleagues on the Joint Economic Committee have suggested some improvements that the Treasury and the Federal Reserve Board ought to be acting upon. But despite the short notice, the existence of a kind of monopoly in Government bond marketing and other shortcomings, the experimental 25-year offering showed plainly enough that the 4¼-percent ceiling is too low to allow needed flexibility in debt management. We hope that the experience will persuade Congress that the compromise plan for partial removal of the ceiling already approved by the House Ways and Means Committee ought to be adopted as a minimum.

Civil Rights: Less Talk, More Action

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. HOFFMAN of Michigan. Mr. Speaker, ever since my vote was cast against the House civil rights bill, politicians high in the party command have said and written that my vote was hurting their efforts to induce the colored people to vote the Republican ticket. The colored vote cannot be bought.

They asked why my vote was cast against the House bill. The answer is simple. It was a bad bill. It gave arbitrary power to politically appointed referees and established procedures which could have been corruptly used. It was discriminatory in that it gave the courts power to punish the violators of some injunctions, not of others.

We have legislation which, if enforced, would protect the right of every qualified voter to cast a secret ballot. The House bill contained unsound provisions which have been eliminated. The bill was a political maneuver—top politicians in both parties thinking they would get a political advantage out of the issue in the coming November election. The Senate has now so amended the bill that when returned to the House, it is my intention to vote for it.

TOO MUCH POLITICAL MANEUVERING

On trouble, caused in the main by agitators who have too much leisure on their hands and by a comparatively few sincere, charitable individuals who mus-judge the national need, was on the way to a satisfactory solution. The present agitation has retarded the ultimate goal of equal justice for all.

As the daily press has indicated, the controversy has not been minimized, but emphasized, not only here, but in other parts of the world, especially South Africa. Today's issue is not alone the right to vote, but the extent of the right of association. There has been far too much talk, too little action. I have always acted, not just talked—done what I could to end discrimination.

Let me give you the facts: In 1934, my first primary campaign, we had eight young women, university graduates, two young white men, and one colored man, Elijah Ampey, a personal friend from my home county, campaigning. We toured the six counties in the district. There was no discrimination until we hit Benton Harbor at the Bridgman Hotel. The clerk, a young Jewish man, told us Lija could not eat in the dining room with us. A controversy arose. It was settled when I insisted there would be no discrimination against him because of color. He ate with us. We had no other trouble.

In 1951, in Benton Harbor and St. Joseph, our committee held hearings to correct an order of the food department. The chairman of our committee, William Dawson, a colored veteran, presided. He was a guest at the Whitcomb Hotel, owned and operated by my personal Jewish friend, Leon Harris. Friend Dawson was welcomed as a guest at a dinner in his honor, was treated with every courtesy. Even the most critical agitator could not discover any trace of discrimination because there was none.

If more people would adhere to the Golden Rule, attend to their own business, cease their efforts to regulate the social and business life of their neighbors, discrimination because of color would end more quickly.

As often happens, the votes against the House bill, the debate in the Senate,

has resulted in far more equitable proposed legislation. If it comes back to the House with the Senate amendments, I shall vote to adopt it, even though adequate enforcement of our present laws at this time would seem to make it unnecessary.

I am wondering what the professional agitators will bring up next; when, if ever, they will enforce the legislation which permits a man to work at an acceptable job without paying tribute to some pressure group; when more will back their enactments with action as some have been doing; when we will get labor legislation without partisan political implications.

The Castro-Cuban Situation

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. BRIDGES. Mr. President, on April 4, the distinguished Senator from Alaska [Mr. GRUENING] referred to my recent address on the Cuban situation. I appreciate his commendation of my speech and I am happy to note that he has taken a strong stand in this connection.

An editorial which appeared in the April 6 edition of the Manchester (N.H.) Union Leader entitled "Liberal Democrat Blasts Appeasement" pays tribute to another Member of this body for his strong position on the Castro-Cuban situation. I refer to the able junior Senator from Florida [Mr. SMATHERS].

I believe this editorial deserves the attention of all the Senators and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIBERAL DEMOCRAT BLASTS APPEASEMENT

Senator GEORGE A. SMATHERS is one of a handful of Washington solons who have attempted to tell the American people the truth about this country's relations with Cuba. For that, he has earned the undying enmity of the Castro government, whose state-owned propaganda media ranks him among the leading enemies of the Cuban revolution. But this newspaper believes that the overwhelming majority of the American people would rather hear the truth, whether that truth angers the Communist-ridden Castro regime or embarrasses the U.S. State Department.

Senator SMATHERS laid some cold, hard facts on the line when he said that the United States should recall its Ambassador from Cuba, reduce Cuban sugar quotas and adopt a get-tough policy toward the Castro government. Not only would this policy "put Mr. Castro in such economic difficulty" that the Cuban people "would have all legitimate right to get rid of Castro," SMATHERS said, but also "the one thing Latins respect and admire above everything else is decisiveness and firmness." In that, we are sure our neighbors to the south are no different than us. And like them, we are sure that the average American is completely bewildered by this soft attitude which the U.S. Government has adopted toward Castro.

A good case in point is the recent agreement concluded between Soviet Russia and Cuba, under which the former is to buy 5 million tons of Cuban sugar over a 5-year period. As Senator BRIDGES so ably pointed out in a ringing address recently delivered in the Senate, only 200,000 of this will be paid for in cash, the rest by barter for Soviet-manufactured goods—at Soviet-fixed prices. But what is more important, the Kremlin will pay only the world price for the sugar—a few cents under $3 a hundredweight—while the United States subsidizes Cuba to the tune of $5.50 per hundredweight.

All the while, friendly neighbors to the south are afflicted with great quantities of surplus sugar which they are eager to sell us, but which we refuse to buy in order to pander to Castro. The latter, in return, not only lashes us verbally but also economically. As one case in point, Cuban imports from the United States last year dropped $110 million—Castro's way of saying thank you for the more than $1 million worth of food from the U.S. Commodity Credit Corporation distributed in Cuba during the last 6 months by the Protestant Church World Service and the Catholic Relief Service.

Senator SMATHERS, Senator BRIDGES, and a handful of other Senators and Congressmen provide one of the few links the American people have to the realities of the Cuban situation. Given the facts, we do not believe the people will long tolerate the official policy of appeasement of Castro and his Communist henchmen.

Pennsylvania's 12th District of American Legion Calls for Immediate Release of Bishop James E. Walsh Now Imprisoned in Red Communist Chinese Jail

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. FLOOD. Mr. Speaker, the savage and unconscionable sentence recently meted out to Bishop James E. Walsh by the Chinese Reds is a clear demonstration of that Government's unwillingness to accept honest and decent standards of conduct and its further disdain of the rights of the individual human being.

The incarceration of Bishop Walsh calls for the marshaling of every conceivable force at our command in an effort to free him from the abominable situation in which he has been placed by ruthless and implacable enemies of the civilized world.

The Government of Red China should be made to understand in unmistakable terms that our Government will not sit idly by while our nationalists are jailed on trumped-up and unbelievable charges. The record of the Red Chinese Government in this area over the years has been a horrendous one—one that shocks the conscience of good and decent people everywhere.

One organization that has forcefully gotten behind this effort to free Bishop Walsh has been the 12th District of the American Legion in Pennsylvania. It has called upon the Members of Congress and the executive department to intercede in behalf of Bishop Walsh with the Red Chinese government calling for his immediate release from jail and almost certain death if he remains incarcerated.

So that Members of Congress and others may be apprised of the American Legion's position in this grave matter, I include as part of my remarks a letter of transmittal from Mr. Louis J. Greco, coordinator, 12th district Americanism committee, with which he forwards a copy of a resolution adopted by the delegates of the 12th district:

THE AMERICAN LEGION,
HEADQUARTERS, DEPARTMENT
OF PENNSYLVANIA,
Harrisburg, Pa., April 4, 1960.

Hon. DANIEL J. FLOOD,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: By direction of 150 delegates of 40 American Legion posts, representing some 12,000 legionnaires in Luzerne County, I am sending you copy of resolution concerning Bishop James E. Walsh, now imprisoned in Red Communist Chinese jail.

It is the desire of the 12th district American Legion delegates that you join us in calling upon the Secretary of State to press the Chinese Communists for the immediate release of Bishop Walsh.

May I hear from you soon? Your communication and action will be relayed to the 12th district Legion delegates at the next district meeting of April 24, 1960.

Very truly yours,

LOUIS J. GRECO,
Coordinator, 12th District Americanism, the American Legion.

RESOLUTION

Whereas the Red Chinese Communist courts have seen fit to imprison Bishop James E. Walsh, M.M., former superior general of Maryknoll Fathers, and prominent clergyman of Pennsylvania, for what the Chinese Communists call espionage, treason, and spying; and

Whereas Bishop Walsh, an American citizen, was condemned to 20 years in a Chinese Communist jail; and

Whereas any proof the Communist Chinese could submit would hardly fall within the category of "fair play" and "honest jurisprudence" as judged by American standards: Therefore, be it

Resolved, By the delegates from 40 American Legion posts representing some 12,000 legionnaires in the 12th district, Luzerne County, Pa., and organized under the fundamental belief—"For God and Country"—do hereby brand the jailing of Bishop James E. Walsh a mockery on justice; another demonstration of the unwillingness of Communist Chinese to accept honest standards and live with the rest of the world in peace and in justice; be it further

Resolved, That the American Legion call upon the Honorable Christian A. Herter, Secretary of State, Washington, D.C., to press the Chinese Communists for immediate release of Bishop James E. Walsh, an American citizen, before his health is injured irreparably; and for a guarantee that no American citizen will ever be tried or sentenced without a fair public trial; be it further

Resolved, That certified copies of this resolution be sent to the Secretary of State; Senators HUGH SCOTT, JOSEPH CLARK, of Pennsylvania; also a copy be sent to Representa-

tive DANIEL J. FLOOD, 11th Congressional District, Luzerne County, Pa.

LOUIS J. GRECO,
Coordinator, 12th District Americanism Committee, the American Legion.
JOHN R. GALLAGHER,
Commander, 12th District, Luzerne County, the American Legion.

Mail to Alaska Via the Alaska Highway

EXTENSION OF REMARKS
OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. BARTLETT. Mr. President, historically mail destined for my State of Alaska has been handled by steamship from the west coast port of Seattle. In recent years the infrequent sailings of steamers means that parcel post and other surface mail is sometimes weeks, a month, or even longer, in reaching its destination.

Since the Alaska Highway is now kept open on a year-round basis, Alaska residents individually and through civic organizations have attempted to persuade the Post Office Department that surface mail be shipped to Alaska by truck over the highway. These efforts have uniformly failed as the Department holds firm to its contention the time saving would be negligible and the cost too great.

An article in the March 20 issue of the Seattle Times concerning trucking over the highway is not only interesting in all its aspects but tells of the comparative ease with which scheduled trucking service is maintained on the Alaska Highway. Surely, this faster means of transportation should be employed in sending mail to Alaska.

I ask unanimous consent to have printed in the Appendix of the RECORD the article from the Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ALASKA HIGHWAY IS THEIR "HOME"—OR SO IT MAY SEEM TO THESE TRUCKERS FROM LYNDEN, WHO SPEND A LARGE SHARE OF THEIR DAYS ON THE LONG RUN TO FAIRBANKS

(By Dolly Connelly)

Six years ago, when tractor-trailer rigs of Lynden Transfer, Inc., first set out at Lynden, in Whatcom County, on regularly scheduled runs from Washington to Fairbanks, Alaska, farewells were quite a thing.

Children were taken out of school to see the intrepid diesel truck drivers on their way. Wives, some holding back tears, and company officials, a reporter from the Lynden Tribune, fellow workers, officials of the Lynden Chamber of Commerce—all were on hand, excited and a little fearful, to wish Godspeed to the driver teams and aluminum behemoths of the road.

It was an adventure, traveling the 4,800-mile round trip with nearly 20 tons of payload in the dead of winter. It still is an adventure, but so casually do the 10 steady drivers of the Alaska run accept the hazards of highway pioneering that farewells have become cursory. There's the wave of a strong hand from the high cab of the tractor, and a "So long—Good trip," from the company president as a big shiny rig labeled L.T.I. disappears toward the border crossing at Sumas.

At least two refrigerated tractor-trailer vans—58 feet overall in length, riding on 18 huge wheels, carrying 38,000 pounds at 8½ to 10 cents freight rate—leave Seattle and Lynden headquarters of the company each week in winter. The number jumps to as many as five a week in summer, when work and population in Alaska hit a high.

The trailer vans make at least 100 trips in 10 months of the year, stopping only for spring breakup, which closes British Columbia highways to vehicles of their weight. By riding pickaback on railroad flat cars from Vancouver, B.C., to Fort St. John at the upper edge of British Columbia, they will operate throughout the period of thaw this spring for the first time.

The men and the great trucks have carried multiple millions of pounds of fast freight to a hungry, booming Alaska over more than 6 years of regular runs. Theirs still is the only trucking concern operating in routine manner the full length of the Alaska Highway.

Lynden Transfer started the service with meat from Seattle packinghouses, fresh milk concentrate in half-pint containers, eggs, and fresh produce that once traveled to Alaska expensively by air.

Dry freight came in unsolicited, because it travels faster by truck than by ship. Cargo manifests now read 40 percent food, 60 percent freight of the variety of a mail-order house. Iron drums and cigars, cottage cheese and avocados, sides of beef and washing machines, musical instruments and welding supplies, cabbages and hams, dress goods and drugs, plastic baby pacifiers and loggers' chain saws—everything and anything rolls over the Alaska Highway behind the big diesel engines.

More interesting than the diversity of cargo or the scenic wonders of frontier road is the character of the men who share the exacting driving task of those long 72 to 80 hours on the roadway. Most are Lynden farm boys, many of them sons of Hollanders who immigrated to Whatcom County one generation back. They're still farmers in the "off" periods between runs.

Many of them raise strawberries or run fine dairy farms with the help of wives and teenage sons. Modest, soft-spoken men with "yes-ma'am" manners, they are skilled at one of the most difficult trucking assignments in the world. The company has the same rural air. Its address is R.F.D. 3, Lynden.

Applicants for driving jobs on the Alaska route come from the crews operating another Lynden Transfer activity, the "Milky Way" run. Tractor tank trucks, called "milk trains," haul fresh milk throughout Washington in this service.

Lynden Transfer was founded in 1924 by W. E. Austin to freight agricultural products of the Lynden area to Seattle markets. In 1946, Henry Jansen then a driver for the company, took over controlling interest and expanded operations.

Jansen, primarily a fast mover of food, became interested in the peculiar problems of supplying the interior of Alaska. The traditional route, by sea and railroad, was slow for fresh foods. Airfreight was one answer, but costs were high. He believed that the Alaska Highway, improved after the Second World War, would provide the solution. Glen Kok, a driver, was sent on a survey in the winter of 1953.

Kok's belief that regular schedules could be maintained, with a truck out of Seattle each Thursday night and due at the unloading platform in Fairbanks the next Monday morning, began the venture.

Jansen would welcome a new service to Alaska for his L.T.I. trucks. Alaskans long have complained of the tardiness of regular mail service from the 48 States.

When Alaska became a State, the cry for faster mail service was taken up strongly by the Fairbanks News-Miner, which pointed out that the people of the North, if they wish fast mail service, are forced to pay air-mail rates on everything but checks to the local laundry.

In an arrangement between the Chambers of Commerce of Fairbanks and Tacoma, twin letters were posted at Tacoma at exactly the same time by regular ship-delivered mail and by Lynden Transfer truck. The truck delivered its letter to Fairbanks in 3 days, less than helf the time required by steamship and train. The demonstration that the mail could be speeded up stimulated Alaskans to apply pressure for a change in the present system.

On the Alaska Highway, speeds to 50 miles an hour are safe in some stretches. Maintenance camps, placed each 100 miles, have done much to improve the highway. Barrel-stave culverts no longer crumble under spring floods. Something has been done about the fist-sized "gravel" that once ripped tough truck tires after a few hours' service, and regularly smashed through windshields.

The read still asks the best efforts of men of character and multiple talents, however—and there are no stoplights for 2,000 miles.

The men drive straight through, with brief stops every two or three hours to check the rig, and for coffee and meal breaks. Each driver takes a 300-mile shift, driving 8 to 10 hours while his partner may sleep in the berth behind him or keep him company.

There is no such thing as an uneventful trip. L.T.I. drivers rescue the stranded, pull automobiles out of ditches, effect emergency repairs at 40 degress below zero, and may have to change as many as 35 flat tires on a summer trip.

They know a temperature variation of almost 170 degress—79 degrees below zero in the winter, when a breakdown could be fatal, and heat of 90 degrees in summer. Vans, refrigerated in summer, are heated in winter to 28 or 36 degrees by propane furnaces, controlled from the complicated 50-dial panel of the cab.

Cabs are heated comfortably in winter. If ever heat goes out, the men bundle up like Eskimos. Over the years, veteran drivers, some with as many as 130 runs in their records, have learned to take with them the tools for emergencies.

"We turn the rigs into homes away from home," explained Bert Sheets and his driving partner, Bud Wilson. "We have a small emergency heater that can be removed from the truck, down-filled parkas and pants and thick felt boots. You get turned out of your rig up there by an accident, and you're on your own. Maybe there won't be anybody along for 24 hours."

The men applied fresh machinist's tape to each minute screwhead and bolt hole in the cab.

"The wind coming through these at 60° below cuts like a knife," said Sheets.

Sheets and Wilson, scheduled to roll that night, checked through reserve supplies: Two hundred gallons of diesel oil in the emergency tank, complete repair toolbox, ax, shovel, extra fan belts, canned foods, first-aid kit, down-filled sleeping bags, heavy chains for each of the 18 wheels, four spare wheels, spare tires and tubes, and a towline.

The tremendous vibration when all 18 wheels are chained works fastenings and bolts loose at such a clip that men check the rig every hour. Chains on all wheels, including front wheels, help to prevent disastrous side-slip of the 19-ton load on ice.

Typical versatility of the pair was displayed on a recent trip when a broken radia-

tor hose flushed away all engine water and antifreeze. They replaced the hose and built a big fire in the middle of the road in minus 30 weather to melt snow. For a receptacle they used a large oil tray.

Trucks are given a complete overhaul at Lynden at the end of each round trip, and a check at the Fairbanks terminus. En route, if a rig is forced to stop, the drivers' motto is: "We can't say here, we'll have to do something."

Each season has its particular truckers' nightmare.

"In spring, it's the mud, soft muskeg, and melting snow pouring hub-deep over the highway," said Marvin Stuurmans, dairy farmer and driver. "In summer, it's flats and the great mushroom clouds of dust. And squadrons of mosquitoes that feed on you while you're changing tires. In fall, we watch for ice. In early freezeups, the road is covered with a sheath of ice.

"There's always danger of a spinout, over which the driver has little control," Stuurmans said. "It's never happened to us—L.T.I. has a wonderful safety record—but its happened to other drivers. On a steep rise you start to slide. Your wheels spin, and the tremendous weight behind you begins to pull you back down off the mountain, maybe to a 1,000-foot dropoff. Then, in winter, you push snow over the bumpers or fight slides on a slick surface."

Stuurmans looked at his truck with a shy smile, finished in a different key.

"It's a fine run, always something different," he said. "We've helped hundreds of persons on the road. You never pass anybody up without offering aid. It's a long trip, but it gives you a real sense of accomplishment each time you make it safely, on time, with your cargo in good shape. You can take pride in it."

Winter is preferred driving time, because the roadbed smooths out under snow.

The highway's highest point is reached in a 50-mile climb to 4,200 feet on Steamboat Mountain.

Stuurmans, with Kok as his partner, held up at Destruction Bay by a washout on the road on one trip, attended Indian funeral services for a drowned child.

"You get to know everybody in Alaska," Stuurmans stated. "You learn a lot of different things about different people."

The drivers see wildlife in plenty, some of it none to friendly. Long ago, after one cab was bashed in, all tractors were equipped with "moose guards," heavy steel gratings over the radiator to repulse the attack of an occasional enraged bull moose, which resents the coming of the mechanical age to the wilderness.

A grizzly sow once put two drivers "right back in the cab." The L.T.I. drivers, spotting a grizzly cub alone on the road, stopped to get acquainted and were charged by a roaring half ton of maternal emotion.

"We see changes and growth every trip north as the country opens up," said Bert Sheets. "Some of our trips now are unscheduled runs. We've delivered a load of refinery equipment far out on the Kenai Peninsula, building materials to radar sites close to the Arctic Circle in midwinter, and once took mining equipment, way above timberline beyond Mount McKinley National Park.

"That was the finest trip we ever made," Sheets said. "We hit it just right, for weather. Clear as a bell, wildlife everywhere, and that great white mountain rising 20,000 feet against a deep-blue sky. I'll never forget it."

At the southern end, the company's plane, flown by Jansen or by a commercial pilot, is on hand at Lynden for quick emergency service. The small plane has set down on a smooth stretch of highway far in the wilderness with a needed engine part, guided by the sight of the 50-foot truck stopped on the road.

The trucks are more often rescuers than rescued. Once L.T.I. drivers picked up a family in great peril, its car wrecked, no shelter at hand against the cold. There wasn't room for all the members of the family on the seat, so the numerous children were shoved into the sleeping compartment. That's a trip the men won't forget soon. By the time the family was deposited safely in the next town, the kids had torn up most of the comforts of the sleeping compartment.

Trailers often are fully loaded for the return trip with scrap metals, furniture and personal effects of Army families, and automobiles.

In winter, drivers get a week's respite between runs. In summer, when Alaska is bustling, they may make "turn-arounds," as many as 11 in a row, seeing their families only briefly. In 1 month, Sheets and Wilson spent 29 out of 31 days in the rig. Alaska drivers earn $9,000 to $10,000 a year.

With all the hardships, drivers get a far-away look in their eyes when they talk of the beauty of it all—the magnificent mountains thrusting peaks into a cold blue sky, silent forests, rushing rivers. They know that they are dependent upon their own proud resourcefulness as few men are in this age.

Best proof that these men feel a thrill in their role as suppliers of the new frontier is the fact that they carry cameras.

Behind the driver's seat in almost any cab, you'll find a camera, loaded and ready to picture a moose and her calf, clouds rising from a mountain mass, a wild ram silhouetted against the sunset, or simply an L.T.I. truck on the lonely road.

"Traffic Court" Seen by Bar

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. ROBERTS. Mr. Speaker, the television program produced here in Washington, "Traffic Court," is certainly an effective manner of bringing highway safety to the attention of the public.

Recently, this program was seen by those attending the American Bar Association's Traffic Court Conference at the Yale Law School at New Haven, Conn., March 28 through April 1.

Municipal Court Judge George D. Neilson who appeared on the first 10 TV "Traffic Court" programs and who has taken a keen interest in traffic problems for many years and the program producer Lou Brott were invited by the bar association to introduce and present a recent kinescope of "Traffic Court" and explain how the program has served to mold and support community interest in traffic safety on a Washington metropolitan areawide basis.

Format of "Traffic Court" is the reenactment of previously decided cases taken from the official files of the District of Columbia, and nearby Maryland and Virginia.

Participating in the broadcasts on a rotating basis—with "Juvenile Court" seen every fourth week—are the police, judges, and prosecutors of Alexandria, Arlington, District of Columbia, Falls Church, Fairfax County, Montgomery County, and Prince Georges County.

It is now sponsored by the Metropolitan Area Traffic Council as an important part of the Council's traffic safety education efforts of the jurisdictions in the District, Maryland and Virginia.

It is estimated that current audience ratings of the "Traffic Court" period give the program a weekly audience of over 200,000 persons in the WRC–TV viewing area.

Frank Dobie on Libraries; A Bold Free Mind Comments on a Facet of Our Culture

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. YARBOROUGH. Mr. President, J. Frank Dobie, known to all his friends in the Southwest as "Don Pancho," called by some the Carl Sandburg of the cow country, is more than a successful author, university English teacher, folklorist, naturalist, and historian of the cattle country, though he is all of those.

He is a philosopher, free thinker, and a free man. His sharp pen stabs the servile conformity of our times, bids men to think, and calls on them to be intellectually free.

Last week, at the opening of National Library Week, J. Frank Dobie, in his own individual way, commented on the "Human Mind and Libraries." I think his comments worthy of wider distribution than they have yet received.

I ask unanimous consent to have printed in the Appendix of the RECORD J. Frank Dobie's article entitled "Human Mind and Libraries" from the Austin (Tex.) American Statesman of April 3, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUMAN MIND AND LIBRARIES

(By J. Frank Dobie)

The 1960–61 issues of that ponderous volume, "Who's Who in America," will contain in its back pages a citation representing, perhaps for the first time, Texas. Every 2 years "Who's Who in America" summarizes examples of "Educational Philanthropy" and "Exceptional Gifts to Libraries."

The forthcoming citation is to Mrs. Emilie Wheelock Howson, who died in Austin, 1957, at the age of 96, leaving $110,000 without strings to the Austin Public Library and $100,000 to the Carver Branch of the Austin Public Library for the purchase of books. A branch of the library is now being built that will bear the name of Emilie Wheelock Howson.

Exceptional gifts to libraries as listed biannually by "Who's Who in America" express something more than density of population and bank deposits. In volume 30, for instance, there are 13 citations, including 1 for Ontario, Canada. Massachusetts and

New York have two citations each. Vermont, New Hampshire, New Jersey, and Pennsylvania have one each. North Carolina and West Virginia are the nearest there are to the Deep South, with its fear of ideas. The Middle West is not represented at all. The West is represented by Oregon and California. Without having much more wealth than Texas, California has from Bancroft's time on through the time of Huntington, of Huntington Library fame, and clear up to our own times, had many benefactors to libraries and universities. I knew an old cowman a long time ago before cattle were shipped by trucks who judged a railroad town by its shipping pens. Bookstores exist where there are demands for books. Nowhere in the Nation, I suppose, is the support of public libraries anywhere commensurate with the support for more and wider and faster highways.

EMERSON'S COMMENT

Many centers of population that give strong support for churches, hospitals, United Funds, and all sorts of charities, dispense only a pittance to public libraries and museums—to institutions expressive of intellect and taste. Emerson said something about this in one of his essays. "I give the dollar to charity," he says, "but it is a wicked dollar. Tomorrow I shall have courage to refuse it and to give it to the enlightenment of man." To give for enlightenment, for civilization, for the beautiful is not to deny the claims of charity but is to assert the wholeness of man. Nine-tenths of the candidates for public office assert their allegiance to churches, United Funds, Boy Scouts, hospitals and even to such an antidemocracy and antiintellectual organization as the American legion. It's always safe, and maybe popular, to be for God and babies, but I'd like to vote for some candidate who's been a strong crusader for libraries and art museums. Philanthropy takes many desirable forms. What American philanthropist has done the most good with money may not be asserted categorically, but I should consider Andrew Carnegie. When I think of the libraries the Carnegie fund has brought into existence and aided throughout the English-speaking world, I feel like saluting tight old Andrew Carnegie.

A few weeks ago I experienced a joy still retained in going through the Marion Koogler McNay Art Institute in San Antonio. Mrs. McNay, a woman of wealth and a patron during her lifetime of the arts, left the building and extension grounds, many pictures and funds for enlarging and keeping up the museum now named for her. It is fresh and strong and green and growing like the spring leaves coming onto sturdy live oaks right now. The direction of the McNay and the Howson moneys contrasts strongly with millions left in foundations by individuals with no idea or desire for spending the millions.

Public libraries used to be places for quiet study and reading. What picture galleries of human countenances the newspaper rooms in libraries in big cities still are. Nowadays the public library is something of a community center with emphasis on wholesome amusement for children, usually in the form of reading and pictures. I myself don't ask anything better than silence and books for libraries, but I'm for everything that public libraries have been and are becoming. One of their functions have not changed an iota—that is, to provide materials for enlarging and freeing the human mind. They are at the opposite pole from all censors of books and all restrictors of ideas, whether the censor-restrictor is theological or merely greedy against taxes. The idea of the public library is the opposite of the ideal of the dictator who suppresses newspapers and books in the hope of suppressing opposition.

ONE OF THE BRAVE

As I compose this salute to the public libraries and the public librarians of America, I'm looking at a book just published by the University of Chicago Press. It is "Their Majesties the Mob," by John W. Caughey of the University of California. He was one of the brave who a few years ago refused to sign a loyalty oath later declared unconstitutional and who won out. "Their Majesties the Mob," consists of between 50 and 60 accounts of vigilante action in America from the days of California vigilantes to the days of McCarthy and the House Committee on Un-American Activities vigilantism. It was during the frightened fifties that female and male vigilantes alike tried to censor books on shelves in many public libraries and even in some cities to burn them. The libraries stood against such barbarism and enlightened newspapers, which do not include all newspapers by any means, stood behind the librarians. One of the vivid accounts in "Their Majesties the Mob," is by Ralph S. O'Leary of the Houston Post on the Minute Women of Houston who called every man and every idea they did not agree with communistic and blackened reputations of some fine individuals.

The title of one piece in this book sends the spirits up like sight of a flaming comet across a black sky. The title is: "Mr. Justice Holmes Dissents." Despite all book burners, despite all fundamentalist opposition to free minds, the public libraries remain depositories for the bravery and wisdom and foolishness, too, of dissenters. It's the dissenters and not the assenters who have brought mankind as far as it has evolved from the jungle. I stand tiptoe to salute those preserves and carriers of the torches of truth—the public libraries and their librarians.

Harry Van Arsdale, Progressive Labor Leader

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. ANFUSO. Mr. Speaker, Harry Van Arsdale is a labor leader with vision. As head of local 3 of the Brotherhood of Electrical Workers in New York he is the leader of 29,000 workers in the electrical industry of this great city. He is a forward-looking man, who has the interests of his people at heart, and provides them with able leadership. He is very popular not only with the people of his union, but with many people in New York who know him personally and admire his ability and integrity.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article from the New York Mirror of April 11, 1960, written by the noted columnist Columnist Victor Riesel in his column "Inside Labor." The article is devoted to Harry Van Arsdale and his planning for the future. I call it to the attention of all my colleagues because it deals with matters which are of great interest to all of us and will affect our lives and the lives of our children. The article reads as follows:

UNION SEES FUTURE STRANGER THAN FICTION

(By Victor Riesel)

Some day "soon" the phone will ring and at the other end the caller will speak in Swahili and you will hear him in English through the nuclear automatic translator.

Some day "soon" great urban centers such as "New York, London and the Ruhr" will have been dispersed and we will live in small communities grouped around nuclear power plants. No science fiction, this. No esoteric college seminar.

They are just a few of the observations of practical men to other practical men. They were made at a unique and sobering labor-management search into the future by leaders of New York's International Brotherhood of Electrical Workers Local 3, labor's avant-garde, and the city's electrical industry with a yearly payroll of $75 million.

Some time ago, the union's indefatigable leader, Harry Van Arsdale—he who never sleeps—took a long look at the electronic magic being wrought by his 29,000 followers and the businessmen who employ them. He and his counterparts in the Joint Industry Board of the Electrical Industry of New York decided to hear about that magic's impact on the future—of their business, their homes, their working conditions, their nation and the world.

They decided to do this jointly, as they have all other projects which have made the New York Electrical Workers about the highest paid and the industry one of the finest profit groups, in the land.

Soon some 40 employers and 40 union officials began meeting at eight a.m. each Thursday in the Cooper Union library to hear from Academy of Science, Pentagon and university scientists what will happen when the era of plentiful nuclear power arrives. They asked tough questions: "Will they (union leaders, workers and businessmen) be liberated? Will they be automated and made obsolete? Will they be struck down by leukemia?"

I sat with Van Arsdale and Efrem Kahn, the industry leader and Harold Webster, head of the National Electric Contractors Association, the other morning. We heard that the chances of being hurt by Strontium 90 in the blue yonder were exactly 1 million to 1.

As Dr. Merril Eisenbud, professor of Industrial Medicine at Bellevue Medical Center, explained, this means anywhere from zero to 3,000 people of the world's three billion.

During previous breakfast sessions there had been Dr. Boris Pregel, chairman of the board of trustees of the New York Academy of Sciences. It was he who said, "The existence of manufacture and of communications by sea and rail have until now determined the concentrations of populations such as New York, London, and the Ruhr. I forsee the gradual dissolution of these big centers and the establishment of small communities built around nuclear reactors."

Dr. Pregel warned that when machines take over the jobs of clerical workers and those of the old skilled production workers who are among our most highly paid today, "This group will be downgraded to the status of unskilled labor."

With hundreds of thousands who may be thus affected in big cities, their loss of status and income would make them susceptible to violent political moods.

To forestall chaos, there must be planning and retraining now. Labor leader Van Arsdale and his colleagues in industry have seen the future. They'll do something about it—together.

Mr. Murphy a Democrat?

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. PROXMIRE. Mr. President, few, if any, great newspapers have adopted a more independent, nonpartisan approach than the Milwaukee Journal to all political questions, and particularly to appointments to the quasi-judicial agencies of our Federal Government.

But the Milwaukee Journal's sense of fairness was offended by the recent nomination by the President of a man who seconded the nomination of Vice President NIXON at the Republican convention in 1956 as the new Democratic member of the Interstate Commerce Commission.

How Republican can a man be? What a travesty on the whole idea of bipartisan commissions. Mr. President, I ask unanimous consent that an editorial from the Milwaukee Journal entitled "Mr. Murphy a Democrat?" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. MURPHY A DEMOCRAT?

The law requires that there be no more than six members of one party on the Interstate Commerce Commission. There are now six Republicans. One of the five seats allotted to Democrats is vacant. To that seat President Eisenhower has named Timothy J. Murphy, a Boston attorney.

Murphy calls himself a Democrat. But members of that party are doubtful. In 1956, Murphy says, he supported Eisenhower. So, of course, did many Democrats. But Murphy also went to the Republican convention in San Francisco and gave a seconding speech nominating RICHARD NIXON as vice-presidential candidate on the Republican ticket.

Democratic Senators consider this strange conduct for a member of their party. So they're planning a stiff fight on the nomination. "Would the Dodgers allow the Braves to direct their base runners?" they ask in effect.

Better Future for the Aged Through Medical Research

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, medical research will undoubtedly improve the health and well-being of all of us in our later years. Some of the prospects are discussed by Dr. James A. Shannon, Director of the National Institutes of Health, in the ninth and last of a series of columns written for Ray Henry which appeared in over a hundred papers throughout the country during January and February.

The improvements in medical well-being that he notes are all the more reason for modifying our social security retirement policies so as to permit and encourage those older persons, who are able and willing to work and who want to work, to be free to accept employment including part-time employment.

I am hopeful that the Congress will act at this session along these lines:

BETTER FUTURE FOR THE AGED THROUGH MEDICAL RESEARCH

(By Dr. James A. Shannon, Director, National Institutes of Health)

The prospects of better health and health care in the future, particularly for the aged, are the brightest in man's history.

Scientists put new medical knowledge in the physician's hands every day. And, they will continue to do so at an increasing pace.

The past is an example. After all, the significant progress in medical research and the growth of our population in the last 20 years are not unrelated coincidences.

Much of the increase in population is a direct result of new medical knowledge. The knowledge comes from sustained and imaginative study by many scientists. Their work is supported by the public through research foundations, voluntary agencies, Government programs and public-spirited private citizens.

Population growth has been particularly evident at the extremes of the life span. This mainly has resulted from the giant strides which have been made against the infectious diseases and the vast improvements in all kinds of medical care, as well as progress in such related fields as housing, nutrition, and sanitation.

But most important of all has been research aimed at finding more knowledge which is useful in the diagnosis, treatment, and prevention of disease.

Today, our national medical research effort is focused upon the challenge of chronic disease which affects large numbers of the general population and constitutes the major threat to all of our lives as we pass middle age.

Let us take a brief sampling of some of the additions to medical knowledge in recent years and some of the major accomplishments which our top scientists believe we will see in the next 10 years.

Since man's view of the future has always been very limited, we can be sure there will be many more developments than this. Very probably they will be even more exciting.

In the general area of gerontology, the study of aging, science is steadily uncovering the hidden characteristics of the aging process.

We now know as people grow older, they not only shrink in stature, but their organs also decrease in size and vital capacity.

For example: Older hearts can pump less blood with each heartbeat than when they were younger, a fact which partially explains our decline in energy as we grow older.

Although body functions make certain definite changes when growth ceases, aging is not necessarily connected with the deterioration of the body by disease.

Contrary to public belief, body cells of older people can and do perform practically the identical functions as they do in younger people. But the rate of function gradually declines.

Developing fields of science, still unfamiliar to the general public, are of the utmost importance in wresting from nature some of her more complex medical secrets.

One of these is epidemiology, the science of mass phenomena and disease. Such studies, using the rigid tools of the biometrician—a kind of health statistician—to supplement skills of keen laboratory and clinical observers, are clarifying the problems of cardiovascular disease and throwing light into the dark areas of neurological diseases and cancer.

The increasing depth of medical research is making it possible for us to examine the cell and its systems and to extend these findings to the whole man.

Such depths are reachd through modern advances in scientific research like those in biochemistry aided by extensive use of radioactive isotope techniques.

With continuing biochemical approaches to the study of therapeutic agents, we can expect to see an array of new drugs for the attack on killing and disabling diseases.

Deeper penetration into the life processes of the cell will also result from physical biology as physicists, physical chemists, and mathematicians turn their instruments of precisions and models of thought to studies of biological entities and processes. We will soon gain understanding of the nature of reactions within the body cells and how specific proteins are reproduced.

In the field of collagen diseases, such as arthritis, we are rapidly gaining physical as well as chemical understanding of the changes which lead to suffering and disability.

We are approaching a solution to the questions of just what viruses are, how they multiply, and what roles they play in the development of cancer.

Physical biology will also help us to learn how to produce highly potent, purified and perhaps modified viral antigens for use in preventing a host of viral diseases.

Striking changes will appear in the practice of medicine as physicians apply new knowledge now being acquired in the field of mental health.

Important to these and perhaps even greater future gains will be both an expansion and a change in training people to use newly developed precision instruments and techniques.

Despite the current growing shortage of trained manpower, medical science is meeting the challenge of chronic disease more successfully than ever before.

We are solving fundamental problems which have baffled medical men in all previous history because we do have, today, the most advanced methods and the most highly trained scientists the world has ever seen.

Mary Lasker: Crusader for More Beautiful Cities

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. KEATING. Mr. President, one of America's great and unique women, Mrs. Mary Lasker of New York City, has in recent years launched a magnificent crusade to beautify our cities. With remarkable success, resulting from her perseverence and winning ways, she has sold the idea that our urban centers should regard beauty as a public service. She has demonstrated in New York City

that flowers can play a vital role in revitalizing America's downtowns, and other cities all over the country are emulating that city's example.

Anyone who has visited New York City recently must have been struck by the profusion of tulips on Park Avenue, for example. Some 30 blocks of blooms now testify eloquently to the success of Mrs. Lasker's great experiment.

Mrs. Lasker's pioneering work in this field comes as no surprise to those of us who have long admired her dedication to such vital causes as medical research, education and the progress of the underdeveloped countries of the world. It is certainly heartening that this woman, who is undoubtedly one of America's busiest ladies, can take time to spearhead the drive to make our cities more attractive.

I certainly hope the example Mrs. Lasker and her coworkers have provided in New York City will be emulated far and wide in our land. In this connection, an interesting article in the Apirl 10, 1960, issue of This Week magazine catalogs much of the progress which has been made. I ask unanimous consent that this article, which salutes the incomparable Mrs. Lasker and her work, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW AMERICAN LOOK: CITIES IN BLOOM

(By Samuel Grafton)

A new kind of street scene has been observed recently in many American cities: A pedestrian, on his way home, deep in his problems, happens to glance at a street as familiar to him as his hand. His mouth opens. In extreme cases his eyes pop as he sees something brand new among the familiar darkening stones and flickering neons—generous, even staggering, masses of flowers, and long lines of trees.

In New Orleans, these may take the form of palms and azaleas on the center mall of Canal Street.

Seattle's new look is the result of tree plantings.

Flower-banked tubs gladden hearts in St. Paul.

In New York, where the most startling changes have been taking place, strollers will be gaping in another month at 150,000 tulips in bloom, almost 30 blocks of flowers marching gloriously right down the center of Park Avenue.

When city experts discuss this invasion by beauty which is engulfing one American street after another, their conversation most often gets around to a New York woman, Mrs. Mary Lasker.

A few years ago these questions occurred to Mrs. Lasker: How could our American cities be made more attractive and livable? Where should one start? Mrs. Lasker started in the simplest possible way. She put flowers around in the streets, masses of them, after obtaining municipal permission.

It was an artless, almost naive action, but it shone like a good deed in a naughty world. Maybe we need more such simple solutions for problems we think are complicated, because the exciting thing is that Mary Lasker's flowers have won the day. They are spreading, east side, west side, all around the town. And all around the country.

Mrs. Lasker had what was needed to do the job. She is wealthy, winning and attractive, and determined. But, on points, she was about the last person who could have been expected to notice the increasing desolation of our downtown streets, and to do something about them, because she is one of the busiest women in America.

A LADY WITH LOTS OF INTERESTS

Her interests are so extensive that only her closest friends are aware of their number and complexity, and even they may miss on a few. As the widow of Albert D. Lasker, pioneer American advertising man, she has for years devoted herself, as he did, to furthering medical research. Some of the very feminine and dainty rooms of her house are piled high with medical journals, and she is famous for her "steel file" mind; she can bring up, from memory, the date of a medical advance, of a piece of experimentation on research, or a statement made at an important conference, while others are looking in the records for the answer.

Don't ticket her, though, as a lady of science; you'll trap only one small aspect of Mary Lasker that way. As a young girl, from Watertown, Wis., she studied art at Radcliffe (later she was a post-graduate student at Oxford in England).

Her house is filled with paintings, many of them in impressionist masters. Mary Lasker frankly loves beauty, and her house, decorated in what can only be described as many shades of white, is of a fascinating unity throughout, dominated everywhere, in hall, on stairs and in living quarters, by the paintings. (Characteristically, she likes the outside to be beautiful, too, and every year has her gardeners come in from the country and plant bulbs around her neighbors' trees.)

A typical party at her house will find present half a dozen Ambassadors, the heads of a couple of broadcasting networks, perhaps Mrs. Eleanor Roosevelt and Madame Pandit of India. She is deeply interested in furthering education, particularly in underdeveloped countries. And somewhere she finds time to see every good play and to hear most good concerts in New York.

She spends many hours a day at the offices of the Albert and Mary Lasker Foundation, which administers her health and education grants. Unlike many executive types, she is quiet, pretty, and rather retiring. She admits candidly that she likes to spend a number of hours a week at a beauty salon.

FLOWERS FOR EVERYBODY

It was this outstanding lady of New York who decided a few years back that the streets of the town needed beauty. (She had previously set up great chrysanthemum plantings in Central Park, in memory of her mother, but these were off the streets. Now she wanted flowers where people were.)

Although today nobody will come out and say it, when Mary Lasker first made known her modest desires she was met with what might be called well-entrenched scepticism from the city.

What ensued wasn't really a knock-down drag-out political battle. Rather, it was one of those polite but steel-firm controversies.

On one side was Mrs. Lasker, who kept insisting that flowers in a city are like lipstick on a woman. You have to have some color.

And ranging on the other side were experts of the city parks department, who had been battling soot and grime and fumes for years. Quite understandably, the experts had long given up on trying to nurture flowers in an area where flowers weren't expected to grow. The experts stuck to their trees—a lot simpler, they insisted, and better equipped by nature to deal with the unnaturelike surroundings of the metropolis.

SET FOR A STRUGGLE

Mrs. Lasker, in preparing for a struggle with the city over her flowers, enlisted the aid of Mrs. Anna Rosenberg, the former U.S. Assistant Secretary of Defense, and together the two of them set out to do battle with the who-needs-it? spirit of the city.

It ought to be noted that Mrs. Lasker doesn't argue, she merely remarks in a ladylike way that it's a pity not to have more joy in our lives, which are being made longer by medical research.

Finally, after many long hours of meetings and conferences, the experts heaved a collective sigh and said in effect: "Go plant your flowers. Just remember we told you so."

So, in 1956, New York City settled back and watched Mrs. Lasker with a detached but amused eye. (After all, it was her money, wasn't it?). And Mary Lasker proceeded with her plan. She felt that tulips had a chance to survive; she counted on the waxy leaves and petals to withstand dirt, and the small amount of sun that is required to sustain flowering spring bulbs. She began with four bleak blocks on Park Avenue.

The rest, of course, is floral history. The tulips flourished; the parks department was stunned.

In 1957 the city, still recovering from shock at the whole thing, gave her permission to plant 22 blocks on Park Avenue. And that year the city, still amazed but by now visibly pleased, took over at her suggestion the program, appropriating $309,500 for plantings, and started the "Salute to Seasons" program. Mrs. Rosenberg and Richard C. Patterson, Jr., commissioner of the department of commerce and public events, are cochairmen of the project. Changes of the seasons are acknowledged not only with flowers but with special entertainments

"I just gave a little seed money at the beginning to get things rolling," says Mary Lasker.

Things are indeed rolling. Mrs. Lasker and her associates think that there are three elements which can be used to bring beauty into our lives: Flowers, trees, and lighting. By late spring of this year all the main avenues of midtown New York will be tree lined, like the avenues of Paris.

A FAIRYLAND BY NIGHT

At night nowadays 10 blocks of the east face of Central Park, along Fifth Avenue from 60th Street up, are elaborately lighted. This used to be an area of cavernous dark. Now it has been changed into a series of pictures in light, glens carved out of the darkness by astutely concealed lighting. One hesitates to use the child's word "fairyland" to describe it, but let's call it fairyland. That's what it is.

The park lighting is paid for by a New York real estate corporation. Banks have taken over the financing of individuals blocks of the Park Avenue displays. Mary Lasker's seed money has produced quite a crop: Plans for new office buildings in midtown New York now include areas for plantings as a matter of course, plus reflecting pools, and colonnaded walks. Tight-fisted businessmen have discovered there is something very practical in beauty; it gives distinction to a building, a street, a neighborhood. New York had suddenly realized that 500,000 tourists go to Washington every spring just to see the cherry trees bloom. Business leaders who had never thought of flowers before except on Mother's Day now feel they have a weapon with which to fight the flight to the suburbs, the decline in downtown shopping.

The businessmen are realizing that when Mary Lasker says, "It's an important in dollars and cents for a city to establish a pleasant image of itself," she truly knows of what she speaks.

One dreary New York City area, the famous Worth Street textile district downtown, has been transformed; plantings have been set out, a great repainting program has been completed, with the result that a dis-

trict which was declining has seen values shoot up, and a new lease on life won.

Amazingly, the plantings seem inviolate. Incredulous authorities say they don't have a single authenticated case of plant stealing. There was a mixup in 1957, when the first Fifth Avenue plantings happened to coincide with Queen Elizabeth's visit to New York. Some people, assuming the flowers had been put out to welcome the Queen picked them and took them home. Since it has been explained that the displays are permanent, they have been left untouched.

YOU NEED A FEW ZEALOTS

Any city that wants to beautify itself will find, however, that it has to work hard to do it. You'll have to sell the idea, and you'll find that people will need time to think it over, and get used to the notion of beauty as a public service. "You need some zealots to get it going," says Mrs. Lasker. "But it's one of the ways to a better America. Let's remember that we live by joy, not by bread alone."

In arranging plantings, you'll have to be practical. "Don't kill the idea by trying to plant petunias where there's no sun," says Mary Lasker. "Call the local nurseryman, and ask him what thrives in the area. He will know. In crowded northern city streets, we find that gingko trees and plane trees do well. So do spring bulbs, begonias and mums. Farther south, you can use azaleas and rhododendrons. Crabapples are useful in many places.

"Try to start with a specific project. Have your group make a firm offer to your park department, and then call the mayor, and work with him. There's a good chance that people will pitch in, not only for the joy of it, but because it makes your town a nicer place to live in, work in and visit, and brings an increase of activity."

Or, as Mrs. Rosenberg, also a busy woman who has found time for municipal beauty, puts it: "It's vital to do things that make folks feel better. When you watch people walk down a street, and spot the flowers, you can actually see them relax. It gives them a different feeling about their city, a touching kind of pride. It's a sign of maturity that we're finding the courage to respond to beauty."

SOME U.S. CITIES THAT HAVE JOINED THE CRUSADE

Here's a partial list of cities now engaged in plantings and revitalization:

Birmingham has a beautification board in charge of placing large concrete urns filled with growing plants in the downtown area.

Boston is giving more eye appeal to its historic Common, the oldest public park in the United States. New shrubs and masonry are going in.

Chicago, through its city bureau of forestry, has placed trees and shrubs downtown and has encouraged new lighting in the area.

Neosho, Mo., is an example of what a small city can do. Each year the Flower-Box City distributes dirt-fertilizer mixture as a free service to citizens and business firms.

Norfolk has recently undertaken a project of flowering plants and displays in downtown streets.

Omaha has made its main effort embellishing a major highway which connects the central business district with the city's municipal airport.

Philadelphia has been engaged in setting plantings and floral arrangements in the heart of the business and finance district.

Portland, Ore., has placed over 500 potted trees and flowers downtown.

Rochester, N.Y., long known as the Flower City, cultivates lilacs not only in private gardens but in public parks as well.

Washington has the annual Cherry Blossom Festival, the Kenilworth Aquatic Gardens, and the National Capital Parks System, but beyond all this the city emphasizes beautification around its more than 85 statues and memorials.

What can you do? To find out specific varieties of plants, trees, and shrubs suitable to your community's climate conditions, you should consult your State university's botany department or agricultural unit, or local botanical gardens. Your agricultural county agent may also provide information.

Cutting the Fire Toll in the U.S. Forests

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. ENGLE. Mr. President, the Interior and related agencies appropriation bill, containing funds for the Forest Service, is now in conference. I hope the conferees will heed the many pleas to provide adequate funds for forest fire prevention. This is far better economy than spending emergency funds on forest firefighting, as we have to do every dry year in California.

The point is very well stated in an editorial in the San Francisco Examiner of March 29 entitled "Cut the Fire Toll in U.S. Forests." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CUT THE FIRE TOLL IN U.S FORESTS

Great forest fires take a tragic toll each year in this country's 181 million acres of national forest preserves scattered across three-fourths of the 50 States. No less tragic is the fact that much more can be done to prevent these fires, but is not being done.

An effective fire-prevention program is pending in Congress. Unless it is approved, the country can expect ever worse repetitions of the huge fires that last year, in the national forests within California alone, raged over 178,000 acres. The flames not only destroyed timber and wildlife; they did lasting damage to watershed, recreational, and scenic values.

This destruction will increase in magnitude simply because the Nation's population expansion is pushing civilization ever closer to the national forests.

Under the existing system, Congress each year gives a flat sum to the U.S. Forest Service for routine forest protection. Then, when great fires occur in a dry year, funds are dished out on a wasteful emergency basis to fight the flames and their consequences. These funds generally exceed the amounts spent on protection.

Under the proposed program, additional funds would be supplied specifically to prevent fires by reducing fire hazards. This prevention would take the form of controlled burning, more fire trails, more brush cutting, more firefighting equipment, more employment of key men on a year-around instead of seasonal basis.

In effect, part of the emergency funds now wastefully spent to fight fires would be spent before the fires to keep those fires from occurring, or to minimize the damage they could do. There would be a substantial dollar saving. More important, vast acreages of our forest resources would be saved from destruction.

This is a sound and prudent prevention program conceived by men who know their business. It is supported by prominent lay experts serving as advisers to the Forest Service. We urge Congress to put it into effect before the new season of forest fire destruction is upon the country.

The President's and Vice President's Statements in Connection With National Library Week, April 3–9, 1960

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. SCHWENGEL. Mr. Speaker, in a democracy such as ours, it is important that the people be up-to-date in all of their information about this great country of ours and the operation of its government. That is why our libraries and their services are so essential and why we must do everything we can to see that these services be made available to more people.

In Iowa I take special pride in the role I played in the expansion of library services within the State. I was the author of many bills which brought the great world of books and the printed word to more of our citizens. The literacy rate in Iowa is among the highest in the Nation.

During National Library Week—April 3–9—I was impressed by the statements of President Eisenhower and Vice President NIXON. Under leave to extend my remarks, I would like to bring these statements to the attention of my colleagues.

The President's statement was made in a letter to Benjamin E. Powell, president of the American Library Association. The President said:

During National Library Week, our people have the opportunity to renew their interest in, and support for, the libraries of America. These libraries contribute much to the pleasure and intellectual growth of us all. Unfortunately, many citizens have no access to library. This handicaps the minds of both young and old. I am glad that the programs of National Library Week will emphasize the need to broaden the availability of books for a better-read, better-informed America. I wish every success to these efforts.

Vice President NIXON's statement was printed in the April 3 edition of This Week magazine. It is as follows:

BE READY! BE LUCKY!

(By RICHARD M. NIXON, Vice President of the United States)

At our house, as in the homes of millions of other American families, we enjoy a good television program. However, we sometimes find it too easy to spend more time than we should just watching. Stimulating as television can be, we realize afterwards that there are other spare time activities which make for a rich and interesting life and have more permanent value.

Take reading as an example. I think our young people in particular miss a great deal when they deny themselves the opportunity of reading in their spare time. Reading is not only fun—but through it we have at our fingertips the whole of Western civilization.

And reading has an added attraction. When someone handles a difficult situation well, you often hear it said that he is lucky. There is no question but that the breaks do play an important part in life.

Generally, however, you will find that what seems to be luck comes to those who have done their homework.

The phrase "he is lucky" more often than not applies to a person who has prepared himself to take advantage of the breaks when they come his way.

Words are not simply things in themselves but keys to ideas. Every word and every sentence you read is a tool for unlocking your mind. And once the mind is unlocked, it becomes the doorway to ever-widening vistas of knowledge. With ideas and opinions in your mind, you can be prepared for any eventuality.

Jonathan Swift once referred to the "artillery of words." This phrase has vital meaning for us today. The Communists are waging an all-out war for men's minds. We must counter their barrages of words with meaningful ideas of our own.

To win a battle in which words are artillery and ideas have the impact of missiles, we need minds of broad caliber and depths of intellect. People are not born with minds like this; but they can develop them. The reading you do when you are young disciplines your mind and increases your capacity for understanding of the problems of the future.

For this reason reading, study, and the intellectual discipline in an atmosphere of freedom in the long run will be the major strengths in the free world arsenal. And today's young Americans, who tomorrow will have to assume leadership in this battle, must be prepared to meet the challenge.

Knowledge is no luxury. It is the key to survival.

Young Northerner Takes a Look at South's Stand on Civil Rights

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. TALMADGE. Mr. President, one of the State of Georgia's leading daily newspapers, the Macon Telegraph, on Thursday, April 7, 1960, published on its editorial page the text of the address which won first place in the recent Albion College oratorical contest in Michigan. The speech was on the subject of civil rights legislation and was delivered by a young premedical student, Mac Briggs of Scottville, Mich.

Mr. Briggs, who prefaced his remarks with the assertion that neither he nor his family had any ties with the South, undertook to speak in defense of the South and, in so doing, eloquently pointed out the hypocrisy with which many Americans outside the South approach the issue of human relations. While I disagree with some of Mr. Briggs' opinions on the theory of race relations, I do wholeheartedly agree with the editor of the Telegraph in his comment that "it is heartening that there are those in other sections of the country with understanding of and sympathy for our position."

I commend Mr. Briggs for his sound logic and intellectual honesty and I ask unanimous consent that the text of his prize-winning speech be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUNG NORTHERNER TAKES A LOOK AT SOUTH'S STAND ON CIVIL RIGHTS

(EDITOR'S NOTE.—In these trying times for the South, it is heartening that there are those in other sections of the country with understanding of and sympathy for our position. One of those is a young premedical student at Albion College in Michigan. His name is Mac Briggs of Scottville, Mich., and his speech on the civil rights bill, which we are pleased to print, recently won him an oratorical contest sponsored by Albion College.)

I was born in northern Michigan. My great-grandfather never marched under the Bonny Blue Flag, the Stars and the Bars of the Confederacy. He had nothing to do with that magnificent grey line that was Pickett's Charge at Gettysburg. No, not one of my ancestors came from south of the Mason-Dixon line.

Yet, today I have been moved to say a word in defense of the South. At first, however, I must deal with a simple difficulty that we all have, our own tendencies to react emotionally, forgetting reason. It is very difficult for us, I think, to be objective about issues involving human emotion because, after all, we are all creatures of emotion. Yet we are also creatures of reason, and it is reason with which I intended to proceed from this point.

Now, 95 years have passed since that gallant soldier, Robert E. Lee, surrendered to General Grant at Appomattox Court House, yet we of the North are still rubbing salt into the ugly and slow-healing wounds of "our vanquished South." We are still treating the South as stubborn, stupid, prejudiced stepbrothers. But the trouble with the North is that we still don't know what the War Between the States really proved. To the North, the war simply served to prove to the southerner that he was wrong. What the North refuses to understand time after time is that the Civil War really proved that the South will go to any length, yes, even that fatal and already doomed one before it will allow change of its way of life by mere force of law.

The South was relatively happy with its continued condition of separation that had always existed between the Negroes and whites, after all, people with similar interests like to be together, and they tried to live up to the 14th amendment after the war by setting up separate but equal schools. The Plessy versus Ferguson Act, as far back as 1896, proposed to provide for separate but equal transportation for the Negroes of the South. Later, this principle was applied to education (at least on paper) as the courts attempted to abide by the 14th amendment. They attempted to make the Negro equal but they still preferred to be separate. Well, this looked good on paper, but in practice, it just didn't work. In the first place, separating the Negro automatically inferred that he was inferior, and in the second place, the school administrators, being white or predominantly white, neglected Negro schools. In effect, even in the most ideal cases the Negro schools were never provided for equally.

After a considerable number of complaints of inequality of education issued, the case of *Brown* v. *Board of Education of Topeka, Kans.*, was debated in 1954 and the Supreme Court concluded that "in the field of public education, the doctrine of 'separate but equal' has no place." Separate educational facilities are inherently unequal. "Therefore," they stated, "segregation necessarily deprives the Negro of the equal protection of the laws guaranteed by the 14th amendment." Later in 1954, the Supreme Court implemented decrees to carry out this decision saying that "all schools must be integrated immediately, or in good faith with all deliberate speed."

They apparently had no idea whatsoever what the social repercussions to such a drastice order would be. Friction, bitterness, extreme antagonism, and Little Rock resulted. Today, after 6 years, there are no schools integrated in the South.

Now, the North has self-righteously proceeded to crack down on the South again for her resistance to put into practice the civil rights of the Negro. According to the February 5, 1960, issue of U.S. News, the White House has now proposed a new twist to something that was tried right after the Civil War: A plan to police elections forcing the South to protect the rights of Negro voters. It didn't work then, and it won't work now; human nature doesn't change. Who among you here complies without rebuttal when someone orders you to change immediately and completely an attitude that you have held all your life? No matter how wrong you know you may be, you naturally react strongly against such brutal treatment of your emotional values, don't you?

Last Sunday's Detroit Free Press has revealed that Senate Majority Leader LYNDON JOHNSON has announced that he would hold around-the-clock sessions, putting southern Senators through a grueling day and night test of physical endurance in order to force the civil rights bill through. The southern legislators have immediately retaliated, stating most emphatically that they will use every means and power they can muster to defeat the bill. Said Senator RICHARD RUSSELL, a Democrat, from Georgia: "We desire to know whether it is proposed to boil us in oil, burn us at the stake, or simply burn inches off our bodies." Today the filibuster of the 16 southern Senators continues. Here are 16 men trying to represent their people while 84 Senators proceed to let them shout themselves to exhaustion and then force something upon them that has no relevance to the States represented by the 84. And we talk about maltreatment of minorities. How blaring does hypocrisy have to get before the North will recognize it in themselves?

Now don't misunderstand me; I have never thought that slavery was right. Segregation is unfair, undemocratic, no matter where you have it, but integration is a step that can only be accomplished by patience, understanding, and education. However, whether segregation is fair or not is beside the point here. My point is that we of the North have rejected cultural integration, just as much as the South. We stand pointing our finger at the South as enlighened champions of democracy apprehending democracy's betrayers. We of the North must protect the Negro of the South; but what about the Negro of the North? Let's just see what happens to the northern Negro.

Maybe you have noticed that, in buying a home in the North, the Negro is invariably at the mercy of the real estate agents. If a Negro is not forbidden to buy into a new area altogether, he can expect to pay about $1,500 more for a home than a white person is asked for the identical structure.

In Westchester, N.Y., a fashionable all-white neighborhood, a survey was conducted to get the opinions concerning Negroes of these residents. It was found that over 75 percent agreed that better housing facilities should be made available for the Negroes; but, when asked whether or not they would mind having a Negro live next door, about 80 percent said, "Yes; they would mind."

In Detroit there are patches of ugly shacks, which represent in some cases, the results of just such housing discrimination. Most of the shacks are studded with "for rent" signs, you see kerosene burners tucked into the corners of dark, dismal rooms. You smell the pungent, musty stench. You hear parents talk of their children being bitten by rats. There are at least 35,000 of these wretched structures in Detroit, and over three-fourths of them are occupied by Negroes.

We are forcing the South to integrate—the very thing we in the North reject; and we don't even seem to be aware of our hypocrisy. Look at what happened at Grand Rapids Central High School. A few years ago the school was all white. Then the Negroes, expanding into the school district, began attending the school. [Our "model" Northern laws state that anyone of any race living within the school district can attend the district school regardless of race.] So what do the whites do? Well, in Grand Rapids they promptly rejected the principle of integration and moved out of the district so their children wouldn't have to attend the same school and live in the same neighborhood as the Negroes. This pattern of school geographic segregation can be observed in every major city in the North from Brooklyn to Seattle.

What right do we have to be "cracking down" on the South? If the North chooses to segregate their neighborhoods into all-white and all-Negro districts, does the South ask us to go into long dissertations to justify our actions?

If we do favor integration why don't we stop crucifying the South and integrate ourselves?

What does it take to make a people more conscious of their own shortcomings than of their brothers? Will the time proven maxium, "actions speak louder than words," go forever unheeded in the North? Or will we go on treating the South in such a way that they may continue to sneer back at us, "What you do speaks so loudly that I can't hear what you say?"

We will not integrate our schools. [We'll gerrymander first.]

We will not live next to our Negroes.

We will not give them equal opportunities.

We will not accept any blame for segregation problems.

We will lash the South with our tongues.

We will criticize their way of life.

We will force them to do something that in effect we refuse to do.

Are we prepared to force upon the South the unfortunate days of the Reconstruction all over again? Then let he who is guiltless cast the first stone against the South.

Georgetown's Rhodes Scholar

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks I am including an article which appeared in the Georgetown University Alumni Magazine about a young Texan, George P. Giard, Jr.

When we hear so much about the failures of our age and the shortcomings of youth, I think it is inspiring for all of us to read such accounts as this of young men with such a vision and such a healthy and vigorous sense of civic responsibility.

The article follows:

GEORGETOWN'S RHODES SCHOLAR

(By Harriet Griffiths)

A young man with a traditional Texan's large view of life is George P. Giard, Jr.

The 21-year-old senior and president of the Yard at Georgetown University will be off across the ocean next fall to take up the study of law at England's Oxford University.

Awarded a coveted Rhodes scholarship, he plans to spend the next 2 years and possibly a third studying in Britain for the profession of his choice. After a try at the British bar examinations, he hopes to return and take an American law degree.

A lawyer educated in Europe and in America will have a distinct advantage in the wide scope of legal affairs of the future, George believes.

Such infant fields as space law, he says at the risk of understatement, will take lawyers interested in civic affairs on a big scale.

George is majoring in philosophy at Georgetown, not only for its own interest but as a good background for a lawyer.

He credits the honors study program he is taking at Georgetown with much of his success in winning the Rhodes scholarship. Two of the important concepts of the course, he explains, are very small classes with top professors, and an emphasis on studying from original texts, rather that textbooks.

George, nicknamed "Peppy," has shown unusual leadership ability at the university. He was president of both his sophomore and junior classes.

As president of the yard, he heads the college student council. He is the representative of the college to outsiders as well as of the students to the school administration. He presides at athletic pep rallies and as master of ceremonies for various events.

With the yard office annexed to his dormitory room, his suite is a focal point for students with activity planning assignments or problems.

"It's kind of like having your cot in your office," he says.

George's voice already is being heard beyond the campus. He is a member of a panel of eight area students holding a series of discussions for broadcast overseas by the Voice of America.

A firm advocate of participation in civic affairs, George says he has tried during his school years to interest as many people as possible in student government, and extend the area of student participation.

One of his most admired public figures is a fellow Texan, Senate Majority Leader LYNDON JOHNSON. He also has a deep respect for President Woodrow Wilson because he brought so much to his office.

George's family goes back 100 years in Texas, he says, but happen stance made him a "naturalized Texan." He was born in San Francisco while his mother was visiting there.

After finishing at Georgetown, he says, he probably will go back to his usual summer job teaching water safety in Dallas before leaving for England.

He believes in taking the long view of swimming safety, too. It is important to cultivate foresight rather than merely to act after the fact, he says. This means being alert for signs of potential trouble before it happens—an obviously uncertain swimmer, a bather hugging the ropes, or a youngster who jumps into the pool straight from lunch.

He looks at his intended legal career in the same light. Foresight, he maintains, comes with a thorough background. He plans to get a good one.

United Neighborhood Houses—60 Years of Achievement

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. KEATING. Mr. President, 1960 marks the 60th anniversary year of United Neighborhood Houses of New York, an organization dedicated to improving conditions in the Nation's largest city. Through its dedicated pioneering efforts, United Neighborhood Houses has made New York City a better place in which to live and has shown groups all over America the manner in which private initiative can contribute substantially to improving urban conditions.

I am pleased to have this opportunity to salute all who have made United Neighborhood Houses such a significant part of life in New York City and to wish this fine organization best wishes and Godspeed in the days ahead. I ask unanimous consent that an editorial in this morning's New York Times, paying tribute to United Neighborhood Houses, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 11, 1960]

SIXTY YEARS YOUNG

To endure 60 years is in itself no mean achievement. But United Neighborhood Houses of New York, Inc., 114 East 32d Street, New York, has done far more than just exist since it was founded at the turn of the century. Over the years its efforts have sparked such reforms as the creation of the City Housing Authority and the outlawing of old-law tenements.

Just this past year the United Neighborhood Houses has won city sponsorship of a settlement-initiated neighborhood conservation program, has improved liaison between settlements and the police in the continuing fight against neighborhood crime and corruption, and has worked with State officials to obtain youth guidance and vocational counselors in 15 settlements to aid teenagers.

A special United Neighborhood Houses grant of money will expand citywide summer programs with teenagers to prevent what have become characteristic hot weather outbreaks of juvenile violence here in the city. Funds are needed by this organization in its 60th anniversary year to enable it to continue its program of vital services to the settlements, the city, and all our neighbors.

Report on Nature of Distressed Labor Markets in New England and Northeastern States, February 1960

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. FLOOD. Mr. Speaker, unemployment has been rising in the New England and Northeastern States. Conditions within the distressed areas have deteriorated. A number of labor markets in which employment had previously improved have been forced back into chronic labor surplus areas.

Unemployment in several of these States now exceed the 6 percent mark: In February 1960, Maine reported an unemployment rate of 8 percent and Massachusetts, 6.2 percent. In January 1960, the latest month for which data are available: New Jersey reported an unemployment rate of 7.3 percent; New York State, 6.9 percent and Pennsylvania of 8.2 percent.

In the 9 New England and Middle Atlantic States 94 labor markets had substantial labor surpluses and among these 80 labor markets were chronic labor surpluses, indicating that unemployment had exceeded 6 percent during at least 18 of the last 24 months and in most these substantial surpluses had persisted for more than 2 continuous years.

Twenty-eight of the forty-one labor markets in this region of the country suffered from chronic labor surpluses. These included: Bridgeport and New Britain, Conn.; Brockton, Fall River, Lawrence, Lowell, New Bedford, Springfield-Holyoke, Worcester, Mass.; Providence, R.I.; Atlantic City, Newark, Paterson, Trenton, and Camden, N.J.; Albany-Schenectady-Troy, Buffalo, New York City and environs, Utica, Rome, N.Y.; and Altoona, Erie, Johnstown, Philadelphia, Pittsburgh, Scranton, Wilkes-Barre, Hazleton, and York, Pa.

The following table highlights the conditions in these areas:

Northeastern States	Labor surplus markets	Total	Distressed and chronic labor surplus labor markets		
			Large	Small	Smaller
Region	94	80	28	41	11
New England	44	34	10	13	11
Connecticut	12	10	2	8	----
Maine	5	4	0	2	2
Massachusetts	22	18	7	3	8
Rhode Island	1	1	1	0	0
Vermont	4	1	0	0	1
Middle Atlantic	50	46	18	28	0
New Jersey	10	9	5	4	----
New York	15	13	4	9	----
Pennsylvania	25	24	9	15	----

Also as part of my remarks, I include Fact Sheet No. 38 E, part I, which shows employment and unemployment in surplus labor markets in New England and in the Northeastern States, February 1960:

Fact sheet No. 38E

PART I. EMPLOYMENT AND UNEMPLOYMENT IN SURPLUS LABOR MARKETS, NEW ENGLAND AND NORTHEASTERN STATES, FEBRUARY 1960

Region, State, labor market	Month of report	Civilian labor force	Unemployment	Unemployment as percent of the labor force	Months surplus in last 24 months (March 1958–February 1960)	Distressed area [1]	Most recent date of start of substantial labor surplus

Visit Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. BARTLETT. Mr. President, an article in the Elks magazine for April entitled "To Alaska" by Horace Stellar, told of the great land a traveler to my State will find and detailed many of the delights which await the tourist. From Ketchikan to Barrow, Alaska offers magnificent scenery, wonderful fishing and hunting, and many other diversions. The welcome sign is always raised, and the visitor will find Alaska's greatest product to be its friendly people.

For the benefit of my colleagues and all those who read the RECORD, I ask unanimous consent to have the article mentioned printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TO ALASKA

(By Horace Sutton)

If there's one thing that the admission of Alaska has forced, it is a retreat by the Texans. No longer can those lone starry-eyed citizens talk long and loud of having the largest State. What they are saying down there now is that Texas is the largest State in the Union without a glacier.

Gold and cold are what Alaska is noted for, but neither is likely to be discovered by the tourist who comes in summer. Probably it would be more likely for one to find gold before cold, especially if one were to venture north in July and August when most parts of the new State are no frostier than the upper reaches of the United States and Canada.

Aleuts, Indians, and Eskimos are the three indigenous types of people who have inhabited Alaska and still do, albeit in diminishing numbers. Alaska itself is an Aleut word, "Al-ay-eshka," which means Great Big Land.

Travelers who are intrigued by Alaskan history and Alaskan culture—and there is plenty of both—will find the new State awesome, appealing, rugged, expensive, and unlike almost any other place in the world. There are remnants of the Russian days in the names like Sitka, Wrangel, and Petersburg—not to mention the onion-topped churches that still exist in the panhandle. There are still Indians in the panhandle, where the towns have names like Ketchikan and Metlakahtla, still Aleuts in the Aleutians at places called Umnak and Unimak, still Eskimos at Point Barrow and Kotzebue. And everywhere there are the pioneering Americans who live a life that is utterly different.

One can explore Alaska gingerly by boat or by plane up the panhandle. The nearest town of size is Ketchikan, the first stop of the inland-passage steamers that cruise up in sight of land all the way, gliding through the tall green country and the lower glacier lands. Ketchikan, which is also reachable by plane—they set you down at nearby Annette Island and Ellis Airlines brings in passengers by its small flying boats—likes to be known as the salmon capital of the world. There are camps within a few miles of the center of town, a town incidentally that is vastly occupied with cleaning, chopping, storing, and canning halibut and salmon. "How far do you have to go to catch a salmon?" I asked a camp manager last summer. "Just right out in front of the dock," he told me, and in an hour I proved he was right.

Ketchikan is also full of totem poles, Swedish lumberjacks, Filipino fish handlers, and more Swedish lumberjacks. It has a big new mill, and a small, old, but very pleasant hotel, the Ingersoll, and it has a few fur shops where the prices are about as low as they are anywhere in the State.

Next up the line is the State capital at Juneau, which has lots of tourists, and a fairly good but overworked hotel called the Baranof (or Baranov) and lofty, fir-covered mountains that rise up right out of the town. Its single biggest attraction is the Mendenhall Glacier, a few miles out of town, which all but rings the entire settlement. It used to be great sport to export glacial ice to the States for parties, but they are having trouble getting types who will cut it. And the bars in town that used to float it in their drinks now have ice machines. The most famous is the Red Dog Saloon, which is gotten up to look like a gold rush tavern, and is worth a visit. The salmon are a sight in late July, swimming upstream.

The real frontier begins up in Fairbanks, which is real interior Alaska, just south of the 65th parallel, but on the permafrost all the same. There are still log cabins on the back streets of Fairbanks, but there are modest-size skyscrapers, too. From the skyscraping apartments, on the edge of the river, one can look across the water and watch the beavers at work. An afternoon excursion on an old sternwheeler along the rivers to see the Indian fishwheels is a fat sawbuck. A double room in the motel comes to about $18, not far out of line with prices in many of the other States.

Shee fish and Alaska king crab are the big local dishes, and both of them are a gourmet's delight. One of the best places to get them is at Cripple Creek Resort, a spa, Alaska style, where everybody eats family style, dines on reindeer steak and sourdough biscuits. You can pan for gold near the Ready Bullion mine by day, watch the Eskimo dancers after dark.

Fairbanks is the northern limit of the farthest north railroad in the United States, and a sign near the dead-end bumper attests to the fact. Being so far from downstate railroads, it has the least grumpy, most affable trainmen in the land. The train rolls on all day long, south to Anchorage and on farther still to Seward. The prime stop en route is Mount McKinley National Park, which encloses giant Mount McKinley as well as untold elk, moose, grizzlies, and small game. There is a lodge on the grounds not 5 minutes from the railroad station, and for $15 the management will take you out in the wee hours of the morning for a chancy look, if the weather is right, at the mountain and a moose, an elk, or two.

If Fairbanks, on the permafrost is frontier, Anchorage, on the inlet, is a flourishing midwestern town. Neat suburban houses cover the surrounding hills with lovely flowers burgeoning in the gardens. Like Fairbanks, it has some frontiersy-looking shops with all sorts of fur-trimmed parkas which would make good raiment for anyone living in frosty lands or practicing skiing on the cultivated slopes of the south. Anchorage has a pair of 14-story buildings, after all. It has no Indians nor Eskimos to speak of, and it doesn't go back in history to the Russians. But it has private airplanes by the score upon score—so many in fact that two lakes have had to be joined together to provide enough parking space and a big enough runway. Alaska Airlines, however, takes off from dry land. Its big Westward Hotel is a full-fledged inn with handsome dining salons such as one might expect in Seattle, but never this far north. Yet this is only the beginning, for Anchorage is building more. Northwest Orient Airlines brings tourists in to Anchorage, and Pan American lands at Fairbanks.

For those who would drive to Alaska, the celebrated highway built during the war is a two-lane road with a clay topping over a gravel base, much of it curling its way through lands bereft of man or moose. Lodges and gas stations are ordinarily 20 to 30 miles apart, but there is one stretch of 70 miles unencumbered by any sort of civilization. It gets dusty in summer and the mosquitoes fly in relentless waves. Automobile travelers are well advised to cover the gas tank with a rubber mat as a protection not from the mosquitoes but from bouncing gravel. And a shield over the headlights is good insurance too. In any case I wouldn't move a block in the direction of the highway without a careful reading of the American Automobile Association's booklet on the subject, "Alaska and the Alaska Highway."

The Gray Line, incidentally, will take away your worries and do the driving for you between Anchorage and Fairbanks via Valdez (which is pronounced val-deez). The tab is $40 plus $4 tax. Out of Anchorage there are tours of the Matanuska Valley where the giant cabbages grow, and a full-day excursion from Anchorage to Portage Glacier which covers the Eimendorf vase and a view of the Cook Inlet and a far-off peek at Mount McKinley. A 2-day bus tour between Anchorage and Valdez puts in at Copper Center Lodge for the night and visits Worthington Glacier.

Virtually all the many airlines operating in Alaska have worked out tours of their own. Not the least adventurous of them is Alaska Airlines' float trip, on which participants drift on river rafts along the Yukon River amid the wildflowers, the sandhill cranes, the ducks, geese, and moose. Salmon waters, gold land, mineral baths, and a look at Amundsen's cabin are all on the schedule. Figure $250 per person including the air fare between Fairbanks and Dawson. Wien Alaska Airlines has 2- and 3-day tours of the Arctic Coast and a 1-day tour of the Yukon Valley, as well as its so-called Top of the World Tours to Point Barrow. Any number of combination trips can be worked out, linking ships, buses, and trains, covering the Vancouver-to-Juneau leg by the SS *Glacier Queen* or the SS *Yukon Star*, both of which offer all first-class all outside rooms. Some superior accommodations with private baths are available if you apply early. Canadian Pacific offers Princess cruises to Alaska sailing from Seattle and Victoria, and covering a 2,000 mile voyage in about 7½ days. You can fly one way. There probably is no other vacationland offering as many means of transportation for seeing it, and if I were you I would turn myself in to the nearest travel agent and say, "Mush."

The Interest Rate Ceiling Hinders Treasury Debt Financing Operations

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, in this calendar year the Secretary of the Treasury will be required to refinance $80 billion in maturing public debt obligations of the United States.

Unless the Congress acts on legislation removing the stringent shackles of the 4¼-percent interest rate ceiling,

that refinancing will have to be done in the short-term money market. The only other escape from the ceiling limitation trap would be an economic downturn.

On April 9, 1960, I issued a statement reiterating a call for immediate legislative action to repeal the archaic 4¼-percent interest rate ceiling. I pointed out the fact that a Treasury offering of up to $1.5 billion of 4¼-percent, 25-year bonds received public subscriptions only to the extent of $370 million. This recent Treasury experience in unsuccessfully seeking to extend the maturity of the public debt forcefully demonstrates the need for removal of the ceiling.

Crisis seldom is the proper motivation for sound legislative action nor should it be considered a prerequisite to such action. Despite the fact that projections of budgetary surpluses for fiscal years 1960 and 1961 have served to ease somewhat Treasury financing problems we still are confronted with the need to maintain the $290 billion existing public debt as economically as possible. By avoiding future budgetary deficits we have bolstered confidence in our Government's determination to avoid inflation. However, Congress has the obligation to give to the Secretary of the Treasury the tools for proper debt management so that his authority will be commensurate with his responsibilities in this area. The removal of the ceiling would provide flexibility to the Treasury in its debt operations; the removal would not cause interest rates to go up or down. The Treasury would still finance the debt at minimum possible cost.

Mr. Speaker, as a part of my remarks I will include at this point in the RECORD the text of the statement I issued on April 9 and also an article from the April 8, 1960, issue of Business Week captioned "Rate Ceiling Compromise":

STATEMENT OF HON. JOHN W. BYRNES

The public subscriptions for only $370 million of the Treasury's offering of up to $1.5 billion of 4¼-percent, 25-year bonds conclusively prove the urgency of removing the 4¼-percent interest rate ceiling as requested by the administration 10 months ago. The disappointing results make poor prophets indeed of the self-designated experts in the Congress who have been proclaiming in recent weeks that the Treasury could sell substantial amounts of long-term bonds within the limit of the ceiling.

The Treasury is in a trap—a trap blindly insisted on by the majority party in the Congress which apparently believes that the Secretary of the Treasury should bear the responsibility, but not have the authority, for proper debt management. It is a sorry spectacle for our great Government to have to conduct important public debt operations, with all that the success of these operations mean to the people of America, within the straitjacket of a senseless and an inflationary restriction. The interest rate ceiling has not kept interest rates down and the removal of the ceiling would not cause interest rates to go up.

Certain would-be congressional monetary experts erroneously construed recent bond market conditions, in which outstanding Government bonds were yielding less than 4¼ percent to mean that the Treasury could now sell "substantial amounts" of bonds within the stringent limitations of the ceiling. The Treasury cautioned and the facts proved that the Government bond market had been so inactive that the market quotations were misleading. The facts also proved that these self-appointed congressional oracles on monetary matters were wrong.

The prevailing market conditions and the continued existence of the ceiling prevented the Treasury from selling any marketable bonds for a year. There was no way to gage the strength of the market demand at 4¼ percent. The Treasury took the logical course of testing the market with a 4¼-percent bond issue. The results of the test are in; the results are conclusive. The ceiling continues to bar the Treasury from proper and efficient debt management practices.

Unless this Congress is to sit idly by while our huge Government debt grows shorter and shorter in maturity, with possible severe damage to our domestic economy and impairment of public confidence, the archaic 4¼-percent interest rate ceiling must be removed once and for all without delay.

[From Business Week, Apr. 8, 1960]

THE FINANCE PATTERN—RATE CEILING COMPROMISE

For almost 2 years, the U.S. Treasury has been unable to sell any new long-term bonds. This was because outstanding long-term Treasury issues sold to yield more than 4¼ percent, the legal maximum that can be placed on any new Government issue with a maturity longer than 5 years. The Treasury could have marketed bonds at a discount, but it chose not to take this back door out. Instead, the administration requested Congress to raise the ceiling.

This week, without the help of Congress, Treasury Secretary Robert B. Anderson was able to sell a long-term issue, priced at 4¼ percent, because of a sharp drop in outstanding interest rates. Undoubtedly, Anderson recognized that Congress may take this move as an excuse to maintain the ceiling, but he had pledged that the Treasury would sell long-term bonds whenever economic conditions—and the market—permitted, and he lived up to his word.

LITTLE CHOICE

Debt management has not been a very useful weapon over the past few years. With the ceiling in effect, the Treasury has been unable to use the debt in true contracyclical fashion. This job has been done solely by the Federal Reserve, and while monetary policy has been extremely useful at times, even the money managers say that they cannot do it all.

A case, in fact, can be made that monetary policy must be tighter than conditions call for as long as debt management is of no real use. This suggests that if debt management can be utilized effectively, monetary policy could be eased somewhat.

DEMOCRATIC VIEW

This possibility escapes the Democratic opposition in Congress who refused to yield on the ceiling. They argue that the public has been saved millions of dollars in payments on the debt by their efforts. And they say that the administration's request should be buried because interest rates are now back to normal.

This I-told-you-so attitude is both premature and harmful. The Treasury still needs maximum freedom if it is to manage the national debt with any effectiveness. Over the past year, the interest rate ceiling has forced Anderson to market short-term obligations at increasingly higher interest rates and in an atmosphere of near crisis. This was not only expensive but also posed a threat of inflation. And there is no assurance that we will not see a return of those conditions.

ACADEMIC BARRIER

The opposition refuses to consider this possibility. They insist that there will be no return to higher rates or, if there is, that the Treasury will be able to scrape through again.

But if rates were artificially high, then there should be no logical objection to raising the ceiling. For the Treasury naturally wants to do its financing as cheaply as it can.

POSSIBLE COMPROMISE

Last summer, Congress would have been willing to lift the ceiling if the administration had agreed to a resolution suggesting that the Federal Reserve follow a more flexible monetary policy. Anderson—and Federal Reserve Chairman William McC. Martin—felt that Federal Reserve policy should not have been an issue and considered the resolution too high a price to pay. Congress retaliated by keeping the ceiling on interest rates. But Anderson is now ready to accept a compromise deal—one that would allow the Treasury to exceed the ceiling for some, but not all, of its financing.

Certainly it would be wrong to wait for another crisis. Legislation adopted under crisis conditions often needs repairing once the worst is over. Congress now has an opportunity to reexamine the situation without the pressure of a crisis. If it uses this opportunity, it will realize that debt management cannot be effective as a stabilizing weapon so long as it is hampered by an archaic and unrealistic barrier.

Our Government's Concern With Health of Aged

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. BRIDGES. Mr. President, one of the most pressing issues facing the Congress today—that of medical aid for our senior citizens—is the subject of a recent column written by James W. Tucker, which appeared in the Hampton (N.H.) Union.

The column, entitled "Our Governments Concern With Health of Aged," presents a very penetrating analysis of this problem, which is of great concern to every Member of Congress.

Mr. Tucker points to six stumbling blocks in the path of any paternalistic legislation in this field, such as the Forand bill, which was recently rejected by the House Ways and Means Committee.

This is a very interesting and informative commentary, Mr. President, which is worthy of the attention of every member of this body. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Hampton Union, Apr. 7, 1960]

OUR GOVERNMENT'S CONCERN WITH HEALTH OF AGED

(By James W. Tucker)

The Nation is concerned with the problems of the aged and we who are aged certainly have problems. In connection with us old folks, words have come into general

usage that formerly were not found in the average person's vocabulary nor in most dictionaries—geratology, geriatrics and gerontology.

A POPULAR SCIENCE

Geratology has to do with the study of the decline of life as in old age or in animals approaching extinction. Geriatrics is the science of the medical and hygienic care of old age and its diseases. Gerontology is the science that treats of the decline of life. As a matter of fact, gerontology has become a right popular science of late—the subject of countless projects.

OLD-AGE PROJECTS

The New Hamsphire Federation of Women's Clubs adopted such a project and doubtless has accomplished a world of good in making life easier and happier for old people. Among the objectives of Kiwanis International for 1960 is this one: "Organize and support effective programs for senior citizens." We'll have to get, or try to get, our fellow clubmen in Hampton busy on that one. And where women and service clubs lead, the State, the Federal Government—and labor unions—will not be far behind. Everyone is getting into the gerontology act.

GERIATRIC SUBJECTS

"It is not by the gray of the hair that one knows the age of the heart," as a certain philosopher has said, yet in the rush to aid the senior citizens it's "the gray of the hair" that is mostly used for classification purposes. Gray hair is obvious. The "age of the heart" is a little more difficult to determine. So we are all lumped together as geriatric subjects, which in one way is most fortunate. If it were otherwise those in real need of this kind of help might never get it under existing circumstances.

NEGLECTING FUNDAMENTALS

Unfortunately, in our headlong rush toward materialism we are deserting many of the fundamental philosophies of our fathers. For instance, the idea of insurance by the Government of cradle-to-grave security causes us to lean less on individual self-reliance, heretofore considered a virtue. Unemployment compensation, job insurance and monthly social security checks tend to undermine that need of solidarity which knit family groups into strong, cohesive units, each looking with courage and pride after the welfare of all its members.

LONG-EVIDENT TREND

Responsibilities of individuals, families, and even of communities are too rapidly being delegated to county, State, and Federal Governments. These are the circumstances which today make gerontology a popular and useful science. These are the circumstances which make these heretofore unused 50-cent words commonplace. A half century ago, our wise friend and mentor, the late Dr. George Cook, referred to the trend, even then evident, as "public paternalism." If he were living today that wonderful gentleman, founder of a nationwide medical fraternity and the trusted counsellor of youth spread across the entire country, might be tempted to say, "I told you so."

THE FORAND BILL

And were he living today, Dr. Cook would undoubtedly be actively opposing the Forand bill, a plan for Government-supported medical care of the aged. His opposition probably would be indicated by his advocacy of a constructive plan to accomplish the same result by private, not public, means. He wouldn't need to be prodded in the manner Senator STYLES BRIDGES recently prodded the alumni of the Tufts University School of Medicine to offer an alternative to the Forand bill. "I have faith," said our senior Senator, "that if we put our minds to it we can come up with a better solution than socialized medicine."

BRIDGES' OBJECTION

In making known his opposition to the Forand bill for Government medical aid to persons on social security, Senator BRIDGES warned the medical alumni diners at the Somerset Hotel in Boston on the evening of March 30 that any alternative to the bill, to be acceptable, must be better than the bill itself. He told his audience that unless the insurance companies and the medical profession moved fast the Federal Government will most certainly take over medical care of the aged. Mere opposition on the part of the American Medical Association is not enough, if we interpret correctly the Senator's frank warning. Action of a constructive nature is absolutely essential.

FORAND BILL POPULAR

Although the House Ways and Means Committee has voted against the Forand bill, its author, Representative AIME J. FORAND, 64, Democrat, of Rhode Island, will not lessen his effort to obtain action on this controversial measure which has attracted more attention and more mail than any other bill before Congress. It is by far the most popular of many measures introduced into both Senate and House, calling for medical subsidies to the aged. Both HUMPHREY and KENNEDY, the two Senators who are presidential aspirants, are sponsoring bills of this type. The subject will undoubtedly be put forward by the Democrats as a national campaign issue.

FIFTEEN MILLION ELIGIBLE

Under the Forand bill, the Government would pay medical and surgical benefits, together with 120 days' combined hospitalization and nursing-home care per year, for the 13.5 million people now drawing social security checks. An additional 1.5 million would be eligible if they stopped working. To finance the plan employers and workers would each pay one-fourth of 1 percent tax on the first $4,800 of wages and salaries, per year.

REASONS BEHIND IDEA

The rising costs of medical care, plus the recent investigation of drug prices, together with insurance statistics tending to show that in a recent year, half a million families had medical bills larger than their total incomes for that year, are some of the reasons for political demands for action along lines indicated by the Forand bill. The Senate Subcommittee on Aged and Aging has produced statistics to prove that these problems bear hardest on old people, who have to spend much more on medical care, for obvious reasons. Consequently, the demands are made on Congress by old people and families of old people responsible for their medical expenses.

PRACTICAL OBSTACLES

In the midst of this agitation, mostly on the part of Democrats and the AFL–CIO for tax-supported medical care of the aged, some very practical obstacles arise: (1) a serious shortage of hospitals would result, (2) instead of a $1 billion cost, it might be 2 billions the first year and 7.5 billions annually by 1970, (3) inflation, temporarily checked, might again begin to spiral upwards by reason of the heavy taxes involved, (4) a government medical program of this sort would inevitably lead to socialized medicine and this would mean the same deterioration of medical service that has characterized similar programs in other countries, (5) no protection is furnished the four million aged persons not covered by social security and, (6) in general, the Forand bill and similar measures are paternalistic and discriminatory.

ALTERNATIVE IDEA

A couple of weeks ago, following a discussion among Republicans at the President's weekly session with legislative leaders, Arthur Flemming, Secretary of Health, Education, and Welfare, made it known that the administration opposes compulsory plans such as are embraced in the Forand bill, and after studying the problem will submit an alternative idea, founded perhaps on a voluntary basis and making use of the Nation's comprehensive private facilities for health insurance. Here may be an opportunity for the cooperation on the part of insurance and medical authorities suggested by Senator BRIDGES.

COUNTING YEARS

If our government refused to count a man's years until that man had nothing else left to count, then our Government would be less paternalistic and there might be considerably less demand for national, State and local projects of a geriatric nature.

Civil Rights and Intimidation

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

CIVIL RIGHTS AND INTIMIDATION—NORTHERN MOTEL OWNER CALLS SELF DEFENSELESS IN RACIAL CASE

(By David Lawrence)

Do the various candidates who aspire to the presidency really practice what they preach?

This is a question raised by a reader who feels that, since free speech is being rather broadly interpreted nowadays by the Supreme Court to include the distribution of anonymous handbills, a citizen has the right to direct a few anonymous queries to the candidates. From a reader in a city in Michigan come these three questions:

"Do the children of the candidates invite playmates into their homes regardless of race, creed or color?

"Do these candidates entertain Negroes in their home at the same time and on the same level as their white friends?

"In other words, do they practice what they preach?"

The letter then goes on to discuss the background against which the questions are asked:

"I want to be sure that my vote will not help put a man in office who is secretly dedicated to wrecking my way of life. I resent anyone trying to tell me the person or persons I should associate with, just because the courts say he is my social equal. I have always been the judge of that, and I want to go on being the judge of it. I cannot vote for anyone who says I am not.

"I am enclosing an article from one of our newspapers which points up what 'civil rights' have brought to us in Michigan. I refer to the case against some motel owners who have been declared by the office of the State Attorney General to be 'in violation' of the State's 'civil rights' statutes. Under this ruling, the State Tourists council has notified the West Michigan Tourists and Resort Association that it will not distribute the booklets of that association or its annual guide if they carry the listing of the persons who are accused of violating the statutes."

The clipping, which was from an article in the Grand Rapids Press, says:

"This has amounted to making the West Michigan Association the punitive 'club' to carry out the ruling of the attorney general.

"Members of the executive committee of the West Michigan Tourist and Resort Association feel very strongly that it is an American principle that no person may be deemed guilty without his day in court. This the defendants have not had. No complainant to the attorney general's office has brought suit, and the attorney general's office has arbitrarily declared them to be 'in violation' without a court hearing of any kind."

The Michigan reader's letter continues:

"My understanding is that the only 'crime' these people committed was circulating calendars with a Negro's picture on them, the same having been ordered before the State's 'civil rights' bill was passed.

"We, too, own a motel, and according to our 'civil rights' laws, if a Negro comes in and we are full up and cannot give him a room, he can go away and report us as having refused him. We can then be held 'in violation,' without any complaint being lodged against us or without our even knowing that we have been reported. We would have no opportunity to present our side. The penalty is a $10,000 fine or 1 year in jail, or both. So, you see, we have no 'civil rights.'

"As you will note, the court has been asked to allow any interested parties to intervene, but I am sure none will. Public opinion is so much against us that no one dares raise his voice. I must ask you, if you should see fit to use any part of this letter or the clipping, not to make my name public. I could ruin our business. We could be picketed or have a sit-down demonstration, and we would have no redress.

"We've always held our standards high in our motel. Yet now Negroes come in and they sit outside and shout back and forth, play ball or do anything to attract attention, while white people drive past without stopping, and then our motel stands half empty. So you see, the problem is economic as well as social. Again I ask where are our 'civil rights'?

"We are elderly people. We have put our life's savings in this motel. If we lose it because of racial trouble, we are too old to start over."

The foregoing is similar to many other letters that have been received in which people express the opinion that social customs are private customs and that every business should have the right to select its own customers. Former President Harry Truman, commenting on the "sit-in" demonstrations, has publicly stated that "if someone came into my store and tried to stop business, I'd throw him out." Boycotts have been undertaken as a means of intimidating individuals who believe they have a right to run their own business.

This problem is not confined to the South. Mail received by this correspondent indicates there are plenty of instances in northern cities where the civil rights issue now has become an agitation for the invasion of private rights.

Historic Legal Decision Relating to Jurisdiction in Atomic Energy Matters

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. HOSMER. Mr. Speaker, on March 21, 1960, Judge John F. McCarthy of the Superior Court of the State of California in and for the county of Los Angeles rendered a historic decision relating to the respective jurisdiction of the Federal Government and other governments on matters relating to atomic energy. In this field, in which so little law has been made, Judge McCarthy has pioneered in his usual capable manner. The decision in the case of *Boswell* v. *City of Long Beach*, So. C.–206, is as follows:

The Atomic Energy Commission of the United States licensed plaintiff to collect, package and dispose of radioactive waste by dumping it at sea. All of plaintiff's operations are conducted under the supervision of the Commission. Plaintiff has contracted with two licensed atomic energy laboratories in northern California thus to dispose of their radioactive wastes.

On September 4, 1959, plaintiff applied to the Long Beach City Tax Collector for a license to engage in the business of radioactive waste disposal on certain property located in the M–2–A zone. Land in this zone is subject to less restriction as to its use than any other in the city. The nature of plaintiff's business was disclosed to the tax collector and to all other interested departments of the city. The police, fire, health, and building and safety departments each investigated the application. On September 29, 1959, a meeting was held with officers of these and other city departments for the express purpose of considering all phases of plaintiff's business. This meeting was also attended by representatives of the Atomic Energy Commission, the State health department, the Los Angeles County Health Department, the California Fish and Game Commission and the U.S. Coast Guard. The nature of plaintiff's proposed operation was fully explored. Thereafter, all of the affected city departments approved plaintiff's license application, except that the health department gave its approval on the form which it usually used for food establishments.

In January of 1960, more than 4 months after plaintiff's application was filed with the tax collector, and more than 3 months after the September 29 meeting, the first shipments of radioactive wastes arrived at plaintiff's place of business. Up to that time no one connected with the city government had questioned his right so to engage in business, the city had retained his license fee, and he assumed that all requirements had been met. The arrival of the first shipments was announced in the press. Promptly thereafter the city caused the police to prevent further unloading of radioactive waste at plaintiff's place of business. The city health department withdrew its previously given approval and destroyed the document evidencing that action. The city tax collector then refunded plaintiff's license fee and ordered him to discontinue his operations without a license. The city caused plaintiff to be criminally prosecuted for engaging in his said business without a city license.

Rightly believing that he is the victim of gross unfairness and inefficiency at the hands of the city, plaintiff brought this action to restrain the city and its various officers and departments from unlawfully interfering with the conduct of his business. Though plaintiff sought a license to engage in the business of collecting, packaging and disposing of radioactive waste, and all the affected city departments so regarded his application, the city now belatedly defends on the ground that plaintiff operates a junk business. The significance of this is that the city's zoning ordinance prohibits the operation of a junkyard in an M–2–A zone or elsewhere in the city without a non-conforming-use permit from the city planning commission, and another ordinance forbids the issuance of a business license at any location zoned against the particular kind of business sought to be licensed, and if plaintiff operates a junkyard, he is not entitled to a business license. The fiordinance imposes on the building and safety department the duty of determining, in connection with every business license application, whether or not the site of the business is zoned for the intended use. In this case such an administrative determination was made in plaintiff's favor, i.e., that his business could be conducted in an M–2–A zone.

At the time the city stopped plaintiff's operations he had done everything required of him for the issuance of a business license to engage in radioactive waste disposal. The city had made every determination and had done everything required of it except the ministerial act of writing the license document. Such being the case, plaintiff was in fact duly licensed. The city had no power arbitrarily to revoke that license or to interfere with the conduct of such licensed business without just cause or without notice and hearing.

Whether or not plaintiff's operation can be classed as a junk business as defined in the zoning ordinance is doubtful. That question need not be decided because even if plaintiff's work is defined as the junk business, the city is without power to stop his operation by zoning or any other exercise of its police power.

The disposal of radioactive waste is an indispensable part of both the peacetime and defense uses of atomic energy. It is well known that dangerous waste products are created in the processing, development, and use of nuclear fuels, and cannot safely be permitted to accumulate in populated areas. Radioactive wastes are an extreme hazard to health if not promptly and effectively disposed of. Without a continuous and speedy waste disposal program all atomic energy research and production, both for peaceful and defense purposes, would stop. The problem is not one of purely local concern if only for the reason that radioactive wastes must be transported long distances and through many communities to reach proper disposal areas. This necessarily involves interstate and foreign commerce, particularly as in this case where the final dumping ground is far at sea. The regulation of radioactive waste disposal is clearly within the sphere of Federal jurisdiction either as an exercise of the war powers or of the power over interstate and foreign commerce.

The city claims the right to prohibit plaintiff's business as an exercise of its power to protect the public health. It has such power if the State or Federal Governments have not already fully occupied that field of legislation. If the State or Federal Governments have fully occupied that field, in a matter of general concern such as this, the city's power is limited to such regulation as does not unreasonably interfere with State or Federal action.

The U.S. Atomic Energy Act (42 U.S.C.A. 2011 et. seq.), covers the entire field of atomic energy legislation, including protection of public health and disposal of radioactive wastes. The Atomic Energy Commission has been granted full power and sole responsibility for regulating the disposition of radioactive waste and protection of the public health thereby (42 U.S.C.A. 2051). Congress has decreed that the Commission may not delegate regulation of such waste disposal even to a State. Section 2021 explicitly says: "* * * the Commission shall retain authority and responsibility with respect to the regulation of * * * the disposal into the ocean or sea of * * * special nuclear waste material * * *" and "the disposal of such other product, source or special nuclear material as the Commission determines by regulation or order should, because of the hazards or potential hazards

thereof, not be so disposed of without a license from the Commission." Plaintiff is licensed by the Commission and all of his operations are conducted under its supervision.

A careful study of the Atomic Energy Act discloses that it covers the entire field of atomic energy in great detail and particularly the matter of radioactive waste disposal and the public health problems incident thereto. Therefore, the city of Long Beach is without power unreasonably to interfere with those activities of plaintiff for which he is licensed by the Atomic Energy Commission. The attempted absolute prohibition of plaintiff's work in the city's least restricted zone is clearly unreasonable.

This does not mean that the people of Long Beach are without protection against radiation hazards. It merely means that such protection must be, as it presently is, afforded by the Atomic Energy Commission. Likewise, a license from the Atomic Energy Commission does not exempt plaintiff from all non-Federal regulation generally applicable to others. State and municipal agencies may regulate the activities of a licensee of the Atomic Energy Commission to such extent as does not unreasonably interfere with or frustrate the national objectives committed to the exclusive jurisdiction of that Commission. But State and local agencies are without power to prohibit the performance of such functions as are necessary to the welfare of the entire Nation. Here, the city seeks absolutely to forbid the performance of all work for which plaintiff has been licensed by the Atomic Energy Commission. This it cannot do.

Accordingly, an injunction shall issue restraining defendants from preventing plaintiff from engaging in the business of collecting, packaging, and disposing of radioactive waste material from the premises in question in accordance with the terms and conditions of his license from the Atomic Energy Commission, upon repayment or tender by plaintiff of a license fee of $21 to the city tax collector and upon giving bond in the sum of $5,000 surety or $10,000 personal.

Dated March 21, 1960.

JOHN F. McCARTHY,
Judge of the Superior Court.

Mrs. Norma Studley Currier

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. BRIDGES. Mr. President, an article which was published recently in the Rochester (N.H.) Courier, pays tribute to a New Hampshire woman who has devoted much of her life to the affairs of her community, her State and the Nation.

The subject of the article is Mrs. Norma Studley Currier of Rochester, whom I have known and respected for many years. I believe this article is a well-deserved tribute to an outstanding public-spirited citizen and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rochester Courier, Apr. 7, 1960]

Some years ago, along about election time, a down-the-line Democrat sat in a restaurant on the square discussing the candidates. As he orated about the fine Democrats, a friend tapped him on the shoulder. "When you get in that election booth," he said, "don't forget to put a cross against our little girl's name." The Democrat looked around in astonishment. "What in the world made you think I wouldn't?" he asked. "She's a Republican worthy of any Democrat's vote."

The "little girl," a term used with affectionate respect by members of both parties, is Mrs. Norma Studley Currier, who isn't really a "little girl" but a gracious, womanly person, one good to know. .

Winter winds wailed down Wakefield Street (actually, it was a bitter, late March afternoon) as the Courier man turned left at the sign, "Studley Greenhouses," and walked into warmth on Wakefield Street. The warmth was the warm personality of Norma Studley Currier, who was the first woman this reporter had ever interviewed. He has been missing something.

Mrs. Currier is a person easy to know but as difficult for this writer to describe as, say, the color of her hair. Is it auburn, rusty, chestnut or just plain red? It is the same with her pictures. Even the latest one does not do her justice. You just have to meet her.

"I was a year ahead of Norma at Simmons College," said Marion Holmes of the First National Bank, "but of course we'd known each other all our lives." The Courier man was noseying around to find something in Mrs. Currier's life that would give a "This Is Your Life" surprise to her as she returns from the eighth annual Republican Women's Conference in Washington, today, and (we hope) reads these lines. "No," mused Marion Holmes, "Norma was—just Norma. Lots of fun, nice to get along with. Being a year ahead of her at Simmons, I don't even know what her marks were."

Her marks are very high, personally, publicly, politically, in Rochester, in the State and in the Nation. She is the Republican National committeewoman, and has served five terms at the New Hampshire General Court, from ward 5.

How did she get into politics? "I saw a good man lose," she told this interviewer, simply. "I was very young and politically naive at the time. I went home, after the election returns, and thought, "Can such things be? That a man with ideals and hopes of good government should be defeated? Not," she explained, "that the winning candidate was not a good man. Just, I believed, that the man who lost had more to offer the people."

We were moving through the Studley greenhouses, among the lovely Easter lilies, the mums, the carnations, all the spring blooms. Now we went into the living room of the Currier's Dutch colonial home. Two sleek, enormous cats came in, one orange-barred, one gray, and silently pleaded for a place on Mrs. Currier's lap. The gray won.

On the wall were personally, sincerely autographed photos of men who have added to the greatness of New Hampshire. The room and the house have a comfortable, lived-in look. In another room are books and books and books, and the titles show Mrs. Currier's interest in our State's history and politics, past and present. "But don't say just that," she protested. "I like to entertain, and I like food, especially steak, and ice cream, especially butter crunch, and I love TV westerns, especially 'Maverick,' especially James Garner. And I love people."

And she likes good government. Back in 1930, she drove a Nash (yes, they made them then) for former Gov. Huntley Spaulding as he campaigned for the governorship. She claims she was old enough to vote when women's suffrage came in, but that's hard to believe.

Proud moments? One was when, in 1955, she held the chair at a joint session of the New Hampshire court held outdoors in the statehouse plaza to greet President Eisenhower. Another was when she was one of Ike's guests for breakfast at the White House.

She holds and has held many important positions. Among others, she is a member of the 1960 Federal Assay Commission that decides if our new coins conform. She showed us beautiful mint condition samples (which cost her more than their face value) and explained her work in this department.

We had to leave; Mrs. Currier had important commitments, and we had this to write. We thought: When a girl on the threshold of womanhood saw, quite a number of years ago, that nice guys with ideals don't always win, either in baseball or politics, she made up her determined young mind. She became a political idealist and the wind can be very cutting and cold when you stand up there. Norma Studley Currier still stands there.

The Courier man went out into the cold March wind, but he felt heart warmed.

The Davenport Institute of Grand Rapids, Mich.

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. FORD. Mr. Speaker, the Davenport Institute of Grand Rapids, Mich., is one of the outstanding private schools of business in the United States. It is prensently headed by Mr. Robert W. Sneden who is also the current president of the National Association and Council of Business Schools. We in Grand Rapids are proud of Davenport Institute and Bob Sneden. Under leave to extend my remarks, I include a brief history and statement of purpose of Davenport Institute:

DAVENPORT INSTITUTE

Davenport Institute and its antecedents have a history dating back to 1866, making it one of the oldest institutions of its kind in America. It has a record of nearly 100 years of continuous service as an institution devoted to the training of young men and young women for responsible positions in the offices of business, professions, and government.

From the beginning and all through its history, it has operated as a free-enterprise arm of organized education. It has always paid its own way, depending for its income on tuitions received for educational services rendered to people who preferred to get their business education at this school. Even today, although it has been granted a charter by the State of Michigan as a nonprofit educational institution, it continues to pay some State taxes and all local real estate and personal property taxes. In addition, it renders a valuable educational service to western Michigan.

Evidence of the soundness of the educational program of Davenport Institute is found in the thousands of its alumni who

occupy positions of responsibility throughout America generally and in Grand Rapids and west Michigan particularly. Furthermore, many of its students, who decided, upon completion of their work at Davenport, to continue their education at degree-granting institutions of higher learning, found that the credits earned here were readily transferable to certain colleges and universities.

Although the progress of this institution can be traced by a general upward curve, certain dates in its history had a particular impact on its development. In 1910 M. E. Davenport entered the scene when he took a position as a teacher in what was then known as the Grand Rapids Business Institute. He soon discovered that this was a failing enterprise and, upon the sudden departure of its owner, Mr. Davenport was faced with the decision of whether to follow suit and desert the sinking ship or to respond to the pleas of the few remaining students to stay at least long enough to help them complete their courses. He decided to stay. This meant borrowing money to meet expenses, but it was the only choice he could make because a high sense of educational responsibility was already a compelling force in his makeup—even though he was still a young man.

So, at 25, M. E. Davenport found himself in the school business through one of the accidents that often mark the careers of great men; and M. E. Davenport was one of the great men in this field, as his next 50 years would reveal.

The 15 years that followed M. E. Davenport's accidental introduction into the independent business school field were not easy ones. It took him 5 of those years to get out of debt, but he continued to move his institution forward.

The year 1924 was the next significant date. That was the year he acquired the McLachlan Business University which enjoyed the reputation as one of America's leading business schools. Mr. McLachlan had died and there was no one to carry on, so M. E. Davenport acquired the school and formed a merger known as Davenport-McLachlan Institute. He then applied for and was granted a corporation charter by the State of Michigan to operate as a class "A" college with power to grant degrees in business. Davenport Institute does not now grant degrees because the agency by which it is accredited is still in the process of refining its criteria to provide for the granting of degrees. The college still has State authority to do so, but it is not exercising that right.

The period from 1924 to 1952 was a stormy one. Prosperity, depressions, wars, and recessions produced dramatic ups and downs; but still the general growth pattern continued. In 1945, for example, following World War II, there were fewer than 100 students in school. By 1947 there were over 400 enrolled—partially because of the GI bill, and partially because of reduced demands upon our youth by the Armed Forces.

During the years immediately following World War II, Mr. Davenport gave extensive consideration to what could be done to make the institution less dependent upon tuition receipts for its finances and how reserves could be created that would carry it through periods of low enrollment. Of the many alternatives that were considered, the following two moves were decided upon.

1. In 1948 it was decided to construct a dual purpose building that would provide first-class accommodations for the school and also be attractive as a commercial rental unit. So the building the college now occupies was completed. Part of it is leased and the rest used for classrooms and administrative offices. The theory was that, in the event of reduced enrollments, space not needed for classrooms would become available for lease and the income from leases would help finance the college program. The soundness of this aproach was clearly demonstrated during the Korean war. When the war began there were about 400 students in school. Within a few months, because of the draft and unlimited employment opportunities, the enrollment was reduced to slightly more than half that number. Immediately, classroom space not needed was converted to office space and leased. Davenport Institute rode out the storm nicely, while other private colleges of all kinds were forced to close their doors. As conditions returned to normal after the war and enrollments increased, the leased space was reclaimed for classroom purposes.

2. Traditionally, practically all institutions of this type operate as proprietary or profitmaking corporate institutions. Davenport Institute was among that group. Consequently, it paid taxes just as did any type of business organized for profit. Dividends, if any, could be paid, and there were no restrictions on what was done with any profits earned. This was fine in years that schools enjoyed prosperity, but because of long-range commitments to students and faculty, a year when enrollments were down was disastrous. Unlike manufacturing or retailing or certain types of service businesses, personnel couldn't be laid off in order to reduce expenses without seriously compromising the educational program. It was clear that reserves had to be established to carry the college over difficult times. Because of Federal taxes on income, it was difficult to create reserves. So in 1952 Mr. Davenport decided to apply for nonprofit status. In 1954 the Bureau of Internal Revenue approved the application, and Davenport Institute embarked on a new era.

This action reflected the kind of attitude that characterized Mr. Davenport's whole life—an unselfish eagerness to do the things that would strengthen his school. From that time on he and his family would not benefit personally from any gains made by the school. They even included their substantial equity in the former corporation and all its assets in the new nonprofit corporation. This means that only through dissolution and liquidation of the corporation can they recover their original investment, and they can never share in any gains that have been made since 1952 and will be made in the future.

Substantial gains have been made since 1952. The assets of Davenport Institute, Inc., now total nearly $2 million, and its present net worth is nearly $1 million. All of this has been done without grants or endowments or legislative appropriations of any kind. All of this has been done through the application of good sound business principles that characterize the free-enterprise system—modified, of course, by the unselfish devotion of a man to an ideal.

Starting in 1951, an extensive expansion program was undertaken. Since that time schools in Lansing, Bay City, Saginaw, and Kalamazoo were brought into the organization, and an affiliation was established with Detroit Business Institute in Detroit. Combined enrollment in all departments of these institutions exceeds 3,000 students.

In 1958 a residence for out-of-town women students was acquired. The beautiful former residence of the well-known Sligh family, located at 455 East Fulton, is now serving approximately 100 young women in attractively furnished apartment-type accommodations. Low-cost, supervised, and highly desirable residence facilities add considerably to the total program.

In January 1959, with its record of achievement the highest in its history, Davenport Institute suffered the loss of its leader through the passing of M. E. Davenport, who had served this institution for nearly 50 years. Ordinarily a loss such as this would deal a serious blow to an organization of this type because, traditionally, business schools are very dependent upon the leadership of one man. It is a tribute to M. E. Davenport's executive ability and eloquent testimony to the organizational structure he developed that Davenport Institute was able quickly to adjust and continue to move ahead. This speaks well for the long-term future of the school.

Davenport Institute has always maintained high educational standards. Liberal granting of credit to transfer students by colleges and universities who know the college best is evidence of these standards.

Further evidence is found in the records of its graduates in positions of responsibility. One of the most clear-cut records is the one established by its alumni in the CPA field. It is generally accepted that a person who is awarded the CPA has demonstrated his fitness to perform at professional level. In a recent announcement of successful candidates for the CPA, which appeared in the Grand Rapids Press, five of the eight who were certified were Davenport trained. An investigation revealed that during the past 3 years, of those awarded the CPA in the Grand Rapids area, 40 percent were Davenport trained.

Davenport Institute is a member of the leading State and national organizations that deal with business education.

Davenport Institute is accredited by the Accrediting Commission for Business Schools, Washington, D.C., which is recognized by the U.S. Office of Education.

The future prospects of this institution are excellent. It has a rich heritage of tradition and performance on which it can draw. It is soundly financed and competently led. Its organizational structure is such that it does not depend entirely upon any one individual for its leadership. A board of directors of highly competent men and women directs its overall policies. It will continue to serve its traditional role in the total education picture and will broaden its services to include new programs and activities as they are developed to meet new needs.

Dr. Willis Tate of Southern Methodist University Warns of Anti-Intellectualism and the Penalties Inflicted on Thinkers

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. YARBOROUGH. Mr. President, Dr. Willis M. Tate, president of Southern Methodist University, presides over a university that probably has more academic freedom than any other major institution of higher learning in Texas. He was recently Honors Day speaker at the University of Texas. Though only a small portion of his remarks were printed in the news accounts of his speech, that portion is worthy of wide distribution because it points out the danger of loss of creativity and expression because of the public distrust of thinkers among our people, and the pressures for conformity.

I ask unanimous consent to have printed in the Appendix of the RECORD the wise and perceptive comments by Dr. Tate, as printed in the Dallas (Tex.)

Morning News for April 3, 1960, under the caption "Dr. Tate Cautions University of Texas Honor Students."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. TATE CAUTIONS UNIVERSITY OF TEXAS HONOR STUDENTS

AUSTIN, TEX.—University of Texas honor students were warned Saturday by Dr. Willis M. Tate, president of Southern Methodist University, of dangers of pseudo-intellectuality, arrogance, and isolation.

The Honors Day speaker counseled the students that "the test for every man, regardless of the limitations or brilliance of his intellect, is how responsibly he made his decisions."

Whatever decision is made, he said, "Each of you is responsible for bringing to society your particular contribution and intellectual commitment."

He stressed "the deep satisfactions of a continued life of intellectual endeavor." But he cautioned against disillusionment in the face of roadblocks placed in your path by unthinking people.

"While our world desperately needs and depends upon the trained mind, I cannot say our culture loves the intellectual," Dr. Tate said. "In fact, the opposite is true. The thinker is always a threat to the way things are or used to be. He is castigated, distrusted, and feared. There is no honors day down the road. Great pressure is built up to make the thinker conform."

Such pressure brings a danger of loss of creativity and expression, he pointed out. Nevertheless, "the limitations our world places upon you does not excuse you—for you, being who you are, must seek the full limits of reason in every area of life."

In his introduction of Dr. Tate, University of Texas President Logan Wilson spoke of his "unusual combination of educational statesmanship and personal courage. Since becoming president of SMU in 1954 Dr. Tate has won the admiration of his fellow educators and the public at large," Dr. Wilson said.

Dr. Wilson commended the honor students who distinguished themselves in academic areas which extend alphabetically from accounting to zoology.

"Fortunately, the time has long since passed when high-ranking students were falsely regarded by some as 'greasy grinds' and the pinnacle of undergraduate social respectability was represented by the 'Gentleman's C'," Dr. Wilson said.

Honors Day is an annual feature of roundup at the university. It publicly recognizes outstanding achievement in learning and teaching.

A Program

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. DORN of South Carolina. Mr. Speaker, the following resolution, passed by the Independent Farmers of Ohio, Inc., is worthy of the attention of all Members of Congress:

RESOLUTIONS PASSED UNANIMOUSLY BY INDEPENDENT FARMERS OF OHIO, INC., JANUARY 21, 1960

Be it resolved that Independent Farmers of Ohio go on record in favor of legislation forbidding the practice of monopoly in any field—whether industry, labor, or education.

RECIPROCAL TRADE

Whereas we feel that our best government is that of the people. Be it resolved that Independent Farmers of Ohio go on record that the power of reciprocal trade be returned to the Congress. Also that our monetary system be returned to the Congress as provided for in the Federal Reserve Act.

SOCIALIZED MEDICINE

Whereas in every country in which the medical profession has become socialized medical standards have deteriorated and medical progress has been stifled. Therefore the Independent Farmers of Ohio resolved that further Government intervention in the field of medicine cease and that medical research and practice remain in the hands of private institutions and individuals.

WORLD COURT

Whereas the President has asked for the repeal of the Connally amendment, and whereas the repeal of the Connolly amendment would destroy our national sovereignty and invalidate our U.S. Constitution and Bill of Rights; and

Whereas our legislators under oath have sworn to uphold our Constitution and with sole legislative powers would have their duties jeopardized by transferring judicial authority from our constitutionally and established courts to a world court over which we have no control. Be it resolved that the Independent Farmers of Ohio go on record that the Connally amendment be retained to safeguard our individual freedoms.

SOCIAL SECURITY

Whereas, the social security program has placed an economic burden upon the taxpayer and removed our Christian responsibilities of caring for our elders directly; and

Whereas those participating, many of whom are objectors, while certain groups are given freedom of choice to their participation: Now, therefore, be it

Resolved, That Independent Farmers of Ohio go on record that the social security program be made compulsory and those wishing to participate be allowed to do so.

FEDERAL AID TO EDUCATION

Whereas the field of public education is an area of government, in which the Federal Government has no constitutional authority to act, such powers being reserved to our States and our people in articles of the Bill of Rights; and

Whereas, under the present dangerous doctrine advanced by the U.S. Supreme Court in the *Wickard* v. *Filburn* case that the Government may regulate that which it subsidizes it becomes inevitable that Federal usurpation of authority in the field of public education must inevitably lead to the Federal regulation; and

Whereas, Federal regulation with the consequential concentration in Washington of powers over the minds and bodies of the American youth raises the grave possibility of the same authoritarian thought controls and intervention as has been employed in the totalitarian governments of our time: Now, therefore, be it

Resolved, That all Federal intervention in the field of public education cease forthwith.

FEDERAL AID

Independent Farmers of Ohio are unalterably opposed to foreign aid of any kind.

FARM PROBLEM

Whereas the present so-called farm problem is coming to be generally recognized as largely Government-created and not as the result of free economic forces; and

Whereas the exorbitant cost of the present socialistic or communistic farm policy of the Federal Government is unprecedented by any peacetime department of Government, and has added materially to the already staggering burden of the American taxpayer, and

Whereas under present farm policy the American farmer has already been reduced to the status of virtual serfdom under the Department of Agriculture, deprived of his constitutional rights of property, rights to due process of law in the established courts, and his rights, liberties, and security in his private domain;

Whereas present farm policy as implemented by the AAA Act, its amendments, and related acts has virtually nullified the Constitution of the United States through the violation of articles 4, 5, 7, 9, and 10 of the Bill of Rights, and through the usurpation of power by the Federal Government with the consent of the Congress, the judiciary, and the executive: Now, therefore, be it

Resolved by the Independent Farmers of Ohio, That the Agriculture Adjustment Act as amended be repealed and that simultaneously the accounts of the CCC be frozen pending the orderly liquidation of the corporation.

Respectfully,

MRS. INEZ MUSSER,
Secretary.

MARSHALLVILLE, OHIO.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. ALGER. Mr. Speaker, I include the following newsletter of April 9, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

How to compromise differences in viewpoints without abandoning one's own principles is a problem often confronting every conscientious officeholder. A Member of Congress, for example, has moral obligations to (1) himself and his own set of values, (2) the Nation as a whole, (3) his constituents, whom he is charged to represent, and (4) his political party. More often than not, these responsibilities parallel one another and are easily discharged. But the possibility for conflict is pretty obvious. Any single controversial piece of legislation—any burning issue—may pose a real dilemma.

It was with all these thoughts in mind that I paid a visit to Vice President NIXON the other day. For myself, I felt a duty in conscience to share with him some accumulated hopes and concerns. Too, I wanted to pass on the views of many constituents who have told me personally and by mail what course they believe the Vice President should adopt, both in his present office and in his candidacy for the White House. As for our party, I hoped to express and bolster the more conservative viewpoint about which we hear a good deal less in today's press.

It was the newspaper image of DICK NIXON becoming more liberal—an image at variance with his long voting record—which had disturbed many, including me. If there were any truth in that picture, it seemed to me most important that the Vice President realize the tremendous underlying voting strength of conservatives. True, the conservatives are not as vocal, nor as well organized, as are the so-called liberals and some

of the minority pressure groups, but I'm convinced that a great reservoir of political strength is there, awaiting only adequate leadership.

Due to their lack of organization—their failure to unite and campaign effectively—all too many candidates have felt no need to appeal to the great body of conservatives, and they have stayed away from the polls in alarming numbers, losing by default. However, the conservative—the fellow who believes in a balanced budget for his Government as he believes in one for his family, who believes in paying down our debts and in preserving a sound dollar, who believes in protecting and strengthening individual freedom and who rejects the bureaucratic regimentation so dear to the self-styled "liberals", is today opening his political eyes. He is orgainzing, and winning, in certain Congressional Districts already. He needs and wants a leader he can follow.

So I pointed out to the Vice President that to the degree his own course might move to the left, or that others might successfully picture him as having moved left, he would lose political strength. A Republican Presidential aspirant can win only as a conservative. The Democrats have the "liberal" votes sewed up. By appearing to woo these groups, a Republican can only discourage and lose support among the conservative majority. As I see it, DICK NIXON has only to encourage and inspire action by the commonsense and conservative majority. He can best do this by stressing his own dedicated convictions on the role of Federal Government in our lives, as demonstrated by his own voting record.

Without quoting the Vice President, I can at least relate my own very clear impressions of some points he made, and with which I agree. (1) Politically, he'd be foolish indeed to come out with a lot of flatfooted pronouncements on any and all issues until his opponent in the race is determined; meantime, though, he's admittedly vulnerable to attack by liberal columnists and members of the press who choose to misrepresent or misinterpret his views. (2) He has a responsibility as Vice President, to be a spokesman for administration positions, at this time. (3) The campaign against the Democrat nominee, when known, will permit a clear differentiation of viewpoints that will be encouraging to conservatives. (4) There is, and must always be, room for honest difference of opinion between members of the same party.

It is my hope that conservatives will remember that it isn't enough to complain. Political action is what counts. And political action backing bed-rock, constitutional principles, aimed at limiting the role of the Government in our lives, can win out, hands down. True, demagogery and political expediency have won elections in the past. This year, I believe, will be the year for aroused conservatives. DICK NIXON can be their leader.

Identical Bidding to Chattanooga Electric Power Board

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, April 11, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Nashville Tennesseean by Lois Laycook, Washington correspondent.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEFAUVER PROBE CHANGES BIDS
(By Lois Laycook)

WASHINGTON.—The Senate Antitrust Committee's recent price-fixing investigation has stopped the practice of identical bidding by electrical equipment manufacturers to the Chattanooga Electric Power board.

S. R. Finley, general manager of the board, notified Senator ESTES KEFAUVER, committee chairman, yesterday that the probe has paid off in huge savings to the board.

A Federal grand jury in Philadelphia recently indicted 18 equipment manufacturers on antitrust violations following the investigation.

In a letter to KEFAUVER, Finley said recent bids received by the Chattanooga board on major power equipment varied from 2 to 37½ percent. In previous years, Finley said, bids from various manufacturers on the same equipment have been similar or identical.

Finley said the board recently advertised for bids on a large order of heavy equipment, including circuit breakers, transformers, and regulators for delivery in the fiscal year beginning June 30.

"For instance," Finley said, "the orders placed in February covering network equipment, power transformers, regulators, and unit substations had a combined total published price of $382,448. The equipment was purchased for $278,640, reflecting a savings to the board of $103,806, or approximately 27 percent."

Finley said the results of the bidding "undoubtedly stem from the activities of the subcommittee."

KEFAUVER's subcommittee held extensive hearings on electrical equipment price fixing at Knoxville last fall. The Federal grand jury indictments of several manufacturers followed shortly thereafter in Philadelphia.

KEFAUVER said he was very happy to receive Finley's report.

"The evidence of identical bids which the subcommittee heard in Knoxville last fall raised many questions in my mind," the Senator said. "The savings that have just accrued to the Chattanooga power board is good evidence of the savings to the public when competitive bidding takes the place of price fixing in an industry."

Positive Action Needed To Save Small Business

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. STEED. Mr. Speaker, I have asked permission to include in my remarks the full text of a speech delivered recently by the Honorable JAMES ROOSEVELT, of California, before the annual convention of the National Independent Dairy Association.

Mr. ROOSEVELT has served as a member of my special subcommittee on dairy problems since its inception. In addition, his own subcommittee's work in the full industry and the gasoline price war problem of the Nation have given him an unusually broad introduction to some of our most distressful economic problems of our times.

I especially commend his comment on remedies that are available by this Congress to all my colleagues. I heartily endorse his views on these matters.

The text follows:

POSITIVE ACTION NEEDED TO SAVE SMALL BUSINESS

(Speech of Hon. JAMES ROOSEVELT before the National Independent Dairies Association, Washington, D.C., Tuesday, April 5, 1960)

It is a pleasure to attend and participate with you in this third annual convention of the National Independent Dairies Association. You are to be congratulated on the fact that you have taken positive action in organizing and sustaining a trade association, through which Members of Congress are enabled to learn about your problems and to ascertain your views on what should be done to help save small business. Also, you are to be complimented on your selection of the leaders of your association. Mr. Stovall, your president, and Mr. Daniel, your counsel, have demonstrated that they are alert to small business problems in the dairy industry, and have been quick to act in requesting Members of Congress to give these problems appropriate consideration.

As chairman of the House Small Business Committee's Subcommittee No. 5, I have learned much about small business problems. However, it has been a revelation to sit as a member of the special subcommittee under the chairmanship of our colleague, the Hon. TOM STEED, and hear about your problems. In hearing about the small business problems in the dairy industry, we have learned that there are more troublesome problems than the milking of cows in the dairy industry. We have learned that small and independent processors and distributors of dairy products are subjected to the trials and tribulations incident to ruthless price wars and various other practices, which weaken small business concerns and tend to eliminate competition. I know I could spend several hours reciting to you what I have learned about your problems, but why do that? I suspect that you not only want to get rid of your problems, but that you would like to be free from hearing about them.

It has been suggested that I devote some of my time before you today to a discussion of H.R. 9898, a bill I introduced on January 25, 1960. That bill, as you know, is designed to prevent the integration of food distribution through the operations of large chain retail food organizations with the processing and production of food items.

The bill would accomplish this objective by making it unlawful for anyone engaged in the retail sale of merchandise in any more than one market area, through food or grocery stores, to engage in the manufacturing, processing, or preparation of any such merchandise. This would be done through an amendment of the Federal Trade Commission Act. The amendment would make it unlawful and an unfair act and practice in commerce within the meaning of section 5 of this act, for any person, partnership, or corporation, engaged in the retail sale of merchandise, or the distribution for retail sale of merchandise in or affecting commerce, to engage in the manufacturing processing, or preparation of any such merchandise, where the effect of integrating the retailing of such merchandise with such manufacturing, processing, or preparation may be substantially to lessen competition or tend to create a monopoly in any line of commerce.

It should be emphasized that the bill would not apply to all integrated processing and retailing operations. Many small business concerns are engaged in processing and retailing food items. For example, the retail bakers prepare bread in the backroom

and retail it in the frontroom of a single establishment. Likewise, small processors and distributors of dairy products operate from a single plant, and frequently deliver the processed dairy products directly to homes in retail lots. The bill would not apply to small business concerns engaged in operations of this kind. I say that because the bill would have application, as I have pointed out, to the integrating of retailing with manufacturing, processing, or preparation of food items only where the effect may be substantially to lessen competition. It is inconceivable that a small, independent processor and distributor of dairy products, who has confined his operations to a single market, would be charged with a violation of the provisions of H.R. 9898 simply because he has integrated his processing and packaging of milk with a few deliveries and sales to homes at retail. Of course, it is clear that the provisions of the bill could not be applied to the operations of small business concerns whose operations could not possibly have the effect of substantially lessening competition or tend to create monopoly in any line of commerce. Instead, the bill would apply to those firms which have integrated their activities to include the manufacturing, processing, preparation, and retailing of food items in such large volume and over such a wide area as to affect competition adversely and substantially. In that respect, the attention would be directed particularly to the multiple-market operators. We know that in the dairy industry we have multiple-market operators with farflung organizations—some extending over the breadth and length of the country. Their activities embrace manufacturing, processing, preparation, and retailing of dairy products. Their integrated activities and pricing practices, when considered in the light of the size of their organization and volume of business, would undoubtedly be considered to be within the purview of H.R. 9898. In other words, it is simply another case where character and size are factors which would require or compel good conduct. Misconduct by a large overgrown evil man usually is more damaging than misconduct by a small innocent child. The provisions of the bill would apply only to those having the size and power to do damage and the use of that size, power, and position in damaging competition.

We did not reach lightly the conclusion that action such as is provided for in H.R. 9898, should be taken. We have made our proposals only after giving much thought and study to the problems of small business in food distribution.

When the program for Subcommittee No. 5 was announced March 17, 1959, we stated that it was the intent and purpose of the subcommittee to review the trade relations and trade practices in the field of food distribution. We noted that in that connection it had been alleged that monopolistic and unfair trade practices were becoming matters of great concern to those who cherish and fight for a free and competitive enterprise system in this country. We were told that the anticompetitive conditions and anticompetitive practices present a threat to those things needed for the growth and survival of a healthy small business community.

Only a short time before we announced our program for the study of small business problems in food distribution by Subcommittee No. 5, the Federal Trade Commission had stated that "There have developed tendencies to concentration of economic power, to collusive price action, and to unfair competitive methods." In that connection, Hon. John W. Gwynne, then Chairman of the Federal Trade Commission, in announcing that the Federal Trade Commission would study the situation said:

"We want to know why the industry is getting so tough for the smaller operator. * * * The trend seems to be to eliminate the small man entirely."

We made field investigations and we conducted extensive hearings in Washington, D.C., San Francisco, Calif., and in Denver, Colo. We received testimony and considerable additional evidence from scores of witnesses, and accumulated a printed record of approximately 2,000 pages. We heard from the chainstores and the co-ops, from the frozen food people and the poultrymen, from the wholesalers and retailers, and from the farmers. The Government agencies gave us facts on how many retail grocery stores there are and how much money we spend in them. From all of this information we have a broad picture of small business problems in food distribution.

Out of this mass of information emerged the showing of need for legislation to help small business in dealing with some of these problems. For example, in the course of our hearings in Washington, we found that approximately 40 percent of all markets for preserves and jellies have been captured by large chain retailers who are either producing their supplies or have made special long-term arrangements for their supplies. In the face of these facts, small independent producers and packers of jams, jellies, and preserves are under severe handicaps in their efforts to survive.

During the course of our hearings in San Francisco, we were told that a few buyers or large chain food retailers, with offices on or near California Street, San Francisco, were buying 80 percent of the annual output of canned fruits and vegetables produced in that section of the country. Incidentally, California produces almost 50 percent of the national output. We were told that these few buyers for the large chain food retailers are utilizing their combined economic power in such a way as to result in the destruction of countless independent business enterprises.

Our Denver hearings disclosed that large chain food retailers are getting into the production, preparation, and distribution of meat food products. Large food retailers have captured a substantial portion of the total retail market of meat food products. Proceeding from that vantage position, they are integrating backward into the processing, slaughtering, and even the feeding of cattle.

Representatives of small meatpackers, feedlot operators, ranchers and many other businesses testified that the practices of large food retailers in integrating the retailing with the feeding, slaughtering, and packing of meat food products are destroying small and independent business enterprises and competitive markets for those products. It was pointed out that the strongest argument now being put forward by the large packers for relief from the provisions of the meatpacking decree of 1920 is the fact that the large food retailers are integrating backward into the meatpacking business. In that connection, I stated on the record during the course of our hearings in Denver that "If the basic and fundamental principles which brought about that consent decree were sound, and we must believe they were sound—they remained in operation for many, many years, and were therefore in the public interest—it would seem to me a poor excuse to upset them simply because someone else in the other direction was going forward to accomplish the same thing. And my question would be, Would it be unreasonable to think that should the 1920 consent decree be reversed, or be obliterated, that there would also be the great danger that that would be the opening door for an amalgamation of the chainstore and the large packer to accomplish exactly what was prohibited in 1920?"

Through the information we have developed during the course of the hearings before Subcommittee No. 5, and the special subcommittee, regarding small business problems in the dairy industry, we have been impressed with the fact that certain large chain retail food distributors are integrating the processing and packaging of dairy products with their retail operations. Safeway, with its Lucerne brand, and Kroger, with its private brand, on dairy products for a long time, have been engaged in these integrated operations. More recently, we noted during the course of the hearings before the special subcommittee in Boston on February 17, 18, and 19, 1960, that one of the largest retail food chains in that area has integrated or brought under its control the processing and packaging of milk and other dairy products distributed through its retail stores. Information available to us is to the effect that another one of the leading food retail chain organizations in that area is engaged in preparations for integrating the processing, packaging, and distribution of dairy products.

How much these integrated activities will affect the small independent processors and distributors of dairy products remains unanswered. However, we are informed that many independent processors and distributors of dairy products have lost or are in the process of losing their markets as a result of these integrated operations, coupled with the pricing practices involved in the marketing of dairy products in the affected areas. If these effects should rise in their significance to the point of substantially lessening competition or tend to create a monopoly in any line of commerce, then H.R. 9898, if enacted into law, could be applied to help save small business concerns. In my view, therefore, its enactment could well be positive action taken to save small business. It is hoped that you will study and consider H.R. 9898 and conclude that it has the virtues for saving small business, as we do.

In conclusion, I thank you again for your graciousness in permitting me to attend and participate in this third annual convention of the National Independent Dairies Association.

West Virginia—In Springtime

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. BYRD of West Virginia. Mr. President, for the past several months there have been many articles written about my State of West Virginia. More often than not these articles have described the destitute conditions prevailing in the coal mining areas of West Virginia. I rise today to thank a writer, Martha P. Haislip, for her ability to go beyond the evident and picture another facet of my State. This writer, whose article appeared in yesterday's New York Times, has depicted the historic value and contrasting beauties that can be seen in West Virginia. The Times' description is centered around the famous area of the Greenbrier Hotel, but may I add that one can find much the same richness in any section of the Mountain State. I ask unanimous consent for yesterday's

article to be printed in the Appendix of the RECORD so all can enjoy some of the lesser-known facts about West Virginia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA—IN SPRINGTIME—THE STATE'S DIVERSE AREAS OFFER STRIKING CONTRASTS AND HISTORIC SITES

(By Martha P. Haislip)

WHITE SULPHUR SPRINGS, W. VA.—The permanent residents of West Virginia sometimes are annoyed by visitors, and more often by the nonvisitors, who wonder out loud what there is to see and do in West Virginia. People know about Virginia and its colonial history and restorations, but mostly they appear to know little about West Virginia, beyond its coal mines and mining towns.

Not many visitors to this part of the State ever seem to be curious to see what lies around the corner from this community, which houses one of the world's largest luxury resort hotels, the Greenbrier. But a few do get curious, and this curiosity always becomes more intense in the spring and summer. Their reward is extremely valuable.

DRAMATIC EXAMPLE

To take one dramatic example, within a short distance of White Sulphur Springs is an area known as the Cranberry Glades, a mile-long section of "misplaced arctic tundra," the likes of which are unknown in the United States outside of Alaska. The area, encircled by high mountains, is crossed by many small streams and bands of rare shrubbery and wild flowers.

The water section, covered with lichen and moss, often to a depth of 10 feet, has a deceptive appearance of movement that lends an eerie aspect to this bog. Needless to say, the glades are just what the botanist and ornithologist ordered.

To arrive at this area, the motorist proceeds to Lewisburg, turns north on U.S. 219 to Mill Point and then west on State route 39 for 6 miles. This leads to the Forest Service access road and a parking lot. From there, the visitor proceeds on a boardwalk that goes directly, as far as it is safe to go, into the glades.

In contrast to the glades is the view of the New River Gorge from the lookout in Grandview Park. An overhanging cliff nearly 1,000 feet high commands an extended panorama of forested mountains and the rushing, horseshoe-shaped New River. The lookout can be reached from White Sulphur Springs by driving west on U.S. 60 and turning south on U.S. 19, then taking a country road that is in excellent condition.

Equally dramatic in appearance is Hawk's Nest at Anstead, also on Route 60. Here, the view of the New River Canyon is said to surpass the famed Royal Gorge. Interesting, too, is the 3-mile-long Hawk's Nest Tunnel, which diverts waters of New River from its 5-mile-long gorge. A mile of the tunnel is through solid rock, and a dam provides a 160-foot-high waterfall for electric power.

Lewisburg, ten miles west of White Sulphur Springs, is a gem of a town. Its lovely old homes are set back on wide lawns along tree-lined streets, on hilltops that command magnificent views or on rolling farmland. These homes and their grounds combine the gracious atmosphere of old Virginia, of which this area once was a part, with the pleasant activities of today.

A MELLOW CHARM

Lewisburg is one of the oldest towns in the State, having survived Indian massacres and Civil War depredation. And it still has a mellow charm, despite the invasion of modern living, countless new homes, a country club, a military academy, a girls' school and thriving cattle and farming businesses.

Many ancient buildings, including some erected in the 1700's, and beautiful old homes (many occupied by descendants of the original owners) are of historic and architectural interest.

Probably the most noted of Lewisburg's landmarks is the Old Stone Church. It was built in 1796, and has the distinction of being the oldest continuously used church west of the Alleghenies. It is simple, yet pure, in its design, which includes handhewn native limestone, a graceful cupola and a beautiful interior. Many of the original features, such as the slave galleries and old pews, have been preserved, and the extensive collection of framed Confederate money on the walls of the vestibule makes the church an important point of interest. In the adjacent churchyard are gravestones bearing quaint epitaphs.

Also distinguished in Lewisburg is the John Wesley Methodist Church. Its thick brick walls and its well-proportioned belfry give the edifice great dignity. The interior retains much of the original appearance, despite damage done by a cannon ball during the Civil War.

The John A. Preston Community House is another fine example of early architecture in Lewisburg. The two-story building is typical of its early-day use, that of a storehouse. The old jail building—it is of uncertain date (probably between 1785 and 1795)—has a grim dungeon.

The Greenbrier County Courthouse is handsome and imposing. It was erected in 1837 after a succession of log and stone buildings, in one of which Patrick Henry once defended a client for murder.

CIVIL WAR RELICS

The Greenbrier County Library and Museum is a "must" for visitors interested in relics of the Civil War. The building was used as a military hospital then, and preserved under glass are pieces of original plaster containing the names of soldier-patients.

But it is the homes, rich in historical associations and warm with continuous occupation by descendants of pioneer families, that fascinate the visitor most often.

That such a peaceful setting as occupied by Hartland should have been the scene of such tragic happenings seems unbelievable. But it was here that the Clendennin massacre occurred.

Chief Cornstalk and a band of Shawnees arrived, apparently with peaceful intent, and were kindly received. After they had dined, they killed 50 of the settlement's white men, ransacked and burned many cabins and returned to their settlement on the Ohio River.

Miraculously, Anne Clendennin escaped, although her young child was killed. Mrs. Clendennin returned after several years, remarried and repossessed the lands of her former home. Although the original cabin is gone, the small log house erected in 1800 by Mrs. Clendennin's second husband, John Rogers, remains as a wing of present-day Hartland. The home is now occupied by a descendant of the Rogers family.

The original part of Stuart Manor (built by Col. John Stuart, often called the Father of Lewis County) dates from 1789 and an addition from 1820. The interior includes beautifully carved mantels, built-in cabinets of aged cherrybood, handmade hardware and an interesting wooden Indian door.

Other early homes worth visiting are the 1796 Totten House, whose thick walls of river stone preserve a steady indoor temperature the year around; North House, dignified in line and distinguished by ornamental woodwork; Montgomery House, which has a concealed room in the attic that served as a hiding place for a Confederate soldier home on leave; Johnson House, which has simple lines of weatherboarding over the original log construction, and Hock House, where such features as hand-carved mantels and hewn beams have been preserved.

Of the more pretentious homes, Elmhurst is one of the most imposing. It contains at least 20 high-ceilinged rooms, and it is ideal for entertaining, for which it was famous in the early 1800's. During the Civil War, the house was hit by shells but it was spared from burning by the enemy because of the critical illness of a member of the family.

Five miles west of Lewisburg is Arbuckle House. The residence stands on a gentle rise from which there is a sweeping view of the surrounding farmland. The house was built of brick burned on the farm, and is a notable example of early architecture. Its perfect proportions, two-story pillared portico and balcony, fan-lighted doorway, hand-carved cornice, and interesting interior details have been admired by countless visitors.

NORTH OF TOWN

Simmons House, 12 miles north of Lewisburg on Spring Creek Road, is fascinating in every detail.

James H. Bowen, who constructed the home in 1822 from locally burned brick, had 12 daughters. To house them and himself comfortably, he built the three-story house with a center partition. Mr. Bowen lived on one side of the partition and his daughters on the other.

Of great beauty in this house are the many carved mantels and interior woodwork, which have been carefully preserved.

The lovely name and effective placement of Tuscawilla (Seminole for two lakes) counterbalances the lack of adjacent water, which the name indicates. A magnificent view of the mountains from this well-proportioned brick house makes the mile-long drive from Route 219 a worthwhile trip.

Montescena, the Boone home, is a perfect example of southern plantation architecture. Its tall white pillars, wide, flagstone-paved porch and graceful balcony above the front door are typical. But the mansion's setting among wide fields and fine old trees shows nothing of the tragic occurrence here during the Civil War.

After the Battle of Droop Mountain, 30 miles to the north of Lewisburg, a Federal soldier attempted to loot the house during the absence of its owner, David Creigh. On reaching the second floor, where Mrs. Creigh was caring for a sick child, the soldier continued his looting and used abusive language to Mrs. Creigh. Her husband returned, surprised the soldier and engaged in a fight in which the soldier was killed.

At the advice of neighbors, the man's body was concealed in an old well. Months later, the incident was disclosed by a runaway slave, with the result that Mr. Creigh was hanged, without a trial, for having defended his own family.

Another imposing old home in the vicinity of Lewisburg is Morlunda. It was built about 1827 of locally burned brick. No expense was spared in the interior finishings, which are of hand-carved solid walnut.

The structure is surrounded by hundreds of acres of rich grazing lands and commands magnificent views of the mountains. Cattle bred on the farm are nationally known for their excellence.

Mountain Home, built about 1830, is still in the possession of the Dickson family. The house is very large, and has enormous rooms, high ceilings, and many intricately carved mantels and elaborate woodwork.

Mountain Home contains true Williamsburg colors—blue-green paint and red putty—and is one of the best-preserved mansions in the area. It is a treasure house of beautiful antique furnishings and Colonial objects of artistic value.

The Dicksons always have been enthusiastic horsemen, and for years have bred and shown fine animals. They also furnish many of the riding horses used by guests at the Greenbrier.

HISTORIC INN

Noteworthy, too, is the architecture of the Colonial Inn, which was built in 1834. Alterations have been made over the years, but the original lines of the building retain their purity. More impressive is the General Lewis Hotel. The east wing is the original structure, built in 1828. Many fine antiques, as well as collections of glass, china, and old prints, are displayed here. Old trees, shrubs, boxwood, and flower borders add much to the charm of this hotel.

Also interesting and worthy of a visit are Greenbrief Military Academy, Greenbrier Junior College for Girls, and the Daywood Gallery. The gallery, once a small, unpretentious dwelling, has been transformed into a charming museum with a lovely boxwood garden, wall fountain, and beautifully landscaped lawns. To be found here are many specimens of antique furniture. Early American glass and Chinese porcelain. The art collection contains paintings by numerous famous artists.

Sport Fishing in Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. BARTLETT. Mr. President, there have been many, many occasions during my congressional service for me to speak in the House and the Senate concerning Alaska's commercial fishery. There is another fishery in Alaska which is deserving of attention—our marvelous sport fishery.

Trout of all description are there for the virtual asking, many running as large as salmon. Of course, we have the salmon, which, in addition to being the basis for our commercial fishery, provides a magnificent sport fish. We have, too, the grayling, the big Arctic char and that fish with the incredible name, the shee fish.

The April issue of Elks magazine contains an article, "Fishing Alaska's Big Rivers," by Dan Holland which I believe will be of interest to my colleagues.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"Yes," replied the old chief, obviously puzzled that we should ask so foolish a question, "trout are more bigger than salmon." This was the local answer to the rumor we had heard about some of the big rivers of western Alaska. It sounded out of all reason, but we knew enough not to disbelieve any story about Alaskan fishing. Now we could put it to the test. Within an hour of the time we had put our rods together and made the first cast, we found that the rumor was fact. The rainbow trout were actually larger than any salmon which ran on the Alaska Peninsula. My biggest was a 31¾-incher, a pretty fair trout in anyone's pond.

I've been lucky. Starting in 1938, I've reached the far corners and creeks of the great State of Alaska by one means or another. I've fished from Ketchikan to Attu and from there to the very limit of land in the North where piddling little creeks seep out of the frozen tundra directly into the Arctic Ocean—and I've yet to be disappointed. I've seen some fabulous things, such as the rainbows "more bigger than salmon."

And there are the incredible arctic char, or malma trout, in certain streams near Nome, huge 12- and 14-pound things as elaborately colored as an overdecorated Christmas tree. The male fish is green with contrasting livid orange spots, some of them the size and shape of peanuts, and an equally livid orange belly and undershot lower jaw. Even the tip of the upper jaw is orange, as though it had been dipped hastily in paint. The female is slightly more respectable, but unusual in her own right. She is a light, clear blue with white spots and belly. And the size of these fish is as shocking as their color. The good Lord let go all holds when he created that pair.

And the mysterious, wild-eyed shee fish of the north, and the sea trout of southeastern. And grayling. With the Michigan grayling extinct and the Montana grayling on the ropes, Alaska is the only place in the States to enjoy this fishing as it should be. The reputation of the unique grayling is such that it requires no further embellishment, of course, and fortunately it exists over a very wide range in Alaska, from the Kenai to the Arctic Ocean. There are literally hundreds of miles of grayling streams as yet untouched.

The most delightful grayling fishing I ever experienced was a Tanalion Point on the Kenai, the most I ever saw were in the interior tributary streams of the Tanana and the biggest were near Ugashik on the Alaska Peninsula. The poorest as game fish were in the tundra creeks of the Far North. The water there is so extremely cold that none of the fish inhabiting it—grayling, lake trout nor char (as much smaller, slimmer, and more conservative fish than the malma trout)—puts up any battle until he lies on the moss a while and warms up; then he flops around. Not many fishermen are going to be bothered by this problem very soon, though. It is not exactly a place where a person can drive and fish out the car window.

This is one reason that some of the fishing mentioned hastily here will remain good for years to come. A great many fine Alaskan streams are as yet inaccessible. The fish won't be molested, which is fine for them, if not much help to the fisherman.

This is where the salmon comes in. All in all, this is the most exciting, most interesting and most available game fish in Alaska. No matter where the summer traveler happens to be, he can find salmon fishing somewhere in the vicinity.

Owing to the unfortunate visit by an English sportsman many years ago when the then territory of Alaska was young, the full possibilities of the plentiful and varied salmon are not realized yet. "Frightful shame," he reported upon his return. "Those bloody salmon up there won't take a fly."

Obviously, without a gillie to tie on his fly and to pull his boots, the old gentleman never fished at all, but thus errors are born; then they are compounded through the years by men of inaction who parrot whatever they read or hear without investigating for themselves. Soon the statement is accepted as indisputable fact.

Amazingly, this fallacy is still prevalent, although anyone who likes to fish knows that any and all of the five varieties of Alaskan salmon take a fly readily—too readily at times.

When I first visited Alaska, I was young and a disbeliever. I didn't believe that all Pacific salmon die after one visit to the sea and one spawning act; I didn't believe that they all returned to the place of their birth; I didn't believe that they ate nothing after entering fresh water; and I didn't believe that they would refuse a fly.

I was wrong on the first three counts. A king salomn can and does grow to the amazing weight of 60 or 80 pounds in a brief 6-year cycle. A few with good appetites reach a weight of over 100 pounds in this short time. An Atlantic salmon may return to the sea after spawning and live two or three such cycles, but all Pacific salmon die after spawning once. They are like an annual plant in that they grow, mature, spawn their seeds and perish. But I had to see thousands of them dying to be convinced.

The logic of my mind wouldn't accept the fact that an unreasoning creature such as a salmon could drift downstream from its birthplace, no more than half fish and half egg, then return to this exact spot in its old age. Such is the fact, however miraculously.

Neither did it seem credible that a red salmon (sockeye), for instance, could fight an uphill battle against powerful river currents for sometimes 2,000 miles and more without replenishing its energy by feeding. Atlantic salmon often spend almost an entire year in fresh water before returning to the sea. I couldn't believe that they expended the enormous amount of energy necessary to reach their destination and spawn without eating.

After I had opened the stomachs of about a hundred salmon, both Atlantic and Pacific, I finally became convinced that they don't eat in fresh water. The reason obviously is that salmon enter rivers in such hordes—or did, at least, before man fouled things up—that there could not possibly be enough feed in fresh water to accommodate them. Therefore, nature had to give them sufficient energy for the entire procedure before they left the sea.

I had to be proved wrong on these three subjects to my own satisfaction. Now I know and admit that what I originally read on the subject was correct.

But on the fourth point, which after all is the most important to the sportsman, my curiosity proved me right. In spite of what the English gentleman had reported, and in spite of the many people who echoed him, I had the satisfaction of taking all five species of Alaskan salmon the first couple of seasons I fished there. In the 20 years which have since passed, I have done it many times, simply because I like to fish, and simply because a salmon—any salmon—is as fine a game fish as anyone can tangle with.

Try it, anyone who is fortunate to be in Alaska, and find out what a real fish feels like. Fish for the humpback salmon, the smallest of the lot, in a salt chuck or near the mouth of his spawning river. A humpy makes only a short run, and it is one of the freaks of nature that Pacific salmon become grossly distorted as their spawning period approaches. The humpy transforms rapidly since his run is short; therefore, it is necessary to catch him early while he is still a sleek, appealing fish. Then he will not only take a fly readily, but he will jump as though he had a bee on his tail.

One of the surest places to fish for the red salmon is at the very outlet of their particular spawning lake. Their mouths are already hard at this time, so they are difficult to hook, and those hooked don't stick around long, but they never stop jumping.

An example of such a red-salmon fishing spot is the outlet of Upper Russian Lake on the Kenai. When the fish are in, no one can spend a day there with a fly rod and not catch fish.

The dog salmon is the least interesting as a game fish. He takes a fly as readily as the others, but he seldom makes a long run and he doesn't jump. With about 12 pounds of sheer muscle and energy to back him up, it comes down to that or nothing.

The two big fellows among the five Alaska salmon, the silver (coho) and the king (chinook, tyee, spring) are different. Like the Atlantic salmon, they are seldom found in one great mass. They run in larger rivers as a rule, where they are less evident, and they run more or less individually.

Both of these can be taken in salt water on a fly—or spoon or strip of herring as one chooses. The place to fish by casting is along a kelp bed, of which there are thousands in Alaskan coastal waters. A favorite spot, because of its availability, is Tee Harbor outside Juneau.

In fresh water the best place to take a big king salmon is well up one of the large rivers in which they run, near its headwaters, as fishermen who have seen them in the Salmon River of Idaho know. Most such headwaters in Alaska are inaccessible. Those I have taken there were from comparatively large water, fishing blind.

The silver is the finest fish of all in fresh water, much in appearance and actions like the Atlantic salmon or steelhead. He acts like an out-sized rainbow. They are available many places—I took one on a fly as far north as the Snake River outside Nome—but the best luck I ever had with them was in the Situk River, about an hour-and-a-half walk by way of the narrow-gage railroad track from Yakutat. More convenient is Eyak Lake near Cordova.

So much for where. Now, how and why? If salmon don't eat in fresh water, why do they take a fly at all? On the spawning beds it is reasonable to assume that they would strike a spoon or even a fly, mistaking it for a sculpin or other small fish trying to raid the spawn, but why strike a fly otherwise?

There are a lot of things I don't know, and this may be one of them, but I have a theory. It seems to hold.

Salmon strike a fly—Atlantic salmon as well as Pacific salmon—because of a lifetime of responding to certain foods, such as shrimp, smelt, herring, and the like, if the fly reasonably represents that food. Even though they do not swallow such a fly, the instinct to take it is imbedded; they can't resist.

Pacific salmon go to sea when they are so small that they can freed on nothing but microscopic organisms, food too small to be imitated. Their feeding habits as far as the fisherman is concerned are established in the sea. Once they reenter fresh water, they don't encounter herring and shrimp; so this feeding instinct is latent. A fly which imitates these can awaken it.

Accepted steelhead patterns imitate, by accident or otherwise, shrimp or the fish's own roe which it habitually mouths. These steelhead flies and Atlantic salmon flies, which also are a fair facsimile of shrimp, will take any of the Pacific salmon. I have had even better success, however, with a very large streamer fly, which represents a herring. The most consistent luck I ever had with silvers was in the Situk River when it finally occurred to me to use tarpon flies.

Any such salmon, as it enters fresh water, is the most power-packed fish in the world. It has energy stored in its body to run for weeks against the current. Anyone who has tied into a 15- or 20-pound silver knows what such energy feels like on a line.

And there's more, lots more; some known, some unknown. There's a type of angling somewhere to suit the inclinations of anyone—everything from the dainty, acrobatic grayling to the bullheaded heavyweight king salmon. To me, strangely, the fishing with the greatest appeal is about the most accessible of all. This is the variety found among the maze of islands of southeastern Alaska, from Ketchikan to Juneau.

This is the land of the totem pole, the brown bear, the towering Sitka spruce, twisting glaciers and peaks such as Kate's Needle and the Devil's Thumb which can be seen from sea level rising 2 miles into the sky. This is the land of bays, inlets, channels, salt chucks and small, intimate streams, all packed with game fish. The trout are not as huge as those in some of the distant corners, but they are plentiful and colorful. There are sleek, silvery Dolly Vardens, bright cutthroats, and acrobatic rainbows. There are salmon everywhere. And, for a change of pace, there are codfish and halibut to be caught by jigging with a handline out of a boat anywhere. So for the man who thrills to the sound of a reel singing in tune with the run of a trout, or the feel of the surging power of a salmon bending bamboo, or to the sight of a grayling going into his dance, Alaska is a pretty nice place to be.

But it does have a serious drawback. Summer, if a person is far enough north, is the time of the midnight sun. Even in southeastern Alaska it is dark for a few hours only. And as long as the days are, anyone with less than four arms can't find time enough to take advanage of the fishing. This leaves little time for eating and none for sleeping, which is OK for about a week; then a fellow's casting arm begins to lose its snap, and his eyes begin to sink and his fins get a little frayed. He suddenly realize how a spent salmon feels.

The Republican Party and the So-Called Common Man

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. SCHWENGEL. Mr. Speaker, a lot of political hay is made these days by harvesters in the political field who would have us believe that one, and only one, of the major political parties is concerned with the welfare of what is usually referred to as the common man.

This bill of goods is pretty hard to sell, especially when the people who have been categorized in this manner stop to appraise their prosperity. Then they realize how much more they have under the sound fiscal policies of this administration and they can see through the delusion which is being offered in the guise of welfare and social betterment programs by the deficit-spending crowd who decry fiscal soundness. They—the common man—become aware of the other side of the coin and realize fewer of these programs mean less Government, less spending, less interference, but a lot more prosperity in the long run.

Dr. Kirk Porter of the political science department of the State University of Iowa, made this point quite forcibly in a recent address, and under leave to extend my remarks, I ask that it be printed in the Appendix of the RECORD so that all of my colleagues can have the advantage of his comparison.

THE COMMON MAN

Since the time of its origin the Democratic Party has constantly declared its devotion of the common man, the ordinary man on the street, and underprivileged people generally. By contrast they have asserted that the Republican Party is the party of rich people, property owners, and big business. Yet there have been millions of people in the Republican Party who are not rich, who are not big property owners, do not hold great blocks of stocks and bonds, but are people of modest means, connected with very small business establishments. These people have been Republicans not because they are rich, but because they believe the policies of the Republican Party are better for them, and for the whole country, than are the policies of the Democrats.

Republican policies are very definitely designed to serve the interests of the common man. The Republican sees benefits for everybody—rich man, poor man, farmer, laborer, professional men, and people in every walk of life in a sound economy based on free enterprise and private initiative. What the common man needs is a job, a self-respecting job that is well paid, so that he will not need direct help. Business provides jobs. If the businessman prospers he can hire people and pay them well. The farmer will have a market, the professional men will have patients and clients. Literally everybody will benefit. To respond to the impassioned pleas of every organized group that demands immense expenditures in order to benefit themselves is to promote special privileges. It would cause runaway inflation, bankruptcy, and ruination for everybody, the common man included.

Republicans want to safeguard the interests of all the little private business establishments in the land as well as the big ones, and the millions of people who work for them. That is the way to promote prosperity for everybody, the common man and every other kind of man, north, south, east, west, farmer, laboring man, banker, rich and poor alike.

It is shocking mockery to deceive vast numbers of humble people into thinking that huge appropriations labeled for their benefit will do anything but bring grief to them and everybody else. The Republican Party is for a sound dollar and fiscal responsibility. To spend great sums beyond one's income is to invite disaster. The humblest man who ever struggled with a household budget or the finances of his small business knows that full well. Millions of small businessmen, homeowners, workers, and professional men know it, and that is why they are Republicans. For the Government to spend billions it does not have is much like any common man spending dollars he does not possess. The Government does not go bankrupt as would the private citizen. Instead of that the insidious process of melting away the substance of anyone who possesses anything at all steadily goes forward. The common man pays more for a common sack of groceries or a common pair of shoes. His rent goes up, or the cost of maintaining his common little house goes up. The value of his life insurance goes down. If he has a modest investment in bonds, or a savings account, he sees that go down too. This process hits the common man the hardest of all, for even that which he has melts away before his eyes.

Thus the Republican Party, standing firm against proposed grandiose expenditures for all manner of things, is in truth the party of the common man, the man who has modest possessions and does not want their value to be destroyed.

To demand expenditures and to take no account of income is just as bad as to advocate printing-press money. There is no issue here as between the rich and the poor. The principle is the same whether it is applied to a Wall Street financier, to the Government, or to a small boy with a two-bit allowance. Many small boys understand it thoroughly. They are destined to be Republicans.

The Republican Party does not appeal to any one segment of the population. The

Republican Party appeals to every man, in whatever walk of life, at every economic level, and wherever he may live. One of the basic themes in the Party program is fiscal responsibility and a sound dollar, opposition to rising prices and deficit spending.

Ceremonies Honoring the Memory of Andrew Furuseth, the Abraham Lincoln of the Sea, on His 106th Birthday

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. CHAVEZ. Mr. President, I am very happy to note that the Senator from Utah [Mr. Moss] is presiding over the Senate, and that prior thereto the Presiding Officer was the Senator from Arizona [Mr. HAYDEN]. What I am going to talk about has to do with the winning of the West.

Mr. President, Mr. Silas Blake Axtell, director of Friends of Andrew Furuseth Legislative Association, has sent me a copy of some of the worthy tributes paid to Andrew Furuseth on the anniversary of his 106th birthday, by people who knew of his devotion to the cause of the seamen of the world.

Mr. Axtell is a descendant of one of the first Governors of New Mexico, prior to its becoming a State.

I ask unanimous consent to have the text of the remarks made by Mr. Axtell and by the Reverend Dr. James C. Healey, chaplain to merchant seamen in the port of New York for 42 years—now retired—printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Mr. AXTELL. "We have been given a 15-minute period over the New York City broadcasting station through the courtesy of Mr. Seymour Siegel, director for many years. But today we are going to tell you again about Andrew Furuseth, the Abraham Lincoln of the sea, on this 106th birthday.

"A symposium was published in 1947 concerning this great leader of labor and spokesman for humanity, because he devised a way to free thousands of seamen without bloodshed or violence.

"I am authorized to read to you a communication from John L. Lewis, one of our greatest of Americans, who has done so much to improve the living and working conditions of the coal miners of the United States. Mr. Lewis in his letter of February 17 says:

" 'While a young man, just turned 30, I was assisting with the legislative work of the American Federation of Labor in Washington, and was domiciled at the old National Hotel. Mr. Andrew Furuseth was a more or less permanent guest at the same hotel, and was similarly engaged in seeking legislation in behalf of seamen.

" 'I was never formally presented nor introduced to Mr. Furuseth, and naturally regarded him through the eyes of a young man, gazing with awe at a person of great renown. Gradually, however, he took notice of my presence in the hotel and would speak to me on occasion, and later would engage me in more or less extended conversation in the evenings, in the spacious lobby of the hotel. I learned something of his personality, and came to have the greatest admiration for his analytical mind, his tenacity and perseverance, the dedication of his purpose, and the austerity of his life.

" 'Subsequently, as I attended the convention of the American Federation of Labor, I recognized his influence and power in its councils, and the respect given him by the elder statesmen of that organization. In debate, he was a redoubtable opponent, and not many of the leaders in the Federation would undertake to measure swords with him in the convention discussions.

" 'I came also to learn of the respect and esteem in which he was held by many of the more liberal-minded Senators and Representatives in the National Congress, and gradually through the years he moved closer and closer to his goal of achieving freedom and emancipation for the seafarers of the Nation. His final success, when the Congress enacted the legislation in question, caused President Samuel Gompers of the American Federation of Labor to issue his famous statement, "The last of the bondsmen are free."

" 'Not only the seamen, but the citizenry of our Nation as a whole, have cause to revere his memory and to acclaim his personal achievement in establishing the principles of freedom in the maritime industry, after many years of intense legislative effort.

" 'The memory of Andrew Furuseth should be enshrined in the hearts and minds of the millions of America's workers, and the ceremonies to be held on March 12, honoring his memory and achievements, are most fitting.' "

On May 4, 1948, in the Symposium on Andrew Furuseth which this Organization sent to libraries all over the world, Mr. Lewis said:

"Andrew Furuseth possessed one of the really great minds of the century. His genius of thought and expression was devoted solely to the benefit of seafaring men and others who toil. Living a life of self-deprivation and Spartan simplicity, he was freed from the intellectual impedimenta that burdens and slows the pace of inferior minds. He was unaffected by the commendation or disapproval of other men. He broke new ground for the underprivileged in the realm of economic and social freedom. He achieved national recognition of certain fundamental principles.

"These achievements, which constitute the consummation of Andrew Furuseth's monumental task, should be preserved and protected in the interest of future generations."

Robert M. La Follette, Jr., on January 24, 1938, said:

"Andrew Furuseth was one of the truly great men I have known. I first met him as a boy when he enlisted my father in the struggle to make the sailor a freeman. From that time until his illness he came every Sunday to our house for breakfast.

"I have known many scholars, men with many degrees, but I have never known a man who made greater use of his knowledge than did Andrew Furuseth. To him history was not a study of civilization which had crumbled into dust, but it was rather an instrument to be utilized in the daily work of life. He had a rare intimacy with the literature of the past and present. He was familiar with law. His interests were narrow, but as wide as humanity.

"He was a living justification of the principle upon which democracy rests. Sprung from the masses, he devoted his great intellect and indomitable courage to the advancement of their cause.

"On this occasion I wish to read a tribute written by one who knew him best."

Then Mr. Robert M. La Follette, Jr., quoting from the speech of his father, Robert M. La Follette, the progressive Senator from Wisconsin, said:

"One morning in December 1909 there came into my office in the Capitol Building, a tall, bony, slightly stooped man, with a face bespeaking superior intelligence and lofty character. It was Andrew Furuseth.

"He wanted to interest me in the cause of the American sailor. He was a sailor himself, he said, and he wanted to 'be free.' I did not know what he meant. I questioned him. Surely there were no slaves under the American flag. Bondsmen there were—but Lincoln changed all that. And it had been written in the amended Constitution. 'Yes,' he said, 'but not for the sailor. All other men are free. But when the amendments were framed, they passed us by. The sailor was forgotten.' "

A person that you all respect who knew Furuseth was Fiorello LaGuardia. On March 10, 1946, speaking over this station in memory of Andrew Furuseth on his 92d birthday, he said:

"Andrew Furuseth was a great soul. He lived to benefit others. And as long as ships will sail the ocean, flying the American flag, the name of Andrew Furuseth will always be remembered."

I have a letter from Gerrit Vanderstaay, former official of the Seamen's Union:

"Again you're doing me the honor and ask about our mutual friend, Andrew Furuseth.

"Both you Mr. Axtell and Andrew Furuseth should forever be remembered by not only the seamen but also by the workers all over the world.

"I am remembering the mark of Andy on the Maguire bill, the White Act and finally the Seaman's Act introduced by LaFollette making all seamen free in U.S. ports.

"Some years ago while a representative of the I.S.U. at Savannah, Ga., I negotiated and signed the first agreement with the South Atlantic Mail Steamship Co., and am proud that the remains of Andy were buried on the high seas from one of that company's ships. May he rest in peace for work well done.

"Due to the freedom of the seamen I came to the United States and remained here, am married, have two children, am a U.S. citizen, a member of the International Union of Operating Engineers No. 37, member of Moose, Masonic Lodge, Scottish Rite, and a Shriner of Boumi Temple.

"All this improvement of myself a former seaman because you and Andrew worked and worked sometimes under impossible conditions to make the seamen free.

"To work is to worship.

"I remain your friend who as a former Hollander appreciated what Andy the Norwegian did to free us."

John P. Frey said:

"His services to the American trade union movement were so great that they never can be fully measured. His moral courage, impressed the younger men in the movement, as well as the leaders. His purpose in life was to secure beneficial results for others instead of getting something for himself.

"Norseland never produced a more glorious warrior or a more kindly heart."

Judge Denman, late senior circuit judge of the U.S. Court of Appeals, Ninth Circuit, said:

"Furuseth was one of the world's great men who did not whine because the men, to whom his life was a service, often failed to understand him."

Andy sought my advice on one of the legal questions involved in his seaman's bill. When it finally reached the White House, President Wilson sent for me to aid him in analyzing some of its provisions. The conference was not long. What impressed the President most was my statement that the bill removed the last vestige of congressional peonage in repealing the imprison-

ment provision of the former desertion statute.

The next speaker is Patricia Lynch, graduate of the University of Washington and assistant to her brother, Carl Lynch, secretary to the Sailors Union of the Pacific during the maritime strike in 1934 and editor of the American Seaman which did so much to prevent the Communists from taking over the Seaman's Union. Miss Lynch says:

"We pay tribute today to Andrew Furuseth, the Abraham Lincoln of the sea, on this, the 105th anniversary of his birth.

"With the increasing demand that we examine charges of corruption on the part of those who now inhabit labor's house, it is only fair that we should also examine the record of those who built labor's house. A record of sacrifice and integrity without which labor never could have made the gains it now enjoys. Outstanding in the small group of selfless leaders who built labor's house is Andrew Furuseth.

"Furuseth was a sailor. He sailed under the flags of Norway, Sweden, Germany, England, and America, in turn, trying to find humane conditions under which he could follow the calling of his choice. He failed. It is difficult for us today to realize conditions as they were then. Even American seamen, born in the country which had fought a war to end slavery, were regarded as slaves under the law. Flogging and branding were common. A brutal mate or captain could and often did work seamen until they dropped dead. Of these conditions Furuseth said, and I quote: 'I saw men abused, beaten into insensibility. I saw sailors try to escape from brutal masters and from unseaworthy vessels upon which they had been lured to serve. I saw them hunted down and thrown into the ship's hold in chains.' He saw overinsured and undermanned ships go down at sea, with appalling loss of human life, all because owners would not furnish skilled seamen to sail them or provide lifeboats for passengers and crew. He heard no voice lifted in protest, no hand raised to help. On long watches he pondered the cause of these injustices, some way to right these wrongs. The cause, he found, was the law—the laws of every nation. Every country made serfs of its seamen. The only way to right the wrong was to change the law. The only weapon available was to unite the seamen. Then came decision. He would strike the blow for freedom. The next question was, where?

"He told my brother Carl Lynch, another selfless fighter for equal rights for all mankind: 'I chose the United States because this was the first country in the history of the world that dared to declare in a political document that all men are created equal, that they are endowed by their Creator with certain inalienable rights, and that among these are life, liberty, and the pursuit of happiness.'

"In 1883, at the age of 29, he deserted a British barkentine in Tacoma, Wash., to be chased by bloodhounds but not recaptured. A short time later in San Francisco, he started to organize the seamen. He had taken the first step. He did not underestimate the task ahead, a task that appeared hopeless to the body of his men. He educated himself; he familiarized himself with the laws and conditions governing seamen. He was a deep student, a profound thinker. His own integrity gave him faith in the integrity of others. His strength was rooted in his knowledge of the fatherhood of God, the brotherhood of man. He said, and I quote: "When understood, our idea will make its own way with all forward-looking and liberal-minded men. Let us then sow the seed, leaving it to the God of freedom to supply the growth.' He believed there were aspects of their fight which, if properly presented, would enlist the support of broadminded men and women of the United States and of Europe. He was right.

"He attracted to the fight such men as Senators La Follette and Shipstead, the Honorable James H. Ralston, the Honorable James G. Maguire, attorneys Henry W. Hutton, of San Francisco, B. A. Green, of Portland, Oreg., and Silas Blake Axtell, of New York. These men tossed aside promises of lucrative careers to devote their legal training to the almost penniless cause.

"Test after test was carried to the U.S. Supreme Court. Time and again the Court ruled against the seamen, holding that the 13th amendment to the Constitution was intended to free the Negro slave but that seamen should remain bondmen under the law.

"The fight was hard, tough, and unrelenting, but without bloodshed. Furuseth was selfless and fearless. His reply to the judge when he was threatened with imprisonment for .violation of an injunction during a strike, is carved on a monument to Furuseth in San Francisco, and I quote: 'You can put me in jail. But you cannot give me narrower quarters than as a seaman I have always had. You cannot give me coarser food than I have always eaten. You cannot make me lonelier than I have always been.'

"His vision and integrity attracted other high-minded men to the seamen's cause, and the fight became effective on a national scale. The first notable victory was the abolition of desertion charges against seamen engaged in the coastwise trade. His next great victory was in 1898. Congress passed the White Act which (1) abolished imprisonment for desertion from American vessels in ports of the United States; (2) gave the crew the right to demand a survey of the vessel; (3) totally abolished corporal punishment on American vessels; (4) required the surrender of any subordinate guilty of inflicting corporal punishment; (5) gave seamen the right to draw half wages in any port instead of having to wait to the end of the voyage to draw pay.

"But the bitterest fight was ahead, the fight for safety—both for crews and for the traveling public. The shocking loss of 1,517 lives when the Titanic sank in 1912 swung public opinion behind Furuseth's long fight for adequate and qualified crews, lifeboats, and so forth. In 1912 Congress passed the La Follette Seamen's Act. But safety at sea was a costly project, and there was sufficient pressure from domestic and foreign shipping interests to keep the act from being signed into law. With a change of administration, however, the fight for the Seamen's Act was won. President Wilson signed it into law in 1915. The act freed thousands of men from serfdom—a successful revolution without the loss of a single life. Along with the ensuing amendments and court decisions, it has influenced changes in seamen's working conditions and wages throughout the world, tending to raise them in the direction of parity with American canditions and wages. Many attempts were made to annul the act's provisions. Furuseth fought them all and won. The vision, integrity, and unchanging determination of one penniless sailor led the seamen of the world to freedom.

"Of Furuseth, his friend, adviser, and fellow fighter, Silas Blake Axtell, has said, and I quote: 'Furuseth was great because he eliminated himself. He sought no reward of a material character. He sought no publicity, no fame, no reputation. He was great because he asked no thanks. He was great because he was a son of God who loved as the brother of all men and devoted all his mind and heart to the service of others.'"

Rev. James C. Healey said:

"On this 12th day of March I am honored to be asked to pay tribute to a leader in labor who being dead nevertheless lives because every American seaman is a debtor to his dedication to the task of raising their profession of seafaring to noble heights.

"In the days when Andrew Furuseth sailed the members of the crew labored in a social climate which still clung to ideas inherited from the days of the galley slaves. Dana in his classic Two Years Before the Mast shows with what impunity the masters of vessels could strip a man and flog him. It was there Andy began. He brought to them the right to leave their vessel in a safe port. He gave them the protection of laws to compensate them when injured. All legislation which gives them the rights of collective bargaining derive from his gallant struggles. He was a man of poverty who never aspired to live in a luxury denied to the humblest member of a crew of his day. He loved seamen. He fought those who would oppress them and he endeavored to enact laws guaranteeing noble living under law. We shall not look on his like again. Not a member of any organized church, Andrew Furuseth died a saint and a martyr for a cause greater than himself."

A Tribute to James Madison

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. KASTENMEIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the March issue of the American Junior Red Cross Journal written by Irving Brant, an outstanding historian who has long been recognized as an authority on James Madison. The article is particularly timely since Congress only this past week passed a bill to create a James Madison Commission which would plan a memorial for our fourth President, best known as the Father of our Constitution. More than 160,000 copies of this magazine are distributed to boys and girls who participate in the Junior Red Cross program.

The article follows:

THE CONSTITUTION BUILDER

(By Irving Brant)

On a morning early in May 1775, two young men galloped along the red clay road connecting Orange Court House with Charlottesville, Va. At the county line they met a body of armed horsemen, members of a newly organized military company of Albemarle County. Guided by the two youths, the men from Albemarle joined a similar body of Orange County men, and both groups set off for Williamsburg, the capital of what was then the British Colony of Virginia.

The two guides were brothers. The older of them was James Madison, famed today as the principal framer of the Constitution under which our country is governed and fourth President of the United States. It was the intention of the two military companies to force the British royal governor, Lord Dunmore, to restore the Colony's gunpowder, which he had removed from an arsenal and hidden aboard a warship. But on the way they met Patrick Hentry and his Hanover County Independents riding back from the capital. Henry's company, finding the powder out of reach, had compelled the Governor to pay for it.

A few days later, news reached Virginia of the battles fought at Lexington and Concord between British Redcoats and New England farmers. James Madison wrote resolutions for the revolutionary committee of Orange County, headed by his father, declaring that the blow struck by the British in Massachusetts was a hostile attack on Virginia and every other Colony. Thus began the public life of a man who for the next 42 years was hardly ever out of National or State office and who rose to the highest position his country could bestow.

Four generations of Madisons had spent their lives in Virginia when James was born there on March 16, 1751. The Madison family, of English origin, cleared tidewater forests and gradually pushed westward onto the fertile plateau that borders the great Blue Ridge. There James Madison's grandfather acquired several thousand acres and built the estate that became known as Montpelier, the lifelong home of the President.

From his 11th year until he was 15, Madison studied at the Donald Robertson School in Virginia. His course included such books as the Latin of Ovid, John Locke's "On Human Understanding," and the philosophy of Socrates and Plato. Entering Princeton in 1768, he made a special study of the principles of government, and seemed to relish the heavy doses of theology meted out to everybody in that day. By sleeping only 5 hours a night he completed a 4-year course in 2 years, and found time to write satirical verses lampooning the members of a rival literary society.

At Montpelier, after graduation from college, Madison continued his studies of government. Virginia then had a State church and repressive local laws against dissenters. Madison spent much of his time trying to protect minority churches against what he called "that diabolical, hell-conceived principle of persecution" which raged among a good part of the established clergy and laity. This experience, along with his studies, made him a lifelong opponent of any connection between church and state.

Madison's physical frailty, partly due to overstudy, forced him to drop out of the Orange military company, but his intense devotion to the rights of the colonists put him in the forefront of the independence movement. He was elected to the Virginia revolutionary convention of 1776, which asked the new Continental Congress to declare the independence of the United States. In that convention he wrote the clause on freedom of religion in the Virginia Declaration of Rights. A year later, his refusal to serve whiskey to voters led to his defeat for reelection. The legislature promptly put him on the Governor's council, which directed the State's military operations, and in 1780 he was sent to the Continental Congress.

In that body Madison was underestimated at first. He was only five feet six inches tall, of slight build. His voice was weak. Though he was 30 years old, one member described him as a boy just out of college with all the impertinence of youth. The impertinence consisted of the quiet employment of talents that soon led Congress to entrust him with writing its most important papers.

As a congressional delegate, Madison strongly supported the alliance which brought French help in the struggle for independence. He upheld national rather than State authority, tried in vain to enlarge the taxing power of Congress by amending the Articles of Confederation, and managed the legislation by which the country's public lands were put in Federal instead of State ownership. French Minister Luzerne wrote of him: "He is regarded as the man of the soundest judgment in Congress."

Reentering the Virginia Legislature in 1784, Madison defeated a bill for State support of church schools. Realizing that the National Government was nearing a breakdown because it depended on the States for revenue, he induced the State legislature to invite all States to the Annapolis Convention of 1785, to consider that problem. This gathering led to the Philadelphia Convention of 1787 which replaced the weak Articles of Confederation with the far stronger Constitution of the United States of America.

Madison's work in the Philadelphia Convention won him the title of "Father of the Constitution." Three great features of our Government come chiefly from him:

The supremacy of the National Government in matters that affect the national security and welfare, and the retention by the States of authority in State affairs.

The system of checks and balances by which the powers of the Federal Government are distributed among its three branches—the legislative, executive, and judicial—with a further division of power between the two House of Congress. The purpose was to prevent any branch of Government from gaining tyrannical power.

The idea that democratic self-government would be safe and effective when extended over a vast continental area, provided the powers were divided as he proposed. His argument on this point induced the Convention delegates who were in general men of large property interests, to put their trust in Government by the people.

To go into effect, the Constitution had to be ratified by the States. Madison joined Alexander Hamilton and John Jay in explaining it to the Nation in the famous Federalist Papers. He then took the lead in securing ratification by Virginia over the powerful opposition of Patrick Henry. Reason won over oratory.

Elected to the new Congress, Madison proposed the first 10 amendments to the Constitution, protecting the rights and liberties of individuals. He and Thomas Jefferson worked together to found the Democratic Party in opposition to Hamilton's Federalists. The Hamiltonian party held power until 1801, when Jefferson was elected President and Madison became his Secretary of State.

In the State Department, Madison played an important role in the purchase of the Louisiana Territory from France, doubling the country's area. He helped shape the policies, "short of war," by which President Jefferson, during the Napoleonic conflict, sought to resist the seizures of American ships by both England and France.

When Madison became President in 1809, he sent separate notices to England and France, saying in substance: "If you stop your violations of international law and the other country does not, I will ask Congress to declare war on the other country." Napoleon made a tricky agreement. England refused to yield at all, and stirred deeper anger by continued impressment of American seamen to fight on British warships. On June 18, 1812, war was declared on England.

The War of 1812 produced astonishing victories for the little American Navy, but for 2 years the land forces met with repeated defeats. That was due partly to incompetent generals, partly to the refusal of Federalist New England to help fight the war, partly to past neglect and the refusal of Congress to heed Madison's requests for effective preparation. The President was no trained military leader, but his stubborn fortitude was a great factor in carrying on the conflict.

By the summer of 1814, the average age of generals had dropped 20 years. Brilliant young tacticians like Winfield Scott, Jacob Brown, and Edward P. Gaines led seasoned regulars who held their own against Britain's Napoleonic veterans. This change, combined with England's war weariness and the American wish for peace, resulted in the signing of the Treaty of Ghent in December, 1814. Before the news of it crossed the ocean, Gen. Andrew Jackson won the greatest victory of the war at New Orleans.

The treaty settled almost nothing, but the American naval victories and the successful stand against England's veteran armies raised the country's prestige throughout the world. A sense of the futility of war as a method of settling disputes has converted the Treaty of Ghent into a lasting symbol of Anglo-American friendship.

After leaving the Presidency, Madison and his wife Dolly lived for 19 years at Montpelier before death came to him at the age at 85. In his late years he headed the board that directed the University of Virginia. Voluminous letters and articles came from him, denying the right of States to nullify national law. His dying word was an appeal to his countrymen to cherish the Union.

The marriage of James and Dolly Madison produced no children, but they loved to have their house overrun with successive generations of nieces and nephews. In the eulogies that followed Madison's death, newspapers and public men paid equal tribute to his services to the country and to the purity of his character. Henry Clay regarded him as the greatest American statesman after Washington. It is safe to say that to James Madison, more directly than to any other man, we owe the free government we are now seeking to preserve in a world that knows too little freedom.

Panama Canal Zone Sovereignty: Views of American Legion

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. FLOOD. Mr. Speaker, during recent months distinguished Members of the Congress, disturbed by the worsening of relations between the United States and the Republic of Panama, have made many forthright statements presenting the key angles in the vitally important question of Canal Zone sovereignty.

Regrettably, important elements of the major mass media have failed to enlighten our people on this grave matter. Their silence suggests a control of the press favoring suppression of news about Communist activities, illustrated by those which have occurred on the Isthmus of Panama, and now threaten our continued sovereign control of the Canal Zone.

Securing accurate information and the preparation of it in the form of addresses to the Congress have involved much effort and study on the part of many persons. Among those who have made significant contributions are employees of the Panama Canal Company, Canal Zone Government, and other U.S. agencies in the Canal Zone. Their understanding of the problems involved derived from long residence on the Isthmus and personal observation of repeated incidents of violence has enabled them to render important services in alerting the Congress and the Nation to the real dangers at Panama.

Mr. Speaker, I think that I reflect the overwhelming view of the American peo-

ple when I say they are grateful for what these employees and other Isthmian residents have contributed to public knowledge in this regard. They certainly deserve to be commended for their courage to speak out boldly on the subject of Canal Zone sovereignty at the time when the highest officials of their government, through timidity and a policy of vascillation, decline to take a firm stand in behalf of the just rights of the United States.

One of them is Raymond G. Bush, now department commander of the American Legion in the Panama Canal Zone. In a report presented on March 30, 1960, to the Foreign Relations Commission of the American Legion in Washington, D.C., Mr. Bush gave an admirable summary of the current crisis at Panama and urged a firm stand by our Government in meeting the current menace.

Another such leader is Arthur J. Wynne, Chairman of the Canal Zone Committee for U.S. Retention of the Panama Canal. Because of his forthright but temperate report on Isthmian conditions, "Yankee, Go Home," which I included in my remarks to the House on January 27, 1960, he has been denounced by Panamanian radicals. These extremists, who seem to formulate the foreign policy of Panama, have insultingly demanded that he be deprived of his employment and driven from the Canal Zone.

This action, Mr. Speaker, should cause our officials to think more realistically. If the Panama Canal should be nationalized by Panama, which is the avowed ultimate objective of radical elements in that country; how long could it be successfully operated under supervision of such men as are heading the fight for Panamanian nationalization?

The above-mentioned Canal Zone leaders know whereof they speak. They realize that there can be no compromise in the fundamental principle of sovereignty. In stark contrast to some who have expressed their views, these leaders treat the subject with a realism that is most refreshing. They know that a crisis has arrived which requires a grave decision be made and that, in the question of sovereignty over the Canal Zone and Panama Canal, it is "All or Nothing."

In order that Commander Bush's able report may have the widest possible circulation, especially to the Congress and other agencies of Government concerned with Panama Canal questions, I quote it as part of these remarks:

REPORT TO THE FOREIGN RELATIONS COMMISSION, THE AMERICAN LEGION, WASHINGTON, D.C., MARCH, 30, 1960

(By Raymond G. Bush, Department Commander, Panama Canal Zone)

THE AMERICAN LEGION,
DEPARTMENT OF THE PANAMA CANAL ZONE,
Gatun, C.Z.

Mr. Chairman and members of the Foreign Relations Commission of the American Legion, I am Raymond G. Bush, a U.S. citizen born in the State of New York and a resident of the Panama Canal Zone for the past 20 years. I am employed by the U.S. Governinent and am at present the department commander of the American Legion in the Panama Canal Zone.

I am very appreciative that the National Commander, Mr. Martin B. McKneally and the chairman of this committee invited me to present to this Commission my views of the situation in the Panama area.

In speaking about Panama and its relations with the United States, I am reminded of the Biblical saying that God created the earth in 6 days and rested on the seventh. The United States most certainly did create the Republic of Panama on November 3, 1903, but in its relationship with the youngest of our sister American Republics, it has not had 1 day's rest since that eventful day over 56 years ago.

Since that November day the whole political history of Panama has been an ever ambitious fight to obtain, if not control the Panama Canal Zone. From this comes the problems of the Republic of Panama.

The Panama Canal is a 10- by 50-mile strip of land carrying a marine waterway connecting the Atlantic and Pacific Oceans, completely bisecting the Republic of Panama. This narrow strip of land was granted to the United States by the Republic of Panama in 1903 for the purpose of construction, maintenance, operation, sanitation, and protection of the canal to be constructed, as outlined in article II of the Hay-Bunau Varilla Treaty of 1903. Based on this part of the treaty, Panama has raised a hue and cry that they have complete jurisdiction and sovereignty over the Canal Zone. Nothing could be further from the truth.

Panama in its historical claim for sovereignty ignores that part of the same treaty which states and I quote,

"The Republic of Panama grants to the United States all the rights, power and authority within the zone mentioned and described in article II of this agreement and within the limits of all auxiliary lands and waters mentioned and described in said article II which the United States would possess and exercise if it were the sovereign of the territory within which said lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, powers, or authority."

During the last few years, particularly since the Suez crisis, Panamanian objectives concerning the Panama Canal and the Canal Zone have been developed and extended by the Panama Government, public and private officials, organizations, students, press, and radio. Those objectives and aspirations current in Panama would modify the present exclusive control of the Canal Zone by the United States in varying degrees of basic principle or economic concession, to eventual nationalization of the Canal. They leave little doubt that the mere flying of the Panamanian flag in the Canal Zone is not what Panama seeks and that it is but a single step and I repeat, a single step, toward ultimate control.

During the 1955 treaty negotiations, the Panama Government pressed for the following concessions, all of which were rejected by the United States on the basis of the officially reaffirmed position of the United States that no useful purpose would be served in debating the question of sovereignty, that all such matters were resolved by article III of the 1903 convention.

(a) Panamanian flag to be flown as well as the U.S. flag in the Canal Zone, including on all vessels using the canal.

(b) Spanish language to be official in the Canal Zone, along with the English language.

(c) Foreign Consuls in the Canal Zone to be accredited by Panama rather than the United States.

(d) Panamanian citizens before the Canal Zone courts to be tried by mixed tribunals. (American and Panamanian judges.)

(e) Panamanian postage to be used on all mail matter dispatched from the Canal Zone.

(f) United States to wholly recognize Panamanian sovereignty over the Canal Zone.

In spite of the fact that the question of sovereignty was rejected by the United States, this did not prevent responsible government officials to publicly state that the United States was violating the treaty. As recently as February 17, 1960, in a speech at Honolulu, Hawaii, the Panamanian Foreign Ministr, Miguel Moreno, Jr., said:

"The refusal by the United States to raise the Panamanian flag in the Panama Canal Zone, is one of the several violations by the United States of the treaty under which it controls the Canal Zone."

This was not the first time that Mr. Moreno has put the finger on the United States as not abiding by solemn treaty commitments. On November 28, 1959, while addressing a mass meeting in Panama City celebrating Panama's independence from Spain, Foreign Minister Moreno stated that the time had come to break the chains of servility; that Panama has incontestable sovereignty over the Canal Zone; that Panama would not accept titular sovereignty until the United States with Panama raises the Panamanian flag in the Canal Zone; that the canal is Panama's.

In 1923, Secretary of State Hughes declared that the United States would never recede from the position which it had taken and that this Government could not and would not, enter into any discussions affecting its full right to deal with the Canal Zone under article III of the treaty of 1903 as if it were sovereign of the Canal Zone and to the entire exclusion of any sovereign rights or authority on the part of Panama. It is an absolute futility for the Panamanian Government to expect any American administration, no matter what it is, any President or Secretary of State, ever to surrender any part of these rights which the United States had acquired under the treaty of 1903.

There have been numerous other occasions whereon the Department of State has had the occasion to construe and apply article III. It would serve no purpose to quote more of them. The uniform position of the United States has been that the sovereignty over the Canal Zone is not an open or doubtful question and that the language of article III is not obscure or ambiguous and that plain and sensible words should be taken to mean what they say. The Republic of Panama has no right to the exercise of sovereign rights, power or authority in the Canal Zone and no right or privileges of a sovereign in the Canal Zone. Any titular sovereignty which the Republic of Panama may possess in the Canal Zone is wholly barren and dormant, at least so long as the convention of 1903 remains in effect.

If the United States has all the rights and powers in the Canal Zone, what is the question? The 1903 treaty grants all the rights, power, and authority. What is left?

The flag issue is one more concession that Panama is demanding and there will be many more until she really gets what she wants, the Panama Canal.

The only thing that is going to appease and satisfy Panama is the ultimate rescinding of the sovereignty clauses in the Hay-Bunau Varilla Treaty of 1903. This will certainly open the door to Panamanian nationalization of the Panama Canal.

It is obvious and make no mistake about it, that Panama in her struggle to have her flag raised on the Canal Zone wishes to erase the false concept of "titular sovereignty" and attain the full recognition of her civil, penal, fiscal, and labor justification in the Canal Zone.

A Panama City newspaper states the objectives of Panama very clearly in the following article:

"November 3 and 28 have passed and will go down in history as the two dates of

patriotism when the people launched themselves to plant the Panamanian flag in Panamanian territory • • • Now there will be December 12, followed by December 22 and so on, until all the Yankees are driven out of the Canal Zone and the canal is nationalized."

The recognition of titular sovereignty is far from what Panamanians think the United States ought to do to remove the differences which brought about the current crisis. A letter drafted by a special committee chosen by spokesmen for 40 organizations in Panama suggested the replacement of existing treaties by an agreement on the following:

(a) Unquestioned sovereignty of Panama over the territory in which the Panama Canal is built.

(b) Replacement of the present grant in perpetuity by one for a fixed period.

(c) Elimination of unfair competition to Panama's industry and commerce.

(d) Elimination of discriminatory practices as to wages, opportunities, work conditions and treatment of Panamanian workers in the Canal Zone.

(e) A fair share for Panama in the gross receipts of the Canal in addition to the present annuity.

(f) Suspension of any judicial, commercial or industrial activity in the Canal Zone which is not connected with the powers of the U.S. authorities in the Canal Zone exclusively for the maintenance, operation, sanitation and protection of the Canal.

(g) Fair interpretation of new treaties.

Following the November 3 incidents of which you are all aware, the Panamanian press and radio carried on an extremely vicious and malicious campaign against the Canal Zone and the United States. With complete disregard for the facts, the press, radio, and officials placed the full blame on the United States for the November 3 riots and waged an unscrupulous campaign to inflame the public to further demonstrations and to exploit the November 3 pressure tactics for concessions from the United States. The press and radio nearly 100 percent politically controlled, also pushed nationalism to extreme limits and made sovereignty in the Canal Zone, including flying the flag there the rallying cry of nearly all Panamanians, most of whom prior to and during the November 3 incidents were indifferent to the political maneuverings which were all that were involved at the time.

In the daily Panama newspapers appeared editorials and cartoons that left little to the imagination. One column called for the removal of the No. 1 enemy of Panama, Gov. William E. Potter, "for on this black Yankee personality falls the responsibility for the bloody acts in Panamanian territory November 3 and 4, 1959."

Still another column says, "By fair means or foul, the United States has acquired since her independence, territory three times greater than most of Europe. This was done with little expense and by killing Indians and taking land from Mexico."

On November 5, 1959, the afternoon newspaper La Hora, depicts the U.S. Army as vicious dogs, some firing machineguns, others with bared bayonets, three tearing with their teeth at a Panamanian holding a Panamanian flag and one with a child between his teeth. A balloon over the head of a sharp-toothed, armed dog wearing a helmet with three stars, says, "Kill, kill the goddam Panamanian patriots."

On the last page of the same newspaper, there was a cartoon of President Eisenhower talking with the Canal Zone Governor, William E. Potter, on the telephone. Both are dressed as devils with fire and smoke coming from their eyes, ears, and mouth. Eisenhower says, "Listen Potter, I have the complete plans for 'Operation Hungary' so that you can follow them to the letter on November 28. It is time that we got ahead of the Russians on something." Governor Potter says, "OK Chief, bullets to these Communists."

The official theme in Panama during this period was that the situation was so bad that the United States must give something big immediately to appease Panama. The United States was officially so notified on several occasions and was under constant pressure to grant concessions, including a recognition of Panamanian sovereignty and the flying of the Panamanian flag in the Canal Zone. The violence of November 3 and the threat of more on November 28 was openly used to persuade the United States to appeasement action.

The bloody rioting that occurred along the Canal Zone boundary was part of a premeditated plan to focus worldwide attention on the plight of Panama. Panamanian leaders felt that with the United States so deeply involved in major crises throughout the world, an incident in the Canal Zone, such as Panamanians being killed by Americans or border disturbances requiring the use of the U.S. Army would cause our Nation to quickly give in to Panama's demand of sovereignty. This supposition was based on the theory that anti-American propaganda branding the United States a "blood crazed" aggressor of small defenseless countries would surely gain sympathetic support throughout Latin American countries and be very embarrassing to the foreign policy of the United States.

Gentlemen, the time has come when we as a Nation should take a closer look at our relaitonship with a country which resorts to diplomatic blackmail to obtain further concessions from our Government. Let us tell our side of the story beginning with Hay-Bunau Varilla Treaty of 1903. We have never denied that Panama has titular sovereignty over the Canal Zone and by the same token never have we relinquished the sovereign authority Panama granted to the United States in the 1903 Convention.

Very few people realize, and Panama completely ignores that in this treaty, we paid $10 million for and received a grant in perpetuity. To put it bluntly, this grant in perpetuity was an outright purchase, not a lease, with no strings attached. Under article II of the 1903 treaty, this grant in perpetuity gave the United States the use, occupation, and control of the land and land under water for the construction, maintenance, operation, sanitation, and protection of the Panama Canal Zone. I would like to add that the 10 million paid to Panama was not the only money that the United States paid out when it acquired the rights to build the canal. The unsuccessful French Canal Co. received $40 million, while the Colombian Government received $25 million. In addition, our Government purchased outright all land owned by individuals within the Canal Zone.

This expenditure, in excess of $75 million certainly cannot be construed as a steal particularly when you take into consideration the value of the dollar at that time.

While there have been two major treaty revisions, which greatly modified (in favor of Panama) the original Hay-Bunau Varilla Pact of 1903, in neither of these treaties was there any surrender by the United States of the sovereign rights over the Panama Canal Zone as set forth in the original treaty.

Some of the major revisions that benefited Panama were:

(1) Increase of the annual annuity from $250,000 to $1,930,000.

(2) Gifts of lands and other properties valued at approximately $24 million.

(3) Construction of a high level bridge across the Pacific entrance to the Panama Canal for the convenience of Panama, at an estimated cost of $27 million.

(4) Employment preference over other foreign nationals.

(5) Abolishing of purchase privileges in the Canal Zone commissaries for Panamanians working in the zone but living in Panama.

(6) Preferential purchase of Panama products.

However with these giveaways and many more on the part of the United States, Panama still wants more. She wants the canal and she will get it if we are not alert to the prime purpose behind her persistent demands for sovereignty and the flying of her national flag over the Panama Canal Zone. Giving in on this point will shortly be followed by the replacement of our civil government on the pretext that as a sovereign nation, that foreign governments (in this case the United States), will not be permitted to make or administer laws affecting the territory and nationals of the Republic of Panama. The next step is complete nationalization of the Panama Canal, with the exclusion of all U.S. interests.

There is no question that the United States has complied with its treaty commitments with Panama. However, we are constantly being criticized for noncompliance and many of these complaints center on the question of equal pay for equal work. This was one of the principle subjects that set off the November riots.

Simply stated, the Panama Canal Company is paying the same basic wage for all employees, whether they are Americans or Panamanians. The wage policies are exactly the same in principle as those applied by the Panamanian Government. The local rate is the going rate and if skilled employees have to be imported from a place where a higher rate is paid, that higher rate must be paid, otherwise the employee could not be hired. Business in Panama, pays Panama wage rates generally, but if it needs a foreign expert or skilled employee or executive from another country, it necessarily pays that person what it takes to induce him to leave his country and work overseas. He certainly would not leave his country for less than he could get at home, plus some additional inducement.

Although the minimum Canal Zone wages for employees of the U.S. Government agencies in the Canal Zone is 50 cents an hour (as compared to Panama's 40 cents an hour) only 267 employees in 12,000 full-time positions received less than 58 cents an hour. The current average wage for the total force of full-time non-U.S. citizen employees is 82 cents an hour.

A year ago, before the Canal Zone pay plan was adopted, there were 126 non-U.S. citizens on the U.S. wage base. Such employment has now risen to a total of 240. As non-U.S. citizens become qualified for the U.S. wage base positions, this figure will be augmented monthly. Similarly, in January of 1959 there were 67 U.S. citizens receiving the locality wage in effect at that time. Today nearly 200 U.S. citizens are on the Canal Zone wage base. The above clearly shows the policy of the Canal Zone to make more and more jobs available to Panamanians as vacancies exist and as skills become available.

In recent weeks, Panama has had several important visitors from the United States. Some of them have openly expressed their opinion that they can see no reason why the Panamanian flag should not be flown in the Canal Zone. Shortly thereafter they disappear from the scene and Panama makes political hay out of their statements. One of these very well know visitors went so far as to blame what he called, "An exclusive community of American civilians that has grown up in the zone and has little contact with the friendly people and country around them for the resentment and ill will in Panama." Nothing could be further from the truth. Before the November incidents, American civilians as well as military per-

sonnel always visited in Panama and its interior provinces.

Gentlemen, was this visitor who is so ill informed of existing conditions around when rocks and other debris were being thrown at the Canal Zone Police, Firemen and U.S. Army troops who were guarding the Canal Zone border under very trying and provocative circumstances; when lives of Americans and Government property were in danger; when our U.S. flag was being desecrated at the American Embassy in Panama in full view of Panama's National Guard. (Note: The U.S. flag was not flown at the Embassy after the November 3 riots, until American Legionnaires and other U.S. citizens demanded from the Ambassador that he honor the Father of our country on February 22, a national holiday.) Was this visitor around when the rioting mobs burned Uncle Sam in effigy; when Canal Zone Governor William E. Potter was being named public enemy No. 1; when General Gaither's troops were being called mad dogs, shooting down innocent Panamanian patriots. Do you gentlemen call this the action of a friendly country. Is this the incentive that is needed for the Canal Zone employees to visit and be good neighbors with the Republic of Panama, as they have in the past. My answer is "No."

The time has come for the United States to take a firm stand and make a decision one way or the other what it is going to do. Now all that is left to talk about in our relations with Panama is, all or nothing. Give in to the demands of the agitators and the canal will shortly belong to Panama. The United States must decide on a policy with Panama and stick to it and not be pushed into something that it will regret.

Probably some of you are wondering, what can the United States do now to appease the Republic of Panama. I am of the firm conviction that nothing will ever satisfy her demands, but the canal.

The American Legion should encourage the United States to foster good will in Panama and other Latin American countries and be good neighbors, but at the same time let's stand up and tell Panama that we are going to keep the Panama Canal Zone under one flag, the Stars and Stripes.

National Council of Churches

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a letter which I addressed to Rev. Roy G. Ross, general secretary of the National Council of the Churches of Christ in the U.S.A.:

APRIL 4, 1960.

Rev. ROY G. ROSS,
General Secretary, National Council of the Churches of Christ in the U.S.A., New York, N.Y.

DEAR REVEREND ROSS: This acknowledges receipt of the letter dated March 22, 1960, signed by yourself with an appendix signed by a number of other persons.

Under date of February 26, 1960, in response to a telegram which I had received respecting public statements made by myself in regard to the National Council of Churches, I sent a telegram to the National Council of Churches as follows:

"Reurtel do you desire opportunity to appear before the Committee on Un-American Activities in order to question the accuracy of the material which came from the committee's files and which appears in the Air Force Manual? If you desire such opportunity, we can arrange a time convenient to yourselves."

May I again ask: Do you desire an opportunity to appear before the Committee on Un-American Activities in order to question the accuracy of the material which came from the committee's files and which appears in the Air Force Manual? If you desire such opportunity we can arrange a time convenient to yourself.

Sincerely yours,

FRANCIS E. WALTER,
Chairman.

Forests and Rural Development

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. WHITENER. Mr. Speaker, on March 31, 1960, a forestry demonstration was conducted at the Cleveland County Fairgrounds in Shelby, N.C. This demonstration was sponsored by the Seaboard Air Line Railroad Co., together with 14 cooperating local, State, and Federal agencies. It was an outstanding event in every respect and will mean much to the development of the forestry program in the congressional district which I have the privilege to represent.

More than 800 persons from western North Carolina were in attendance. In addition there were visitors from many other States, some coming from as far away as New York City.

In connection with the demonstration there were seven interesting forestry stations illustrating tree growth, planting, and utilization. There were two exhibits which seemed to attract the greatest attention. They were a miniature sawmill and a working model of a lumber dry kiln. Also, there was a very interesting model of a mechanical tree planter in operation. This tree planter was purchased by one of the Shelby banks and donated to the county to be used for the benefit of the farmers of the county for many years to come.

The main address of the day was delivered by Hon. True D. Morse, Under Secretary of Agriculture and Chairman of the Committee on Rural Development. Mr. Morse spoke on the subject, "Forests and Rural Development." His splendid address was carried throughout the eastern section of the United States on both radio and television.

In the course of his address, Mr. Morse called to the attention of his audience the exhibits of a recently released U.S. Department of Commerce publication entitled, "Forest Industry Opportunities." This publication is of great interest to me, and I would certainly commend it to any of my colleagues whose area is concerned with the growing forestry industry.

Mr. Speaker, under unanimous consent I include the address of Mr. Morse in the Appendix of the RECORD as part of my remarks, as follows:

FORESTS AND RURAL DEVELOPMENT

(Address by True D. Morse, Under Secretary of Agriculture, and chairman, Committee for Rural Development Program, before Forestry Demonstration sponsored by Seaboard Air Line Railroad Co. and 14 cooperating private, State, and Federal agencies, Shelby, N.C., March 31, 1960)

In most of the 1,000 counties of the United States where incomes and levels of living of farm families are unusually low—about one-half or more of the land is in timber. And the forests tend to be neglected or wastefully cut.

Incomes are low because farms are usually small and soils are poor or rocky or on steep hill or mountain sides. Fields tend to be small and irregular.

The farm families are seriously underemployed and often unemployed.

It is an age-old, chronic condition. Only since 1955 has there been an organized and effective attack directed toward helping solve this unconscionable situation.

The rural development program emphasizes timber and forestry and associated industries and activities as major opportunities for area development and improvement of incomes of farm and rural families. State and local leaders are quick to recognize that forests are a great resource that can be made much more productive.

"If you don't have an oil well or gold mine, take a good look at your timber stand" is the advice of one State agricultural college. "A 12-inch pine tree grows to 14 inches in 5 years when properly managed. At that rate, it earns 28 percent interest per year."

Dr. Richard E. McArdle, Chief, U.S. Forest Service, in stressing the importance of forests and the rural development program points outs that more than half of all commercial forest land is in small private ownerships. He says:

"By the year 2000—40 years from now—the Nation's population will about double, with twice the present demand for wood products. Productivity of small private forests must be increased to meet the anticipated future demand." This can only be done by the owners of the small forests. Community and area programs will help them and spur them on to achieve more highly productive and profitable forests.

Forests are basic to the progress and well-being of all timbered areas. That means practically all of the areas of the United States most in need of more income.

The challenge and opportunities are shown by striking figures. Timber occupies 86 percent of the land area of Maine; over 60 percent of States like Alabama, Florida, Georgia, North Carolina, South Carolina, Virginia and West Virginia; and more than half of the land in other States where rural development is underway, like Arkansas, Louisiana, Michigan, Mississippi, Pennsylvania and Washington.

Our wood crop occupies more land on farms than any other crop. Trees are a crop and should be grown as such.

Small woodlands are held by over 3 million farmers and some 1 million nonfarm owners. No other land use or crop directly affects the welfare of more landowners. Small woodlands add up to big business.

County and area leaders cannot do an adequate development job if they ignore 40 to 93 percent of their land and the natural renewable resource which it supports. That is the reason that rural development program committees usually establish a forestry commission, or subcommittee, charged with the responsibility of making the timberland more productive and profitable.

Forestry commissions of the rural or area development programs are made up of people who have a financial interest in the timber economy. For example: sawmill operators; pulpmill foresters or operators; owners of timberland or their foresters; private foresters; hardware and implement dealers who sell equipment; representatives of woodworking industries; paper companies, wood-preserving, and other such industries; bankers and lending organizations.

Working with such commissions as advisers and in helping carry out the forestry programs agreed upon are the public agencies—State and Federal—such as: State forest service, U.S. Forest Service, Agricultural Extension Service, Soil Conservation Service, and agricultural stabilization and conservation committees.

The Seaboard Air Line Railroad and 14 other private, local, State, and Federal agencies have sponsored this forestry demonstration which illustrates the large number and variety of companies and agencies which have a responsibility for better forestry. They want to be of help on programs that will produce more income.

What to do: An increasingly fine record is being achieved as counties and areas team up on development programs and move into action.

Fire is controlled.

There is better protection against insects and diseases.

Tree farms are established.

Wasteful savage cutting is stopped or reduced.

Woodlands are renovated and weed trees cut.

Seedlings are planted by the millions.

The first thing some of the committees do is to call upon the public agencies for help in finding out approximately how much and what kinds of forest trees they have to work with. They call upon the public agencies, in this case the forest service and the State foresters, to tell them what these kinds of trees are good for.

As a result, new pulpwood loading yards have been established. New charcoal plants, pallet plants, and furniture plants have been constructed and put into operation.

These developments have a twofold advantage. They create jobs which gave the small woodland owner an opportunity to earn ready cash in an off-the-farm job. These jobs are created not only in the mills but in the woods in the form of fallers and skidders, and in the trucking and hauling industry.

But of more importance, they create markets for forest products that didn't exist before, thus giving the landowners a new source of income and permitting them to put their woodlands in better shape for future growth.

Using these new markets as a means of putting the existing woodlands into better growing condition is the most important contribution the county committees can make to the long-time economy of their counties or areas.

Thus new industries are established and small existing operations are expanded by rural development programs. More jobs are created and incomes are increased based on the forests and forest products. As a result farm families and nonfarm families too, have a higher level of living and entire areas are becoming more prosperous.

The Oklahoma Experiment Station (Bull. B-548) found, "on the average, farming paid to a rural family in Cherokee County roughly $300 of net income, while off-farm payments contributed over $2,000 per family." This illustrates why areas all across the Nation are organizing to bring diversified—and new income opportunities to farm families on small and low production farms.

Beautiful and productive forests along with hills, mountains, streams, and lakes provide an attractive countryside for attracting and developing other sources of income.

Outdoor recreation is big business—and will greatly expand. The President and Congress in looking ahead have felt the need will be so great that there has been established a National Outdoor Recreation Resources Review Commission.

The chairman is Laurance S. Rockefeller, who refers to "the booming demands on our recreation resources." The Commission is to make recommendations by September 1, 1961, for a program of action.

It is being pointed out that most of the population is concentrated in the Northeast and East where the land is largely privately owned. Timbered areas to the South are in easy reach of most people of the United States. Here is a big opportunity for attractive timbered areas to serve the rapidly growing need and demand for a great variety of outdoor recreation—all the way from camping and hiking to hunting and fishing.

Congress, in enacting Public Law 85-470 that established the Commission, said it is "in order to preserve, develop, and assure accessibility to all American people of present and future generations such quality and quantity of outdoor recreation resources as will be necessary and desirable for individual enjoyment, and to assure the spiritual, cultural, and physical benefits that such outdoor recreation provides."

The tourist trade is big business and will greatly expand. There will be 80 million more people in just 20 years—and the population is expected to double in the next 40 years.

People want to travel and relax in scenic and attractive rural areas. The tourist business and recreation income are being developed with better accommodations, more parks and more attractive towns and communities and such areas hang out a welcome sign for travelers.

Rural residences are big business. Population centers are "exploding." People are reaching further out into the country for places to live. Families spend much of their income in the areas in which they live. They provide better markets for locally grown farm products—and provide work for farm and nonfarm families.

Retired people increasingly seek attractive rural areas in which to live. They have larger social security and other retirement incomes to spend where they make their homes. This is a rapidly growing business—an increasing number of our people are in the 65-and-over age group.

Thus areas blessed with forests have many income opportunities waiting to be developed.

A new bulletin, "Forest Industry Opportunities in Rural Community Development," is just now available through the work of the U.S. Forest Service. It is a fine new tool for area leadership and rural development committees, to illustrate the great potentials in timber.

It shows "that for every dollar the timber owner gets for his stumpage, an average of $17.60 more value is added to the original worth of the wood by the time it reaches the ultimate consumer.

"These additional dollars go out as wages for workers and income for companies engaged in harvesting, processing, fabricating, transporting, and distributing the forest product. If you don't have the industry in your community to convert your trees into forest products, those extra wood-based jobs never show up and those extra dollars just don't circulate among your people."

Photographs show some 20 examples of how wood is being remanufactured near the place it is growing. It shows how to keep the work at home—and multiply the income. More areas should be cashing in on their timber resources in a much larger way.

W. S. "Bill" Swingler, Assistant Chief, U.S. Forest Service, who guided the creation of the new bulletin, in a recent speech said, "So I suggest—no, I urge you to go home and think it over. Can a rural development committee help your area? If you think it can, why not start one?

"You will be able to increase the economic benefits that you get from your woodland. And there's something else. You will get a far deeper and more satisfying return—that very special feeling which comes to a man when he has had a part in making his community a better place in which to live."

The Canadian Parliament has had a study made of the rural development program as it is operating in the United States. The methods and results found in this country were convincing.

The Canadian Minister of Agriculture, the Honorable Douglas S. Harkness, in an address prepared for delivery in Des Moines, Iowa, February 20, 1960, stated that one of the five sections of the agricultural program for Canada is "a rural development, or redevelopment program somewhat similar to the one you are carrying on in the United States, designed particularly to deal with the many problems associated with the rural population on small, uneconomic units."

Today, Paul V. Kepner, Deputy Administrator of the Federal Extension Service, is in Ottawa to appear before a special committee of the Canadian Senate at the request of the chariman, Senator A. M. Pearson. He is there to answer questions and explain further how the rural development program works to produce more rapid progress and higher incomes.

North Carolina has been well out in front in rural development. Pioneering work has helped point the way for the program now underway in 30 States and Puerto Rico. Other States are making plans to get started.

Gov. Luther H. Hodges says the people are very appreciative of the program and know what it means to the farmers in this State. In an address at the Industrial Education Center in Burlington he said "the people of North Carolina have demonstrated their faith in themselves and their enthusiasm for the future by endorsing and actively supporting a variety of programs designed to bolster this State's economy and raise its standard of living."

We are deeply grateful for the strong and effective leadership of Dean D. W. Colvard, and Extension Director D. S. "Dave" Weaver. They have not only given leadership here in this State, but national leadership as well.

The meeting is another demonstration of how businesses, industries, utilities and private organizations want to help. The Seaboard Air Line Railroad through the past 15 years has actively promoted forestry through such meetings. Mr. Warner T. White, assistant vice president, has given his active leadership.

In the new rural America that is emerging, forests will play an increasingly important role. Their multiple use will not only supply physical products but the spiritual, cultural, and recreation values to which Congress refers.

Many farm communities and entire rural areas that have been experiencing a decline in population—will soon be hit with a reversal of this trend. Already it has happened to some counties.

Tremendous new opportunities will open up—as rural areas help provide homes and occupations for 80 million people in the next 20 years. The time to plan ahead for such developments is here—now.

Our deep concern is for people—the welfare of farm families and other rural people, too. We must help banish the age old, chronic poverty, low incomes, underemployment and wasted manpower.

The farm and rural families plagued with such conditions must be helped to enjoy the good life that prosperous, progressive America makes possible for our people.

The Forand Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a letter received from the Physicians Forum, Inc., dated April 6, 1960.

The letter follows:

THE PHYSICIANS FORUM, INC.,
New York, N.Y., April 6, 1960.

Congressman JOHN D. DINGELL,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DINGELL: When you consider the discharge petition for the Forand bill, please realize that many thousands of physicians endorse the request of the vast majority of the American people to add health-service benefits to the Federal social security system.

The official spokesmen for organized medicine do not accurately reflect the views of the medical profession—a striking verified example is the AMA's continued opposition to social security coverage for physicians, despite the fact that this is favored by two-thirds of them in polls throughout the Nation.

Like the medical profession at large, most of us are in private practice and belong to our county medical societies. Our years of medical practice gives us extensive personal knowledge of the great medical needs of the aged and the frequently insurmountable obstacles they encounter in attempting to get good medical care. More often than we wish to recall, we have seen our patients, on reaching retirement, fail to receive necessary hospitalization, diagnostic procedures, and other medical services, and forced to give up their personal physicians.

From our experience we also know that currently available health insurance has not eliminated the financial obstacle to good medical care for the aged. Many do not have health insurance, particularly those needing it the most, while those covered still suffer considerable financial hardship because benefit payments are usually so inadequate.

Our elderly patients with Blue Cross policies are also the hardest hit by the current wave of increases in Blue Cross rates; as a result, many find it difficult to pay the premiums and some have had to give up their policies. We are deeply worried about the unfortunate predicament these patients will face when they require hospitalization.

It is clear to us that currently available health insurance must be bolstered by the Federal social security system to assure universal coverage of the aged regardless of their limited and usually shrinking economic resources.

In the 23 years of the Federal social security system, we physicians have witnessed with gratitude the financial help it has provided to our patients. For many, this was sufficient to maintain their personal dignity without which mental and physical health rapidly deteriorates. For some, it made possible the continuation of important doctor-patient relationships or the purchase of necessary medical services. To the best of our knowledge, the benefits of the Federal social security system have been provided with a minimum of redtape and without political interference.

More recently, the Federal social security system has worked directly with the medical profession in administering the disability freeze and the disability benefits programs. Practicing physicians who have participated in this work have found the same rational approach that has characterized the entire system. In particular, there has been no interference with professional judgments, no loss of professional integrity, no lowering of the quality of care.

We know the need for Forand-type legislation is unequivocal.

We believe that the Congress which enacts Forand-type legislation will receive the highest praise from a grateful people—those over 65, those supporting elderly relatives, as well as most younger people who justifiably worry what would happen to them if they became seriously ill in their old age.

We hope you will add your name to the Forand bill discharge petition and that you will aid the passage by this Congress of legislation for financing medical care for the aged by the social security system.

Sincerely,

ALLAN M. BUTLER, M.D.,
Chairman.

A Higher Living Standard for American Migrant Workers

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. PELLY. Mr. Speaker, I believe there is an opportunity to improve the lot of the American migratory farmworker. In this connection, under unanimous consent I include in the Appendix of the CONGRESSIONAL RECORD an address on this subject by Secretary of Labor James P. Mitchell which he made last week to the National Travelers Aid Association.

This speech has a close relationship to a bill, H.R. 11313, introduced by me to eliminate the importation of foreign farm labor and to replace it with our own transient farmworkers who now average less than a thousand dollars' earnings a year and who could do the work now done by imported Mexican nationals.

The address follows:

ADDRESS BY SECRETARY OF LABOR JAMES P. MITCHELL AT THE LUNCHEON OF THE 1960 BIENNIAL CONVENTION OF THE NATIONAL TRAVELERS AID ASSOCIATION, WASHINGTON, D.C., APRIL 6, 1960

Members of the National Travelers Aid Society, I was pleased by your invitation to luncheon with you this afternoon, and to remark briefly on the status, and the prospects, of our migratory farmworkers—families that are often desolate, always in need of some kind.

It is my hope to use this time to recount for you some of the things that have been done to help the migrant, and to talk about some of the things that I feel must be done in the future if the migrant is ever to take his place as a full citizen of this wealthy Nation, with full access to the responsibilities and rewards of our social and economic life.

I would like to remark first, however, on the work of the Travelers Aid Society. There is no lonelier person than a traveler in trouble; our clearest example of the virtue of charity is the story of the Samaritan who helped a traveler in trouble.

Each year 30 million Americans of every background and income group change their city of residence. This ability to move freely, to pursue opportunity, to change jobs at will, was a breathtaking freedom to the people who came to this new world from the social confines and economic strictures of the old. In a dynamic economy such as ours, it remains an American characteristic.

Yet most people on the move must rely upon the uncertain help of strangers in case of trouble. To all travelers, the glow of the Travelers Aid lamp in bus, rail, and air terminals throughout the Nation is a welcome one.

Unfortunately, there are few such "kindly lights" for the 500,000 American migratory farmworkers to steer by.

Anyone familiar with American agriculture is aware of the extraordinry changes that have taken place in recent decades, and that are continuing. We can produce immense crops from fewer acres, far beyond our limit to consume them or profitably dispose of them. Modern processing, packaging and marketing techniques have brought to agriculture the stylization and management methods of industrial production—a system in which the migrant appears as an economic element, as one of the phases in the process.

President Eisenhower has warned that failure to confront the complex problems of the new mass agriculture "can cause serious strains on the firm freedom supports of our society." Of particular interest to us is the fact that the "scientific revolution" that causes headaches to agricultural producers also brings grief to agricultural labor—helps, in fact, to perpetuate the migratory labor system itself.

This much seems certain to me: We may have learned to use the tools of technology to dramatically increase agricultural production but we have failed to use those tools of progress to benefit many of the men, women, and children who labor for hire on American farms.

The migrants will be coming north now. As I speak to you, migrant families in our Southern States are gathering their few belongings boarding the old trucks and buses to begin their long trek. They will work long days, travel great distances before autumn brings them home again. And they can expect certain things:

The migrant can expect to receive the lowest wages in the entire American economy, less than $900 a year.

He can expect to be unemployed, numbering the jobs he is able to pick up away from the farm as well as those on the farm, about half of the days of the year.

He is expressly left out from the protection of most of our social and labor legislation.

He can expect to be ineligible, in all but a very few cases, for health and welfare services because of residency requirements fashioned, in some places, with him in mind.

He can expect that his children will be forced by economic necessity to work beside him in the fields, and that those same children, because they move with their parents from place to place, will often be deprived of the opportunity for an education.

Our 500,000 domestic American migrants can expect, also, to be in competition with 500,000 foreign workers, brought into this country every year.

And the migrant can expect to be considered, by many who employ him, and in the literal sense of the word, a "commodity" to be bought and used at the lowest possible price.

Those are his expectations, right now, as he starts north to harvest our crops and fill our supermarkets.

I have never been able to understand the apathy of most farm employer organizations

over the years when it comes to finding solutions to this vast and compelling human problem.

Even more distressing is the traditional and historical opposition of those farm employer organizations to any and all suggestions that are put forward for the relief of the substandard conditions of farmworkers.

Now I do not doubt that American growers and their organizations are not devoid of humanitarian instinct, nor that they have contributed their just share to the Albert Schweitzers and the Dr. Dooleys who dedicate their lives to the underprivileged of foreign countries. I have no doubt that many of these organizations support our foreign aid programs to assist those nations that are underprivileged.

Yet, when suggestions are made that would raise the status of our own migratory workers, who live in the poverty of a $900-a-year average income, these same individuals and organizations are seized with a pious horror at this assault upon free enterprise.

During the past 2 years I have made several speeches on the problems of the migrant farmworker. I have attempted to show that it is a problem that cannot be rationalized out of existence, that our posture as a nation founded on human dignity is seriously impaired by a farm labor system based upon the availability of a large supply of poverty-stricken workers.

In response to this position, recommendations have been made by farm employer organizations that would have the effect of making it the policy of the U.S. Government to help maintain that supply of underemployed and underpaid workers for the benefit of agricultural employers.

I do not believe that American agriculture does, can or should depend upon such a labor system.

In accordance with that conviction, I have made proposals and advanced programs that, in my opinion, would improve agricultural labor conditions and, in the long run, the health of agriculture itself.

Today I would like to summarize briefly what progress we have been able to make in the past 4 years. I would also like to summarize briefly some of the more important proposals, and advise you on their status.

I have the honor to serve as chairman of the President's Committee on Migratory Labor, established by President Eisenhower in August 1954.

One of the most important projects of the committee is the promotion of joint Federal-State action through the establishment of State migratory labor committees. Much of the responsibility for the well-being of migrants and their families rests with the States. Workmen's compensation, unemployment insurance, residency laws, and regulations for housing and transportation are, for example, primarily State responsibilities.

At the time the committee was established, only seven States had migratory labor committees. Today, the total has reached 28. Of the 31 States which employ 4,000 or more domestic migrants per year, 24 have organized migratory labor committees.

It seems to me that during the next general State legislative year, 1961, we should see a good deal of action by the States in the field of migratory labor. My optimism is based on a new source of support for migratory labor legislation. In the past what has been lacking in attempts to extend protective legislation to farmworkers has been support from most farm employer organizations.

At a speech in Chicago last year, I suggested that such organizations might contribute constructive suggestions in this area. I am delighted by the news that the American Farm Bureau Federation has recommended that its affiliated State farm bureaus consider State legislation to (1) improve housing standards for migratory workers; (2) extend occupational insurance to farm workers; (3) license farm labor contractors; (4) enact safety standards for truck transportation of farmworkers; (5) insure availability of school facilities to children of migratory workers; and (6) establish minimum age restrictions for the employment of minors in agriculture.

I welcome this somewhat belated action on the part of the Farm Bureau, and I would like to suggest that they join with those groups and individuals which have traditionally fought for such legislation through the years to put their recommendations across.

In addition to the growth of State interest stimulated by the President's Committee, the Department of Labor has been moving ahead in those areas within its competence and interest. Among those programs are:

Development and expansion of the annual worker plan through which an estimated 200,000 workers will move this year.

Development and issuance of amendments to the regulations governing the interstate recruitment of migratory farmworkers.

Development and introduction of a bill for national registration of crew leaders operating across State lines.

Development under PCML auspices of proposed legislation for the establishment of overnight rest facilities for migrant workers.

Initiation of studies now underway in several States to determine the advisability and feasibility of extending unemployment compensation to farmworkers.

Development of much stronger foreign worker standards—protecting our own workers from substandard competition.

These are concrete accomplishments by the Department of Labor in the field of farm labor. Taken together, they represent more significant progress than was made in any comparable period of time in history. I think that in the years to come the record will show that the programs undertaken by the Department of Labor over the past 4 years on behalf of farmworkers will have laid the groundwork for the accomplishments of the future.

In regard to that future, I believe there are a number of items of the first priority.

There is, first, the question of a minimum wage in agriculture.

In February of last year I first announced my conviction that a minimum wage for farmworkers was an essential first step in providing our migrants with the necessary economic improvement from which other improvements would follow, and without which no lasting improvement is possible.

At that time, I directed a special study to determine both the desirability and the feasibility of extending the minimum wage to agricultural workers.

A report will be released at the end of this month, and it will show that minimum wage for hired farmworkers is both feasible and desirable.

It will also show that such a minimum would apply to a relatively small percentage of farm employers, all of them large, who hire a substantial portion of the hired farm help in the United States, and would not apply to the small family farmer.

To assume, of course, that such legislation would receive the appropriate attention of Congress in a political year is to avoid the realities of our society. I am releasing this report however, so that ample discussion and thought can be given to it, in sufficient time and detail, to insure a meaningful consideration in the next Congress.

A second broad question relating to the future of the American migrant is the status of our foreign labor programs.

A little over a year ago, I appointed four distinguished consultants to advise me on the operation of Public Law 78, the act which enables the Secretary of Labor to recruit supplemental farm labor from Mexico.

The consultants reported that the mass importation of Mexican farmworkers, occurring at the rate of 450,000 last year, is having a definite adverse effect on the wages and working conditions of American farmworkers. To cure this, the consultants made recommendations.

In recent weeks, the Subcommittee on Equipment, Supplies, and Manpower of the House Committee on Agriculture has held hearings on the extension of Public Law 78.

Several of the bills before that subcommittee would do the opposite of what the consultants recommended. They would not only dilute the Secretary of Labor's authority to administer this very difficult program; three of the bills would also revoke the Secretary of Labor's authority to issue regulations governing the use of the U.S. Employment Service—a service through which many farm employers recruit domestic farm help.

I think that those bills are hostile to progress. I consider them dangerous to the progress that has been made so far, and I urged strongly that the administration declare itself against them by opposing them without dissent—and this was done.

It is the Department of Labor's position that Public Law 78 should not be extended unless and until adequate remedial measures are adopted and substantial improvements are made in the program.

The Department of Labor, in accordance with that position, will make recommendations for improving the operation of the Mexican farm labor program before the present law runs out.

To the individuals and organizations that have supported the Department of Labor's farm labor programs, I would like to say that even though the attention of Congress is distracted in a political year, that is not an indication that the momentum toward reform is slackening. Rather the opposite is true. Indifference is giving way to concern; ignorance is declining before knowledge.

This problem is going to be solved. Despite the long history of frustration that has been the lot of those who have worked to find just solutions to this great human need, the tide is beginning to run with them. I believe that the day will come when the migratory American farm worker will be able to hold up his head as a self-sufficient and self-sustaining member of our society, like every other American worker.

When that days comes—and it will come—then we will have held out a genuine hand of help to the families that wander on the face of our land, and know so little of its true richness.

Thank you.

Congressman Edward J. Derwinski's Remarks at Pulaski Foundation Banquet, Honoring Congressman Clement J. Zablocki and Architect Biernacki-Poray, March 28, 1960

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. SCHWENGEL. Mr. Speaker, it was my privilege to be present at the General Pulaski birthday dinner sponsored by the Pulaski Foundation, Inc., March 28.

Our colleague, Congressman CLEMENT J. ZABLOCKI, of Wisconsin, was honored on that occasion along with the famous architect Biernacki-Poray.

During the course of the festivities, Congressman E. J. DERWINSKI, of Illinois, paid tribute to these gentlemen for their roles in the building of a children's hospital in Krakow, Poland.

Under leave to extend my remarks, I would ask that Congressman DERWINSKI's remarks appear in the RECORD so that all Members who did not attend the banquet can have the opportunity of knowing about the significance of this occasion.

The remarks follow:

Before I deliver my statements on the importance of this occasion, I have a personal message to deliver to Majority Leader JOHN MCCORMACK. As you know JOHN, I am speaking on behalf of the Republican Members of the House honoring our good friend and colleague, CLEMENT ZABLOCKI. CHARLIE HALLECK, our gentle, quiet, soft-spoken minority floor leader, has a great admiration for you, JOHN, and he asked that I deliver this reminder to you. CHARLIE is aware that your preoccupation with helping us balance the budget has made you a bit absent minded and wants to remind you that you are speaking to the Pulaski Foundation, a Polish-American organization, rather than to one of your fine Irish groups in Boston where you would be more apt to be singing "Mother Machree."

Seriously, it is a pleasure for me to represent the Republican Members of Congress in honoring our colleague CLEM ZABLOCKI. Actually, I wish to speak to you this evening not in my position as a Member of the House, but as an American of Polish extraction who appreciates the bipartisan nature of this evening. We are gathered here to join the Pulaski Foundation as they honor CLEM and Wladek Poray.

When I attended the Interparliamentary Union in Warsaw last fall I had occasion to consult with Mr. Poray and to examine with him the proposed site of this wonderful hospital that will soon be a reality. It was obvious to me that this action represented a concrete example of the effectiveness of a true "People to People Program." This project is a wonderful example of what we, as ordinary citizens with humanitarian hearts, can do to help people in a nation less fortunate. By a program such as this we effectively display personal interest and spirit that a cold precise government cannot convey. We further prove that our Nation above all else can be proud of the great hearts that our citizens possess and our truly national desire to, whenever possible, be of help to afflicted peoples.

Poland is one of the unfortunate countries entrapped behind the Iron Curtain as a result of the unfortunate Yalta Agreement, but her proud people maintain a hope that the future will alleviate their present distress. The development of this hospital plan, first sparked by the vision of Wladek Poray, spearheaded by CLEM ZABLOCKI and all our colleagues on the Foreign Affairs Committee, approved by both Houses of Congress in a great display of bipartisanship, approved by our State Department and signed by President Eisenhower, proves to witnesses throughout the world that the heart of our Nation remains as great and as vigorous as it has always been. When we give public recognition to these gentlemen and all who cooperated with them, we canont help but have tremendous hope and staunch confidence that acts like these will help create in the future a much better, healthier, happier, and freer world.

Seventh District Voters Speak

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. LEVERING. Mr. Speaker, I have never had any doubts but what our democratic system of government will continue to function successfully providing the people are given the facts upon which to render sound judgments.

This fact was demonstrated last week when I announced the results of a poll I conducted in the district which I am privileged to represent in Congress. Some commentators made quite a story out of the poll which showed my constituents favoring continued defense efforts but opposed to increased taxes for the same. This proves to me that the people from the "Heart of Ohio" district believe that if the waste and extravagance is cut out of the Defense Establishment, new taxes at this time will not be necessary to do all the things required for our protection and survival.

Under leave to extend my remarks in the RECORD I include an editorial from the Mount Vernon News for April 8, 1960, which further discusses my questionnaire:

SEVENTEENTH DISTRICT VOTERS SPEAK

What do the people of America want in the way of government?

That question has been answered, at least for those of the 17th Ohio Congressional District, in a questionnaire completed by Representative ROBERT W. LEVERING.

Compilation of returns from the questionnaire, as LEVERING says, "shows the subject uppermost in the minds of the people is spending, waste, and extravagance in all departments of Government, and particularly in the foreign aid program. The items most frequently mentioned were the interservice rivalry in the Defense Department, the high cost of storing surplus farm commodities, and the losses involved in the procurement and disposal of defense equipment."

For instance, one of the questions submitted was: "The President, in his budget message, indicated a surplus of about $4 billion for fiscal year 1961. This comes about chiefly through an increase in revenue rather than from reduction in services. In which way would you favor arriving at a surplus?"

The answer was decisive. Only 9 percent advocated maintaining present taxes with some increase, 86 percent were for reduction in spending, and the remainder, 5 percent, had no opinion.

Other items in the questionnaire which deal with controversial issues, most of them currently in the limelight are:

Do you favor an acceleration of our defense effort in such fields as long-range ballistic missiles, nuclear weapons, and the satellite program? The answers: Yes, 55 percent; no, 35 percent; no opinion, 10 percent.

Do you favor Federal assistance to elementary and secondary schools? Yes, 34 percent; no, 57 percent; no opinion, 9 percent.

Are you in favor of amending the Social Security Act to include medical expenses? Yes, 39 percent; no, 54 percent; no opinion, 3 percent.

On the farm program, 58 percent favored self-help plan and 10 percent were opposed; enlarging the soil bank program to pay farmers for taking 60 million acres out of production drew weak support, 15 percent, while 52 percent were against; abolishing controls and farm supports and subsidies was favored by 53 percent, with 20 percent opposed.

A stronger civil rights bill was approved by 45 percent "yes," to a 20 percent "no" vote.

This is only one congressional district of the many in the country, but it shows some significance. If every Congressman in the country would submit similar tests of public opinion, Congress could hardly ignore the majority vote in any category.

"Equal Opportunity in Housing"—An Address by Harris Wofford, Jr., Associate Professor, Notre Dame Law School—Part 2

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. BRADEMAS. Mr. Speaker, under unanimous consent I am pleased to include in the RECORD the second half of an address on "Equal Opportunity in Housing" delivered by Harris Wofford, Jr., associate professor at the Law School of the University of Notre Dame, in South Bend., Ind.

This address was given on Equal Opportunity Day in South Bend on November 19, 1959, at an observance sponsored by the South Bend Urban League and Hering House Community Center, Inc. I was pleased to include the first half of this address in the RECORD of Friday, April 8, 1960, on page A3131.

Part 2 of the address follows:

TWOFOLD ACTION NEEDED

From all this the Commission found that two simultaneous things must be done in this field: (1) opportunity for good and for new housing must be opened for Negroes throughout the whole community, including the outlying areas of the city and the suburbs; and (2) the shortage of decent low-cost housing must be relieved and the present slums cleared or rehabilitated.

The alternative to such a dual program is not the status quo. For Negro housing needs are growing and Negro income are increasing, and if these are pent up within confined areas the result will be blockbusting. That is, present areas of Negro concentration will necessarily expand, block by block, with tension and violence in the wake. The centers of our cities will then increasingly become all-Negro, surrounded by what Mayor Dilworth of Philadelphia calls a "white noose," the all-white suburbs. I do not need to spell out the further results in terms of the city's tax base, the cost of social services, the spread of juvenile delinquency, the inevitability of de facto school segregation. This is the old story of two cities—of a house divided that cannot stand.

Yet there is no excuse for continuing this vicious circle. Take South Bend. I would not pretend to know the full dimensions of the problem here. But Negroes comprise less than 10 percent of the total population, about the proportion in the Nation as a whole. Even if all of this 10 percent wanted to live in the now white neighborhoods and

were able to afford new homes, their dispersal could cause no so-called "inundation." Actually, only a very small portion could afford homes in the better areas or would want to live in the midst of a preponderantly white neighborhood. And here is the final irony: The affront to human dignity that results when such white neighborhoods refuse the traditional American hospitality, the corruption in the souls of Americans who thus violate the great commandment to love their neighbors and be their brother's keeper—all this is done to keep out a relative handful of fellow citizens, a few Negro doctors or lawyers or businessmen who have come up the hard way and earned their right to be respected in any society.

Perhaps in the end we will regain our sense of humor about all this and see the absurdity of it, particularly when the public comes to understand what the Commission learned, that the residence of such Negroes in better neighborhoods does not mean a lowering of property values. The white neighborhood that panics at the coming of a Negro neighbor, the whites who rush to sell out, these sometimes take a loss as the price of their prejudice. But, as the Commission stated, "The only thing people in this situation have to fear is fear itself," stubborn, unreasoning fear, as President Roosevelt put it.

AN EXAMPLE OF PANIC

Let me tell an incident I do know about here in South Bend. A distinguished Negro legal scholar connected with the Commission on Civil Rights was invited to join the faculty at Notre Dame. Some residents in the area where I am presently renting a home, good people whom we have come to know and like, learned that our landlords were about to rent their house to a lawyer on the Commission's staff who was joining the law faculty here. Assuming that I was the Negro in question, some of them sounded the alarm, protesting that the value of their property was endangered. Even after my wife and I arrived as the new tenants we were rather breathlessly informed by one of our neighbors that the house had almost been rented to a Negro. When pressed a little for facts, this neighbor told us that with her own eyes she had seen the Negro drive up to the house in a university car. It happens that the Negro they feared had never looked at, driven up to, or considered this particular house. My wife had gone there once in a university car. What makes this miserable story so comic is that that very week we had read in the newspapers that this Negro and his wife were being entertained as guests of President Eisenhower at a state dinner in the White House. This man, a great lawyer, a form dean of Howard University Law School, a member of the Commission on Civil Rights, and his wife, a charming woman and an outstanding homekeeper and gardener, would have added many riches and much value to any block they lived on, in South Bend, Ind., or Washington, D.C. I think I can say that one of the factors that contributed to their decision not to come here was the housing situation they found facing them in South Bend.

Well, what is to be done about this? Disraeli is said to have remarked that there was hardly a woman in England who would not be more disturbed by the smashing of the joint of her small finger in a carriage door than by hearing that a million children had died of famine the preceding week in China. What I have talked about is not so far removed as a famine in China, or even as the denial of the right to vote in Mississippi. I have just reported a loss to South Bend caused in part by an affront to human dignity.

RECOMMENDATIONS OF THE COMMISSION

For what they are worth, here are the main recommendations of the Commission. First, according to the unanimous finding of the Commission, "some official city and State program and agency concerned with promoting equal opportunity to decent housing is needed." The Commission recommended that "an appropriate biracial committee or commission on housing be established in every city and State with a substantial nonwhite population. Such agencies should be empowered to study racial problems in housing, receive, and investigate complaints alleging discrimination, attempt to solve problems through mediation and conciliation * * *" The Commission added that, "Where public opinion makes possible the adoption of laws against discrimination in housing, this might contribute significantly to the work of the agency promoting equal opportunity in housing. Then the agency would have legal support in its efforts at mediation and conciliation." It found that in New York where such city and State laws exist, significant progress was being made. I leave it to you and to the city fathers to say whether South Bend should accept this recommendation and appoint a commission to promote equal opportunity in housing as well as in employment. That would certainly be one constructive way to transform the promise in Mayor Voorde's proclamation of Equal Opportunity Day into more of a year-round reality.

In any event, whether or not South Bend soon joins their ranks, there are now 30 cities and 13 States where discrimination in housing in one form or another, is prohibited by law and where official agencies, through education, and mediation, are seeking enforcement. One great result of such laws is that the burden of upholding the Constitution is spread to the whole community. Resistance to the coming of a Negro family in a particular neighborhood becomes increasingly pointless when the law establishes freedom of choice in the whole area. The prospect of Negro concentration at one point of breakthrough and consequent inundation of the adjacent white area is also reduced. As one housewife in the Springfield Gardens section in the Queens testified in our New York hearing, she and her friends had refused to flee in panic when some Negroes moved in on the ground that, "we may as well stay here and learn to live with our neighbors on a block because this is something we're going to have to learn, no matter where we go." Instead they welcomed the newcomers and stabilized their community on a new democratic basis. "It's either this," this white housewife and PTA leader testified, "or taking a rowboat and rowing off Montauk Point, and then who knows * * * you might meet a fish you don't like."

While it seems to me important for northern cities and States to practice on the local level what their spokesmen preach on a national level, the necessity for nationwide action by the Federal Government will remain. Whether you approve of the present Federal housing programs or not, they exist on a vast scale—perhaps not vast enough to cope with the problem, but vast enough to be a major factor in the whole housing market. I mean FHA and VA home mortgage insurance as well as urban renewal and public housing. The question is whether the Government has any responsibility to see that these programs are used to promote equality of opportunity. The Commission accepted the argument of a California court that "when one dips one's hand into the Federal Treasury, a little democracy necessarily clings to whatever is withdrawn." The Commission found that all Federal housing assistance was subject to the constitutional rule against racial discrimination. Therefore, it recommended, again unanimously, "that the President issue an Executive order stating the constitutional objective of equal opportunity in housing, directing all Federal agencies to shape their policies and practices to make the maximum contribution to the achievement of this goal."

There is no time to report the other more detailed findings and recommendations made by the Commission. Some of them concern South Bend, such as the need for better site location and design in public housing projects in order to avoid the type of high-rise large public housing apartment located in the midst of an all-Negro area which spells de facto segregation along with other troubles. Similarly the Commission stressed the need for full citizens' participation in all stages of the planning of urban renewal, and particularly the participation of Negro representatives. Father Hesburgh and Dean Johnson strongly urged all real estate boards to admit to membership qualified Negro real estate men. For further details I refer you to the Government Printing Office for a copy of the Commission's Report, or to the question period. I have barely scratched the surface of but one of the subjects in the Commission's 600-page report. (There is a 200-page abridgment you can get.)

THE NORTH'S RESPONSIBILITIES

I said I was reporting these recommendations "for what they are worth" because so far little attention has been given to the Commission's housing findings. The press has concentrated on the findings of denials of the right to vote in the South. While I think stronger legislation to protect the right to vote is, and should be, the No. 1 item on the agenda of the next session of Congress, I would like to see the North face up to its own responsibilities in civil rights—particularly in the field of housing and employment.

When the Commission selected housing as one of its three subjects some northern champions of civil rights saw in this a plot by the three southern members of the Commission to take the focus off the South and to fuzz the moral issue by showing that discrimination existed everywhere. While I do not deny that the southern members went along with our housing study partly because they thought it was good to throw some light into the dark corners outside the South, I would say that on this point I think they were right. The fact is that with nearly half of the Negro population residing outside the South the problem is now a national one. Discrimination does exist everywhere. If this is the truth, then only by facing it and acting upon it can we be free. I argued with some of my northern friends that the result of our housing study and our hearings in northern cities, of our building some moral heat on this issue outside the South, would be to increase the moral heat everywhere. But both these northern critics and I so far appear to be wrong. The focus has not been taken off the South and the moral heat in the North about its own shortcomings has not been generated because the Commission's housing study has been largely lost in the shuffle.

Speaking of moral heat closer home than Mississippi, let me mention one item in the report of the Indiana State Advisory Committee to the Commission, headed by Jack Scott, your former mayor. This Indiana committee reported that there are no Negro residents in 30 of the State's 92 counties, and that in some Indiana communities there have been signs advising "Niggers don't let the sun go down on you here." I don't know whether such signs are now in existence, but our Indiana advisory committee aptly noted that "if one cannot establish residence in one-third of the State, he cannot meet the qualifications for voting," and concluded that "in this way in parts of Indiana the Negro is being deprived of his right to vote by indirection."

But I don't want to stop with such a sour note about this State. I am well aware of

the continuing migration of Negroes to Indiana and to South Bend, and I recall the story of the Negro witness who was testifying before a congressional committee and was solemnly asked by a southern Senator: "Would you rather live in the sovereign State of Mississippi or in the Union of Soviet Socialist Republics?" The Negro is supposed to have answered, "I'll take Indiana."

And I might add that Indiana is now making up for the fact that its original State constitution of 1816 denied Negroes the right to vote and that its constitution of 1851 not only continued the denial, but even prohibited their migration to the State by the present more important fact that Congressman JOHN BRADEMAS is taking the leadership in the House of Representatives in the effort to enact new legislation establishipg the right to vote everywhere. Immediately after Father Hesburgh, Chairman Hannah, and Dean Johnson, the three northern members of the Commission, proposed a constitutional amendment establishing universal suffrage and prohibiting State literacy and interpretation tests through which most of the discrimination in the South takes place, Congressman BRADEMAS introduced a bill to submit this proposed constitutional amendment to the States for ratification.

So I am full of hope about the role Indiana can now play in fulfilling the American dream. Pericles told ancient Athens that it was the school of Greece. I don't want to push the comparison too far, but South Bend, like any American city that truly wishes to turn the American dream into a reality, can be a school of America. For two-thirds of the American people are now living in urban areas, and the equality of opportunity promised by the Constitution must, like charity, begin at home and in the homes of Americans. When we speak of housing we are talking about the face of America now and in the future. As Father Hesburgh said in opening our New York hearing, "That face must have the beauty and dignity and harmony of the Constitution, not the face of slums and discrimination and chaos." If this city in the crossroads of America, or any city dedicated to the unfinished work left by Lincoln, can succeed in this, then the promise of America will be nearer fulfillment; the promise that Thomas Wolfe put in these words: "to every man, regardless of his birth, his shining, golden opportunity, to every man the right to live, to work, to be himself and to become whatever thing his manhood and his vision can combine to make—this, seeker, is the promise of America."

Remarks of Congressman Robert W. Levering on the Occasion of the Presentation of the Plaque Commemorating the Anniversary of the Fall of Bataan at the Tomb of the Unknown Soldier, Arlington, Va., April 9, 1960

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. LEVERING. Mr. Speaker, on Saturday last, April 9, the 18th anniversary of the fall of Bataan, the American Defenders of Bataan and Corregidor, an organization unique in this country, presented a beautiful plaque to the trophy room at the Tomb of the Unknown Soldier in Arlington, Va., in the name of the unknown among those who died in defense of freedom in the early months of World War II in the Philippines.

Present for the ceremony on behalf of the American Defenders of Bataan and Corregidor were Kenneth Stull, national commander, John S. Koot and Joseph Vater, of the tribute committee, as well as Albert Senna, former national commander, and several other members of the organization. Col. Ismael Lapus and Lt. Alejandro Melchoir from the Philippine Embassy appeared on behalf of the Independent Republic of the Philippines.

Mr. Speaker, I can attest personally to the fact that many of the defenders of Bataan and Corregidor were buried in unmarked graves during the 3½-year period our troops were confined in prisoner-of-war camps. By unanimous consent heretofore granted, I include, for the RECORD, the remarks it was my privilege to make on the occasion of the trophy presentation:

Today as we observe the 18th anniversary of the fall of Bataan, we perform a conscious act of recalling those far-off days of suffering and sacrifice. As we dedicate this plaque we pay tribute to those who did not return.

In December 1941 the ground forces available to meet the Japanese invasion of the Philippines comprised the Philippine Army, with a total strength of less than 100,000, and a U.S. Regular Army contingent of some 25,000. The Philippine Army was ill-equipped and its training was incomplete. These forces, we quickly learned, were inadequate to stop the enemy at the shoreline, and General MacArthur withdrew them into the mountainous peninsula of Bataan and to the island of Corregidor. This withdrawal was conducted with consummate skill under constant enemy attack.

The epic struggle against overwhelming odds began on December 10, 1941, when the initial Japanese amphibious landings were made on the island of Luzon. The Japanese timetable of conquest called for the overwhelming of the Philippines in 10 days. But the enemy had not anticipated the heroic resistance of the American soldiers and their Filipino comrades in arms. Actually, it was almost 120 days before the Americans and the Filipinos, too weakened to resist any longer, were forced to surrender.

Shortage of food had reduced the defenders of Bataan to less than one-fourth rations. The supply of needed clothing had long been exhausted and a large part of the troops were barefooted and clad in rags. Wounds and disease had taken their toll; less than half the men were capable of walking any distance. Those indescribably weary men still capable of action in the twilight hours of Bataan had little left with which to continue the fight other than their will and their pride. They had no antitank weapons and little or no artillery. They had only rifles and small amounts of ammunition. Four long months of bitter fighting against a well-trained and well-equipped foe, without replacements in men, equipment, or supplies, had brought them to the brink of annihilation.

April 9, 1942, when Bataan fell, was a dark day in the course of our struggle in the Pacific. But Bataan has become a word of honor and courage in the language of freedom the world over. Bataan was a valuable lesson in the relationship of free peoples. Even as this gallant band of Filipinos and Americans laid down its arms, the loyalty of the Filipinos, soldiers and civilians alike, to the cause of freedom remained steadfast.

Bataan was a military defeat, but it was a victory of the spirit—the spirit which moves men of different nationalities to fight shoulder to shoulder for their common freedom.

This plaque commemorates those men who fought as heroically and tenaciously as any military force has ever done. It commemorates especially those who did not return. Their desperate resistance, holding as they did a sizable portion of the Japanese strength at bay for so long, allowed American forces to be dispatched to Australia, New Caledonia, and other islands for the counter-offensive which began 4 months later at Guadalcanal. Nobody could have done more.

It seem to me the words of Jose Rizal, the Philippines' greatest hero, spoken on the night before his execution, are appropriate at this time. "The place matters not, cypress or laurel or lilly white, scafford or open plain, combat or martyrdom's plight."

The Milan Trade Fair—A Showcase for Free Enterprise

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. ANFUSO. Mr. Speaker, with the growing recognition in the United States of international trade fairs abroad as one of the most important showcases in which to present the story and the products of our system of free enterprise, I should like to call to the attention of my colleagues the opening in Italy on April 12 of the largest international agricultural, industrial and commercial fair in the world—the 38th International Milan Trade Fair.

The fairgrounds, utilizing nearly 4½ million square feet and containing 47 miles of display frontage, is situated in the center of the city of Milan, the geographical center of the European common market. From April 12 until the 27th, 13,500 exhibitors will show more than 1 million products made in 120 countries and territories in North and South America, Asia, Africa, the Middle East, and Europe to the expected record attendance of 4,350,000 persons.

Among the 33 national pavilions at the fair will be those of the Soviet Union and the U.S. Government. In addition to our official exhibit, there will be exhibited independently the products of 550 large and small U.S. companies. I am informed that advance registration at the fair indicates a greater U.S. attendance than ever before because of the growing interest in our country of the needs for the enhancement of economic well-being, both here and abroad, through foreign trade and investment in all the areas of the world which are represented at the fair.

This year the permanent fairgrounds have been enlarged and five complete new international expositions have been added. A vast new agricultural pavilion, covering a total area of nearly 200,000 square feet, is bringing into one integrated exposition all exhibits related

to farm machinery and farm products of all types. In addition, the hall devoted to nuclear power applications in industry, opened last year, has been enlarged.

Exhibits at the 1960 fair will cover 120 product classifications. They will be arranged in eight main groups of displays, each one almost a complete international exposition in itself. These main sections of the fair include:

Agricultural produce and equipment; industrial and agricultural chemicals and related equipment; construction materials and machinery; manufacturing machinery, equipment and materials, and office equipment; electrical, electronic, and optical products; aircraft, marine, and automotive products, equipment, and supplies; consumer goods, including household appliances and furnishings, textiles and apparel, and sporting goods; national pavilions of the many governments officially participating, including the United States and the U.S.S.R.

Products on exhibit will range in size from housewives' needles to the largest construction and manufacturing machinery and will include light and heavy industrial and agricultural equipment and products, photographic equipment and supplies, automobiles, aircraft, boats, furniture, printing machinery, hotel supplies, oil country goods, raw materials, office supplies, nuclear power equipment, paints, toys, highway, and homebuilding machinery and materials, engineering goods, machine tools, textile machinery, foods and beverages, glassware and ceramics, plastics, refrigerating equipment, radio and television equipment, lumber products, farm machinery, motion picture equipment, livestock, pharmaceuticals and veterinary supplies, and virtually all other types of products from all parts of the world.

One of the unusual aspects of the Milan Fair is that throughout the 2 weeks' exposition, economic, technical, and trade discussions and conferences are held to enable both government officials and business executives from all over the world to meet and discuss their problems and to explore ways by which they might increase trade, commerce and investment between their countries. I commend the American businessmen who will take part in this truly fine vehicle for international collaboration and hope that their number will continue to grow.

God and Politics

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 11, 1960

Mr. GEORGE. Mr. Speaker, occasionally we hear that no member of certain religious faiths should become President of the United States. As you know, under the Constitution, there is no religious test for this or any other public office, and this is as it should be.

I am proud to say, Mr. Speaker, that my minister, the Reverend Kenneth R. Locke, pastor of the Western Highlands Presbyterian Church, of Kansas City, Kans., and my friend the Reverend Rice Lardner, Presbyterian minister of Olathe, Kans., are good friends of the Honorable JOHN F. KENNEDY, Senator from Massachusetts. Both of these able men rebel at the thought that religion should be raised as an issue in the presidential campaign.

In the March 7 issue of Monday Morning, a magazine for Presbyterian ministers, an article appeared by the Reverend Ernest Ackerman, pastor of the First Church, Perry, Okla., entitled "Election Year Bigotry," which I believe other Members would enjoy reading and which I include in the extension of my remarks:

ELECTION YEAR BIGOTRY

I am both hurt and angry. I am simply appalled by the devious and insistent tinge of bigotry and, even worse, downright fear being evidenced by many of the brethren in this election year. Out here in the "hardshell" belt one expects to be bombarded by the prejudice and fear inherent in poorly educated groups used to clannish decisions, but to find it in our own ministry, flashing out like a licking tongue of flame intended to reduce all to the ashes of conformity, speaks ill of the guidance some of our people must be receiving. I for one raise an agonized voice in protest.

Could it be that we have forgotten the very foundations of the Presbyterianism we so vociferously proclaim? I don't need to review it. It has been reviewed many times, and we have all applauded it in principle and glowed in the power of God working through His people. "Thy will be done." Amen. "In our weakness is our strength." Amen. And as long as we had no specific fear to test it, it remained great. Apparently now that we have a fear confronting us which we may not be able to control, we repudiate it. I sorely suspect that, in many of our United Presbyterian churches, if the minister doesn't control the election of elders, the selection of teachers, the vote to build, or whether young people may dance at fellowships, the right of conscientious voice should properly be shelved temporarily, at least until we may smugly applaud it again in principle in some denominational publication.

I read recently of a translator of Scripture in Africa who could find no adequate word for "trust" in a certain dialect. A colporteur happened in and set two chairs together and proceeded to stretch out on them, saying how good it felt to "lean my whole weight on" the chairs. The translator had his word for trust. How much do we trust God, for one, and our people, in this profound sense? How far will ministers go in demonstrating by example to their flocks their trust in something we disagree with, perhaps even secretly fear?

Where is the enlightened "love God and love thy neighbor" of last year? Shall we grudgingly lift ourselves to call the Negro our brother in 1 year, but not the Roman Catholic in the next? Is it snidely righteous for one President to be photographed often with Dr. Elson and wrong for another perhaps to be photographed with Cardinal Cushing? Are not the safeguards in our American Government, in the first amendment to the Constitution and, in the extreme, of impeachment for malfeasance, as safe in the one as in the other?

In the final analysis, if our way of life is the Christ-intended way, by the living God we had better confront the test and turn to a better way. How many times have we preached on the frequency of Jesus' words, "Fear not," and their synonyms? Or on the greatest commandment? Or on the Lenten meaning of the cross? Et cetera ad infinitum? Or do our themes really conceal something like this: "Because you have neither the time nor inclination to be as intellectual as I, just believe what I tell you to believe, and fear those things I tell you to fear; love whom I say to love, and hate whom I tell you to hate." I pray that this is the absurdity that it implies.

I would like to be reassured that our Presbyterian system of today is the leader in Christian thinking in this and all other matters. My own hurts, from what I have read and heard since Senator KENNEDY announced his candidacy, will be soothed and healed by a great and ringing, far-reaching, Christian pronouncement of principle by the next general assembly.

In the meantime, my whole weight is leaning on God my Saviour. He will lead the people who are entrusted to my care into righteousness providing I guide them into leaning their whole weight on Him too.

Resolution To Abolish the Distribution Guides System in the Canton Post Office

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. BOW. Mr. Speaker, I offer and insert, together with my remarks, a resolution which was adopted unanimously by the members of Local No. 524 of Canton, Ohio, National Federation of Post Office Clerks—AFL–CIO—at their meeting of March 17, 1960.

I sincerely hope that their resolution shall have the careful study and consideration of the proper committees of Congress and of the Post Office Department.

The resolution follows:

RESOLUTION REQUESTING THE POST OFFICE DEPARTMENT TO ABOLISH THE DISTRIBUTION GUIDES SYSTEM IN THE CANTON POST OFFICE

Whereas the Post Office Department went on record several years ago when it put into operation the work performance standards system, that they had no intention of ever measuring individual production; and

Whereas the clerks in the Canton Post Office are already overburdened with very difficult schemes which they must learn and master on their own time; and

Whereas the Canton Post Office is one of the very few post offices having the cumbersom, costly, and tedious 77-hole, wing-type combined distribution case; and

Whereas in the creatio nof this guides system, the physical condition and age of the individual clerk was not considered, thus bringing about the condition that if he could not maintain a far rate of efficiency he could be removed to a position more adaptable to his capabilities which could lead to some serious personal problems, infringing on seniority rights, preferred assignments, or possibly removal from the service; and

Whereas the distribution guides system has added to the clerk's burden with unrealistic standards set so high as to make them imposible to attain as our clerks have have already proven; and

Whereas this burden will place undue and unfair mental and physical strain on the

clerks thus creating a condition that will eventually lead to the impairment of the physical, mental health, and the well-being of the clerks; and

Whereas such a speedup system is a personal affront to the postal clerk who historically has been recognized as a most sincere and dedicated public servant; and

Whereas such a system is another step toward an unpromising and not too optimistic future for the post office clerk, a future that is completely and ruthlessly mechanized, standardized, and artificial, thus completely ignoring the value of the human factor; and

Whereas employee organizations were neither consulted nor permitted to give their opinions or suggestions, nor were they permitted to help in setting up work standards or time on each operation as is the custom and practice in private industry; and

Whereas the distribution of mail, before this distribution guides system, was handled in a very efficient manner, effecting quick dispatch, and next-day delivery. The clerical force at the Canton, Ohio, Post Office feel that this present system is just another watchdog or check on the career men who are the backbone of the postal service. This system is a throwback to the old piecework program which organize labor threw out years ago: Therefore be is

Resolved, The National Federation of Post Office Clerks (AFL–CIO) Local No. 524, Canton, Ohio, hereby goes on record as being opposed to the distribution guides system or any other system which in effect policies and is used as a psychological whip to speed up the efforts of the individual clerk; and be it further

Resolved, That it is our contention and firm belief that the most economical and successful method of moving mail is through proper supervision; and be it further

Resolved, That we intend to seek all avenues of approach in obtaining assistance to halt this inhuman speedup system which will completely destroy the morale of faithful clerks and reduce the once proud public servants to a mere automation existing in servitude; and be it further

Resolved, That copies of this resolution be sent to W. E. Dornan, Canton postmaster, the Post Office Department, including our regional office at Cincinnati, Ohio, the Senators and Representatives from Ohio, the chairman of the two Post Office Committees in Congress, and to George Meany, president of the AFL–CIO, and all affiliated locals, including the Greater Canton AFL–CIO Council.

The Folly of the Forand Bill

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Binghamton (N.Y.) Press of March 5, 1960:

[From the Binghamton (N.Y.) Press, Mar. 5, 1960]

COMPULSORY MEDICAL INSURANCE FOLLY

The so-called Forand bill, which would impose compulsory medical insurance to take care of the Nation's needy elderly, stands little chance of approval in the current session of Congress.

But the bill has many supporters, particularly among elderly persons who have been deluging Members of Congress with letters and who now and in time to come will constitute a powerful political force.

The Forand bill is not wrong insofar as it epitomizes society's concern about the needy elderly. It is wrong in its arithmetic. What it proposes is to tax all and impose on all health insurance whether they want it or not, or need it or not. And then it goes on and proposes no more than a pittance for those really in need.

Among those receiving social security benefits are many who have health insurance and other ample means of paying for their medical needs. Then there are those who lack means. They constitute the problem.

Why should the Government undertake to finance the cost of medical care for all, the rich and poor? Why should the poor be taxed to pay for the poor? It's too much for too little. It's like swathing a man from head to toe in bandages to treat a puncture in his belly.

The problem of providing medical aid for the elderly is not to be gaged by the number over 65, but by the number actually in need. If all over 65 are to receive free medical care, the cost in taxes will be so high that all taxpayers will in natural course demand Government medical care, and the Nation will be saddled with socialized medicine, which would be as unsatisfactory as it would be costly.

The question of providing medical care for the elderly is a serious social problem, but it can be solved short of suffocating governmental paternalism which deprives individuals of the right to solve their own problems and gives them too little in exchange for forfeiting their economic independence.

The problem of health insurance is being solved to a substantial degree at the private level. Millions of American industrial workers are provided health insurance that will continue in force in retirement. Insurance companies are striving to formulate policies to meet medical care costs in the policyholder's later years. Individuals are seeking their own solutions.

The American people have less need of Government-supplied medical care than they have for financial honesty in Government—policies that protect the future buying power of the dollar. Deficit spending by Government, far beyond that occasioned by war or reasonable need, is to blame for the neediness of many elderly persons today.

What the Forand bill proposes would be to heap great, unnecessary burdens on the people now to relieve them of future burdens. The arithmetic is bad as anyone can well perceive with a bit of calculation. Hardship is not relieved by creating greater hardship, nor by creating excessive costs that would prevent the individual from contributing to the solution of his own problems.

Goldwater Gaining

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. DORN of South Carolina. Mr. Speaker, the Goldwater stampede in South Carolina was given the silent treatment by the great metropolitan areas and national networks, but the truth is seeping through. It is electrifying and is giving the oppressed taxpayers hope for a presidential choice in November. The following editorial appeared in the Greenville News, Greenville, S.C., one of the South's leading newspapers:

[From the Greenville News, Apr. 8, 1960]

STATE GOP ACTION MAY HAVE EFFECT

The backing given Senator BARRY GOLDWATER, of Arizona, by South Carolina Republicans may have more significance than the mere 13 votes the State's delegates will cast for him at the National Republican Convention this summer.

In his speech before the State GOP convention, Senator GOLDWATER made it unmistakably clear that he is a bedrock conservative. His philosophical inclination toward States rights and individual liberty is emphasized in more detail in his new book which was reviewed on this page several days ago by our Columbia correspondent, W. D. Workman, Jr.

It would be unrealistic, of course, to credit Senator GOLDWATER with much of a chance of snatching the Republican presidential nomination from Vice President NIXON. The withdrawal of Gov. Nelson Rockefeller assured the nomination for Mr. NIXON and President Eisenhower's open support of him has now made assurance doubly sure.

But the South Carolina backing may yet create an important reaction. When the Arizona Senator's name is placed in nomination, or even if it is not, things may happen.

It may be assumed that the State convention's action did not go unnoticed by Republicans in other States. Despite the fact that the left-liberal press elsewhere rather self-consciously ignored it or relegated it to some inconspicious spot, the word of this kind of thing gets around.

The only conclusion that GOP leaders can gain from it is that there is still in existence a body of opinion which strongly opposes latter-day liberalism and which sees too many of its symptoms in Mr. NIXON.

There have been several recent reports that leading Republicans, including National Chairman THRUSTON MORTON, have already divided this feeling. They have warned the Vice President and the White House that, despite some early optimism, they face a rugged campaign come next November and "me-tooism" won't win the race. The action taken in Columbia provides solid confirmation of this.

By itself, it probably would not provide enough pressure to divert Mr. NIXON from the leftward trend which he has been accused of adopting lately. But if it should inspire others to follow a similar course, an irresistible force may be set in motion.

Above all, it should be remembered that there is at this moment no leading candidate for the vice-presidential nomination. Several figures, including House Minority Leader HALLECK, of Indiana, have been mentioned, but in reality the nomination is still a wide open race.

Given vigorous backing, Senator GOLDWATER would be an almost irresistible candidate. He would be opposed by the union bosses, to be sure, but few of them attend Republican conventions and there is still no proof that they can persuade their membership to follow their dictates in the general election.

Mr. NIXON has shown signs of making that fatal error of supposing that he can afford to ignore his friends and placate his enemies. One way to avoid this, or at least to minimize it, would be to place a solid conservative on the ticket with him. For that role few men are better suited than Senator BARRY GOLDWATER.

Address by Nathan Straus on Germany

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. ANFUSO. Mr. Speaker, the American people would be happy indeed to see Germany become a truly democratic country. The fact, however, that men who were openly associated with Hitler during World War II and who played a prominent role as Nazis are still in power today, arouses considerable doubt in our minds whether the new Germany is really on the road to democracy.

The visit to this country by Chancellor Konrad Adenauer last month brought this matter to the fore again. The recent wave of swastika smearings on synagogues, churches, community centers and other public edifices, which was started on Christmas Eve in Cologne, Germany, also raised much doubt as to the extent of real democracy in Germany and, in particular, the effect of German education in conveying to German youth the truth about Hitler and the Nazi regime.

These problems are being seriously discussed in the American press, on radio and television, and other forums of public opinion. A noteworthy contribution toward this discussion was made recently by Mr. Nathan Straus, who delivered a very interesting address over radio station WMCA in New York on April 1, 1960.

Mr. Straus is a well-known benefactor and philanthropist in New York. He is one of our leading citizens, a public-spirited person, and a man whose views and opinions are highly regarded by the people of New York. His address, entitled "Watch on the Rhine," has aroused much interest and I am pleased to bring it to the attention of my colleagues.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the address by Mr. Straus which is as follows:

WATCH ON THE RHINE
(By Nathan Straus)

When Chancellor Konrad Adenauer and Premier David Ben-Gurion issue a statement expressing agreement in their views, it is indeed news. Dr. Adenauer said he had been "deeply moved" and added, "The German people draw a deep satisfaction from the fact that through restitution to victims of nazism a contribution was made toward the process of rehabilitation in Israel." Premier Ben-Gurion said: "We remember the past not in order to brood upon it, but in order that it shall never reoccur. The Germany of today is not the Germany of yesterday. After having met with the Chancellor I am sure that the judgment is correct."

While WMCA does not venture to disagree with the interpretation of conditions in present-day Germany by the Israeli Premier and the German Chancellor, we herewith present some facts, facts that have been verified, facts that do not seem to justify the rosy picture thus portrayed of Germany today.

Has there been a fundamental change in Germany from the sadistic days of Adolph Hitler? Has Germany become a truly democratic country with an appreciation of the horrors of Hitlerism? Are the men now in power new men? Are the facts of the leaders of Germany today new faces, men uncontaminated with the deeds of the Hitler era?

Here are the facts:

Hans Globke was the author of the Nazi regulations which decreed that being a Jew was a crime. He was responsible for affixing the letter "J" to passports of Jewish citizens of Germany to prevent them from escaping from Germany and thus escaping the Hitler gas chambers. He is remembered as the man who once remarked of the cases with which he dealt: "They (the Jews) should have chosen their parents more carefully." This man, Hans Globke, is now, at this very moment, state secretary in the Adenauer government, the man responsible for the appointment of the top people in the civil service.

Theodor Oberlaender was an officer in Hitler's brown-shirted storm troops. He participated in Hitler's first putsch in 1923 and he became a member of the Nazi Party with membership card No. 2,331,552. Is he now in jail. He is not. He is, instead, Cabinet Minister for Refugee Affairs in the present German Government.

Like Herr Oberlaender, Gerhard Schroeder was also a member of Hitler's brown-shirted storm troops. He was a member of the Nazi Party as early as 1933 and he bears his share of guilt for the crimes of the Third Reich. What price did he pay? He is today Minister of the Interior in the present German Government.

What of the men of riches and power in the Hitler era? Who were they then and who are they now?

Friedrich Flick was described in 1946 by the U.S. authorities as head of a $400 million industrial combine and the greatest single power behind the Nazi war machine. In 1947 the U.S. War Crimes Commission convicted and sentenced Flick to 7 years in prison. But after serving only 3 years of his sentence, Flick was released. Who and what is he today? Friedrich Flick is said to be the richest man in Germany. He has been described in German newspapers as the colossus of the Ruhr industries. He is a controlling figure in industries turning out airplanes, paper, chemicals, and plastics, as well as operating Daimler-Benz, one of Europe's largest car producers.

Alfred Krupp, bearer of one of Germany's most notorious names, a name known as a family of makers of munitions, the Krupp industries, assisted his father, Gustav Krupp, in arming the Nazi war machine. Alfred Krupp was branded as a war criminal and sentenced by the U. S. War Crimes Commission in 1948 to a 12-year prison term. But he was released after 2½ years. Since then, with the aid of the American Government, he has become the dominant figure in a giant integrated operation encompassing everything from coal and iron mines to machine plants.

The magazine Business Week has commented: "The trend in the steel industry brings back memories of big business and Hitler's Third Reich." And Fortune magazine noted that the Krupp industries had actively and flagrantly supported the Fuehrer, and adds "The ruler of Krupp accepted all the medals the Nazis pinned on him."

Joseph Neckermann is described in a recent issue of Time magazine as "The mail-order king—hard-eyed, aggressive Joseph Neckermann, 47, founder and sole owner of the company." How did Herr Neckermann rise to wealth and power? In the words of Time magazine:

"In Berlin as throughout Germany, hundreds of Jewish businessmen were being persecuted by the Nazis, forced to sell their businesses at ridiculously low prices to get enough cash to flee Germany."

Neckermann, who normally would have been in the armed forces, had been excused from military duty when World War II began, as a big supplier to the military and, according to Time, "he became a Nazi well connected in party circles." For this he was sentenced by the American authorities to a term in prison, but because of the alleged reason that he had contracted tuberculosis, he was soon released.

Herman Abs was one of the leading financiers who supported the Hitler war machine. A U.S. military government report in 1946 commented: "Abs was the guiding spirit of the vicious Deutsche Bank, which combined an unusual concentration of economic power with active participation in the criminal policies of the Nazi regime." Herman Abs was on the United Nations war crimes list. He was, however, never tried in person for his deeds. He was sentenced in absentia by a Yugoslav court to 15 years of forced labor for war crimes.

Herman Abs is again today ruler of the Deutsche Bank, one of the largest financial institutions in West Germany. He is also chairman or director of over 30 important companies in West Germany, Spain, the Netherlands, Luxemburg, and the United States.

Additional evidence of the power, in industrial life and in political life of Germany today could be shown. But perhaps the fact that today the richest man in Germany, the steel industry king in Germany, the mail order king, the man who dominates part of Germany's growing financial power, the state secretary and the Cabinet Minister for Refugees were all prominent Nazis—some of them sentenced to prison by the American War Crimes Commission—is enough to show the caliber of the men who exemplify the so-called new and democratic Germany.

Now let us look at the education of the German youth in the new and democratic Germany.

Not only is industrial life and government dominated by former Nazis, but so is the educational system.

German textbooks in use today do not include much information about Hitler or about the crimes of the Nazis or the hideous record of the extermination camps: Dachau, Buchenwald, Auschwitz, and Belsen.

The textbook in history used in the German "Volkshule" (elementary schools), which every child is supposed to attend, contains exactly one paragraph about the Hitler regime. It is devoted chiefly to deploring the fact that Hitler's policies resulted in the military destruction of Germany. It says that and no more.

In higher education the same conditions exist.

The textbook used in the "gymnasium," corresponding roughly to our last 2 years of high school and freshman year in college, contains only three pages of reference to the Nazi era. These pages consist of a characterization of the era as one marred by dictatorship in many countries, including Russia, Italy, and Germany. This textbook states only that dictatorship proved a bad thing for each of the countries and that each of the dictators was overthrown by the people of his own country. There is no further reference to Hitler or his rule, no mention of the deeds of the man responsible for the murder and torture of millions.

As a corollary to this record of Germany today, it is not surprising to read in a recent issue of the New York World-Telegram and Sun of a Canadian Jew's charges that he was beaten up by a German for calling Hitler a "scoundrel and a criminal." The incident is related in the following words:

"Chaim Kuflik, 57, a small gray-haired Polish-born Canadian Jew from Toronto, said the incident took place in a Frankfurt restaurant where a tall blond German started to talk to him.

Mr. Kuflik said when he praised Chancellor Konrad Adenauer as a 'real great statesman,' the German retorted: "There has only been one great German and that was Adolph Hitler.' Mr. Kuflik, whose father, brother, wife, and child were killed by the Nazis in Poland, replied he thought Hitler was a 'scoundrel and a criminal.' The German assaulted him and mauled him badly. • • • Two police officers who arrived after the German had left by the back door told Mr. Kuflik it was his own fault that he was beaten up."

Let us now recall, aware of these facts, the recent declaration of Prime Minister Ben-Gurion when he met with Chancellor Adenauer: "We remember the past not in order to brood upon it, but in order that it shall never reoccur."

It would seem from the facts recited here that the "past" is still the present. The danger which once flamed into genocide is still alive in Germany today, in the bodies and the minds of the men who helped to create the "hell" of World War II. These same men are the leaders of Germany in 1960.

Teaching Space-Age Science to Children

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. O'HARA of Illinois. Mr. Speaker, as an example of what my alert and dedicated constituents are doing back in the Second Congressional District of Illinois to keep strong our country I am extending my remarks to include an article by Dr. William I. Harber in the February 1960 issue of the Chicago Schools Journal. The message of Dr. Harber is of importance to the thinking men of America, especially at this time when science teaching is so important to national defense. Dr. Harber's article follows:

TEACHING SPACE-AGE SCIENCE TO CHILDREN—IS THE CONTENT OF OUR SCIENCE COURSES UP TO DATE?

(By William I. Harber)

In a short monograph, "Man in Space: A Tool and Program for the Study of Social Change"[1] there is a contribution by Lawrence K. Frank entitled "Cultural Implications of Man in Space." Mr. Frank says, among other things, "Ordinarily the teaching of physics, chemistry and mathematics is limited to the classic framework, the ideas developed prior to 1900, with the result that the younger members of society learn of the new climate of opinion from comics, science fiction, TV, movies and other informal sources." He goes on to say that "an introduction to MIS (man in space) may be more feasible in nursery school than in elementary grades."

My first reaction on reading this statement was that Mr. Frank was pulling the reader's leg. But after a careful rereading I began to sense his meaning.

As a teacher of physical science in the junior college, I had been puzzled from time to time by the following phenomenon. Affable students would bring articles and clippings on scientific matters to my desk and leave them with the earnest suggestion that I read them. Even though I had frequently seen or read the particular item a student brought, I thanked each student warmly for his thoughtfulness.

STUDENTS INTERESTED IN RECENT DEVELOPMENTS

What I didn't understand for some time, longer than I care to admit, was why such bearers of reading material were so obviously trying not to give offense as they laid the magazine or clipping down. I think, in part, they were trying to bring me up to date on some topics, so that I wouldn't be so far behind the times when the next semester came around.

At the same time they were considerately trying to avoid any suggestion, other than the implied one, that their teacher was unfamiliar with 20th century developments in science. It is a tribute to their scientific acumen that such a judgment was amply supported by the only evidence upon which a hypothesis could be formulated—the content of their course—and a tribute to their human acumen that they realized that, although the poor fellow obviously needed help, it would be best to render it diffidently and as if by accident, lest his pride be wounded.

DO STUDENTS KNOW THE EARTH IS ROUND?

Let us take a look at one of the major areas we cover in our physical science survey course—astronomy. During the last decade that I have taught this subject, I have started out with this bombshell: "Is the earth really round?" The syllabus which I have used for the course furnishes such exciting bits of information as the fact that ships disappear over the horizon bottom first and the fact that you see more the higher up you go.

While I am explaining to the class how back in B.C. old Eratosthenes figured out the circumference of the earth in "stadia," my audience is quietly dividing up into two major camps: (1) those students who knew that this had to be a dull course, else why would it be required, and (2) those students who are wondering whether their teacher is an unreconstructed birdwatcher who has been impressed into the teaching of physical science because of the shortage of scientists. It is the students in this latter group who, I believe, begin to feel sorry for the instructor, and commence to slip him hot items in the sciences from press and periodical.

COLLEGE COURSES INCLUDE 20TH CENTURY CONCEPTS

I am happy to say that in recent years college instructors, aware of the inadequacy of the Newton-Galileo kind of course for present-day science, are contemplating revamping some of their course content. The new texts deal at length with 20th century developments. At least, if such a text were employed together with lecture-demonstrations which took cognizance of more than the most traditional and elementary physical concepts, students would not feel it incumbent upon them to bring me articles on solar batteries after a discussion on the voltaic cell, clippings on solar furnaces after a lecture on the steam engine, and items on radio telescopes after examining and discussing the operation of the crystal set.

But this is science at the college level. How does it fare in the high schools? Examination of the equipment catalogs shows that the laboratory supply houses are still vending the same apparatus that was in use 25 years ago. In fact, since the equipment is sturdily built, much of it in use is 25 years old. Physics teachers are famous for the extreme care with which they handle and maintain their equipment. The result is that many laboratories are well stocked with equipment designed to teach a science which has experienced only a small portion of the impact of 20th century theory and experiment, and only partially or not at all supplied with equipment for demonstrating or experimenting with post-Newtonian concepts.

What do the experiments largely center around? Usually they deal with the great classic works of the 17th and 18th centuries. Not that Galileo's gravitational constant and Archimedes' principle are unimportant, but where do such limitations leave the student? Mainly, he comes to rest at the beginning of the 20th century, when Messrs. Planck, Einstein, and Bohr began to take up the slack in the physical sciences and created a new approach to time, matter, and space.

"CLASSICAL" APPROACHES MAY DIMINISH ENTHUSIASM

The preceding comments are not at all intended to denigrate the high school physics teacher. He is no more nor less the victim of the cultural lag which has weakened science instruction than is the college teacher. One of the first experiments in many college physics courses is designed to teach the student to use measuring instruments such as calipers and micrometers. Such an approach to the thrilling and compelling world of time, space, and matter not only makes the student's entry into that world dull, plodding, and perhaps distasteful, but does not even concede that an 18 year old can measure. This conviction that 18 year olds can't measure is frequently shared by college chemistry courses. The college chemistry student sometimes—you may not believe this—also starts the course with an experiment in measuring but on an even cruder scale. The student works with a meter stick.

If the student had some idea before he came to college that he was capable of measuring objects or spaces, he is soon disburdened of this belief.

IS ELEMENTARY SCIENCE UP TO DATE?

Much of the kind of procedure for instruction in science which I have so far described is, fortunately, in the process of disappearing from high school and college classrooms. But a peculiar problem faces the college teacher and frequently the high school teacher. This is the fact that elementary school science instruction, insofar as it deals with the physical sciences, tends to approach them largely in the classical manner.

[1] Annals of the New York Academy of Sciences, vol. 72 (New York, 1958), pp. 165–214.

A first reaction to the suggestion that it would be appropriate in the elementary school to talk about mass-energy relationships, curved space, and the expanding universe might well be one of angry rejection or at least of extreme doubt. Is it really possible to utilize all we know about the physical world in teaching elementary science? The answer is of course it is. The view of the world which is implicit in pre-20th century science is no less strange to the young child than the view which recent scientific developments demonstrate to be more accurate. Young children adopt new frames of reference much more readily than do older ones.

If, in the elementary grades, the child is exposed only or even mainly to the classical kind of science, he will have to wait until high school to transcend the limitations of the prequantum picture of the world. If we serve him the classical approach in high school, then it is left to the college to reorient him.

WE MUST START SPACE SCIENCE EARLY

In general, the longer the child lives with the classical view, the more difficult it becomes for him to make any change. College teachers frequently wonder why students don't become excited by new ideas which are presented in the college classroom. The answer is that the students figure that, if they have gotten along this well with, for example, a classical science framework, why throw it aside for views and insights which are much more complicated and not at first glance obviously more rewarding? At 18, a student has the world and its inhabitants pretty well figured out.

I think that Mr. Frank is right. We cannot begin too soon to deal with and teach science of the space age. We cannot go quite so far back to begin as Mr. Frank suggests, since the Chicago school system, for better or for worse, has no nursery schools. But we can, and I think we should, begin as early as we are able to teach our students a science which deals with mass-energy relationships instead of inclined planes, with curved space instead of pinholes in black construction paper, and with an expanding universe instead of a round world. These students live in a world in which astronauts are training for other worlds. We should not circumscribe them within the narrower horizons of our own childhood.

"Since science is knowledge and understanding of nature, it is an essential part of our total knowledge and therefore claims an important place in our general education. We cannot all be scientists, nor should we want to be; but we may, at least, develop an appreciation of science, just as we do of music or the arts, through some knowledge of its facts, objectives, and methods"—(Paul E. Klopsteg).

Country Elevators Protest

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. BURDICK. Mr. Speaker, after the announcement of a proposed cut in storage rates and handling charges on Government-owned grain, I received heavy mail from the country grain elevators in North Dakota protesting such cut.

Since the matter appeared to seriously affect the legitimate interest of those elevators, I called a factfinding meeting at Bismarck, N. Dak., on April 6, upon notice to all interested parties including the Farm Bureau, the Farmers Union, and the Farmers Grain Dealers Association. More than 400 persons, representing farmers' elevators, cooperative elevators, and privately owned elevators, from all corners of the State, appeared and testified against the proposed cut, citing among other things their increased costs, lack of a storage cost analysis, high cost of construction in the area, and the arbitrary action of the Department of Agriculture.

It was the unanimous opinion of the meeting that the uniform storage contracts now in effect be continued for 1 year in order to provide time within which to study and negotiate any needed changes. The following resolution was adopted without a single dissenting vote. Names of the elevators represented are appended hereto. Copies of the resolution, the names of the sponsors, and statements received at the meeting are today being delivered to the Department of Agriculture and the House Committee on Agriculture.

The resolution and list of elevators represented are as follows:

It is the consensus of this meeting of farmers, elevator managers, directors, and elevator owners, meeting at Bismarck, N. Dak. Wednesday, April 6, 1960, that:

1. The average cost of operating primary elevators throughout North Dakota exceed the proposed payment-formula recently announced by the Department of Agriculture.

2. The proposed new rate structure for Government-stored grain at local elevators was arbitrarily arrived at by the Department and made public without permitting the country elevator trade an opportunity of hearing; and

3. This right to be heard, we feel should not be arbitrarily abrogated inasmuch as the news stories emanating from a congressional committee investigation of Commodity Credit Corporation's operations, have led the public to believe that exorbitant profits have accrued to the trade in general by reason of long-established grain storage rates. Such fixed conclusions, either by the Department or by the public, do not conform to the facts. There is no instance on record where any local elevator has abused or unduly profited from the established grain storage policy.

Further, since the congressional committee is still investigating the grain storage rate problem, it is our recommendation that USDA immediately rescind its announced action and extend the established rate agreements until (1) the committee has completed its findings and submitted a report with its recommendations, and (2) consider the reports and findings of operators and owners throughout the country as evidenced by this meeting.

It is the judgment of the group that we recommend a 1-year moratorium on the announced arbitrary rates and on any proposed change in the present uniform storage agreement.

LIST OF ELEVATORS REPRESENTED

Equity Elevator, Adrian, N. Dak.
Amenia Seed & Grain Co., Amenia, N. Dak.
Farmers Co-op Elevator Co., Agate, N. Dak.
Farmers Union GTA, Alexander, N. Dak.
Farmers Union Grain Association, Alfred, N. Dak.
Farmers Union GTA, Ayr, N. Dak.
Peavy Elevator Co., Arena, N. Dak.
Grain & Stock Exchange, Barlow, N. Dak.

Your Congressman: What Do You Know About Him?—What Does He Know About You?

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1960

Mr. THORNBERRY. Mr. Speaker, the Bertram Enterprise is a very fine weekly published in Bertram, Burnet County, Tex., and the publisher and editor is Mr. N. Oliver Cox.

In the issue of Thursday, April 7, 1960, appeared a splendid article discussing the need of a Member to hear from his constituents and giving suggestions on what should be contained in a letter written to a Member of Congress. The article is as follows:

YOUR CONGRESSMAN: WHAT DO YOU KNOW ABOUT HIM?—WHAT DOES HE KNOW ABOUT YOU?

Your spokesman in Congress, your representatives, are the two Senators from your State and the Representatives from your congressional district. This is true regardless of whether the incumbent office holder represents the political party to which you belong or an opposing political party. Once Senators or Representatives have been elected they represent all the people of their State or their district no matter which party you are affiliated with.

Your spokesman in the National Government cannot do a good job of representing you unless they know and understand your views and you, in turn understand their problems. They need and want the opinions of all their constituents—if they can get them—regardless of party affiliations.

WHAT TO WRITE ABOUT

It must be remembered that a Congressman's first obligation is to his constituents. His big problem is to get reelected, and much of his time is taken up with satisfying the demands of those who have sent him to Washington. Their views are always given first place in his thoughts. Accurate and useful information sent to him by a voter in his district is always appreciated. He welcomes hearing from "back home" because it shows him the people know he is alive and are interested in what he is doing. Until we realize our representatives in Congress want and welcome our views and we take the trouble to communicate frequently, our relations in Washington will not be what they should—or ought to be. Remember, you don't have to wait until you have a complaint to write to your Senators and Representatives. They're human, too, and a pat on the back is appreciated by them as it is by you, and a slap in the face arouses their anger as readily as yours. Don't gripe—write.

TEN TIPS ON WRITING YOUR CONGRESSMAN

1. Keep your letters as brief as possible.
2. Tell the essentials about yourself or your business.

3. Be forthright: If you're for something, say so. Don't beat around the bush.

4. Avoid emotion: Prove your case with facts and figures.

5. Be reasonable: Seek only possible things.

6. Speak for yourself: Use your own stationery and letter style.

7. Be courteous: Compliment on a good vote, and recognize his staff, too.

8. Request action: Your man is elected to do something.

9. Ask for a answer: You've told him where you stand. Ask him where he stands.

10. Don't stop with one letter. Keep your Congressman informed of your views on all important legislation.

Address Before the National Association of Broadcasters, Chicago, Ill., April 5, 1960, by Frederick W. Ford, Chairman Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1960

Mr. LINDSAY. Mr. Speaker, I have asked unanimous consent to insert in the Appendix of the RECORD an important address by Frederick W. Ford, the new Chairman of the Federal Communications Commission, on the subject of the broadcasters responsibility to the public.

As radio and TV commentator, John Crosby pointed out in a syndicated article on April 11, the chief value of Chairman Ford's speech is that the remarks are self-evident truths, namely, that broadcasters have obligations which cannot be sidetracked by or subordinated to the business aspects.

The address follows:

The Federal Communications Commission is now beginning its second 25 years under the Communications Act of 1934. Consider that in those first 25 years the number of broadcast receivers has soared from 18½ million to about 200 million of which 150 million are radio sets and 50 million are television sets—that almost two-thirds of the world's total are in the United States—that from 600 stations (all AM) in 1934, we now have almost 5,000 operating broadcast stations of which 3,500 are AM, 858 FM, and 566 TV.

Yet, while it is true that all who have participated can point to these figures with justifiable pride in the accomplishment of this phenomenal growth and development of radio broadcast communication since the Commission was established in 1934, it is also true that never before in history has the Commission or the industry been beset with so many thorny and knotty problems as are with us today.

It is my purpose here, today, to talk with you about some of the measures we in Government feel are required to meet these problems and at the same time indicate to you those areas where industry self-discipline and regulation is the proper solution. Our objective is a common one—namely, that radio and television can go forward to achieve the full measure of its possibilities for service to the entire public of the United States.

In general, when the Commission is faced with a problem indicating the need for corrective action, the fundamental question in my mind is not whether the Commission has the authority to take corrective action, but it is to determine precisely what remedy is required and whether it is the Commission's responsibility to apply that remedy. If it should then appear that further statutory authority is needed before the remedy is applied, it becomes the Commission's obligation to inform the Congress of that fact and propose the necessary legislation.

We can all agree on the principle that the least government is the best government, or in more modern terms, that the least regulation is the best regulation. The Congress, however, in enacting and amending our statute from time to time, has made the determination of the extent of regulation which it considers necessary. And within the framework of that statute, it has given the Commission broad powers to administer it. It is the Commission's obligation, therefore, to administer the statute as faithfully as possible and to seek its amendment when in the Commission's judgment that course becomes necessary.

It would be impossible to discuss adequately the many problems which confronted me when I became the Chairman of the Commission a little more than 3 weeks ago and assumed the statutory responsibility "to coordinate and organize the work of the Commission in such manner as to promote prompt and efficient disposition of all matters within the jurisdiction of the Commission." Instead, therefore, I would like to discuss with you some of the matters facing the Commission relating to programing.

Events of the past year or so have sharply pointed up the need for greater licensee responsibility to insure that stations are operated in the public interest. The four areas in which this problem has been most frequently mentioned are (1) fixed quiz shows, (2) payola, (3) excessive violence, and (4) obligation to meet local community needs.

When the full facts became known with respect to the deceptive practices employed in certain quiz shows, the industry acted promptly in taking these shows off the air and establishing more effective internal controls to prevent their reoccurrence. This prompt action is to be commended. But the Commission nevertheless believed that, in order to avoid a repetition of such a fraud on the public, whether through negligence or willfulness, it was necessary to propose rules which will require that in any program involving intellectual skill or knowledge where the result has been predetermined, the public shall be informed of that fact and of the nature of the assistance rendered. In addition, we have prepared for submission to the Congress a proposed statute which will hold persons outside the jurisdiction of the Commission criminally responsible for any deceptions of this nature. There have been bills along this line already introduced in the House of Representatives.

We expect measures of this nature to become effective in the near future. I am sure it is everyone's wish that the situation will not arise requiring their application, but if it does, it will be met with swift action since deceptions of this nature are wrong and indefensible. It is my earnest hope that the industry's initiative in removing such programs from the air has already ripened into a determined persistence to insure that programs involving deceptions of this nature never go out over the air again.

With the thought in mind that you might have more than a passing interest in the Commission's public notice of March 16, 1960, dealing with the requirements of section 317 of the Communications Act with respect to sponsorship identification, I would like to spend a few moments on this subject.

The first duty of the Commission with respect to the matter of payola was to determine the extent of this pratcice in the industry. As you know, this was accomplished by our letter of December 2, 1959 requiring each station in the country to answer a questionnaire under oath. A preliminary tabulation of the replies has been made an submitted to the House and Senate Interstate and Foreign Commerce Committees. The results of that tabulation show that:

Two thousand seven hundred and fifty-seven stations (59 percent of the total on the air) stated in effect that no payola in any form was found in connection with the station's operation.

Four hundred and forty-seven stations (9.5 percent of the total) stated that there were instances in which consideration other than cash was received by the station and/or its employees in connection with the broadcast of certain matter without the required announcement being made.

Fifty stations (1 percent of the total) stated that there were instances in which cash had been received by a station employee as consideration and there was no announcement of sponsorship.

Eighteen stations (four-tenths of 1 percent) indicated that there were instances where the station itself had received cash as consideration and failed to announce sponsorship.

The remainder, 1,374 stations (29 percent of the total) replied that only free records were furnished to the station and that these were played without announcing by whom they were furnished.

Thus, 4,131 or 88 percent of the radio and television stations on the air stated in effect that they either received no payola or it was limited to free records which were not announced at the time they were played on the air as being furnished. This leaves 515, or 11 percent of the stations on the air, in which the station or its employees had received cash or other consideration for broadcasting material without the required announcement having been made.

In order to remove all doubts as to the licensee's obligation in this area, we have issued a notice of a proposed rule which will require each station to establish reasonable internal procedures to assure itself that the statutory requirement of an announcement that all matter paid for or furnished shall be made at the time it is broadcast is being observed. We have also drafted legislation for submission to Congress to include other persons as well as the station owner in this requirement so that it will be applicable to stations and employees alike.

The replies to our inquiry of December 2, 1959, totaled between 7,500–8,000 separate documents. On January 21, 1960, we made public our intention to consider these replies in connection with the processing of broadcast applications. As a result, by March 16, 1960, the date of our public notice on sponsorship identification, there had piled up over 400 applications which could not be acted on until determinations had

been reached with respect to the matters set forth in the stations' replies. In the meantime, we had received numerous requests for definitive rulings on the requirements of section 317.

Our public notice of March 16 was designed (1) to apprise broadcasters of the Commission's views with respect to past practices; (2) to serve as a guide for future operations; (3) to permit action on hundreds of pending applications. We were not unmindful of the many problems with which broadcasters would be confronted as a result of our interpretation of the law. Since March 16, a few more have been called to our attention. In addition, we have received requests by interested parties seeking formal opportunity to submit comments on our interpretations.

The Commission believes that it would be appropriate to provide a forum for the expression of views with respect to the Commission's Notice of March 16. As you know, this was done last week when the Commission issued its Notice of Inquiry providing for the submission of comments, briefs and memoranda of law by interested parties. Our public notice is now open to comment by interested parties, and you may be assured that these comments will receive consideration.

In full recognition of the basic concept that it is the licensee's responsibility to select program material for broadcast in the public interest, I hesitate to speak to broadcasters about program content. I share with you the belief that neither the Commission, the Congress nor the public wants anyone in Government to dictate what should or should not be broadcast. Public comment and complaints about excessive violence have, however, reached such proportions that I feel compelled to mention it to you today.

A number of witnesses in the Commission's recent hearings on programing testified that in their opinion, action looking toward a solution to this problem was of the utmost urgency. Time will not permit even a summary of all such testimony but I would like to quote from one:

"In the fertile minds of children are implanted the seeds of violence, trickery, and corruption and the idea that as long as justice triumphs in the end, the means used to attain it matters little, if at all. Surely to present a preponderance of crime and saccharine superficiality is to distort reality and truth."

That statement was given to the Commission on behalf of the National Congress of Parents and Teachers, an organization of nearly 12 million parents, teachers, and other citizens organized in more than 45,000 PTA's across the country. This is a formidable group.

In his remarks to the opening session of the White House Conference on Children and Youth last week, the President of the United States stated:

"You are working with the most precious resource of our Nation; a whole generation of Americans who will someday make their country's policies and dispose of its great power. The very life of America depends upon the wisdom and resourcefulness which they bring to the basic problems with which they will then be confronted. And the responsibility for their early preparation belongs to the older citizen, not the younger one."

Now I am aware of the efforts of the television broadcasters to be constantly alert to potential harmful effects of the medium and to be responsive to constructive criticism, and that is why I am raising the question with you because you, yourselves, have faced this issue squarely in the television code. I quote from the preamble:

"Television and all who participate in it are jointly accountable to the American public for respect for the special needs of children."

When I consider the attraction that the television set has for the children and youth of this country, I cannot help but feel that all that needs to be done in this area is not being done—in short, is television's responsibility toward children being met?

It is not merely a question of whether there is too much of this type or that type of program or advertising matter. Rather, it is the question of whether this industry will measure up to its self-imposed responsibilities with respect to the advancement of education, religion, and culture, the provision of wholesome entertainment, its special responsibility toward children, decency and decorum in production, its unique position as a vehicle for community affairs and in its factual, fair and unbiased treatment of news, public events, and controversial issues.

It is the earnest hope of all concerned that improvement in these matters can be accomplished by voluntary adherence to the television code by all stations rather than risk the imposition of restrictive measures which can only result in destroying originality and initiative.

It is axiomatic that the broadcaster's success hinges on his ability to get people to tune to his station. To do this, he must offer a program schedule which appeals to the listener or viewer. Only in this way is the advertiser attracted to his station. There is no doubt that the average station operation has to be viewed this way from the dollar-and-cents point of view. In this respect, the broadcaster is a businessman like the theater owner or newspaper publisher.

But, and this is a big "but," the law demands of the broadcaster that his operation be responsive to the public interests. There are imposed certain obligations which cannot be sidetracked by, or subordinated to, the business aspects. It is a task which requires thought, perseverance, and considered judgment.

The Commission was created by Congress to insure that the obligations of the licensees are met. The Commission is required by law to review the broadcaster's performance at least every 3 years, not to determine whether he has made a profit, but to see whether he has faithfully carried out his obligations to operate in the public interest.

What are some of these obligations specifically? First, of course, is the obligation to determine what the needs of his public are. Requests for time by local groups to bring matters of importance to the attention of the community are certainly indications of public need. The broadcaster is charged with responding sympathetically to such requests and to make available a reasonable amount of broadcast time for these purposes. I fail to see how an operation can be in the interest of the public when such requests for time are consistently ignored or turned down because of disruption to the commercial schedule.

Second, I believe further that the broadcaster has the affirmative duty to stimulate the community's use of his station as an outlet for local expression. He should take steps to alert local groups and organizations that his station stands ready to make its facilities available and to cooperate with them in the broadcast of programs dealing with community problems.

Operation in the public interest begins to crystallize when viewed in this light. Where an effective station policy is established in this regard, an important element of operation in the public interest has been delineated.

In summary, the public can be assured that "fixed" quiz shows are a thing of the past, and actions are in process which will prevent their recurrence. Payola, or as it is more technically known in broadcasting, the failure to announce the sponsorship of material being broadcast, has been symptomatic of a certain degree of laxity of licensee responsibility. There is reason to believe that the exposure of this practice by the Harris committee, and the proposed actions now underway, can give the public assurance that it will no longer be a part of the broadcasting scene.

The task now ahead is to profit by experience and to go forward in other areas to make the broadcast medium all that it is capable of, namely—a vital force for good in the social, cultural, educational, and political life of the Nation.

Pornography—The New Black Plague

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. OLIVER. Mr. Speaker, the increased traffic in printed and pictured obscene materials has become a problem of real proportions. On March 29, I introduced a bill to create a Presidential Commission on noxious printed and pictured material. By establishing legally and scientifically the causal relationship which we feel exists between this smut and antisocial behavior, this Commission can perform a great service to society. Effective law enforcement in this area desperately needs authoritative findings upon which definitive legislation may be based for prosecution of filth merchants who exploit young people and psychotic adults. Society fights, at every turn, the sale of narcotics, but those who peddle printed and pictured materials which poison the mind are able to avoid, on too many occasions, the severe penalties which should be levied against them. An effective approach to this threat is threat is urgently needed; an approach which the Commission I have proposed can fully develop.

Under leave to extend my remarks, I wish to insert an article entitled, "Pornography—The New Black Plague," which recently appeared in the National Parent-Teacher, the official publication of the National Congress of Parent-Teacher Organizations. The article thoroughly exposes the unconscionable schemes utilized in the transmission of obscene materials through the mails. However, I feel that this fine article does not go far enough in pointing out the extent to which this filth has permeated

our society. Not only through the mails, but through the use of all media of interstate commerce, newsstands, and so-called art theaters are supplied, by unscrupulous exploiters, with their poisonous sewage. Profit at any cost seems to be their sole interest.

We must find a means of restricting the production, distribution, and sale of this poison. Before prosecution can become really effective, I repeat, we must establish this casual impact which poisons the mind as surely as narcotics poison the body. We will continue to spin our wheels in our legislative efforts for the curbing of this traffic until and unless this is accomplished.

The article follows:

PORNOGRAPHY—THE NEW BLACK PLAGUE

Are you one of the growing number of parents who have felt the shock of seeing among their child's possessions some of the filth that is being sent to young people through the mails? Even if you aren't, you can imagine the horror and heartache that such a discovery has brought to other parents. Mailed pornography knows no boundaries. It infiltrates every part of the country, reaching children and youth on farms and in cities, in suburbs and slums, in stern homes and trustingly permissive ones. No child is safe from this most ruthless of all rackets—the distribution of pornography by mail.

The material comes in a plain envelope, bearing your child's name. The pictures inside defy description. They are not just nudes. They picture the naked bodies of men and women, often boys and girls, singly and together, in every imaginable position of lewdness, intimacy, and perversion. Some of them masquerade as "art photographs." Others are portraints to be hung in a youth's room as a reminder of "how joyous life can be if one is modern." Some are enclosed in small, attractive gift cases that a boy can give to his girl or boastfully display to his friends. Other pictures are on the backs of playing cards—samples of complete decks that the recipient is urged to order and resell to his friends, card by card, at a commission that sounds fabulous to a youngster.

Where does the torrent of smut come from? How does it get mailed to your home? Who is responsible?

The child who receives the degrading stuff may be innocent of wrongdoing. As a young art student, he may have answered a magazine advertisement for art materials. Or he may have sent a dime or a quarter for a train or a model airplane offered at a bargain as a come-on. Such innocent actions can put his name on a "sucker list" for commercialized smut.

Or he may have done nothing at all to bring on the deluge. His name may have been taken from a high school yearbook, the membership list of a youth club, or a newspaper story about school activities. The Post Office Department estimates that between seven hundred thousand and a million children will receive unsolicited obscene and pornographic materials through the mails this year. No one can be certain that his child will not be a victim of the mail traffikers in smut and slime.

How does an obscene picture affect a child or youth who sees it? Children are by nature curious, daring, breathlessly eager for new sensations. Yet on some guileless minds such a picture may barely register. On others the imprint may quickly blur and dissolve. But on mind after mind the impression is likely to be powerful and lasting. The U.S. Senate Subcommittee To Investigate Juvenile Delinquency believes pornography may be most damaging to the child who has had little or no sex education.

Pictures of obscenity and perversion may excite children, giving them a feeling of being grown up. Or they may make all intimacy seem foul and disgusting. Testifying before the subcommittee, Dr. Benjamin Karpman, chief psychotherapist at St. Elizabeths Hospital in Washington, D.C., said, "You can take perfectly healthy boys or girls and by exposing them to abnormalities you can virtually crystallize their habits for the rest of their lives."

Arthur E. Summerfield, U.S. Postmaster General, charges the purveyors of pornography with contributing to the alarming increase in juvenile delinquency. "Sex criminals and sex murders," he says, "almost always have a long record of addiction to pornographic and sadistic material." We had better heed the implications of this statement; children who have never been exposed to such material may become the victims of sex criminals who have been exposed to it. It is to the interest of all parents, therefore, that not only their own children but all children be protected from this immoral sewage.

We cannot risk delay. The indecent traffic is growing heavier every day. Mail-order pornography is big business. Every year the "large, defiant barons of obscenity," as Mr. Summerfield calls them, sell some $700 million worth of filth. Complaints about this depraved merchandising flood the Post Office Department at the rate of at least 50,000 annually. They come from clergymen, high school principals, college professors, newspaper editors, PTA members, and other alarmed citizens.

Why doesn't the Post Office Department do something about the wholesale promotion and distribution of filth through the mails? over the years the Department has diligently tried to keep the mails clear of indecent matter. But it has met powerful opposition from the people who stand to profit by the corruption of children. Occasionally resistance has come from others—from people dedicated to freedom of the press. Confusing liberty with license, these people unwittingly assist the purveyors of pornography.

Last year the Post Office Department conducted 4,000 investigations of obscene mailings and caused the arrest of 293 persons—an increase of 45 percent over the figure for the previous year and the highest number on record. Nevertheless, as the figures indicate, the quantity of filth in the mails is increasing every day. This is partly because the smut sellers, knowing that tremendous profits can be realized from a small investment, are willing to risk a small fine or a light prison sentence. It is partly because certain courts, notably those in Los Angeles and New York, where most of the mail-order business in pornography originates, have been extremely cautious in their decisions on obscenity. Their liberal rulings have established virtual sanctuaries in which dealers in obscenity operate with impunity.

In 1958, as a result of persistent urging by the Post Office Department, an important forward step was taken: The obscenity statute was amended. Previously distributors of pornography could be prosecuted only in the district in which the obscene material was mailed. The amended law makes it possible to prosecute the merchants of filth at intermediate offices and at the point of delivery, where the actual damage is done. And it authorizes fines up to $10,000 for second offenders and imprisonment for 10 years. We now have a powerful means of stamping out a vile racket.

But success depends on the cooperation of a concerned citizenry, the people into whose homes the obscene materials are sent. Parents can do more than anyone else to help apprehend the mailers of filth. The Post Office Department therefore urges all parents to take two simple steps:

Save all materials received, including the envelopes and enclosures.

Report the matter immediately to the Postmaster General or to the local postmaster, and turn the materials over to him.

In appealing to the Nation to defeat commercialized pornography, it was natural that the Post Office Department should ask the help of the national congress. At the annual convention last May a message was presented by W. D. Brewer, regional director of the Denver region of the U.S. Post Office Department. Mr Brewer read a telegram from Deputy Postmaster General Edson O. Sessions addressed to the delegates. "Postmaster General Summerfield," he told them, "is waging an all-out effort at all levels, but most importantly he needs the help of parents and educators if the campaign to erase smut and filth is to be effective. In a recent report to Congress the Postmaster General said, 'It is clear there must be a greater, expanded awareness of the seriousness and the demoralizing results of the wholesale distribution of filth to the children of this country* * *. It is my opinion that the greatest single need today is widespread and concerted public support of this program.'"

The national congress was already acutely aware of the problem. For several months its action committee on comics, motion pictures, radio, and television, headed by J. C. Moffitt, second vice president, had been studying the problem of pornography and its impact upon American children and youth. When the message from the Post Office Department was delivered, the action committee was ready with its recommendations.

The committee urged that State congresses, councils, and local units form action committees and invite all other interested groups to cooperate in the analysis and solution of the problem. Councils and local units were urged to cooperate with distributors of publications and with law-enforcement agents to end the distribution of obscene materials. The committee recommended that each State congress, with professional legal assistance, compile a summary and interpretation of its State laws on obscenity and distribute copies to all PTA's in the State. Through national congress publications the action committee itself proposes to disseminate similar information on Federal laws for the assistance of State and local organizations.

Unanimously the convention approved the recommendations of the action committee and voted to support the Postmaster General's plan for combating the distribution of pornographic materials.

But now a word of clarification: At this moment the national congress is concentrating its forces on just one problem, the most urgent and alarming of all, the filth that crowds home mailboxes and reaches children. The congress has not set out to clean up newsstands, greatly as some may stand in need of a powerful scrub brush and a strong detergent. It is not girding itself to attack the magazines that exploit curiosity about sex and cater to prurient taste. However, grave these menaces may be, they

are not so immediately urgent as mail pornography.

Nor is the congress unaware of the fact that some adults buy obscene material and bring it home, where it falls into the hands of children. We deplore this. It should be as unthinkable for any parent to bring such poison into his home as it would be to bring heroin or marihuana. But the problem is one of adult enlightenment and thus of adult education.

Still less is the national congress setting itself up as a censor of literature and art or as an agent for the restriction of freedom of expression. We realize that there are differences of taste and judgment about literature and art. But in the matter of mail-order obscenity there are no differences of opinion. The thousands of urgent protests to the Post Office Department prove beyond doubt that most Americans have no difficulty distinguishing between filth and art. No one could look at the slimy stuff that is going through the mails, literally by the ton, and have the slightest doubt that it is filth.

The national congress agrees with the Post Office Department that simple nudity, scanty clothing, or revealing garments, though we may disapprove of them, do not constitute obscenity. But lewd poses, shameless exhibitionism, erotic posturing, and portrayals of unnatured sex behavior are unquestionably obscene. By no stretch of the imagination could any person, any mentally healthy person, deny that these things are pornographic and perverted.

The National Parent-Teacher calls the attention of its readers to the urgency of this problem and to the action that is being taken by the national congress. From time to time the magazine will bring you progress reports from the Congress' action committee. It will also bring you the views and counsel of psychiatrists, sociologists, law enforcement officers, and other experts.

What can you do right now? Carry out the Postmaster General's instructions and take to your postmaster any indecent material that comes into your home through the mails. Urge your PTA to establish and support a local action committee.

The barons of obscenity exploit the innocence of children for profit. They grow rich by robbing youth of its happiness and its physical and mental health. If we parents, teachers, and other concerned citizens back up the Post Office Department, if we insist on vigorous prosecutions and maximum penalties for the guilty, we can defeat the vicious purveyors of pornography. The job will take perseverance, impatience, and pluck. The stakes are high: Either we wipe out this new black plague or the pernicious infection will spread throughout our society.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Address by George Chaplin at the Dedication of the Honolulu Japanese Chamber of Commerce Building and Cultural Hall

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. INOUYE. Mr. Speaker, on April 3, 1960, the community of Honolulu joined with the Honolulu Japanese Chamber of Commerce in the dedication of its recently completed building and cultural hall. This was a doubly auspicious occasion, first, for the reason that this event occurred on the 75th anniversary of the coming to Hawaii of the first Japanese contract immigrants, and, secondly, for the reason that the building so dedicated symbolically represents a further affirmation of the greatness of our American way of life in its fulfillment of the aspirations, not only of one segment of Hawaii's cosmopolitan population, but of all Hawaii's people.

The keynote speaker for this occasion was Mr. George Chaplin, editor of the Honolulu Advertiser, whose message, I feel, serves well to agitate those who would take our American heritage for granted.

Under leave to extend my remarks, I include herewith the address of Mr. George Chaplin, as follows:

ADDRESS BY GEORGE CHAPLIN, EDITOR OF THE ADVERTISER, HONOLULU, HAWAII, AT THE DEDICATION OF NEW BUILDINGS OF JAPANESE CHAMBER OF COMMERCE, APRIL 3, 1960

Mr. Chairman, honored guests, ladies and gentlemen, in recent months, many new buildings have risen in Honolulu. For the most part they are pleasant to the eye and to the mind, reflecting as they do the community's healthy expansion. But the buildings and the culture center in which we meet tonight embody not only the quality of growth but of something far more precious. For they are constructed not only of steel and stone, glass and wood, but of memories, too—memories which stretch three-quarters of a century, from the canefields of 1885 to the Halls of Congress today. And for tomorrow—with its memories yet to come—this edifice is to be a link in that causeway of faith and hope which Hawaii offers between West and East.

If tonight should emphasize anything, it is that America's strength lies in its diversity—in the blending of many cultures, of many races, of many religions.

Immigrants came to America speaking many tongues—but a single language—the language of human aspiration. Some came searching for religious freedom, some for economic opportunity. All came for the chance to advance to the limit of their individual capacities in a free society.

The very roots of this Republic were nurtured by the cultural and racial ingredients of farflung lands. Of the 56 leaders who signed the Declaration of Independence, 18 were of non-English background.

And when the Continental Congress sought a great seal for the United States, it was urged to make it a composite of six national emblems from abroad.

Americans of foreign extraction battled for our freedom in the Revolution, for the preservation of the Union a hundred years ago and more recently—in two world wars—for the cause of democracy everywhere. This has dramatic and significant relevance to Hawaii, for without the gallant record of the 100th and 442d we would not today be a State.

The American dream is also the American reality. We see about us a Nation whose arts and sciences, whose commerce and politics, whose medicine and music, whose whole culture is the product of the skills and talents and devotion of men and women whose ancestry spans most of the world.

The record abundantly fortifies the observation of the U.S. Supreme Court that our National Constitution was fashioned for "an undefined and expanding future, and for a people gathered and to be gathered from many nations and of many tongues."

Obviously it is not—nor was it ever—an easy decision to depart one's homeland and to travel long days across a vast sea to start anew. It meant leaving loved ones. It meant, in days goneby, traveling in horribly crowded immigrant ships. It meant, in many cases, coming in as indentured servants, as contract laborers.

And yet, as Historian Carl Wittke, of Western Reserve University, noted:

"Some 35 million made that decision in the years before World War I (including the first group to come from Japan to live in Hawaii). They turned with hope in their hearts to the great republic across the sea, confident that it would give them both freedom and bread. * * * The grand central motif of U.S. history has been the impact of successive immigrant tides upon a New World environment. This country has been a mother of exiles, the cradle of a new race of men and a young Nation with Old World memories.

"Over 40 languages and dialects are still spoken in the United States and each has supported its own press. The roster of our city governments"—and I might add, our own State government (as well as in the field of sports)—"reads like the roll call of the United Nations."

Why do I trace this history? Because it helps put into clearer focus what Hawaii is today and what it could and should be tomorrow. Hawaii has moved the boundaries of the American States more than 2,000 miles nearer to Asia. And Hawaii is the first American State where a majority of citizens have ancestral ties with Asia rather than Europe. This adds a healthy new component to the bright human amalgam of America. This is a new State not just in time but in outlook and in opportunity.

Hawaii, happily, still has its pioneer vigor—the drive and the dedication one finds especially in first, second, and third-generation Americans. I am convinced this helps account for the fierce pride in Americanism that distinguishes these islands. I am convinced that it helps account for the tremendous turnout at elections here. And I am convinced that it helps explain, too, the tremendous emphasis on better education for our youngsters—emphasis by parents who in many cases had to work in their early years rather than go to school and who are determined to create a better life for their children.

In Hawaii one can speak or write of the Bill of Rights and not be accused of being out of date. In Hawaii one can find families enjoying the customs and traditions and the cookery and folk dances of other lands—without the slightest conflict with their devotion to Americanism. In Hawaii one can observe and marvel at and be a part of the melting-pot strength of many nations. This is an exciting and wonderful thing.

What then is Hawaii's future? We are certain to be a wonderland to increasing scores of thousands who come here to enjoy spectacular scenery, salubrious climate and warm hospitality. But our destiny goes beyond this. For we have the duty, the obligation imposed on us by our human resources and by geography and history to spread the message of good will—of peace through good human relations—to the rest of the world, especially to those lands fronting, as we do, on the Pacific.

Consider what our stake is in Asia, how vital that continent and its islands are to the future of the world. Take population alone. India has 397 million people. Red China has 640 million. Pakistan has 85½ million. Japan, 92 million. Indonesia (which, by the way, is the sixth largest nation of the globe) has almost 87 million. Europe, by comparison, shrinks somewhat in importance when one adds up the millions of people and the millions of square miles that form Asia.

You will recall from history that Columbus was seeking the wealth of Japan and China when he landed instead in North America. After sailing from one island to another, he was sure he was finally on the right track to Japan when he put into a place now known as Cuba. It has really not been until almost the present that Americans have recognized that much of the world's fate will be determined in the cities and villages and on the rivers and farms of Asian countries. The problems of Asia are many; they are complicated. Consider these 10 points listed by William D. Patterson, associate publisher of the Saturday Review:

"1. Most people in Asia will go to bed hungry tonight.

"2. Most people in Asia cannot read or write.

"3. Most people in Asia live in grinding poverty.

"4. Most people in Asia have never seen a doctor.

"5. Most people in Asia have never heard of democracy.

"6. Most people in Asia have never known civil liberties.

"7. Most people in Asia believe anything different would be better than what they have, and they are determined to get it.

"8. Most people in Asia believe that freedom or free enterprise means the freedom of western colonial powers to exploit Asians.

"9. Most people in Asia distrust people with white skins.

"10. Most people in Asia are determined never again to be ruled by foreigners."

Now, Patterson made up that list some years ago—but it still is valid in most of the East. There are a few lands of notable exception, Japan being one. The fact is that nationalism is sweeping the people of Asia.

They intend to have no more of colonialism, no more British rule in India, no more French rule in what was Indochina, no more Dutch rule in Indonesia. The people of those lands intend to set their own destiny. For a long, long time, the native leaders of those countries have looked to America for inspiration. After all, we were 13 Colonies when we overthrew the tyranny of foreign rule in the American Revolution. As a young republic, we were weak and beset by serious problems. We had a dubious credit rating abroad. It was not until after the Civil War a mere century ago that we were even certain we had a Union.

In short, we have much in common with the nationalism that is synonymous with the free lands of Asia. Our respect for the policy of self-determination in the Philippines is an illustration. Meanwhile, the Communists pretend to be the friends of nationalism—and yet they are the most dangerous exponents of colonialism and imperialism in the world today. They impose colonialism by whatever means they regard as necessary—ranging from mass murder, as most recently in Tibet, to mass indoctrination in the false religion of Marx and Engels.

Unfortunately, while we talk, the Russians act. In Moscow they are building a massive center for the training of foreign students. Between 3,500 and 4,000 young people from Asia and Africa and Latin America will study there, with the entire cost being absorbed by the Russian Government. This augments a program that has been in progress in Peiping and in other centers behind the Bamboo and Iron Curtains. Thoroughly saturated with Communist dogma, these young people return to their cities, towns, and villages as future leaders—the Khrushchevs and the Mao Tse-tungs of tomorrow.

By contrast, what are we doing in this field? Long before Khrushchev's announcement of the Moscow student center, a similar facility for free East and free West was proposed for the University of Hawaii. The State Department sent out a survey team, which reported favorably. The Secretary of State recommended the center to Congress, but without a specific request for funds. The other day the Washington Post editorially accused the administration of "slowly strangling the whole idea." It is up to Congress to provide not only the funds but the Federal leadership if the Nation is to make effective use of Hawaii's unique potential in the field of East-West education. And we ourselves in Hawaii, through our legislature and through our individual efforts, should also demonstrate in tangible form that we recognize the worth of this project.

But education is only one of several areas of national concern in which these islands can advance the cause of freedom.

There is commerce—with Hawaii providing a natural and convenient meeting place for the businessmen of East and West to exchange ideas and products in a climate of congeniality and mutual benefit.

There is diplomacy—with Hawaii offering an ever-expanding reservoir of talent especially among those of Asian extraction. To the best of my knowledge, our country does not have a single ambassador of oriental background. I would be the last to urge that such selection be made on that basis alone. But I would be among the first to contend that here in Hawaii there are people possessed of the intelligence, the education, the insight and the devotion required for the ablest representation abroad of our great Nation.

I digress for a moment to observe that in our midst tonight is a splendid example of what I've just said. I refer to our esteemed friend, Baron Goto—and, at the risk of making him blush, I will ask him to rise for an expression of similar opinion by this audience.

I should note that one person who did not know this was going to happen was Baron. He's a credit to our family—the human family.

Yes, Hawaii has much to offer to our Nation and to our world. These islands are flowering a new American, representing the best of both East and West.

The answer is "Yes"—if the leaders of our Nation and if we in Hawaii dedicate ourselves to that objective.

We have here a fortunate measure of mankind's most precious possession—brotherhood. We are not without our imperfections, but on balance Hawaii's record in human relations is probably the world's best.

With this achievement goes responsibility and the brightness with which the democratic ideal shines in Hawaii is a yardstick of the challenge facing us—the challenge to work for peace through East-West cooperation, through East-West exchange of ideas and information, goods and services.

This challenge demands our finest effort—a fact strongly brought home by this function tonight. For these buildings, so newly dedicated, are one major organization's impressive response to the needs of our time. These buildings exist for only one purpose—the purpose of service, of contributing to better understanding through culture and commerce.

Travelers to Hawaii and residents too, will have the invitation and the opportunity to visit here, to observe ceremonials and customs that are bright threads in the rich fabric of American diversity. Businessmen will find here many services to facilitate East-West trade. And members of this Honolulu Japanese Chamber of Commerce will proudly enjoy this thoughtfully designed, graciously appointed gathering place for meetings and social functions.

Behind any such project, as this are the men who made it possible with their dreams, with their work—years of work—and with their funds.

There is not time to name all who merit appreciation, but I must mention a few. First, Harry M. Tagawa, general chairman of the building committee. Then Ralph C. Honda, Tasuke Yamagata, Edward N. Yamasaki, and Masayuki Adachi, Hideo Kawana, Clyde K. Shimada, Horace M. Sakoda, and Arthur Y. Ambo, all chairmen of important committees. A special word of congratulations to your able new president, Katsuro Miho, who assumes the leadership of this fine organization at a time when its opportunities were never so bright, its challenge never so large.

I am confident that when history records Hawaii's role in the furtherance of peace through East-West friendship, the efforts of this chamber will loom quite large, indeed. Again, my congratulations and all good wishes. Thank you.

Where Is the Money?

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. BOYKIN. Mr. Speaker, under unanimous consent to revise and extend my own remarks, I include therein what I consider a great editorial from a great paper, the South Alabamian of Jackson, Clarke County, Ala. This wonderful editorial about our great river system was published April 7, 1960. Well, it tells the story. We could go on and on about this, but I would to keep it just as this great writer has written it. Truly, I wish every man could know as much about these wonderful rivers down in our beloved Southland as the South Alabamian does, because we have more navigable miles of streams than any other State in the Union, and because our Army engineers have done so much and we have finished, of course, the great Demopolis lock and dam at Demopolis, Ala., the Eutaw, Ala., lock and dam there, and we have developed to a certain extent the Warrior-Tombigbee, and we are now working on the Coosa-Alabama and we are having a meeting this week. I do hope our great CLARENCE CANNON, who is one of the Nation's greatest statesmen, will see fit, with the help of his committee, the Appropriations Committee in the House, to approve the Millers Ferry project and the other projects that we have there.

My family and I went up, when they dedicated the great St. Lawrence Seaway, when we had the Queen of England and her husband, Prince Phillip. Well, it was a great gathering, but I could not help thinking that those beautiful waters would soon be frozen and they would not be able to use them, while our undeveloped warm waters were going to waste and on down to the sea. But it would not be long, because we are doing so much. The great Jackson lock and dam will soon be completed. We have our great docks there in Mobile that cost over $50 million—did not cost the Federal Government a cent—the taxpayers in the State of Alabama paid for it. We have our beautiful Brookley there that has made such a record—that airbase—better than any other base in the world. Well, we have a great project there; we have over 16,000 people, and our payroll and purchases amount to over $100 million a year; and we hope soon to have missiles along with the taking care of these jet and airplanes that cover the world.

These projects that my friend, the editor of the South Alabamian, tells about should have been developed 100 years ago. Well, they will be, and when they are—take, for instance, the great Tennessee-Tombigbee—when that is completed, and we have put it through the House and through the Senate, and President Harry Truman signed it when he was President of the United States—we just need a little appropriation to get it started. I think we will get it, because the Army engineers are making a survey and if they approve it, I believe the great CLARENCE CANNON, chairman of the Appropriations Committee, will give us the funds to start this project. When that is done, we will have a direct route from Sioux City, Iowa, clear on down by Cairo, Ill., through the Tennessee-Tombigbee and down to the Alabama and the Mobile Rivers, into Mobile Bay and the Gulf of Mexico. It will be a greater project than the Panama Canal or any other water project that has ever been developed in this Nation.

So I think this editorial is timely. It follows:

WHERE IS THE MONEY?

The Federal budget has been published, and taxpayers throughout the Nation have

torn themselves away from their forms 1040, 1040A, and all the other devices designed to bring the glittering flow of coin into the Federal Treasury. There were the usual billions for national defense, more billions to buy and store more farm surpluses on top of the accumulation from previous years now resting in crammed warehouses and groaning elevators. There were more billions earmarked for financing the machinery of government, still more for foreign aid, and nearly a billion for the development and protection of our national resources. This latter item was the one which was most avidly perused by thousands of Alabamians and Georgians living in the Alabama-Coosa River Basin. They knew Congress had authorized a project to develop their rivers, and the President for whom this budget was prepared had publicly stated previously that the development of these rivers, already begun by the Alabama Power Co., was an excellent example of his administration's partnership policy. Surely then it was expected that he would see to it that the funds to finance the Federal Government's initial share of this partnership project would be included in his budget.

To those optimistic people who expect deeds to follow words, this document was bitterly disappointing. There was a long list of projects of infinite variety, from wildlife studies and small boat harbors to siltation studies and hyacinth control. The dismal fact remained, however, the Alabama-Coosa River had again been ignored.

Where is the money? Are not our Federal taxes computed on the same tax tables as those of our neighbors in other States where rivers are being developed with Federal funds? Do we not send our sons to defend our country in time of national emergency? Then why are we consistently ignored when we ask for less than our share of the money, while others, no more deserving than we, are favored? Certainly it can't be ignorance on the part of those responsible for appropriation of funds because the Coosa-Alabama River Improvement Association has spent years gathering and processing facts and figures which they have taken to Washington to present to the congressional committees controlling these funds. Nor can it be from any lack of interest on the part of the business leaders of our State. Year after year these men have left their businesses and at considerable personal expense have spent long weary hours in congressional corridors and offices pleading for assistance in the development of these rivers. Is it a "pork barrel" project denied in the interest of governmental economy? Certainly not; the Corps of Engineers surveys made in 1941 showed that the development of these rivers would actually return a profit to the Federal Treasury. Again in 1958 a second study by the Corps of Engineers confirmed this fact. For the past 3 years, the Senate has approved the appropriation of the necessary funds, only to be blocked by a negative vote in the committee of the House of Representatives. The elected Representatives from the districts within the Alabama-Coosa River Basin have made every effort to win approval for the request for funds, but to no avail.

Where is the money? It is available and the decision rests with the Subcommittee on Public Works Appropriations in the House of Representatives. We, the people of Alabama, must exert every effort to influence the members of this committee in favor of the Alabama-Coosa River development.

All that stands in the way to prevent the project moving to completion is congressional approval of the funds. Let's stop dreaming and start digging. The treasure is well worth the effort. We must see to it that the necessary funds are appropriated by Congress. Let's get on with it.

World Trade Notes

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. SIKES. Mr. Speaker, I feel that the following comments by Paul L. Vogel which appeared in Trade Winds, the International House Newsletter, New Orleans, is well worthy of consideration:

WORLD TRADE NOTES

(A digest of highlights in current world trade affairs prepared by Paul L. Vogel, director of the World Trade Development Department of International House)

American businessmen would do well to closely follow the comparatively fast-moving momentum of Central American economic integration.

The past 125 years have witnessed many fruitless efforts to effect the economic and/or political unification of the five Central American States. Reasons for the lack of success have been manifest: the absence of internal communications, an unstable political climate and the diversity of cultural and social conditions. Thus, in a sense, observers through the years were not particularly surprised that efforts accomplished little.

But today, in this new decade of the sixties, any American businessman who has a stake, either present or future, in the Central American market would be acting most injudiciously were he to continue to dismiss the practical implications of current efforts toward economic integration.

The decade of the 1960's will be almost revolutionary in the strides which will be made. Highway construction to bind the Central American Republics will make more progress than in the past 125 years. Expansion of intra-Central American air service will be dramatic. Most important of all, a new look, embracing political, economic, social, and cultural attitudes will prevade all segments, all classes, of the Central American community. For the trials and tribulations endured for generations in fighting for a proper and legitimate place in the council of nations and for a reasonable share of the earth's bounty have brought about a dramatic transformation of attitudes toward Central American integration.

In a sense, the progress made toward integration during the last 10 years has been remarkable for the lack of publicity and fanfare which has accompanied it. Perhaps this has been the result of the preoccupation of most government officials and businessmen with the very much publicized development of the European Economic Community and of the Communist threat of internal subversion and external aggression which preceded it. But, undoubtedly, the paucity of publicity has also been the result of a difference in approach on the part of the five Central American States as compared to the procedure employed by the six member States of the European Economic Community.

The European Economic Community made a full-fledged appearance on the world scene with the signing of the Treaty of Rome in 1957. The signing of this treaty provided the basis for the creation of (a) a Customs Union, (b) a special Development Fund for overseas territories, (c) a European Investment Bank, (d) an Executive Commission, (e) an Executive Council of Ministers, (f) an Economic and Social Committee, (g) a Monetary Committee, (h) a European Parliament, and (i) a Court of Justice. The Customs Union carried with it a specific timetable covering 12–15 years during which virtually all restrictions of intra-EEC trade would be eliminated and a common external tariff would come into being.

In contrast, Central American efforts toward integration have proceeded from the exact opposite direction. Instead of promulgating a common market and establishing a full array of institutions and juridical bodies, the Central American Republics have proceeded to reach agreements in principle on the desirability of constructing a customs union and a common market. Within the framework of these multilateral agreements, each of five nations has then proceeded to negotiate with each of the remaining four nations to determine, among other things, the commodity areas where reciprocal tariff concessions could be made, and how to go about equalizing tariffs on goods entering from third nations. Equally important, these bilateral negotiations have dealt with the mechanics of establishing officially sponsored industries which would have unimpeded access to all the Central American markets.

A third step in these negotiations has consisted of multilateral agreements in which the concessions already made during the bilateral discussions between the respective nations have been redrawn in the form of a multilateral treaty with an accelerated timetable.

The Department of Defense Is Using College and University Talent To Entertain Our Troops Abroad and Should Schedule Them To Appear Before Students of Other Countries—Mankind Will Profit When Young Men and Women of All Nations and in Great Numbers Study and Learn Together, President Eisenhower Says

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. McDOWELL. Mr. Speaker, President Eisenhower gave top priority to a massive interchange of mutual understanding in his highly important speech at Delhi University in India last December. At that time the President said:

More enduringly than from the deliberations of high councils, I believe mankind will profit when young men and women of all nations and in great numbers study and learn together. In so doing, they will concern themselves with the problems, possibilities, resources and rewards of their common destiny.

Through the centuries nations have sent their youth armed for war to oppose their neighbors. Let us in this day look on our youth, eager for a larger and clearer knowledge, as forces for international understanding; and send them, one nation to another, on missions of peace.

The President's special international cultural exchange program has so far failed miserably to include young people from our colleges and universities in its program. Yet I am assured by Dr.

Howard Hanson, president and chairman of the board of the National Music Council, that student groups "will contribute even more importantly to the cultural exchange program than the exchange of commercial professional groups."

I have introduced legislation to provide the massive interchange which President Eisenhower has called for, and this legislation has been cosponsored by my good friend and colleague from New Jersey, the Honorable FRANK THOMPSON, JR. At the same time, the Department of Defense—which sends college and university talent abroad to entertain our troops—could schedule them to appear before students of those countries where our troops are stationed. Such a step would be a highly significant addition to our Nation's foreign policy and would be the most important step to implement the President's suggestions at Delhi University which has been made to date.

At the same time, the administration should abandon its plans to destroy the historic buildings on Lafayette Square in the Nation's Capital just across the street from the White House. These buildings could be utilized for educational and cultural purposes in the expansion of the massive interchange the President has called for. Congressman FRANK THOMPSON and I have sponsored legislation—H.R. 11678 and H.R. 11691—for this purpose too. Similar legislation has been cosponsored by Senators KENNEDY, MORSE, HUMPHREY, DOUGLAS, HENNINGS, GRUENING, MANSFIELD, and MURRAY.

I include as part of my remarks a speech on the subject of "The Arts and Sciences and International Understanding," which I made on April 11, 1960, to the members of the University Women's Club of Washington, D.C.:

THE ARTS AND SCIENCES AND INTERNATIONAL UNDERSTANDING

I am happy to have this opportunity to discuss with you the Nation's need to further develop its creative resources. This country is richer than we know in artistic achievement. The Communists, however, are telling people around the world that Americans are hardhearted materialists interested only in making money. This is strange talk from the irreligious materialists of Moscow, but it is sometimes a convincing argument to people around the world who know little of our cultural achievements. This type of Communist propaganda makes it obvious that today the United States is involved on a new front in its struggle to win the support and understanding of the world for democracy. We face a committed, energetic, formidable competitor in the Soviet Union. The Communist cause is stretching out to reach millions of persons around the world. We must compete more actively if we are to reach the minds and hearts of the youth of other countries who are to be the leaders of tomorrow.

Experience has demonstrated that military, political, and economic diplomacy, although practiced so effectively in the past, are no longer enough to win peoples' understanding. In a world whose political and military geniuses are stalemated by the discoveries of scientists, we have learned that negotiations over the green baize tables of diplomacy are only one way for nations to try to reach an understanding. Direct contacts between our people and people of other nations are essential to help dispel some of the misconceptions they have concerning the philosophy and goals of the United States.

We must provide new avenues by which we can demonstrate the American imagination and its creative force to many more of our own citizens as well as to people throughout the world. An intensified encouragement of our participation in the arts would make it manifest that cultural endeavor is an integral part of this Nation's way of life. We need to establish a cultural breakthrough at both the national and international levels. A concerted effort must be made to better display America's cultural image.

In the field of music alone, how many people realize, for example, that Americans in a recent year spent more money at the box office for concerts than they spent for baseball games; that we support in this country 1,000 symphony orchestras and 450 opera-producing groups; that over 255 educational institutions offer degree courses in music and advanced level musical training. We have a plentiful reservoir of artistic talent in this country. We should place this talent in the spotlight.

If we are going to take significant steps toward making far-reaching contributions in the cultural field, the task before us is a great one. Today, I want to discuss some of the specific actions which should be taken to accomplish these ends. If the United States is to be able to establish a cultural and scientific breakthrough around the world, we have to take definite action.

President Eisenhower gave top priority to massive interchange of mutual understanding in his speech at Delhi University last December. At that time the President said:

"More enduringly than from the deliberations of high councils, I believe mankind will profit when young men and women of all nations and in great numbers study and learn together. In so doing, they will concern themselves with the problems, possibilities, resources and rewards of their common destiny.

"Through the centuries nations have sent their youth armed for war to oppose their neighbors. Let us in this day look on our youth, eager for a larger and clearer knowledge, as forces for international understanding; and send them, one nation to another, on missions of peace."

As a corollary to this idea we must make certain that many more of America's talented young artists are included in the President's special international cultural exchange program. To achieve this end I have proposed legislation to create an actual two-way exchange program since no such cultural exchange now exists. So far, the major, if not the entire, emphasis of the program has been restricted to large professional groups and individual professional artists. Moreover, the price of tickets of admission in many instances has been beyond the pocketbooks of most people in other countries. There is some doubt that the program as presently administered is as much of a success as some of its proponents would have us believe. Under the present program the large professional groups and distinguished American artists perform in opera houses and great halls and usually for only limited engagements because of the expense.

Why should we display only that portion of America's artistic talent which draws huge impersonal audiences? Why should we play only to a world of gilded mirrors and red plush? Truly these performances do not reach the man in the street, the university student with limited funds, and the student artists in the countries around the world. It is the individual whom we must reach. Our international cultural exchange program must include our students and their teachers, community groups, and university and conservatory groups. There is not only a vast audience abroad for every one of them, but also a vast reservoir of friendship for them to tap. In addition to the professional artists, we should be most certainly sending our talented young artists and art groups on a university circuit all over the globe.

My proposal envisages an actual two-way cultural exchange program. It would support the performances of individual artists, choral groups, youth orchestras, and drama groups from other countries on their tour of the university circuit in the United States. Thus, young artists from around the world would have a chance to see this country, to learn something of our way of life on university campuses and, what is most important, have a chance to talk with other young people who have similar interests and talent. The merits of this type of exchange are undeniable for, as Isaac Stern declared at the recent International Music Conference, the most effective penetration in cultural exchange is at the youth level, on both sides.

Recently I returned from an inspection tour of the operations of the mutual security program in some 20 countries in Asia, Africa, and southern Europe. I was impressed especially by the fact that the leaders in many of these nations are very young, under 30 years of age in many cases. It is my firm belief that we can best reach the young people in other countries through a cultural exchange program such as I have described.

Van Cliburn made the most significant cultural breakthrough in the last decade, yet he received absolutely no financial help at all from the President's special international cultural exchange program.

Van Cliburn's expenses were paid with funds raised by the Institute of International Education from the Martha Baird Rockefeller Fund. Many others of our highly talented young people who could help to carry the message of international goodwill have not been able to secure such distinguished private patronage. Furthermore, the door of the Government's cultural exchange program has been closed by administrators in the Department of State who seem surprisingly unaware of the tremendous potential of the young talent in our colleges and universities.

So far the President's special international cultural exchange program has devoted almost its entire congressional appropriations to sending major professional groups abroad. The State Department overlooks the opportunity of utilizing young talented American artists in this program. This shortsightedness must be corrected if we are going to effect a massive interchange of mutual understanding through student exchanges. The legislation which I have proposed would make permanent the inclusion of young American artists in our cultural exchange programs. No longer would this endeavor be subject to the whim of individual officials or of any political administration in Washington. The enactment of this legislation would insure that a specific provision for young artists has the support of the Congress which is vital if we are to enhance America's cultural image.

In addition to the need for the Federal Government to place a broader emphasis on the arts in direct connection with international cultural activities, we should provide a means to promote among more of our own citizens a knowledge of and interest in the creative arts. For example, I believe we should establish in Washington, D.C., a national showcase program to display the very excellent fine arts programs of our institutions of higher education. The primary purpose of the showcase would be to encourage the further development and growth of all the arts in colleges and universities. The time is right to establish a permanent program to encourage our young people with interest and talent in the arts, instead of leaving their discovery—as in the case of Van Cliburn—to the U.S.S.R.

As R. L. Bruckberger emphasized in his recent book "The Image of America," "America does not always give its own creative minds the recognition due them, indeed it sometimes ignores them altogether. This is so often the case that an observer as casual as the average European traveler in America finds it only too easy to assume that in certain fields there are no creative minds. * * * In their hearts, Americans do not believe that there could ever be found among them men of such stature as Stravinsky, Picasso, and Bergson."

It is my firm conviction that we do have talent which can be encouraged through the showcase program by giving national recognition and encouragement to young American artists. The bill I have introduced is sponsored also by Representative CARL ELLIOTT, of Alabama; Representative EDITH GREEN, of Oregon; Representative FRANK THOMPSON, of New Jersey; and Senator WAYNE MORSE, of Oregon. It would inaugurate an International Olympiad of the Arts and Sciences. This program, to be held every 2 years, would present high quality international exhibitions, productions, festivals and programs in these fields. I am sure that such an enterprise would greatly strengthen the mutual understanding of the peoples of the world.

I have often been asked how I would expect the International Olympiad of the Arts and Sciences to be initiated, organized, and operated. Here are some answers to the questions that have been raised.

The President of the United States would communicate with the heads of all the nations in the world, inviting them to send representatives to Washington for a conference. This meeting could be under the chairmanship of the Secretary of Health, Education, and Welfare, who would be responsible for practical arrangements. The President would address this conference, calling upon the nations to join with the United States in competitions in the arts and sciences.

Following this conference I would expect that most of the nations would set up committees which would be responsible for arranging participation in the competitions. An American committee would work through the Department of Health, Education, and Welfare, under appropriate guidance from the Department of State. Distinguished private citizens would be appointed by the President to serve on this committee.

As I mentioned before, my bill calls for an International Olympiad of the Arts and Sciences to be held every 2 years. I would hope that the first Olympiad might take place in the new Lincoln Center in New York, and that our proposed National Cultural Center in Washington would be completed in time for the second. If a cooperating nation extended an invitation for the Olympiad, I think that this invitation should be carefully considered and accepted if approved by a meeting of representatives of all participating countries. Pending the assurance that there would be facilities for the competitions overseas, I believe we should continue to hold them at 2-year intervals in the Nation's Capital.

As I see it, the Olympiad of the Arts and Sciences could include competitions in five main fields.

First, I should like to see an international folk festival, where the nations of the world would compete in dancing and folk singing, and in displaying native handicrafts including fabrics, woodcarving, and other traditional crafts. This would help to preserve the folk heritage of mankind, a heritage which is rapidly being dissipated around the world. The industrialization of the modern world is seriously diminishing the interest of many in the folk arts. It would be a tragedy if these noble traditions were to be lost. I believe that the International Olympiad program would be a strong influence in preserving this inheritance from man's past.

Secondly, there could be festival of drama and the dance which would involve competition in the presentation of assigned classical plays, such as Shakespearean tragedy; competition in the presentation of original plays; competition in the presentation of national theatrical forms such as the Kabuki and plays of Japan; and finally, competition in classical dance forms such as the ballet. The difference between these dances and those which might be presented under the folk festival is that there are certain types of dances which are common to a variety of cultures and competition here would be on the basis of national interpretation of these classical dance forms.

There could be a music festival which would involve individual competition in all of the principal instruments in use today around the world. We should have competition in piano, the stringed instruments, the brasses, and the woodwinds. Special categories for national instruments which would make it possible for the world to become acquainted with the unique musical heritage of various cultures could be included.

There could also be a competition in painting and sculpture. Here an international body of critics might set up the appropriate categories, and select qualified judges. I hope there will be several categories, including both the classical and modern schools, and the traditional art of the world's civilizations.

The fifth competition might be in the sciences. A group of distinguished international scientists could decide upon the type of competitions to be held. It might be patterned after the science talent search and National Science Fair, which are sponsored by Science Service.

The International Olympiad could follow the tradition of the sports olympics with the lighting of the traditional flame, the reciting of the Olympic oath, and the awarding of medals.

However, I believe that the winners in the Olympiaid should receive additional prizes, such as opportunities for concert tours, gifts of musical instruments, and opportunities for additional exhibits of their artistic or scientific achievements.

Many benefits are to be derived from these contests. First, there would be an opportunity for young artists or scientists to win distinction. Secondly, people would have a chance to learn that Americans are not materialistic money-minded individuals. Finally, the world would be enriched by this exchange of artistic and scientific ideas.

Unquestionably an appropriation would be required from the Congress to initiate these contests. However, I think that there would be enough public interest after the first Olympiad to warrant reliance upon public subscription to finance future American participation. The revenue from admission to various events would be very substantial, and should go a long way toward financing the entire project.

The arts and the sciences are a universal language. We should use this language to become better acquainted with our friends around the world, and to enable them to understand us.

The milennium will have to be achieved by hard work. The alternative may be the destruction of mankind. I believe the International Olympiad of the Arts and Sciences and the two-way cultural exchange program of young artists would be gigantic steps toward more effectively promoting international stability and mutual understanding of the world's peoples.

As we go about living our busy lives today, we think of and pray for peace in our time. And as we ask for divine guidance, we should remember that it is not enough just to ask for peace—we must work for it.

Chactic and Deplorable Condition Found in the Dairy Industry

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. McCORMACK. Mr. Speaker, hearings which have just been concluded before the House Small Business Committee's Special Subcommittee on Small Business Problems in the Dairy Industry, produced evidence of chaotic and deplorable conditions in the dairy industry. This has been shown to be the case in several sections of the United States, including our own great Commonwealth of Massachusetts. The Honorable WRIGHT PATMAN, chairman of the House Small Business Committee, had appointed a special subcommittee to look into this matter. The hearings to which I have made reference were before that special subcommittee, over which our distinguished colleague, the gentleman from Oklahoma [Mr. STEED] presided. In the course of these hearings, the chairman of the special subcommittee, the Honorable TOM STEED, stated:

The Chair would like to say that in the Congress we have two types of committees that conduct public hearings. We have legislative committees and then we have the special select committees such as this one here today. Our Small Business Committee is not a legislative committee. It has been set up as a factfinding committee to keep the House of Representatives informed on troubles and problems of the small business community.

This special subcommittee deals with the dairy industry. All of the complaints that have been looked into, both from the staff and from the public hearing level, have been brought to this subcommittee by Members of the Congress at the request of constituents of theirs. We have operated in many States because this problem is a widespread problem. When price wars are involved, naturally every consumer is interested in buying what he wants at as low a price as he can get it and it is often an easy feeling on the part of the buyers that low prices are to be desired, and because of that we sometimes find ourselves in the position of, in the minds of some, of being interested only in raising prices, making the public pay more than it otherwise has to pay. That is not so. This subcommittee is not interested in prices as such. We believe that only when there is free and open competition can the consumer have quality service and prices that are fair to him, and since milk is the most widely and largely consumed item of food that we have, we feel that there is no more important industry in our country than the dairy industry, and our purpose is trying to determine the facts of the chaotic and unstable conditions we find in this industry today and to see if recommendations can be made to the legislative committees of remedies that might help insure that the traditional old tried and true American system of free enterprise can be maintained.

Mr. Speaker, it should be noted that as a result of the work of this Special Subcommittee on Small Business Problems in the Dairy Industry, two very important bills have been introduced to assist and encourage small business in its struggle to survive and prosper. Those bills

are H.R. 8841, introduced by our colleague the gentleman from Oklahoma [Mr. STEED], and H.R. 10235, introduced by our colleague the gentleman from Texas [Mr. PATMAN]. The first of these would empower the Federal Trade Commission to enter temporary cease-and-desist orders in an effort to help save small business. The other bill, H.R. 10235, would help save small business by prohibiting sales at prices below cost in certain situations where the existence of small business concerns and competition are threatened.

In the hearings before the special subcommittee, a large amount of additional evidence of the chatotic and deplorable condition in the dairy industry resulting from unfair trade practices was received and considered by the subcommittee. This included the presentation of factual evidence by Mr. Brooks Robertson, a research analyst of the subcommittee. Mr. Robertson's presentation is a brief of the conditions in the industry as he found them in making many of the spot investigations as a result of the complaints received from Members of the Congress who had, in turn, received these complaints from their constituents throughout the United States.

Under leave to extend and revise my remarks I include in the RECORD at this point the presentation of these facts as made to the special subcommittee by Mr. Brooks Robertson on April 6, 1960:

STATEMENT OF BROOKS ROBERTSON, INVESTIGATOR-ANALYST FOR THE SPECIAL SUBCOMMITTEE ON SMALL BUSINESS PROBLEMS IN THE DAIRY INDUSTRY

Mr. ROBERTSON. Mr. Chairman and members of the subcommittee, Congressman STUBBLEFIELD and Congressman JOHNSON of Colorado, my name is Brooks Robertson and I am investigator-analyst for the Special Subcommittee on Small Business Problems in the Dairy Industry of the Select Committee on Small Business of the House of Representatives.

At your request, I have prepared summaries of the results of investigations that I have made for the subcommittee in various sections of the United States where the subcommittee has not as yet been able to schedule public hearings. These investigations, as well as those which led to public hearings, were without exception made at the request of one or more Members of Congress representing the areas involved, who had received complaints from their constituents relative to alleged improper acts and practices noted in the dairy industry.

Among the Members of the House of Representatives who requested formal public hearings were Hon. JOHN W. MCCORMACK, Hon. MORGAN M. MOULDER, Hon. BYRON L. JOHNSON, Hon. CHARLES H. BROWN, Hon. JOHN B. BENNETT, Hon. E. ROSS ADAIR, Hon. JOHN BRADEMAS, Hon. RANDALL S. HARMON, Hon. CLARE E. HOFFMAN, Hon. BYRON G. ROGERS, Hon. SILVIO O. CONTE, Hon. EDWARD BOLAND, Hon. TOM O'NEILL, Hon. J. CARLTON LOSER.

Complying with requests of several Congressmen in whose districts these investigators have been made, as well as in which public hearings have been held, copies of the results, including confidential material, have been transmitted by you, Mr. Chairman, to the Federal Trade Commission or the Antitrust Division of the Department of Justice, for their assistance and guidance in looking into alleged law violations in this industry. As a result, complaints have been issued by the Federal Trade Commission and indictments secured by the Department of Justice, and it is understood that several investigations are being made at this time by these two enforcement agencies of the Federal Government.

With your consent, I shall read the summaries mentioned and request that they and the attached affidavits, statements, photographs, and other data mentioned be included in this record of the final hearings of this subcommittee during the 86th Congress.

It is also requested that the confidential and other data received during these investigations and not included in the record, be received into the files of the committee for future reference.

GREATER METROPOLITAN WASHINGTON, D.C., AREA

This milkshed includes the area within a radius of approximately 150 miles of Washington, D.C., and the marketing area served includes Washington, the three nearby counties of Maryland, and the nearby area of Virginia.

Early in 1959, the dairy industry of this area was, through the acts of the local operating division of the National Dairy Products Corporation, thrown into a chaotic condition which condition affected the entire industry in this area from the individual dairy farmer producers through the various handler levels and, of course, the consumers.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate this matter by the Honorable HOWARD W. SMITH, Member of Congress from the affected area, who had received numerous complaints from farmer-producer constituents. Complaints were also received from numerous individuals and concerns at other levels in the industry and the consuming public manifested its interest and concern as this situation was developing.

On April 1, 1959, I was directed to make an aggressive, thorough, and comprehensive investigation into this matter with a view of providing information on which might be based a public hearing in Washington, D.C., by your subcommittee. I was actively engaged in this investigation for several months, during which time dozens of interviews were held with representatives of the industry at all levels. Maryland, Virginia, and District of Columbia health officials, officers of milk producers cooperatives and retail outlets, including virtually all of the large grocery chain stores and supermarkets were interviewed. I attended numerous meetings and conferences held by the District of Columbia Commissioners and meeting held by other interested groups.

As is well known, this alleged milk price war was widely publicized by radio, television, and the press, with the two sides purchasing time and space on these media to present their respective positions to the public on this controversy.

Information obtained indicated that the largest processor and distributor in the area, the National Dairy Products Corp., had taken the position that the price of the raw product from local sources was too high and their continuing to pay it was rendering their position noncompetitive in this market. It was reported that this concern was making an effort to cause the District of Columbia health code to be relaxed to permit the importation, processing and distribution of milk from areas other than this milkshed and thus endeavor to avail themselves of a less expensive supply of raw milk.

It appears that to offset this move and thus to preserve their market, the farmer-producers acting through their marketing cooperatives, petitioned the Secretary of Agriculture to issue and make effective a Federal milk marketing order for this area which was accomplished and which became effective July 1, 1959. Under this order minimum prices paid producers for milk were established by the Secretary.

The activities of your subcommittee in thoroughly investigating and following these developments closely were well known in the industry at all levels, as well as by health officials involved and shortly after July 1, 1959, the effective date of the Federal milk marketing order, the situation started to improve. The public hearings by your subcommittee, already postponed from a tentative starting date in June, were again postponed pending further resolution of the problems noted. The greatest contribution, it is believed, to the solution of the many problems, appeared to have come from the industry itself and all segments participated. Late in July, it was decided by your subcommittee that the situation had so improved and that as all segments were endeavoring to continue this improvement, it would not be necessary to hold public hearings at that time.

Following your instructions, your staff has continued to observe and note further developments in this area and will continue to do so. Should acts or practices reoccur that would tend to demoralize the industry and the market, the information already obtained and that the subcommittee is continuing to receive, will be available for an early public hearing into the matter.

In view of the present status of the market in this area at this time, as described above, the only document offered into the record at this time is the attached statement of Mr. William B. Hooper, general manager of the Maryland and Virginia Milk Producers Association, which outlines some of the problems of the milk producers in this area and milkshed.

Mr. STEED. Without objection, his statement will be received as a part of the record.

(Above-mentioned statement not included in CONGRESSIONAL RECORD.)

UPPER BAY, SACRAMENTO AND SAN JOAQUIN VALLEY, CALIF., AREA

Mr. ROBERTSON. This area includes the cities of San Francisco, Berkeley, and Oakland, and the rather extended section north of San Francisco, the milkshed adjacent to Sacramento and the entire San Joaquin Valley south to and including the area adjacent to Los Angeles.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate the problems of milk producers and independent processors by Hon. JOHN J. MCFALL, Hon. HARLAN HAGEN, and Hon. B. F. SISK, Members of Congress representing districts in this area.

Requests for the investigation which I made during the week of October 26–30, 1959, were received as a result of complaints from the constituents of these Congressmen and from the Associated Independent Dairies of America, San Francisco, as well as from several milk producers' cooperatives concerning practices employed by the major processors and distributors of milk and other dairy products in the area described.

The Association of Independent Dairies has a membership of approximately 22 which concerns appear to be all of the independents that are left in this area at this time. This group has, since the completion of my investigation, filed a suit in the State courts of California against the major dairies alleging violations of the State law. A large percentage of the complaints received were from many independent producers presented, in some cases, through the particular cooperative to which they belong and all allege unfair treatment by the major dairies.

The situation in California is unique in that there appear to be no effective bargaining cooperatives such as found in other areas and the individual producer in a large majority of the cases has no alternative but to negotiate individually with the particular dairy to which his milk is sold. The State law provides a minimum price to be paid to producers as well as a maximum price to

be charged consumers and the difficulty in which the producers find themselves is brought about through the terms of the contracts through which the milk is purchased and the various bases of utilization as class I and class II. It is alleged that an actual feudal system is in effect in this connection and that the major dairies who purchase the raw product from the producers are arrogant and unfair to the producers in their arbitrary handling of the contracts and their determination of the usage and subsequent payments. In general, the complaints describe the agent of the purchasing dairy as submitting a contract to the producer calling for delivery of a certain percentage of his production at the class I rate, sometimes as low as 50 percent of his entire daily production. The purchaser will then require the producer to sell him the balance of his production at the class II or manufacturing rate.

There appears to be no successful appeal channel open to these producers and history has shown that if the producer objects to this usage ratio, the big dairy will cancel the contract, summarily, thus causing the producer to become a grade B producer with all of his milk going to the manufacturing plants at the low class II rate. It is further alleged that once a producer has failed to comply with the terms of the large dairy and his grade A contract has been thus cancelled, he finds it impossible to get a contract with another dairy and hence remains a grade B producer indefinitely.

Information tending to confirm these and other charges of unfair practices in the industry as described above, was received from the following:

California Milk Producers Federation, San Francisco, Calif.

DeLash Distributing Co., Patterson, Calif.

Charles J. DeMartini Dairy, Pettluma, Calif.

Pete Van Ruiten Dairy, Artesia, Calif.

Delbert F. Bettencourt, Gustine, Calif.

John Verboon, Hanford, Calif.

Jack W. Lowe, Hanford, Calif.

Wallace R. Clark, Hanford, Calif.

The information provided by the above concerns was received on a confidential basis and is included in the committee files for future reference. Additional information received and submitted herewith for inclusion in this report is as follows:

1. Resolution No. 11, dated November 2, 1959, of the Western Dairymen's Association.

2. Statement on vertical integration and contract buying in the dairy industry of the California Milk Producers Federation, dated September 29, 1959.

3. Statement of experiences of the Central Valley Milk Marketing Association with milk distributors, dated October 30, 1959.

4. Statement of Virgil E. Ernest and Nelson S. Riddle, doing business as Laurel Farms, Tulare, Calif., dated November 9, 1959.

Mr. STEED. Without objection, the material will be received for the record.

(Above material not included in the CONGRESSIONAL RECORD.)

Mr. ROBERTSON. Mr. Chairman, in reading the next summary, which concerns the southeastern Florida area, attention is invited to a more recent report given by the Honorable BYRON L. JOHNSON a few minutes ago.

This area includes cities from Vero Beach on the north to Key West on the south, and intermediate points.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate pricing practices in this area by the Honorable PAUL G. ROGERS and the Honorable DANTE B. FASCELL, Members of Congress representing districts within the area, and Mr. D. C. Daniel, executive vice president of the National Independent Dairies Association.

Requests for the investigation which I made on September 8, 9, and 10, 1959, were received as a result of complaints of constituents of the Congressmen and members of NADA concerning pricing practices noted in the area. These practices, it was alleged, involved accusations against Foremost Dairy, Inc., the Borden Co., and Sealtest Southern Dairies, a division of National Dairy Products Corp.

During the course of these investigations, information was received to the effect that the large dairies operating in the area had broken the market to the point that half gallons of milk were sold out of stores at 19 cents and in some instances at lower prices. This milk price war, being carried on at sales below cost and alleged discriminatory pricing, was proving disastrous to the smaller independent dairies. There is attached an affidavit made by Tripson Dairy, Inc., Vero Beach, Fla., a statement from the Velda Corp., Miami, Fla., and a statement from the Adams Dairy, Key West, Fla., which documents are submitted for inclusion in this report and which tend to verify the complaints described above.

In addition to the attached information, additional information has been received for the confidential use of the committee and is included in the committee files.

Mr. STEED. Without objection, the statements will be received for the record.

(Above material not included in CONGRESSIONAL RECORD.)

MEMPHIS, TENN., AND VICINITY AREA

Mr. ROBERTSON. This milkshed and marketing area consists of an area with a radius of about 30 miles from Memphis on both sides of the Mississippi River at this point.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to make an investigation by the Honorable CLIFFORD DAVIS, Member of Congress from this district, who had received complaints from his constituents, and Mr. D. C. Daniel, executive vice president of the National Independent Dairies Association, who had received complaints from his members concerning the pricing practices in this area.

My investigation, which was made August 27–30, 1959, revealed a truly chaotic condition in this market and tended to verify the complaints from the small businessmen which had been received. Four major dairies appeared to control the pricing policies in the area which, during the price war, resulted in sales below cost and discriminatory pricing. The three small independent dairies surviving this type of competition were struggling against great odds to stay in business. Here, again, as in many other areas investigated, the supermarkets and chain grocery stores appeared to be accomplices of the giant dairies in these sales and pricing programs and immediate relief was sought by the small businessmen.

Attached to this report for inclusion in the record are affidavits submitted by Meadow Brook Dairies, Inc., Cedar Grove Dairies, both of Memphis, and the Southern Guernsey Dairy of nearby Hernando, Miss.

Considerable additional information was secured relative to the milk market situation in this area and has been included in the committee files for future reference.

Mr. STEED. Without objection, the statements will be received for the record.

(Above information not included in CONGRESSIONAL RECORD.)

PADUCAH, MURRAY, AND MAYFIELD, KY., AREA

Mr. ROBERTSON. This area includes the three cities mentioned and intermediate and adjacent points.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to make an investigation by the Honorable FRANK A. STUBBLEFIELD, Member of Congress from this area, who had received complaints from constituents, and Mr. D. C. Daniel, executive vice president of the National Independent Dairies Association, who had received complaints from his members concerning the chaotic pricing situation which had developed in this market.

My investigation, which was made on August 30, 31, and September 1, 1959, revealed that in the city of Paducah, only one independent processor and distributor of milk and dairy products has survived the alleged unfair competition of certain of the nationwide chain dairies and that in the entire area the competition presented by the large dairies owned outside of this area were repeatedly reducing local competition and tending to create monopolies. Information received tended to verify these complaints as well as the complaints that large nationwide supermarket and chain grocery stores were cooperating with the large dairies with the result that in the entire area fluid milk was being sold at prices below cost of production and intra-area discriminatory pricing was apparent.

Attached hereto for inclusion in this report are affidavits from the Dairy Brand Products Co., Harrisburg, Ill., Ryan Milk Co., Inc., Murray, Ky., and the Sunshine Dairy, of Paducah, Ky., outlining the situation investigated in detail.

In addition to these affidavits, considerable other information was received tending to confirm the merits of the complaints received and are made a part of the committee files for future reference.

Mr. STEED. Without objection, the statements will be received for the record.

(Above material not included in CONGRESSIONAL RECORD.)

INDIANAPOLIS, COLUMBUS, AND MUNCIE, IND., AREA

Mr. ROBERTSON. The entire State of Indiana has been suffering from a chaotic condition existing in the dairy industry from the producer through the consumer levels in which connection reference is respectfully made to the hearings held by the Special Subcommittee on Small Business Problems in the Dairy Industry at South Bend, Ind., on July 1, 1959. The particular area, subject of my investigation on January 20, 21, and 22, 1960, includes Indianapolis, Columbus, and Muncie, Ind., and intermediate points.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate pricing practices in this area by the Honorable JOSEPH W. BARR, the Honorable RANDALL S. HARMON, and the Honorable EARL HOGAN, who represent congressional districts in this area.

These requests for an investigation were made as a result of the Members of Congress receiving complaints from their constituents concerning pricing practices noted in the area. These practices, it is alleged, involved wholesale and retail sales below cost, discriminatory pricing, and other trade practices believed to be unfair to these smaller and independent businessmen.

Cited in the complaints received are several of the large grocery chains reported by some to be in collusion with the larger dairies operating in this are, the result of which collusion appearing to be lessening of competition and thus tending to create monopolies.

Affidavits received from the following independent processors and distributors verifying the complaints received are attached and made a part of this report:

Maplehurst Farms, Inc., Indianapolis, Ind.

Hoosier Dairy Products Co., Noblesville, Ind.

William R. Roberts & Sons, Inc., Indianapolis, Ind.

Thompson Dairy, Inc., Columbus, Ind.

Hornaday Milk Co., Indianapolis, Ind.

Banquet Ice Cream & Milk Co., Inc., Indianapolis, Ind.

In addition to these affidavits, letters, and statements were received from the following

independent processors and distributors which are also made a part of this report:

Golden Guernsey Farms, Inc., Indianapolis, Ind.

Riggins, Inc., Muncie, Ind.

Mutual Milk Co., Indianapolis, Ind.

Mr. STEED. Without objection, the statements will be received in the record.

(Above affidavits not included in CONGRESSIONAL RECORD.)

PASCAGOULA, BILOXI, AND GULFPORT, MISS., AREA

Mr. ROBERTSON. This area includes the three cities mentioned and intermediate points located on or near the Gulf of Mexico.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate pricing problems in this area by the Honorable WILLIAM M. COLMER, Member of Congress, representing the area and by Mr. D. C. Daniel, executive vice president of the National Independent Dairies Association.

These requests for an investigation were made as a result of the Member of Congress receiving complaints from his constituents and NIDA from its members concerning the pricing practices noted in the area. Charges were made that through the use of milk as a loss leader, sales below cost and discriminatory pricing by the large nationwide dairies, the smaller independent dairies in the area are being damaged to an irreparable extent.

On March 17 and 18, 1960, I conducted a thorough investigation into the complaints received from this area and received information tending to substantiate the charges. This included discriminatory pricing by the utilization of unrealistic large discounts and rebates to particular customers resulting in the practice of sales below cost which, it is charged, could be designed only to reduce and eliminate the competition of independent dairies and the creation of a monoply.

There is attached and made a part of this report an affidavit dated March 24, 1960, from Suni-Land Dairy, Inc., Pascagoula, Miss., verifying most of these allegations and additional information was received from the Home Milk Products Co., Biloxi, Miss. In addition to the information hereby included in the record, other information of a confidential nature is included in the committee files for future reference.

Mr. STEED. Without objection, the statements will be received for the record.

(Above statements not included in CONGRESSIONAL RECORD.)

DETROIT AND FLINT, MICH., AREA

Mr. ROBERTSON. This area includes the eastern part of the State of Michigan, including the cities of Flint, Detroit, and intermediate points. The Special Subcommittee on Small Business Problems in the Diary Industry was requested to investigate pricing practices in this area, particularly Detroit, by Members of Congress from Michigan, including Hon. LOUIS C. RABAUT, Hon. JAMES G. O'HARA, Hon. JOHN D. DINGELL, Hon. CHARLES C. DIGGS, Hon. THADDEUS M. MACHROWICZ, and Hon. MARTHA W. GRIFFITHS.

These requests for investigations were made as a result of the Members of Congress receiving complaints from their constitutents concerning the pricing practices noted in the area. These practices, it is alleged, involve collusion between supermarket foodstores and large processors and distributors of fluid milk and other dairy products. Particularly, attention was invited to the plight of the now independent retail routemen who, until about a year ago, were employees of the large dairies, but who were forced to purchase their routes or have their employment terminated.

Several hundred of these men were thus virtually compelled to purchase their routes and have made full payment to the large dairies involved. It is alleged that within a short time thereafter, the chain supermarkets, through special discounts or other means, offered milk for sale at retail at their stores at prices below those being charged these routemen by the same large wholesale distributors.

On March 14, 15, and 16, 1960, I conducted an investigation into this situation based on the complaints that had been received. The investigation developed information to the effect that supermarkets and other retail stores were, in fact, selling milk at prices far below cost—in some cases as low as 19 cents per half gallon. At the same time, routemen were being charged from 35 cents to 41 cents per half gallon by the same wholesale suppliers, thus making an obviously impossible competitive situation. It was generally charged that the large dairies, in collusion with the large supermarkets, were willfully attempting to eliminate the home delivery service through these pricing practices and thus concentrate the retail distribution of milk in the stores.

Information confirming the situation as described herein was received through interviews with officers and members of the United Dairy Workers, AFL–CIO, Local No. 83, Highland Park, Mich., and Local No. 383, Flint, Mich. In addition, newspaper clippings, photographs, and written statements were secured and the following such material is submitted for the record: Letter dated March 21, 1960, from the United Dairy Workers, Local No. 383, Flint, Mich.; photostatic copies of supermarket advertisements taken from Michigan newspapers; and letter dated January 15, 1960, and resolution from United Dairy Workers Local No. 83, and 116 letters received from the following independent milk deliverymen described above, which letters are to be retained in the subcommittee files for future reference; letter dated April 1, 1960, from Twin Pines Dairy Farm, Detroit, Mich., and statement from Mr. Glenn Lake, president, Michigan Milk Producers Association.

Mr. STEED. Without objection, the statements will be received for the record.

(Above statements not included in CONGRESSIONAL RECORD.)

EAST ST. LOUIS, BELLEVILLE, GRANITE CITY, AND SOUTHERN ILLINOIS AREA

Mr. ROBERTSON. This area includes, in addition to the cities mentioned above, practically the entire southern half of the State of Illinois. In this general area, all of the more disturbing factors are found at all levels of the dairy industry.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate pricing practices in this area by the Honorable MELVIN PRICE and the Honorable KENNETH J. GRAY, Members of Congress representing districts within this area.

Requests for the investigation were received from the Congressmen as a result of complaints received from their constituents which included independent processors and distributors, dairy workers' local unions, individual employees of dairies employed as retail deliverymen on a commission basis, and producers. On February 23, 1960, I proceeded to this area interviewing several dozen members of the industry on all levels, completing the investigation in 4 days, on February 26, 1960.

The complaints investigated were sales below cost, discriminatory pricing and a planned program by the large national dairies to eliminate home delivery and the small independent dairies. I covered this area thoroughly and noted that in a majority of instances fluid milk was advertised in the windows and offered for sale in the stores at the ridiculously low price of 10 cents per half gallon and in some cases even less. I arranged for pictures to be taken of this evidence of this milk price war and they are attached and made a part of this report.

The most common general complaint encountered was one which I verified involving particularly the large Pevely and Adams Dairies of St. Louis, Mo., which concerns continue to flood the market in nearby Illinois with their milk at wholesale prices always below wholesale prices offered by independent dairies in Illinois regardless of the general and comparative price levels.

Affidavits were received from the Edwardsville Creamery Co., Edwardsville, Ill., the New Era Dairy, Inc., Carbondale, Ill., and the Dressel-Young Dairy of Granite City, Ill., which reflect and substantiate the complaints and which are attached and made a part of this record.

In addition to these affidavits, statements were received and are made a part of this record from the Collinsville Dairy, Collinsville, Ill., Joseph L. Powers, representing employees of the Niederer Dairy, East St. Louis, Ill., Pat Quick, representing Sealtest Dairy employees, East St. Louis, Ill., and Milk Haulers & Dairy Workers Local No. 528, Greenville, Ill.

Also submitted herewith for inclusion in the printed record are photographs taken in the area visited, advertising milk for sale at prices as low as 10 cents per half gallon. Your attention is invited to the last picture of this series taken of a sign in the window of the State Street Supermarket, El Dorado, Ill. The sign reads as follows: "Going Wild, We Don't Have Cheap Milk, But We Do Have a Bargain in Dollar Bills, We Will Give You a Dollar Bill for 75 Cents."

This comedy relief is introduced as portraying the general confusion, misunderstanding and fear that prevails in the lower economic levels in the dairy industry in this area of Illinois.

An abundance of material, including newspaper advertisements of below-cost prices, statistics and other statements of a confidential nature, were received and are being held in the committee files.

Mr. STEED. Without objection, the material will be received for the record.

(Above material not included in CONGRESSIONAL RECORD.)

NORTHWEST ARKANSAS AREA

Mr. ROBERTSON. This area includes the northwest section of Arkansas from Fort Smith north to the Missouri line and east to the area of Siloam Springs, Ark., and intermediate points.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate the dairy industry in this area by the Honorable JAMES W. TRIMBLE, Member of Congress representing the area and Mr. D. C. Daniel, executive vice president of the National Independent Dairies Association. These requests for the investigation were made as a result of the Congressman receiving complaints from his constituents and NIDA receiving compaints from its members concerning the pricing practices noted in the area. These practices, it is alleged, involve sale of milk below cost through the supermarkets, chainstores and other outlets, the excessive use of milk as a loss leader and other unfair trade practices alleged to be followed for the purpose of reducing or eliminating competition of small independent processors and distributors. Direct charges were received against Foremost, Beatrice, and other large dairies alleging unfair competitive trade practices as mentioned.

I conducted an investigation in this area on February 24, 25, and 26, 1960, and received information tending to verify the allegations made. For example, in one retail store that I visited, I received a quart of Meadow Gold milk distributed by Beatrice Foods Co., by surrendering a small coupon taken from the local paper. This milk was given away free with no purchasing performance required. This appears to be the most flagrant loss

leader use of milk that the subcommittee has encountered and presents an example of apparent collusion between the large distributors and certain retail outlets designed to provide unfair competition to the local independent dairies and their commission deliverymen. Obviously, the home delivery service of the industry in this area cannot survive a continuation of these practices.

Information confirming the practices herein described was received through interviews with officers of independent dairies, routemen, and from newspaper advertisements which are attached and made a part of this record. Statements were also received from the Dixie Dairy, Inc., Siloam Springs, Ark., and the Cottage Club Dairy, Inc., Fayetteville, Ark., which are attached and made a part of this record. Likewise attached for inclusion in the record is a picture which I had taken of the milk display case in the Thriftway IGA store in Fayetteville, Ark., on February 24, 1960, attached to which is a page from the newspaper mentioned above, which has the coupon mentioned describing the gift of one quart of Meadow Gold milk free.

In addition to the above information that is included in this record concerning this area, an abundance of additional supporting material is included in the committee files for future reference.

Mr. STEED. Without objection, the statements will be made part of the record.

(Above statements not included in CONGRESSIONAL RECORD.)

BURLINGTON, IOWA, AREA

Mr. ROBERTSON. This area includes the city of Burlington, Iowa, and all nearby points within a radius of approximately 30 miles. The population served is estimated at 40,000 and the total fluid milk product is produced, processed, and consumed within this area. Import and export of fluid milk is negligible.

The Special Subcommittee on Small Business Problems in the Dairy Industry was requested to investigate pricing practices in this area by the Honorable FRED SCHWENGEL, representing this district in Congress, and by Mr. D. C. Daniel, executive vice president of the National Independent Dairies Association.

Requests for the investigation, which I made on March 24 and 25, 1960, were received as a result of complaints from constituents of the Congressman and members of the NIDA concerning the pricing practices noted in the area. These practices, it is alleged, involve a concerted effort on the part of supermarkets and chain stores, apparently in collusion, toward the illegal control of prices of milk and in and out of the stores. The objectives are alleged to be (1) the control of pricing, (2) use of milk as a loss leader, and (3) the elimination of the home delivery feature of the industry in this area. There are three well-established and efficient independent processors and distributors in this area, all of whom are receiving 36 cents per half gallon with no quantity or other discounts admitted, and during my visit to the area the out-of-store price was 29 cents per half gallon. Obviously a continuation of this practice would eliminate the home deliverymen who work on a commission basis for the dairies and are required to sell to their customers at prices far in excess of the current out-of-store prices.

Information confirming the situation as described herein was received through interviews with managers of supermarkets, officers of the three dairies and home deliverymen employed by these dairies. Inasmuch as it appears that retaliatory pricing practices are being used against some small business concern and these retaliatory pricing actions were being used because the small busines concerns did not participate in and carry out an agreement fixing the resale price of dairy products and inasmuch as the Federal Trade Commission is presently investigating the situation in this area, no documents are submitted at this time for inclusion in the record. The statements and other information received during this investigation are included in the committee files for future reference.

MONAHANS, ODESSA, AND MIDLAND, TEX., AREA

This area includes the three cities mentioned above and some additional territory in the east central part of the State of Texas.

The Special Subcommittee on Small Business Problems in the dairy industry was requested to investigate pricing practices in this area by the Honorable J. T. RUTHERFORD, Member of Congress representing this district.

Requests for the investigation, which I made on March 19, 1960, were received as a result of complaints of constituents of the Congressman concerning pricing practices noted in the area.

Information received during the investigation revealed that very little milk is produced in this immediate area and that the requirement of this commodity is, therefore, necessarily imported from other points such as New Orleans, La., Dallas and Abilene, Tex. Thus, very little fluid milk is processed in the area and the complaints were received from local distributors of the out-of-area processors and several of the local retail stores. It appears that the intense competition for this busines has produced the use of large discounts and rebates involving discriminatory pricing in many instances. One independent businessman, having the agency for the product of a New Orleans dairy, advised that he does not grant discounts or pay rebates, but simply reduces his list price to meet wholesale and retail competitive prices that have been reduced by the discount system. The alleged cutthroat competition in this market has, in the opinion of those interviewed, resulted in below cost selling and discriminatory pricing resulting in a disastrous effect on the small distributors in the area.

Confusion and fear of reprisals and loss of business appear to dominate the small businessmen in this industry in this area and reluctance was noted on their part to document their problems. The investigation, however, produced some detailed information which was received in confidence and which is made a part of the committee files for future reference.

Mr. STEED. Thank you, Mr. Robertson.

Norfolk Cited as One of the All America Cities

EXTENSION OF REMARKS

OF

HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. HARDY. Mr. Speaker, I have the honor to represent Virginia's most populous and most progressive congressional district. My district includes America's great port city, Norfolk, which is also Virginia's largest city.

During recent years Norfolk has been engaged in a major program of improvement. Her progress has been truly phenomenal and is a tribute to the people of the city, and particularly to their officials and community leaders whose foresight, good judgment, and tireless energies have overcome tremendous obstacles and achieved almost unbelievable results.

The publishers of Look magazine and the officials of the National Municipal League, in recognition of outstanding achievements, selected Norfolk as one of the All America Cities. The award was made jointly at impressive ceremonies on March 3, with presentation addresses by Mr. Cecil Morgan, past president of the National Municipal League, and Mr. Vernon C. Myers, publisher of Look magazine. I commend a reading of their remarks to my colleagues:

REMARKS BY CECIL MORGAN, PAST PRESIDENT, NATIONAL MUNICIPAL LEAGUE, AT ALL AMERICA CITY AWARD PRESENTATION, NORFOLK, VA., MARCH 3, 1960

Mayor Duckwork, members of the city council, Mr. City Manager, Governor Darden, Reverend Brown, and citizens of Norfolk, it is an honor to be in this great city of fine tradition, participating in this celebration marked, as it is, by the display of your historic mace, the replica of which I am proudly wearing. It is a pleasure to be with all of you and to help give recognition to the accomplishments of the diligent and progressive citizens of Norfolk.

Let me begin by telling you a little about the National Municipal League and its joint program with Look magazine.

The National Municipal League is a 65-year-old organization dedicated to the improvement of government through citizen participation. It prepares studies, improves methods, conducts research, disseminates information, and is a fountainhead of knowledge and experience in government affairs.

This program—the All America City Award presentation—is one of the ways the league dramatizes what can be accomplished by informed citizens, working in cooperation with dedicated public officials.

This program was started in 1949, and is a characteristically American scheme of recognition. Each year a group of distinguished judges selects an "all-American team" of 11 players in the "game of civic progress."

Cities are judged first for citizen action—the effort and initiative shown by members of the community in working together for civic improvement.

Secondly, cities are judged by the resulting accomplishments—which must be of outstanding benefit to the community as a whole.

We are proud of the fact that since 1952, a great national magazine—Look—has cosponsored this program, sharing our desire to recognize outstanding citizen participation in community affairs.

The reasons for the All America City Contest are simple. In recent years the problems of our municipalities have multiplied many times over. Far-reaching changes have taken place in almost every area.

Population has grown; industrial development has been rapid; health, housing, education, and transportation requirements have become pressing needs. New services have become vital and taxes have increased. Often, local government has been strained to its limits in coping with this rapid change and enormous growth. Citizen participation has been essential—and our contest is designed to provide recognition to those cities where local action has been most noticeable and most effective.

Dr. George Gallup, director of the American Institute of Public Opinion, served as head of the distinguished panel of judges that selected Norfolk as one of the 11 winners. Nearly 100 cities entered the competition—so you may be sure that Norfolk's accomplishments were outstanding to place your city in the winning lineup.

You are probably interested in knowing who the other members of your All America team are. Like Norfolk, each of these cities was honored for outstanding citizen teamwork in solving community problems. They are: Alton, Ill.; De Soto, Mo.; East St. Louis, Ill.; Fargo, N. Dak.; Lamar, Colo.; San Juan, P.R.; Santa Fe Springs, Calif.; Metropolitan Seattle, Wash.; Vallejo, Calif.; Winston-Salem, N.C.

Basically, the National Municipal League attempts to help citizens help themselves. And this is what Norfolk has done. You have helped yourselves—through knowledge of your needs, intelligent planning, and just plain hard work.

The past decade in Norfolk has witnessed the unfolding of a real American drama. It began with a dismal scene, which I am sure all of you remember. It took time for leadership, organization, and an aroused sense of public responsibility to converge and bring results—but vice, disease, and slums could not be tolerated. You declared war on these evils and you more than won your war.

Today is the dramatic culmination of a decade of work, planning, and striving to make Norfolk a better place in which to live. Your imposing buildings, lovely homes, and new highways spell opportunity and comfort. Your new industrial park, civic center, and medical center will be solid testimony that you have achieved your goals.

I am sure that I do not have to caution you not to rest on your laurels. A great tradition of civic action has taken root in Norfolk. For the first time, the citizens of this city are aware of their great power to effect necessary changes in local conditions. This tradition must not be permitted to die out.

I know that the momentum that has been building up for nearly 10 years is far from being spent. Indeed, I am sure it will provide the energy for even greater achievements in Norfolk in the years to come.

On behalf of the National Municipal League, I am proud to salute Norfolk—as a powerful addition to the All America City team—a winning team in the contest for better municipal living.

ALL AMERICA CITIES AWARD PRESENTATION, NORFOLK, VA., MARCH 3, 1960, BY VERNON C. MYERS, PUBLISHER, LOOK MAGAZINE

I am here today to enter the name of Norfolk on the rolls of a distinguished company. You may have some idea, from your own experience, or how much you have to do to win an All America Award. But I can tell you that the competition is keen. For the past 8 years, I have sat on the All-America Cities jury, and have heard 178 finalists present their stories. Most of them were excellent—every one of them had high merit or the city would not have been in the finals. And this I know without any doubt: the right to bear the All America City title is an honor contended for with heat and determination by citizens all over the country. To win, you have to be better than good. You have to be superb.

So, when Look congratulates the citizens of Norfolk, those congratulations are no empty good wishes. They are based on knowledge. We at Look know what the odds are. We know that winning an All America City Award requires citizen action of a high order—action that is creative, meaningful and persistent.

Look takes great pride in the All America Cities. We are especially proud to be associated in this program with our esteemed cosponsor, the National Muncipal League, an organization which, for more than 60 years has been a powerful champion in the cause of good government.

Just 11 years ago, the National Municipal League announced the first team of All America Cities. Since that time, the annual contest has grown into something of a national institution. We truly believe that the All America Cities Awards have defined and crystallized the concept of citizen action. And they have done more by focusing the attention of the Nation on those cities which have made citizen action a way of life in their communities, the awards—and the people who have helped win them—have inspired hundreds of groups in other cities to put forth similar efforts. That applies to Norfolk, too.

I said a moment ago that citizen action, to be of the highest order, must be creative. Let me explain that in terms of your own achievement.

The world "creative" comes from the verb "to create," which Webster defines in one of its meanings as "to make, by investing with new character or functions." What could better describe the job the citizens have done in Norfolk?

Out of a city whose problems had multiplied almost to the point of disaster, a city plagued by organized vice and disease, branded for its slums by housing authorities, choked by a population boom—out of this dismal picture of a community, Norfolk citizens are creating a city with a bright new character, and investing themselves as citizens, with new functions of civic service and action undreamed of 10 years ago.

The job you are doing for your historic city has, moreover, an importance to the Nation that reaches far beyond the achievements of other winning cities. As the site of the largest naval base on the east coast, you have a special responsibility. Time and again, the motivating force for citizen action in bringing about civic improvements is the desire of parents to make a better environment for their children. You in Norfolk must think not only of your own sons and daughters, but of the kind of environment you are offering to the sons and daughters of other citizens, from one end of the country to the other. That is a large assignment—and the more honor to you that you are living up to it.

I should like to say more in this matter of responsibility. A city holding an All-America City title is very much in the national spotlight. More than that, it is in the international spotlight. Brazil for example has patterned a program of its own on the All America Cities Contest. Municipal associations in Canada, Australia, West Germany, have contacted us for details, with the idea of inaugurating similar programs. The U.S. State Department consults the list of All America Cities winners in selecting places to send foreign officials who come here to study American communities and their governments.

These things have not happened because Look magazine sponsors the All America Cities awards, or because the National Municipal League sponsors them. They have happened because the American people themselves have taken the All America Cities competition to their hearts and, in a sense, have made it their own. The voices of praise have swelled to a multitude, but by the same token, the winning cities have become the focus of watchful criticism. As never before, what Norfolk has done in the past, what it is doing today, and what it will do in the future, is being weighed and measured in the national consciousness.

It takes courage to win an All America City award. It takes courage to be an All-America City. And I speak frankly when I say that it sometimes takes courage to be the sponsor of the All America Cities awards. It is hard for us to be philosophical about it when there are backsliders. One previous winner worked hard to elect a reform administration and clean out the gambling interests, and then fell asleep at the switch. Two years later, the old guard was back doing business at the same stand. A similar fate befell the citizens of two other All America Cities. And at this very moment, the citizens of a midwestern city—twice a winner of the All America City title—are preparing to fight all over again the battle they thought they had won in 1950 and 1951, when they threw out infamous machine government. Why? Because they forgot to be vigilant. They neglected their responsibility as an All America City.

Let us not mince words. It has taken a special kind of courage this year to sponsor All America Cities Awards to communities in the South. The eyes of the entire world are turned on the situation in the South—as I am sure I need not point out. An All America City in the South is on a particularly vulnerable spot—for it already stands out as an example in the public view. How you handle your relations with all your citizens in the coming years can have a profound bearing on the respect in which American democracy is held throughout the world. Without exaggeration, it could well be one of deciding factors in the battle of the West against communism.

Norfolk now joins three sister Virginia cities on the All America Cities roster—Roanoke, Richmond, Petersburg all have won in other years. Winston-Salem, N.C., which held its celebration last year, is another "star" of the South in this year's list of winners.

I feel confident that Norfolk will stand up to its responsibilities. That your responsibilities are greater than those of other cities will not frighten you. You have already made tremendous progress, and I predict that you will continue to make progress with increasing wisdom and vitality.

In conclusion, I should like to tell you why a national magazine goes to such trouble year after year to encourage communities to improve themselves. Look's greatest concern is in people—what they do, what they feel, what they believe, what they want. It's a never-ending story, which we try to tell with warmth, understanding, and wonder. We believe in people * * * but our interest goes beyond a mere belief. We also know what people can accomplish. We know that citizens of good will working together in their community for a common end, can achieve tremendous results. We have seen it happen time and time again. If we can help keep strong the average citizen's faith in his own importance and his own power, working with his fellows, to achieve his ambitions, then we shall have been well rewarded. It is citizens of cities like Norfolk who will make us know it is possible.

This Is the Man

EXTENSION OF REMARKS

OF

HON. LEO W. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. O'BRIEN of New York. Mr. Speaker, I hesitate to burden the RECORD with a dispute over dead men's bones and to weary my colleagues with a discussion now of a bill which was passed unanimously last year by the House. But, the double task has been thrust upon me by a distinguished Member from Indiana who, on March 24, revived a claim, first circulated in 1928, that a Samuel Wilson, buried in Merriam, Ind., was the progenitor of "Uncle Sam," our national symbol.

This House, acting on the recommendation of the Committee on Interior and Insular Affairs, and by unanimous vote, passed early last summer a joint resolution honoring Samuel Wilson, of Troy, N.Y., as the real progenitor of "Uncle Sam" and declaring his grave in Oakwood Cemetery, Troy, to be a national shrine.

The statement by the gentleman from Indiana obviously was not made to influence House action, already taken, but to persuade the other body to sidetrack or kill the resolution, denying Samuel Wilson of Troy the full recognition nationally already accorded him by historians, the city of Troy, and the State of New York.

Is it not fair to ask why those who now revive the bit of Merriam, Ind., folklore were silent last year when this matter was before the House? Where were they on May 7, 1959, when the Subcommittee on Public Lands, headed by the Honorable GRACIE PFOST, of Idaho, conducted a day long public hearing on the bill which the House later passed? Where were they when the resolution came before the Committee on Interior and Insular Affairs, headed by the Honorable WAYNE ASPINALL, of Colorado, which committee passed it unanimously? Where were they when the matter was before a Senate subcommittee earlier this year, which committee subsequently approved it?

Perhaps it will be claimed that they did not know about the Troy resolution. All the wire services carried stories about it. Many great newspapers and national magazines carried feature articles about it.

A large delegation came from Troy to Washington, stopping at Philadelphia en route for well-publicized ceremonies at Independence Hall. Leading the delegation was a distinguished citizen of Troy, attired in a colorful "Uncle Sam" garb. He walked about Capitol Hill and posed for national television shots on the Capitol steps. Certainly the whole effort was not made in the dead of night.

The Troy group did not press their case with a newspaper feature story. They brought with them men who had made long and careful studies of historical fact. They included historians Thomas I. Gerson of the Record Newspapers, Troy, N.Y., Col. Edgar T. Noyes of Texas, and Dr. J. Almus Russell of Pennsylvania.

At the hearing, there was not a written word of opposition to the resolution expressing the sense of the Congress with respect to the recognition of the grave of Samuel Wilson in Oakwood Cemetery, Troy, as a national shrine.

The resolution was also supported by the American coalition of patriotic societies, the Eastern Regional Council of the U.S. Flag Committee, the National Society of U.S. Daughters of 1812, and many other groups.

As to the value of testimony submitted at the House subcommittee hearing on May 7, 1959, the Honorable JAMES E. MURRAY, U.S. Senator, chairman of the Committee on Interior and Insular Affairs, wrote to Mr. Gerson on March 30, 1960:

> I believe the record made before the House committee is complete and that it makes out a prima facie case warranting the enactment of the resolution. It is my intention to make that record available to the Indiana parties, with the suggestion that they disprove the record, if possible. If they cannot successfully challenge the record, the committee will proceed with the consideration of the resolution.

Passage of this legislation is important, because the "Uncle Sam" symbol represents very much the same in the minds and hearts of our people as does the U.S. flag, and as such it must be protected. The testimony before the House subcommittee revealed that some writers have attacked the symbol "Uncle Sam" as being archaic and suggested that it be abandoned. The enactment of this resolution would be an expression of the determination of Congress not to yield to forces which would destroy this enduring symbol.

It has been proved by testimony that the symbol of "Uncle Sam" is not the creature of a cartoonist's pen, but the result of the evolution of the American dream—as expressed in the life story of a most representative American, Samuel Wilson, who was born in Menotomy, now Arlington, Mass., on September 13, 1766, and who died in Troy, N.Y., July 31, 1854, and who is buried in Oakwood Cemetery, Troy, N.Y., where a bronze tablet marks his final resting place. Over his peaceful grave fly the Stars and Stripes maintained by the Uncle Sam's Council, Boy Scouts of America, Troy, N.Y.

The story of Sam Wilson's life is an abridged story of America. As a boy, Sam helped his brothers and sisters run the Wilson farm at Menotomy when their father, Edward Wilson, answered Paul Revere's dramatic call to arms on April 18–19, 1775, and took part in the Battle of Lexington which signaled the birth of New World freedom. Samuel Wilson, then but a boy of 8½, helped to ring the church bell and beat the drums that aroused the other Minute Men. The American Revolution had truly begun, and the Wilson family, all settlers and farmers, took an active part in it. Sam's older brothers, Joseph and Edward, Jr., fought with Gen. George Washington. Sam Wilson himself, as a boy of 14½, ran away from home to serve as a service boy with the American Army until the end of the war.

Samuel Wilson did not know it, but this was his training ground for the next war with England, the War of 1812, when he would emerge as "Uncle Sam," the symbol of an aspiring America and the embodiment of its spirit.

Young Sam was tall, lanky, and strong as a young bullock when he returned from the war. The dark fighting days of the Revolutionary War had broadened his vision, sharpened his wits. Just as Sam Wilson had spoken out against those defeatists who believed that the 13 separate and loosely joined Colonies could not win their independence from England, so he now opposed those pessimists who believed that the new Nation, perpetuated on September 17, 1787, could not survive as a weak and debt-burdened infant nation.

In February of 1789, almost penniless, Samuel Wilson and his brother Ebenezer migrated to Troy, where by dint of hard work Sam took root in the community and became known for his honesty and commonsense, wielding great influence for good.

By the beginning of the War of 1812 Sam Wilson had become prominent in the State. A tall, slender man with a "nutcracker" face, he was especially liked by children who called him "Uncle Sam." People came for miles around for his counsel. He was deeply religious, and was quoted as saying:

> The big thing is not what happens to us in life, but what we do about what happens to us.

He had left his mark upon Troy and the State of New York by the time 1812 rolled around. He had spurred the development of waterpower, championed many civic improvements—helped to give America its purpose and direction.

Sam Wilson and his brother, besides operating a brickmaking plant, a general store, and freightage service on the Hudson River—also owned and operated a meatpacking plant under the name of E. & S. Wilson," where they slaughtered 150 head of cattle a day.

In October of 1812 Sam Wilson was made inspector of provisions for the Army in New York by Elbert Anderson, Jr., the contractor for the Army. Anderson lived in New York City, and had no known holdings in Troy, other than his contract with Samuel Wilson.

Early in 1812, as the war got underway, Mr. Anderson arrived in Troy with Theodorus Bailey, the postmaster of New York City, according to Col. Edgar T. Noyes. Mr. Bailey, who represented New York State in Congress during his lifetime, had attained the rank of brigadier general in the New York State Militia. When Mr. Bailey died in 1828, according to Colonel Noyes, he left a written account of the origin of "Uncle Sam," for he had witnessed the incident that had linked Samuel Wilson who is now buried in Oakwood Cemetery, Troy, N.Y., to America's symbol.

That incident revealed that one of the visitors to the Wilson plant in Troy on October 1, 1812, asked what the initials "EA-US" on the barrels of meat stood for. A workman replied that the "EA" stood for Elbert Anderson, the contractor, and added jokingly that the "US" stood for "Uncle Sam" Wilson, or an abbreviation for the United States.

The allusion caught on and spread rapidly, for Sam Wilson was popular. He epitomized the plain American, with a devotion to honesty, self-reliance, and a passion for justice for himself and all men. The step from this to an impersonation of our country by an ideal "Uncle Sam" was a logical sequence. The term caught on like wildfire and the rest is history—history made largely by newspapers and cartoonists whose classic figure of Uncle Sam wears striped trousers, frock coat, and tall hat—

clothing typical of successful businessmen of that era.

Cartoonists of the day such as Thomas Nast and Frank Bellew joined the crusade for Uncle Sam as the symbol of our national aspirations. They were displeased with the earlier symbol of colonial America personified by "Brother Jonathan," a country bumpkin created during the Revolutionary War, who often got the best of King George. They found him just as inadequate as they did "Yankee Doodle," which had served its purpose.

The need for another national symbol was felt after America won independence, and around the turn of the century when Americans began to feel there was poetry and drama in the continental sweep of their expansion.

The Troy Record newspapers helped to bring the story of the origin of Uncle Sam to the attention of the Nation. Artists like Joseph Keppler propagated the figure of "Uncle Sam" built by Nast, Bellew, and others.

European caricaturists also accepted "Uncle Sam" with open arms, and even made him a rare target for the barbed jibes of jealous Old World nations.

Today, thanks to our testimony, "Uncle Sam" lives on for Americans as a flesh-and-blood human being, because we have accepted his origin. He is the neighbor who swaps yarns over the back fence at sunset; he is easy-walking, easy-talking. You know where you are with "Uncle Sam." And yet he remains a spokesman for all that went before him in the building of America, and all that is yet to come. For there is that sense of dedication in him, that urge of destiny running through him, because "Uncle Sam" Wilson who lies buried at Oakwood Cemetery, Troy, N.Y., faced the problems of his troubled times with faith and courage, and with a deep conviction in the glorious destiny of the United States of America which the Wilson family helped to create.

Samuel Wilson, the prototype of "Uncle Sam," never left Troy except for several years after the War of 1812 when he and a younger brother opened another meat-processing plant in Catskill, N.Y. Oddly enough, there were many Samuel Wilsons living in the United States at that time, and many of these Samuel Wilsons were mistaken for the kindly, genial prototype of "Uncle Sam" who lived at 144 Ferry Street, Troy, N.Y.

Samuel Wilson died at his home, 144 Ferry Street, Troy, N.Y., on July 31, 1854, at the age of 88. He died of old age, and was buried the next day in Mount Ida Cemetery, Troy.

Some years later members of the extensive Wilson family moved Sam Wilson's body from Mount Ida Cemetery in Troy, N.Y., to its present location in Oakwood Cemtery, Troy, N.Y.

In 1931, a granddaughter, Marion Wilson Sheldon, erected a 5-ton granite shaft to his memory at his grave at Oakwood Cemetery, with an appropriate bronze plaque:

U.S.: In loving memory of "Uncle Sam," the name originating with Samuel Wilson, 1766–1854, during the War of 1812 and since adopted by the United States.

Appended for inclusion is the affidavit of the record of burial in Oakwood Cemetery:

TROY CEMETERY ASSOCIATION,
OAKWOOD,
TROY, N.Y., *May 1, 1959.*

To Whom It May Concern:

This is to certify that, according to the permanent records of Oakwood Cemetery, Troy, N.Y., Samuel Wilson is interred in lots Nos. 46 and 47, section F, grave No. 3. The records also show the interment number as 922.

Samuel Wilson was born in Massachusetts and died in Troy, N.Y., on July 31, 1854, at the age of 87. Cause of death is listed as old age. His parents are shown as Edward and Lucy Wilson.

We further certify that his wife, Betsy M. Wilson, is interred beside him in grave No. 4 in the above-mentioned lots and section, interment No. 1642. Betsy M. Wilson was born in New Hampshire and died in Troy, N.Y., on August 20, 1863, at the age of 90. Cause of death, old age.

ELBERT A. HOFFMAN,
Assistant Secretary and Superintendent.

Elbert A. Hoffman, to me personally known, appeared before me on May 1, 1959, and swore that the above information are statistics taken from the permanent records of the Troy Cemetery Association.

MARGARET A. BRENNAN,
Notary Public.

I assure the gentleman from Indiana that I respect the memory of the old gentleman buried in his State, but there is no historical proof that he was "Uncle Sam" or that he even lived in Troy.

We have submitted full proof and we ask that the honor due "Uncle Sam" Wilson not be rejected on the basis of a bit of folklore submitted at the 11th hour.

The spirit of our "Uncle Sam" might well, in the midst of this controversy, paraphrase Shakespeare to say:

He who steals my purse steals trash;
He who steals my name steals all.

The "Samuel Wilson" said to be buried in Merriam, Ind., must have been a member of another Wilson family and not the Samuel Wilson who died in Troy in 1854 at the age of 88. According to the accounts accepted in Indiana, he was quite a patriot in his own right.

But he was not the Samuel Wilson, the original "Uncle Sam," whose family fought in the War for Independence; whose life from 1766 to 1854 witnessed the birth and progress of the United States, spanning as it did the period before the Declaration of Independence to the emergence of the United States as a world power.

On April 2, 1856, Benjamin Mann Wilson, a son of "Uncle Sam" Wilson and "Aunt Betsy" Wilson, purchased two lots at Oakwood Cemetery—because Troy was growing, and plans were afoot to use the Mount Ida Cemetery for other purposes. And a few years later, Samuel Wilson's body was disinterred and reburied in its present resting place at Oakwood Cemetery, where he lies besides his beloved "Aunt Betsy."

Hofstra College: A Community Accomplishment

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. DEROUNIAN. Mr. Speaker, I am justifiably proud of an outstanding educational accomplishment in my congressional district. This month, Hofstra College, in Hempstead, N.Y., celebrates the 25th anniversary of its founding.

HOFSTRA COLLEGE BACKGROUND INFORMATION

Twenty-five years ago, on April 8, 1935, the executors of the estate of Mrs. William S. Hofstra signed over a 12-acre Hempstead property to New York University. The following September, Nassau College-Hofstra Memorial opened its doors to 159 full-time freshmen and 631 evening students.

This was in keeping with Mrs. Hofstra's wish that the home, then called "The Netherlands," be used for the benefit of the Long Island community as a memorial to her deceased husband. At first a 2-year college, it was granted a provisional charter in 1937 to operate as a 4-year institution known as Hofstra College of New York University. Two years later, in 1939, the independent board of trustees terminated the contract with NYU and, in 1940, an absolute charter was given by the regents of the University of the State of New York to Hofstra College.

All classrooms and offices were housed in The Netherlands, the homestead renamed Hofstra Hall, in 1935. By 1938, additional acreage had been acquired and Calkins Gymnasium, Brower and Barnard Halls were erected, forming, with Hofstra Hall, the first or main quadrangle. Mason Hall, the library, was completed soon after. Today the library has 90,000 volumes.

Memorial Hall, devoted to student activities and named in memory of the Hofstra students who gave their lives in World War II, opened in 1949. Three wings have been added to the building which houses the cafeteria, bookstore, game rooms, lounges, dean of students and activities offices. The cafeteria seats 910 persons at one time and makes more than 5,000 daily sales, ranging from a cup of coffee to full-course meals.

Hofstra now has 18 buildings located on its 70-acre campus. Two additional buildings are under construction. All new buildings from the first one have been designed by one architect, Aymar Embury II.

Dr. Truesdel Peck Calkins was the first president of Hofstra. When he died in 1942, Howard S. Brower, one of the Hofstra estate executors and chairman of the college board of trustees, became acting president, serving until Dr. John Canford Adams became the second president in 1944.

The college has seen its period of greatest growth under the direction of

President Adams, a world-recognized Shakespearean authority. The only 4-year college in Nassau or Suffolk Counties to cater exclusively to the commuting student, Hofstra has no dormitories but does have parking spaces for some 2,000 cars. It is estimated that 92 percent of its 8,500 day and evening enrollment comes from Long Island.

This enrollment consists of some 3,000 day students, most of whom carry full schedules and are working toward the bachelor's degree; of 5,000 late afternoon and evening students who are employed during the day or are housewives; and about 500 students in 2 extension programs at Brentwood and Huntington.

According to a survey published in January 1960, by School and Society magazine, Hofstra today is the largest private independent college of liberal arts and sciences in this country and ranks fifth among all independent colleges, including public institutions.

President Adams is proud of the young, vigorous faculty Hofstra attracts. Of the 205 teachers serving full time, 114 hold the Ph. D. degree. Most of the 77 holding master's and the 14 with bachelor's degrees are currently studying toward the higher degrees. Two regular faculty members are on leave this year to accept Fulbright fellowships for teaching and study abroad. The part-time faculty of 157 includes many experts in their fields who are employed elsewhere when they are not teaching.

Always interested in experimentation, Hofstra will open, in September 1960, an experimental branch to be called the New College. With the help of a $170,000 grant from the fund for the advancement of education of the Ford Foundation, it will attempt to combine the freshman and sophomore academic years into one calendar year. Under the direction of Dr. Jack T. Johnson, Hofstra vice president and provost of the New College, the branch will emphasize a close faculty-student relationship and self-study. Enrollment will be limited to 120, with a handpicked faculty of 6. The branch will open in a new building at the extreme western end of the campus but it hoped that it will be moved away from the parent institution when another location is found.

Hofstra's curriculum is organized into five divisions: Humanities; natural sciences, mathematics, and engineering; social sciences; business; and education. Advanced degrees include the master of arts in a number of specializations; master of business administration; and master of science in education. The college recently announced that 1,316 schoolteachers of the metropolitan area are working toward their master's degrees in the evening program.

The Hofstra Playhouse, completed in 1958, provides a most modern and attractive setting for the numerous cultural and civic events sponsored by the college for its students and the Long Island community. The second annual subscription series of outstanding entertainers opened last fall with Katharine Cornell and Brian Aherne in "Dear Liar." The Hofstra Symphony Orchestra concerts and productions by the drama department are open to the public. The college is noted for its annual Shakespeare festival.

Other services, available not only to the Hofstra students but to the community, include a reading center for the improvement of that skill, a speech clinic, and a testing and counseling service. Civic, business, and educational organizations frequently use meeting spaces for lectures, films, and forums.

Although a commuter's college, Hofstra provides an atmosphere of campus life. Fraternities and sororities, chapters of national honor societies, and many special interest clubs abound. The memorial hall meetingrooms and lounges are used by these groups during winter months, and in the warm spring and fall the students can be found relaxing, between classes, on the well-kept lawns of the three large quadrangles. This year, most of the cocurricular groups have been busy for weeks, planning their floats for the annual spring day parade through the streets of Hempstead. Appropriately, the theme of the parade, which will complete the 25th year festivities on June 4, will be "celebrations."

Jobs for the Handicapped—Passports to Dignity

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 29, 1960

Mr. VAN ZANDT. Mr. Speaker, emphasizing the truth of the slogan, "Hiring the Handicapped Is Good Business," the 12th annual National Essay Contest selected as the theme for the 1960 National Essay Contest, "Jobs for the Handicapped—Passports to Dignity." The essay contest which closed January 31, 1960, was held in the several States and the first-place winners will enter the national competition which provides prizes of $1,000, $400, $300, $200, and $100.

It is pleasing to state that in the essay contest in the State of Pennsylvania one of my constituents, Michael Orlando, son of Mr. and Mrs. Mario Orlando, a student at the Altoona Catholic High School, was declared first-place winner among 14,789 other essays in the State contest. Michael had previously won the essay contest in the Blair County area which qualified him for the statewide competition.

The literary efforts of Michael Orlando have brought him acclaim in high school circles in the Keystone State and especially in Blair County, Pa., where labor organizations and the Fraternal Order of Eagles have been interested in providing employment for the physically handicapped. In this connection, the five prize-winning essays in Pennsylvania received U.S. savings bonds of $200 for first place, followed by the four runner-ups receiving bonds in lesser denominations. In addition to the $200 U.S. savings bond as first prize which was won by Michael Orlando he also will receive an all-expense-paid trip to Washington, D.C., to attend the President's Committee on Employment of the Physically Handicapped scheduled for May 5 and May 6. The all-expense trip is being underwritten by the AFL–CIO with the Fraternal Order of Eagles contributing the State awards and the Disabled American Veterans contributing the prizes in the national contest.

Michael Orlando's essay is a unique presentation of the theme, "Jobs for the Handicapped—Passports to Dignity," which he chose as the subject of an interesting account of the experience of a normal American couple overcome temporarily by the winds of adversity. The experience of the couple reflects an abiding love for each other and a deep and penetrating faith in God that defies all efforts to shake it for the depths of despair. In congratulating Michael Orlando for his literary triumph, I wish to salute his fine parents and the faculty members of the Altoona Catholic High School for the encouragement they have given Michael and which undoubtedly aided him greatly in his determination to emerge as the winner of first-place honors in Pennsylvania.

As evidence of the importance attached to Michael Orlando's triumph in the essay contest, he was guest of honor at a luncheon, April 5, 1960, in the Lincoln Room of the Penn-Alto Hotel, Altoona, Pa. At this point in my remarks I wish to incorporate the following news article from the April 6, 1960, issue of the Altoona Mirror which describes the victory luncheon. I wish also to include Michael's prize-winning essay as a conclusion to my tribute to his literary ability and the hard-fought laurels he has won in a field of 14,789 young Americans who took the time and study to help focus attention on the importance of realizing that hiring the handicapped is good business.

The article and essay are as follows:

[From the Altoona Mirror, Apr. 6, 1960]

ESSAY CONTEST WINNER HONORED AT LUNCHEON

Members of the Blair County Committee on Employment of the Handicapped held a noon luncheon in the Lincoln Room of the Penn-Alto Hotel yesterday to present State and National awards to Michael Orlando, a student at the Altoona Catholic High School.

Michael was local winner in an essay contest sponsored by the Blair County Committee on Employment of the Handicapped. The subject of Michael's essay was "Jobs for the Handicapped—Passports to Dignity." The local county winning essay was sent to Harrisburg where it competed in the statewide contest. Michael's essay was selected as first-place winner from among 14,789 other essays in the State contest.

A U.S. savings bond in the amount of $200 was presented to Michael by Mark Brown, treasurer of the Pennsylvania State Aerie, Fraternal Order of Eagles, representing the prize donor organization.

Framed certificates of merit from both the President's and Governor's committees on employment of the handicapped were presented to Michael by Randolph M. Clark, chairman of the Blair County committee on employment of the handicapped, and J. Murray Sheilar.

This year, for the first time, there is an additional prize to the first-place winner of an expenses-paid trip to Washington, D.C., to attend the President's committee annual conference on May 5 and 6. The AFL–CIO has underwritten the expense of the trip, which will counsist of $100 expense money and transportation costs. Lawrence Schrenk, of the Blair County Central Labor Council, representing the Pennsylvania Federation of Labor, AFL, and Charles Ferguson, of the Pennsylvania CIO Council, presented the checks to Michael for the trip.

Attending the meeting as guests of the Blair County Committee on Employment of the Handicapped were Mr. and Mrs. Mario Orlando, Michael's parents, and the Reverend Vincent A. Luther, principal of Altoona Catholic High School.

Members of the local committee in attendance were: Roy F. Thompson, mayor; William E. Jenkins, district administrator of vocational rehabilitation; John Tongue, Julius Iacurto, and Raymond Matejczyk, counselors of bureau of rehabilitation; Kermit Martz, John Fraker, and Kenneth V. Moore, Pennsylvania State Employment Service; J. Murray Shollar, Veterans of World War I; Willis Griffith, department of public assistance; Correll C. JOBS FOR THE HANDICAPPED—PASSPORTS TO DIGNITY

(By Michael Orlando)

Alice sat quickly watching her husband reading the morning paper. Instead of eating her breakfast she had let herself become entangled in a web of deep thought. On her face a clear look of admiration was visable. She was recalling the six wonderful years since Frank and she had been married.

It was true, she thought, that they had not been idle years, for together they had worked diligently to save enough money to buy their wonderful little home. She couldn't help feeling a tinge of pride in her husky husband, who in all those six glorious years had never missed a day's work at the plant and who seemed to be ever abounding in pent up energy. Yes, they had been hard years of work and worry, but the feeling of satisfaction that always comes with a job well done, was constantly there, so that together they had accomplished their task. Working mutually for so long had made them like one person, and she knew that they both felt that no problem would be too great to overcome, just as long as they faced it together.

As she sat there thinking of this, it suddenly struck her just how lucky she really was to have such a fine husband. Frank had always been kind and good to her, always being considerate and understanding, and after Joey had been born it seemed he could never do enough for her and their son.

Suddenly Frank interrupted her train of thought by lifting his head up and speaking. "You're awfully quiet this morning, Alice. Is something bothering you?"

Shaking herself back to reality she answered him. "Oh, no, Frank. I was just thinking how glad I was that we are finally settled. It's hard to believe that at last we have the home that we've wanted for so long Has it ever occurred to you how thankful we should be? We have a fine 3-year-old son, a new home, and you have a very good job that you're happy with. If someone has told me 10 years ago that I was going to be this happy, I never would have believed him. One thing, though, Frank, that has always fascinated me about you, is that you never seem to get tired of your job. Why, I don't believe in all the 6 years that we're been married, I've ever heard you say anything disparaging about your work."

Frank took a drink from his coffee cup. He paused a minute, then said, "You know, Alice, I've always told you that I have one strong belief and that is that a man's work is his life. If he obtains satisfaction from his job, then no matter what it is, it will help him to lead a happy, useful life. And he can always have pride and self respect."

Little did Frank know at the time he spoke these words that his very strong convictions would soon be put to a rugged test—a test so stiff that only a man with his spirit and determination would be able to pass. Little did Alice know that she too would be tested, not personally, but through her devoted love for her husband. Yes, neither of them realized that very close now was the tragedy that would change their lives. Here is exactly what happened.

Later that afternoon as Alice was cleaning up the dining room and wondering why Frank was late getting home from work, the telephone rang. She recognized at once the voice of her next door neighbor, Bud Hachly, who also worked down at the airplane plant with Frank and who usually rode home at night after work with her husband. She could tell by the anxious tone of Bud's "Hello, Alice?" that something was wrong and her heart beat wildly as she answered, "Yes?"

"Alice, this is Bud. Now I don't want you to get excited, but we had a little accident coming home from work." "Oh, Bud, where's Frank? Is he hurt? Where are you now?"

"We're down at the city hospital. Frank's okay. He just banged up his arm. They have him in surgery now. I wasn't injured in the accident, and I called you as soon as I could get to a phone."

Alice could not restrain a feeling of fear that was growing inside of her, and she said to Bud, "All right Bud, I'll be down as quickly as possible, good by."

When Alice arrived at the hospital,' she learned that the car had been almost demolished. Both Frank and Bud were very lucky to be alive. Bud was a mass of bruises but he sustained no serious injuries. Frank, however, had his left arm pinned somehow, and it was mangled quite badly. The doctor assured her that they were doing everything in their power to save the arm, but he would not be able to tell for a couple of hours. It seemed like an eternity as Alice waited but finally a doctor approached her. "Mrs. Harper? I'm sure that Frank is going to live, but I'm afraid he will be without the use of his left arm for quite a while, maybe indefinitely. I'm very sorry." These few words began for Alice and Frank probably the most trying period of their entire lives.

In the next few months Frank's recovery was complete except for his inability to use his arm. The doctors told them that nerves had been severed in Frank's arm and using it would be virtually impossible. Frank's strong character enabled him to take this as well as could be expected but as time passed his strong desire to get back to his job kept him in an inner turmoil. He wanted to go to his boss and ask him for some kind of job, any job, just as long as he could work, but he was afraid that he would be rejected. He felt that maybe there was no place in industry for a man with one good arm, and this gnawing fact kept him away. However, Frank had Alice, and Alice also had fight and spirit. They talked it over seriously, and at last she convinced him to act once again like a man. She prayed that Frank would not give up and quit fighting to get back to normal.

Her prayers were answered, and as they walked up the stairs to the office of Mr. Martell, the business manager of the plant, she made up her mind that even if they failed she would not let Frank give up. Her courage was great; her husband's was superb. When they walked into the outer office they were surprised to find that they were immediately accepted and taken into Mr. Martell's office. Mr. Martell listened very attentively to Frank's story, and when Frank had told him everything and bravely proclaimed his wish to go back to work, he sat anxiously and waited for a reply.

Frank was in for a great shock as Mr. Martell began to talk. "My boy," he said, "I purposely did not contact you while you were recovering for two very goods reasons. Let me explain. You see, after I heard the news of your accident from your friend, Bud, I wanted to help you in some way. It had never been the policy of our plant to hire anyone with a physical handicap; but, thanks to your friend Bud, I was enlightened. He persuaded me to look into statistics and see for myself just why hiring handicapped people can be good business. I contacted our local committee on hiring the handicapped, and the information I received was astounding. Why, statistics show that handicapped workers, when put at a job they can do, put out slightly better work than their nonhandicapped coworkers. Their accident rates on the job are no higher than other people's who are not disabled, I also learned that insurance rates do not go up because of hiring handicapped workers. I had never given this much thought, but the man down at the committee office told me that actually a handicapped person does better work than a normal worker because of his intense desire to succeed and to prove himself. This sounded like very sound reasoning to me."

A big smile broke out on Mr. Martell's face as he continued, "I'm sorry if I seemed to get carried away. It probably sounded as if I were trying to sell you on the idea of hiring handicapped people but I must admit that my ideas on the subject have been greatly changed. A minute ago I spoke of two reasons for not contacting you. The first reason was that after Bud convinced me to look into the subject requiring a little of my time, but actually my first reason only helped me to think of a very good reason for not getting in touch with you. Frank, I wanted to see if what that man at the committee office told me was the truth. You proved it to me by showing me determination and a great will to succeed. You may not realize this, but today you not only did yourself a great favor but also many other handicapped people. From now on I am going to base our policy on you. If in the coming months you show me that you can do the job we give you, then I will never hestitate to hire another handicapped person with your spirit. I wish you the best of luck, and God bless you."

Frank and Alice were spellbound, but they managed to thank Mr. Martell gratefully. That day as they walked out together they were the two happiest people in the world.

In the coming month Frank proved his worth at the plant, and now he and Alice are back to living normal lives again. As for the plant itself, well, there are three new employees there, and they are all handicapped workers but doing a fine job nevertheless.

You may wonder where a story like this came from. Well, my only purpose in writing this is that maybe somewhere a man will hear it who is in a position to profit by it and to help others profit by it through hiring them. If through my writing this, just one handicapped person is given a

chance, then I shall call it a success. My interest in this is not primarily a personal one. Maybe this would be better explained if in closing I say that it was very gratifying to see my uncle Frank and my Aunt Alice finally being as happy again as they once were.

Does Frustration Cause Drinking?

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. CURTIN. Mr. Speaker, on March 13, 1960, a very interesting article appeared in the Sunday Bulletin, of Philadelphia, Pa., regarding a young student in my congressional district. Under leave to extend my remarks in the RECORD, I desire to include the aforesaid article, which is as follows:

IN OUR TOWN
(By James Smart)

A Bucks County boy named Peter Frank drove a mouse to drink recently.

Most of the mice of my acquaintance are teetotalers, so I checked with Peter to find out what was going on.

Peter, who is 15 and lives in Yardley, is a senior at Pennsbury High School. He won first prize in the biological division of a science contest in his school district recently with a display on the subject "Does Frustration Cause Drinking?"

Peter set out to frustrate a mouse.

First he went to a store in Levittown and bought some white mice from the pet department.

Then he built a couple of cages and put one mouse in each cage.

Each cage had two drinking supplies, one of water and the other of vodka.

The two mice lived happily in their cages for two weeks while Peter made scientific observations of the normal behavior and kept a careful check on how much they drank.

Both mice, Peter admits, did take a nip now and then. None of us is perfect.

What the mice didn't know was that one of them was in a cage Peter had designed for purposes of frustrating the occupant.

The wire-mesh bottom rested on a board studded with nails, one nailhead under each square of the mesh. And to the nailheads was fastened a transformer.

The mouse in that cage could be given a harmless electric shock, just enough to make him uncomfortable. The mouse couldn't get away from the annoyance, and he never knew when it was coming.

After the 2 weeks of observing the normal drinking habits of mice, Peter started giving shocks to the one mouse every once in a while. It didn't take long to frustrate the critter.

Pretty soon the frustrated mouse began hitting the rodent cocktail (Peter's recipe—four parts vodka to three parts water).

"His alcoholic intake rose," reports Peter. "At the highest point, the mouse that received the shocks drank more than twice as much as the normal mouse."

The frustrated mouse never got drunk, Peter says. At least he never staggered around the cage or sang ribald songs.

But at times he began to show his liquor. "He would sit in the corner of the cage and you couldn't move him or excite him," Peter says.

After 3 weeks of this, Peter cut out the shocks but kept checking the behavior of the mice.

The frustrated mouse, he discovered, gradually drank less after the shocks stopped, but still drank more than the other mouse.

"I think I really proved that inescapable frustration causes drinking," Peter says.

Peter wants to be a doctor, like his grandfather. His dad is an engineer.

He read in the journal of the American Medical Association about a similar experiment conducted with cats, and that's what started him driving mice to drink.

Now that the experiment is over, he has sold the mice back to the store, where neither of them is likely ever to get a slug of vodka again.

A Failure

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. WALLHAUSER. Mr. Speaker, the recent issue of 25-year, 4¼-percent bonds by the Treasury Department, which resulted in a disappointingly small subscription, strengthens the plea of the Department for removal of the ceiling on long-term financing.

The following editorial, which appeared in the Newark (N.J.) Evening News of April 9, 1960, is persuasive, in my opinion, and I hope will be read with interest:

A FAILURE

A 4¼ percent interest rate ceiling on new issues of Government bonds may have had some validity in 1918 when it became Federal law. In 1960 the ceiling is neither defensible nor functional. This was effectively demonstrated by the U.S. Treasury's disappointing attempt to sell a 25-year 4¼-percent bond. Investors' response to the offering was indeed limited.

In announcing plans for the bond issue, Treasury officials had expressed the hope that sales would run to $500 million and even said that subscriptions up to $1½ billions would be accepted. As it turned out, investors subscribed to only $370 million worth of the new issue.

The sale's failure buttresses President Eisenhower's argument for the need of removing the interest rate ceiling. Democrats in Congress had ignored Mr. Eisenhower's request for a year, finally agreeing earlier this session to modify the ceiling. Secretary of Treasury Anderson reluctantly accepted the compromise because it gave him a little more room in which to manage the national debt.

But even this compromise was headed toward oblivion when interest rates on short-term loans began their recent decline. Senator DOUGLAS, Democrat of Illinois, leader of the opposition to redoing the ceiling, pointed to the trend in the short-term money market as proof of his arguments. But the only thing that was proved by the bond sale was that his arguments were, as Mr. Anderson politely understated it, "not well-founded."

Yet the results of this week's sale have left Mr. DOUGLAS unconvinced. He doesn't charge the Treasury with having deliberately planned the failure. Nonetheless, he does suggest that if the Treasury "had planned for failure it would have not acted much differently."

But the Treasury's failure was also the failure of Mr. DOUGLAS and his group. For, in effect, the offering of the 25-year bond at the interest rate ceiling was their suggestion. Even the callable feature, to redeem the bonds after 15 years, was on the advice of the Democrats. Hence Mr. Anderson was obliged to test the reaction of investors. Not to have done so would have been to risk congressional censure.

Africa at the Crossroads

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker—

The permanent political alinements of emerging African nations will be the decisive balance in world politics.

This statement appears in a thoughtful editorial from the Boston Traveler of Saturday, March 19, 1960.

It is a quotation from a "Report From Africa," by President Harold C. Case, of Boston University, which was inserted in full in the CONGRESSIONAL RECORD Appendix of March 23, 1960, page A2626. I include the editorial as part of my remarks:

SUMMING UP AND LOOKING AHEAD

With the nations of Africa emerging from colonial status into independence with what amounts to the speed of light—politically speaking—there's naturally a good deal of talk about helping them out.

By and large, this comes under the heading of "aid to the underdeveloped countries." Everyone seems to agree that if their newfound freedom is to mean a better life—free from poverty, illness and misery—the African states are going to need billions of dollars in capital investments.

Billions for roads, dams, powerplants, factories, hospitals, railways, airports, docks, TV and radio networks. Billions to build a 20th century civilization out of the tropical undergrowth, tribal customs and hopes for tomorrow of a vast, untapped continent.

Of course, it depends on where you live whether you believe all those billions should be dollars or rubles.

Africa—enormous in size, bigger than the United States, China, and India combined, with 230 million people and the richest undeveloped resources on the fact of the earth—is certain to become one of the major arenas of the cold war.

The Communist struggle to win friends and influence people has already begun on the Dark Continent, despite warnings by both African and Western leaders on the hazards of extending the competition.

Among the most recent of those warnings was one sounded this week by Boston University President Harold C. Case, just back from a 2-month tour of Africa. He said:

"Africans are moving at a dangerous pace, around uncharted political curves, on undeveloped economic bush trails. They lack educated leadership. They are risking much. But they are determined. The magic word is 'independence.'

"We should not be maneuvered into the position where our assistance of any sort appears to be forced by the growing interests of the Soviets in African nations.

"On the other hand, to assert that Communist influence in Africa is negligible or that the Soviets are not utilizing all methods at hand to capitalize on this social revolution is to be both naive and blind."

One of the most obvious areas of Communist penetration in Africa is the small west coast nation of Guinea. When the French, angered because the natives voted against remaining in de Gaulle's French community, pulled out fast in 1958, they took everything with them, leaving an economic vacuum.

Reds—not just Russians, but representatives from Czechoslovakia, Poland, Hungary, East Germany, and Red China—swept in almost overnight to deluge the new Marxist-trained Premier Sekou Toure and his people with good will, good offices and goods—consumer and capital.

As a result, Guinea last week became the first officially non-Communist nation to extend formal recognition to East Germany.

It was clear that the West had been bested, at least temporarily, in this important foray, even though Guinea's Toure insists he is neutral in the cold war.

Another thing that became abundantly clear during the past month was that Russia intends to offer a good deal more than material goods in her package of "aid to the underdeveloped countries."

Premier Khrushchev announced the establishment at Moscow of a university for African, Asian, and Latin American students, all expenses paid, including transportation and generous living allowances.

They'll start off with 500 students, he said, and work up to 3,000 to 4,000.

There's no question but what the opportunity for free higher education will appeal to the young people of Africa. As President Case learned there:

"Education is respected and sought more universally than any other modern influence."

And as the Boston University prexy warned:

"The quality, kind and philosophy of education will shape Africa's future. Whoever shapes the mind, will fashion the nation. * * *

"The permanent political alinements of emerging African nations will be the decisive balance in world politics."

It was against this background that Dr. Case proposed a better plan for U.S. aid to African education, with opportunities at the university level as its keystone.

"There are more than 1,900 colleges and universities in these United States," he said. "Unlike the Russian proposal of a future fulfillment, these well-established, accredited institutions could achieve an immediate educational victory by agreeing to accept an average of two African students for full-time study, each with tuition, board and room provided by the college for a period up to 4 years.

"Announced now, the plan could become effective in the fall of 1961. * * * The effect on African countries in a decade would be phenomenal."

Compared with the proposals that we and our allies—on one side—and Russia and the Red bloc—on the other—pour mountains of money into Africa to develop its industrial potentialities, Dr. Case's educational suggestion is a modest one.

But in both the long and the short run, it may prove just as effective.

It is in line with a plan of U.N. Secretary General Dag Hammarskjold, who also emphasizes that men are more important than money and machines in developing and preserving free economies and free governments.

Aware of the tremendous need for competent administrators and civil servants in nations shaking free from colonial masters, Hammarskjold asks a special African fund to enable the U.N. to train such leaders among the natives and, until they are trained, to provide U.N. experts for the task.

Just as U.S. universities are admirably equipped for the educational program, so the U.N. is especially suited to furnish administrative and technical help—provided, of course, such an understanding never runs afoul the veto weapon.

Multiple Use of National Forest Lands

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 5, 1960

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a penetrating editorial, "Quiet War Between Federal Agencies," from the Portland (Oreg.) Journal of April 3, 1960.

The wisdom of the Congress in enacting Public Law 85-470, establishing the National Outdoor Recreation Resources Review Commission, is evidenced once again as that agency, now studying the outdoor recreation resources of Federal lands, is identified as a prominent source of information needed by Congress to resolve emerging policy issues in the management of Federal lands.

The friendly rivalry between two major Federal agencies administering outdoor recreation has evidenced itself in various ways, and is reflected in pending legislation pertaining to multiple uses of national forest lands. I join with the editor of the Journal in hoping that the rivalry will not become disruptive or lead to unwise action inconsistent with worthwhile aims.

The editorial follows:

QUIET WAR BETWEEN FEDERAL AGENCIES

The American public is well aware of the competition among the three chief military branches, Army, Navy, and Air Force. Establishment of an overall Defense Department and Joint Chiefs of Staff has sought to minimize these differences, but nevertheless they continue, manifesting themselves in battles for the defense dollar and for ascendancy in our defense posture.

The public is less aware of the quiet war now going on between two civilian branches of the Federal Government, the U.S. Forest Service and the National Park Service. For the most part, it is fought with a great deal of restraint, and one has to keep his eyes and ears open to see the battlelines.

It has not disrupted friendships between personnel of the two services, and a great deal of mutual respect remains, but outsiders who know and like employees of both services sense that each is intensely loyal to his branch in those areas where they conflict.

The conflict comes in the competition for land to meet growing recreational demands caused by rapidly rising population and increased leisure time.

The Park Service is well along in its Mission 66 program, inaugurated when the late Douglas McKay was Secretary of the Interior. Its purpose is not only to improve existing parks and services but to expand its system. Some of the land it needs for expansion is in the hands of the Forest Service.

The latter does not look with favor upon parting with its land. It has its own Operation Outdoors program designed to improve and expand the recreational phase of Forest Service management. It fears that the Park Service wants to become the exclusive Federal recreation agency. It is determined to stay in the recreation business. This is one of the motives behind the recent Forest Service multiple-use bill which would give congressional authority to present Forest Service multiple-use practices, in which recreation has a prominent place.

The National Park Service has not made clear how much Forest Service land it wants, but a number of outdoor recreation organizations have made proposals for transfers, including vast acreage in the Oregon and Washington Cascades, which would add up to 10 million to 15 million acres. Some Forest Service people think the Park Service is covertly backing the outdoor organizations in these proposals.

The weapons in this quiet war are generally limited to dignified statements. They include debates over the terms "multiple use," "primary use," and "single use."

"Multiple use" is the watchword of the Forest Service, and some in this agency have been known to make disparaging remarks about the Park Service's policy of "locking up" land for "single use." The Park Service replies that "multiple use" is a misleading term, that every area has a "primary use," whether it be timber-cutting, grazing, or recreation, and other uses have lesser or nonexistent values. It contends there is really no such thing as "single use."

The term "multiple use" is ofen misunderstood. It does not mean the attaching of equal values. Here is a Forest Service definition which indicates the two agencies may not be far apart in their understanding: "A forest may have major value for saw log production with intermingled values for recreation, water yield, grazing by domestic livestock and wildlife and mining. Another forest may have little timber production but have vital recreation and watershed values. Actually there are innumerable combinations of use varying with the area and the combination of resources formed thereon."

The outsider is reluctant to take sides in this quite war. Because if he knows both agencies, he respects them both and sees great value in what they are trying to do. This newspaper has supported the proposal for a National Park Service seashore recreational area in the Oregon dunes. This would involved taking some 12,000 acres of Forest Service land, and the Forest Service opposes it. However, this is only one tiny battle of the overall war. The Journal would want to take a hard look at some of the other proposals.

Certainly it believes the Forest Service should remain in the recreation business. But it understands the need of the Park Service, which has a concept of recreation based on the preservation of some of the Nation's most outstanding natural features, to expand.

These are matters which, as Richard E. McCardle, chief of the U.S. Forest Service, has pointed out, will ultimately be decided by Congress, probably with guidance from the Outdoor Recreation Resources Review Commission, now making a study which will be completed in 1961. Meanwhile, one hopes that the waging of the quiet war will not prove disruptive in the attainment of airms which will be best for the country as a whole.

Ed Koterba Named Reporter of the Year

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. CUNNINGHAM. Mr. Speaker, members of the Thirty Club, an organ-

ization made up of former employees of the Washington Times-Herald and the International News Service, both of which have passed on to a journalistic limbo, held their sixth annual reunion on March 18, 1960, here in Washington.

The highlight of this reunion is the award of a specially made portable typewriter to the newspaperman who is voted "reporter of the year." The award has been founded in perpetuity by the Royal-McBee Corp., and its presentation each year by the Thirty Club for outstanding reporting already has raised it in prestige to the point where it is a universally sought-after prize.

I am happy to report that the winner of the 1960 Thirty Club award is a young man whose hometown is also my native city, Omaha, Nebr. His name is Ed Koterba, and in winning the award he joins such other journalistic notables as Bob Considine and Edward T. Folliard.

Ed Koterba is well known here on Capitol Hill, where he spends most of his time when he is in this country, and his human stories about those of us who serve in this body are read throughout the Nation.

Ed was awarded the Thirty Club prize this year for an exceptionally well done series of articles out of Czechoslovakia which I am certain many of my colleagues will recall. These stories, as are all the others Ed Koterba writes, were penetrating, human and revealing. They afforded many of us a better insight into the emotions and feelings of those who live behind the Iron Curtain than all the straight news stories combined. Ed Koterba's ability to find and interpret news where others fail often affords the public a better understanding of the issues facing our Nation.

Although it would take far too much time and space to include the several stories Ed Koterba wrote out of Czechoslovakia, under unanimous consent I include in the RECORD a column of his which appeared in the Philadelphia Evening Bulletin on March 16, 1960. This column displays as well as anything I can cite the manner in which this young reporter from Omaha emphasizes some of the greatest dangers facing our Nation by means of journalistic portraiture—the painting of personalities who make the news.

His column follows:

SOUND DOLLAR MAN

(By Ed Koterba)

WASHINGTON.—Pick up the phone and ask the man at Treasury what the national debt is today. He reels the figure off as painlessly as a string of bingo numbers: $290,204,675,870.58.

That is the deepest we've been in the hole in all history. Tomorrow it may be even deeper.

You stop by the Bureau of Labor Statistics to check on the latest soundness of our dollar. You find the dollar, worth 100 cents in 1939, is now worth only 46 cents. It's never been worth less.

With a buck that's more than half shot before you earn it, and with taxes taking about a fourth of what's left after you get it, what are the people doing about it?

Nothing much, except complaining.

ONE-MAN PROTEST

One fellow out in Oklahoma City had been getting so worked up about it that he finally hopped on an airplane and came to Washington for a 1-day stay to do something about it.

He started up a national "I'm for a sound dollar" campaign.

Coming up to meet him, I expected to find a crackpot-type. A phony patriot the likes of which Washington often unwittingly plays host to. Instead, I found a lanky, wide-eyed, country boy type who honest-to-goodness hopes to rouse the country against wasteful Federal spending.

His name, Bayard Auchincloss. He is a science teacher, a World War II ace, 38 years old, the nephew of a U.S. Congressman, and a descendant of Peter Stuyvesant, the peg-legged mayor of New York when it was New Amsterdam.

CAMPAIGN'S OBJECTIVE

AUCHINCLOSS is wealthy but he's conservative with the dollar. Nevertheless, he's financing the campaign with his own dollars.

His big, wide, ambitious plan: To recruit every man and woman in the country who's against inflation into bombarding Congress every time the taxpayer spots a news story that tells about some proposal for wasteful Government spending.

This modest, soft-talking father of four small children actually started his self-financed organization going last month in Oklahoma City. He placed petitions in Oklahoma City banks, hotels, and other places, and in those few weeks got 5,864 signatures.

He's willing to send these petition-pledge forms to anyone writing to him in Oklahoma City. When he get 2 million or so signatures he'll photostat them and badger our lawmakers with them, proving how intently America wants a sound dollar.

CAR STICKERS, TOO

He's also sending out thousands of red-white-and-blue automobile stickers—which he paid for himself—that announce: "I'm for a sound dollar."

"They get people to thinking," he said, "and that's all I'm aiming for."

It's so rare that a truly conscientious and sincere fellow comes along aiming to help his country rather than himself, that you get suspicious about his motives.

Just what did he expect to get out of it for himself? "The satisfaction that I've done something worthwhile," he said.

I'm in his corner 100 percent. I hope he gets those 2 million signatures.

F.D.R.: An Assessment 15 Years After

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. McCORMACK. Mr. Speaker, Franklin Delano Roosevelt is one of the great constructive figures of history.

In my remarks, I include a splendid article about Franklin D. Roosevelt written by Henry Steele Commager, appearing in the Boston Sunday Globe of April 10, 1960.

F.D.R.: AN ASSESSMENT 15 YEARS AFTER

(The author of the following article is one of the foremost historians in the United States. He gained such stature largely as a professor of history at Columbia University from 1939 until 1956; currently he is professor of history and American studies at Amherst College. He also is the author of a number of books in his chosen field, and is the editor of the 40-volume "The Rise of the American Nation," in process.)

(By Henry Steele Commager)

A whole generation has grown up and come to political maturity since the death of President Roosevelt 15 years ago—on April 13, 1945.

Already Roosevelt belongs to history, rather than to politics; already it is a bit difficult to understand the passions and the fears that he inspired; now we can assess him objectively, he who was the object of almost limitless execration and almost limitless admiration in his own lifetime.

Thus we can see now that Roosevelt himself was far from a revolutionary, or even a radical.

He was, in a very deep sense, conservative: conservative in his feeling for tradition; conservative in his passion for saving the land and the natural resources of the Nation; conservative in his sense of the obligation of the whole of society for the health of all of its parts; conservative even in his economic experiments.

The New Deal was just what the name implies: a new deal of old cards—a deal where the cards would not be stacked in favor of privilege and of wealth. Certainly the Rooseveltian program was a culmination of half a century of historical development, and of American development.

The two major contributions of the Roosevelt years traced their beginnings back to the 1890's: the growth of governmental regulation and of the welfare state, and the emergence of America as a world power. If we contrast the Roosevelt years with the 12 years of Republican rule that preceded it, this is not clear. But if we look back to the Populist Revolt of the nineties the Square Deal of Theodore Roosevelt, and the New Deal Freedom of the Wilsonian era, the historical precedents of the welfare state are clear enough.

And if we look back to the emergence of the United States to world power in the nineties—the Spanish War, the annexation of Hawaii, interest in the Panama Canal—and to the large policies of T. R. and the sense of power and of obligation that animated Wilson, the background of F.D.R.'s foreign policies are familiar, too.

FIVE GREAT DOMESTIC FEATS

What are the great and lasting achievements of the Roosevelt administration? We can distinguish five important achievements in the domestic realm.

The first was the restoration of confidence—"We have nothing to fear but fear itself"—and of vigor in government; the revivification of the national spirit, the restoration of interest in political processes, the reassertion of faith in democratic processes.

The second was the physical rehabilitation of the Nation: of soil and water and resources. Three million young men in the Civilian Conservation Corps planted 17 million acres in new forests, built 6 million check dams to halt soil erosion; the Resettlement Administration moved farmers off marginal lands; the administration planted a shelter belt of trees on the high plains 100 miles wide; the TVA—most important invention in the political arena of the century—became a laboratory for regional reconstruction not only in America but throughout the globe.

The third was human rehabilitation. Coming into office at a time when 10 million unemployed walked the streets in a vain search for work, when two-thirds of the banks had closed down, when farmers were becoming tenants, and homeowners losing homes, schools and libraries and public services closing down, Roosevelt adopted the principle that the Government was ultimately responsible for the welfare of society. Translated into legislation this meant large-scale relief, unemployment insurance, the

prohibition of child labor, minimum wages, and maximum hours, slum clearance, the guarantee of savings, aid to desperate homeowners, relief and support to farmers, support to public health programs and to school programs—in short the creation of a welfare state.

Fourth was the restoration of health to business and industry and finance—regulation of business and support to business, the devaluation of the dollar to put a stop to deflation and start income spiraling up; Government guarantees to banks; pump priming in industry—that whole body of legislation and policy which business itself fought tooth and nail but which contributed so much to the restoration of prosperity and which business now takes for granted: who now would repeal the securities exchange legislation or the provisions for guarantee of bank deposits?

The fifth major achievement was in the political arena, and embraces a number of important developments. It includes the steady trend toward Federal centralization; the strengthening of the executive power; the restoration of equality between the political branch and the judicial; the revitalization of the political parties; the strengthening of the civil service and broad governmental reorganization; some advance in civil rights—though not much; and the revival of interest in and participation in politics.

AN INNER LOGIC, COHERENCE

At the time much of this program seemed breathless and even haphazard; we can see now that it had an inner logic and coherence. For Roosevelt was confronted with two tasks that did not permit delay.

First with a desperate crisis in the economy—and through it in the social and political functioning—of the Nation, and second a 12-year lag in social welfare legislation. He had to move swiftly, and on a broad front.

But soon there was more to it than even this, for the rise of totalitarianism abroad made it clear that nations that lost their economic and social health quickly lost their political and moral health as well. As Roosevelt said in a fireside chat of 1938:

"Democracy has disappeared in several other great nations not because the people of those nations disliked democracy, but because they had grown tired of unemployment and insecurity, of seeing their children hungry while they sat helpless in the face of Government confusion and Government weakness.

"Finally in desperation they chose to sacrifice liberty in the hope of getting something to eat. We in America know that our democratic institutions can be preserved and made to work. But in order to preserve them we need * * * to prove that the practical operation of democratic government is equal to the task of protecting the security of the people."

This Roosevelt and his associates did prove. And, however vehement the hostility to his measures at the time, no one now doubts their validity or desires their repudiation.

Social security is here to stay—and the Eisenhower administration boasts that it has extended its coverage. The TVA is here to stay, and no one proposes to dismantle it. No one would restore child labor, or abandon the regulation of Securities Exchanges, or go back to the primitive warfare between labor and capital that disgraced our earlier history; in fact, no single important part of the New Deal has been abandoned in the past 15 years.

Roosevelt is more than a national figure, he is a world figure—the only one to take his place with Washington and Lincoln and Wilson, the only one certainly known in Latin America and Asia and Africa for his contributions to democracy and freedom. The United States had retreated into isolation in 1920, and did not begin to emerge from the untenable position until the late thirties.

Roosevelt himself had not at first appreciated the gravity of the threat from military dictators in Europe and in Asia, or the extent to which the cause of freedom and self-government was linked together from continent to continent. The brutal invasion of Manchuria and then of China proper by Japan; the reckless destruction of constitutional government in Germany by Adolf Hitler, and his violent repudiation of international obligations and of morality; the rise to power of Mussolini who launched his planes against hapless Ethiopia, sent his legions into war-torn Spain, and tried to recreate in the Mediterranean the ancient Roman Empire—these developments brought home to Roosevelt the true nature of the crisis of our time.

THE ARCHITECT OF VICTORY

In his famous quarantine speech of 1937, Roosevelt tried to rally American opinion to active hostility to totalitarianism, but in vain. Only with the coming of open war in 1939 was he able to arouse Americans to a sense of the gravity of the danger that confronted them.

He persuaded Congress to repeal most of the neutrality legislation that helped only the aggressors; he threw the whole of our moral force on the side of China and France and England and the little nations that had been overrun; he devised the new technique of aid short of war—above all the remarkable invention, lend-lease.

None of this saved the stricken democracies of Europe, but it did two things: it bought time until the New World could step forth to the rescue and liberation of the Old and it united American opinion so that when the day of infamy arrived, the United States was ready to play her part in war and in the postwar settlement.

Roosevelt himself was, more than any other single wartime leader, the architect of victory. It was he who made the all-important decision to defeat Hitler first, rather than to defeat Japan first; it was he who had enough confidence to believe that the United States could fight a war in three areas—the Atlantic, the Pacific, and the Mediterranean. It was he who understood the importance of the Atlantic lifeline; who got the supplies and arms to Britain; who realized the necessity of cooperating with the Soviet, which was engaging by far the largest part of Nazi might; who held off the invasion until the participating nations were ready; who saw the importance of the nuclear weapon and gave the word—and provided the money—to go ahead with it .

As he was the architect of victory, he was the architect of peace, or of such peace as was possible in a war and hate-stricken world.

During the years of war he managed to avoid most of the errors of the First World War. He associated intimately with our military allies and laid the groundwork for the United Nations. He did not postpone the practical details of international organization, but in a series of conferences worked out those details to their solution. Instead of antagonizing the Congress, he carried that august body with him; instead of making the United Nations a party issue he enlisted both parties in its support.

A RESPONSE TO COURAGE

What of Roosevelt himself?

He takes his place indubitaly in the gallery of strong Presidents, and of great Presidents. Coming to office at a time when the foundations of the Republic seemed threatened, he restored confidence and proved that democracy could act as efficiently as totalitarianism.

A liberal, he put government at the service of the people; a conservative, he pushed through reforms designed to preserve the natural and the human resources of the Nation.

He saw that politics could regulate the economy, not the other way around, and he saw, too, that politics was an art; perhaps that was because he was an artist. He repudiated isolation, unified the American people on the great international issues of the day, and furnished a war leadership that was bold and successful.

All this his countrymen understood, and four times they elected him to the Presidency. But they understood him and admired him not only on the exalted plane of principle.

No assessment of Roooosevelt that left out the man himself would be valid. The devotion which he inspired was a tribute to the palpable sincerity of the man. It was a response to the confidence and buoyance which permeated his public as well as his private character.

It was a response to courage, not only physical but moral. It was a response to inventiveness and ingenuity, to the quarterback technique, to boldness and audacity. It was a response to something that had been missing for many a year—to gaiety and humor, a sense of life and adventure. It was a response finally to Roosevelt's own high confidence in his fellow Americans.

To those qualities the American people still respond.

Joseph A. McLaughlin Teaches Youth the Meaning of Our Flag

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in the Carondelet section of St. Louis, Mo., Mr. Joseph A. McLaughlin, a retired civil engineer, has been striving to bring the meaning of the American flag to the children of his neighborhood, and to the grownups as well. With simple but meaningful ceremonies, Mr. McLaughlin daily raises and lowers the flag on his backyard flagpole. In these ceremonies he is joined by the neighborhood children who learn love of country and flag in this participation.

I had the privilege of obtaining for Mr. McLaughlin, in the early days of his project in patriotism, a flag which had been flown over the Nation's Capitol. I am proud to have been a part of his worthwhile endeavor.

At this point I would like to insert an article that appeared in the St. Louis Post-Dispatch describing Mr. McLaughlin and his efforts to encourage good citizenship:

HE TEACHES CHILDREN WHAT FLAG MEANS

(By James Millstone)

A crisp breeze whipped the flag atop the 22-foot pole in the McLaughlin rear yard. Mike Miano shivered in the December chill. He watched the flag for a minute, a worried look clouding his large, dark, 6-year-old eyes.

He turned to the white-haired man standing nearby.

"Mr. McLaughlin," the boy said, the words tumbling out, "I think the flag should be at half-mast because Walter Williams died, and my mother said he was the last Civil War

soldier, and President Eisenhower said that flags should be at half-mast."

The white-haired man looked into the thin, serious face. Then he said, "You're right Mikey. Let's you and I go take care of it. We'll take off our hats in honor of Mr. Williams, and you lower the flag to half-mast."

The ropes were low enough on the flagpole so the boy could reach them. The two of them—the white-haired man and the little boy—removed their hats as the flag came to half-staff.

Joseph Aloysius McLaughlin hardly felt the chill wind on his face because of the warmth that this simple act kindled inside. To think that this small child could care enough to notice the position of the flag.

To Joe McLaughlin, that was one of the most satisfying moments of his 67 years. It was concrete proof that he was making headway at his self-imposed life's project: Teaching children the meaning of the Stars and Stripes.

The idea had been kicking around in his head for a long time. To Joe McLaughlin, it seemed that too many people took their country and its emblem for granted. Children were growing into adulthood with no real understanding of their heritage.

The answer came to him last fall out of a fit of despondency.

"We had just come home from my brother's funeral," he related, "and I was depressed. I looked out in the rear yard. There was a golden sunlight shining in the yard, and I said to my sister, Mildred, 'Let's put up a flagpole.' She said, 'OK, let's get started.'"

McLaughlin went out and bought two lengths of pipe, coupled them together, applied a coat of gray paint and attached ropes.

The children in McLaughlin's south St. Louis neighborhood dropped by to watch him. He made no secret of what he was doing. The children wanted to help.

"They dug the hole," he said. "They took turns digging until they got to 3 feet. One of the littlest kids kept getting in the hole, and when her head came up to the top, we knew that was 3 feet. We set the pole in and poured concrete in the hole."

McLaughlin then gathered the youngsters together, fed them lemonade and ice cream and told them the purpose of the flagpole.

"I said, 'You're all going to learn what this flag stands for. You're going to raise the flag every morning and take it down at sunset.' I never dreamed they'd get so enthusiastic. They haven't missed a day since we started, except when it was raining. It's amazing how they took to that flag."

Sixteen children from 3 to 12 years old clamored for the honor of raising and lowering the flag. McLaughlin worked out a schedule assigning two children to the task each weekday and three on weekends.

Promptly at 8 a.m., the children on duty appear in the McLaughlin yard at 449 Dover Place. They hoist the flag to the top of the pole, and go about their business. They return at sunset to lower the banner, fold it as McLaughlin taught them, and deliver it to the youngsters who are on duty the next day.

The routine varies only on special occasions. The first of these occurred when the pole was dedicated last September 11. McLaughlin invited everybody in sight, including Congressmen, aldermen, and neighbors. The Congressmen sent their regrets, and the neighbors sent their children, some 70 of them.

The number tripled for the next occasion, George Washington's birthday. This time most of the youngsters brought their parents. Even McLaughlin was astounded at that crowd. A Marine Corps color guard led a parade around the block, and short speeches were delivered by Joe McLaughlin and Frank K. Harris, secretary of the Carondelet Improvement Association. McLaughlin's yard was too small to hold the throng.

"Oh, brother," McLaughlin said, "When I started this project, I thought if the kids in my neighborhood would learn the flag, I'd have accomplished a great thing. But when I looked out and saw them coming from all directions, it was more than I had ever hoped for."

Joe McLaughlin's little project has attracted attention. He has received letters of praise from Vice President RICHARD M. NIXON ("I feel that it would be a fine thing indeed for our younger citizens to take part in such a program as you suggest."), Missouri Attorney General John M. Dalton ("This is a fine project and one that deserves the support of all good citizens"), and Mayor Raymond R. Tucker ("This is a delightful idea, and I am sure your ceremonies will be very meaningful and teach the children the meaning of our national flag.").

Strangers who have seen his picture on television or in the newspapers stop him on the street and say, "I know you. You're the flag man."

Veterans organizations have given him medals and citations. One group presented him with a 50-star flag.

Neighborhood organizations have asked him to speak on the flag, and he now spends several night each week giving 20-minute addresses on the meaning and proper display of Old Glory.

Letters lauding his efforts pour into his home at the rate of 75 a week.

Unknown to McLaughlin, 50 children from the neighborhood signed a letter telling the board of aldermen of his good work. Last week, the board adopted a resolution praising Joe McLaughlin for his outstanding Americanism.

All this recognition has left McLaughlin a little startled but far from speechless. Nobody ever accused him of having nothing to say.

His raspy voice was well known around the old United Railways Co., where McLaughlin worked for 25 years. For 8 years he served as supervisor of bridges for the city and later as a construction engineer for the St. Louis Housing Authority.

After he retired in 1957, florid-faced McLaughlin encountered competition from his sisters, Mildred and Rose. Chatty characters all, the three sometimes talk at the same time and tend to overwhelm a visitor with hospitality.

The McLaughlins share their 10-room house with 2 dogs, 2 parakeets, 2 canaries, and countless antiques. The house was built 53 years ago by their father. They are the last of four sons and daughters, none of whom ever married, all of whom spent most of their lives in the Dover place house.

McLaughlin has fired his sisters with enthusiasm for his flag-pole project. They help him to distribute literature, to answer mail, and to entertain visitors, large and small, who are attracted by the patriotic fervor of Joe McLaughlin.

Even strangers are inspired to lend a hand. There was the incident of the bell, for instance. As McLaughlin tells it:

"I figured we ought to have a bell to ring when the flag goes up and when it comes down, a bell to ring for liberty and peace. I went all over town trying to get one. Finally I paid $10 for a bell, but it was no good. It didn't ring loud enough.

"One day some fellow said, 'Well, I'll get you a bell.' So a few days later, I went out on the front porch and there was something with a sack over it. I thought maybe it was a bomb. I took the sack off, and there was a bell. It was so big I had to get my neighbor to help me carry it to the rear yard."

McLaughlin rigged up a stand for the bell, and now it is as much a part of the daily ritual as is the flag. The clear gong resounds throughout the neighborhood twice a day, pealing out the message of peace and liberty.

If McLaughlin is an inspirational figure to men and women of his own generation, he is no less effective with children. They are welcome in his house, and they flock there for treats such as lollipops and to listen to his talk of their flag, their forefathers, and their country.

Seven-year-old Joyce Kissel wrote to him and his sisters a few weeks ago, "I think you are the wonderfulest people in the whole world and I want to thank you for what you are doing."

McLaughlin's philosophy is simple.

"Children who know their flag and have a respect for it will know what their country stands for and will know their God," he said. "I would like to see a flag in every American household. Children who grow up knowing the flag will be good citizens."

Coal Mine Safety

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. SAYLOR. Mr. Speaker, 3 years have passed since legislation was first introduced in the Congress which would amend the Federal Coal Mine Safety Act, thereby providing further prevention of accidents in small coal mines.

Under the present act, title 2 of the law requires major mining operations—employing 15 or more men underground—to comply with strict Federal regulations for mine safety for the purpose of preventing mine disasters. The law, however, exempts certain mines employing no more than 14 individuals.

Mr. Speaker, since January 1, 1960, 20 miners have died because of this exemption under title 1 of small mines—this figure includes the 6 coal miners who were killed on the 9th of April 1960, and I want to bring to the attention of the Members the recent newspaper stories on the two recent mine disasters.

If my bill, H.R. 1961, introduced on the 9th of January 1959, had been passed by the Congress, the lives of these 6 miners might have been saved.

The articles are as follows:

[From the Washington Post, Apr. 10, 1960]

THREE COAL MINERS KILLED IN CAVE-IN

KITZMILLER, MD., APRIL 9.—Three men were buried alive under 10 tons of rock and dirt today in the Paugh coal mine near this western Maryland town.

A son of one of the victims also was trapped by the debris, but was freed unhurt by fast working rescuers.

The victims were John L. Paugh, 50, owner of the small mine; his nephew, Leo Paugh, 21, and Allen Harvey, 40, all of Kitzmiller.

Paugh's son, Lawrence, 18, was dug out by another brother, Marvin J. Paugh, 21, and Joseph Harvey, who were near the disaster scene and heard young Paugh's cries for help.

The cave-in occurred within sight of the mine opening, police said.

Relatives said the elder Paugh had purchased the mine only recently. He and the others had been putting it into working order for the past 2 weeks.

The pit entrance is about 5 feet from another mine opening in which five men were killed several years ago in a similar accident.

State police, county officers, and officials of the State and Federal mine departments assisted in the rescue efforts.

The bodies were recovered from the debris by the Kitzmiller mine rescue squad, composed of coaldiggers from the area.

Lawrence Paugh, who was working close to the three victims, had his foot trapped under the dirt and rock. His brother, Marvin, was outside when he heard the debris come roaring down on top of the men.

He yelled for assistance and with Harvey, a brother of one of the victims, freed Lawrence Paugh in about a half hour.

[From the Washington Star, Apr. 10, 1960]

TWO DIE, ONE TRAPPED IN MINE CAVE-IN

LOUISA, KY., April 9.—Two men were killed and a third was pinned beneath a huge piece of rock in a slate fall tonight at a small coal mine near remote Webbville.

The dead were identified tentatively as Marvin Hall, 50, of near Neon, and Harmon Short, 45, of Whitesburg.

State police said Arle Hall, 58, of Neon, a brother of one victim, was pinned under a piece of slate. Mr. Hall was reported conscious and able to talk to rescuers as they tried to free him with a drill.

Residents of the area said the mine had been opened only about 2 weeks ago by the three men. It had been dug only about 30 feet into the earth.

It Would Be an Act of Folly To Destroy the Dolly Madison House and the Other Historic Buildings Near the White House

---

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. McDOWELL. Mr. Speaker, it would be an act of folly to destroy the Dolly Madison House and the other historic buildings on Lafayette Square near the White House in the Nation's Capital.

Many organizations are interested in preserving these historical buildings, among them the General Federation of Women's Clubs, the National Trust for Historic Preservation, the American Institution of Architects, the National Federation of Music Clubs, the AFL–CIO, the Washington (D.C.) Post and Times Herald, the Commission of Fine Arts, and the National Capital Planning Commission.

Governor Rockefeller and Mayor Wagner have sponsored legislation to save historic Carnegie Hall in New York City. Here in Washington, my able colleague from New Jersey, Congressman FRANK THOMPSON, Jr., and I have sponsored legislation to save the Dolly Madison House and other historic buildings on Lafayette Square from destruction. Bills for the same purpose have been sponsored by Senators JOHN F. KENNEDY, WAYNE MORSE, HUBERT H. HUMPHREY, THOMAS C. HENNINGS, Jr., PAUL H. DOUGLAS, ERNEST GRUENING, and MIKE MANSFIELD.

I include the text of the bill which Congressman FRANK THOMSON, JR., and I have cosponsored:

TEXT OF THOMPSON-McDOWELL BILLS: H.R. 11678 AND H.R. 11691

A bill to amend the Public Buildings Act of 1959 to provide a study as to the best location for a new building for certain courts of the United States, to preserve the Dolly Madison House and other historic buildings near the White House for cultural and educational purposes in keeping with the national policy enunciated in the Historic Sites, Buildings, and Antiquities Act, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States in Congress assembled, That the Public Buildings Act of 1959 is amended by adding at the end thereof the following new sections:

"SEC. 18. The Administrator is authorized and directed to conduct a joint study, together with the National Capital Planning Commission and the Commission of Fine Arts, for the purpose of determining the feasibility of constructing in the area bounded by Pennsylvania Avenue on the north, Seventeenth Street on the east, New York Avenue on the south, and Eighteenth Street on the west, in the Northwest sector of Washington, District of Columbia, or near the Supreme Court of the United States, adequate facilities to house the Court of Claims, and the Court of Customs and Patent Appeals of the United States. As soon as practicable after the date of enactment of this section, the Administrator shall submit a report on the results of such study, together with such recommendations as the three agencies may deem advisable, to the Committees on Public Works of the Senate and House of Representatives.

"SEC. 19. (a) In keeping with the national policy of protecting and preserving historic American buildings and sites for the inspiration and benefit of the people of the United States, the Administrator shall preserve and maintain the Dolly Madison House, the Benjamin Tayloe House, and the Belasco Theater on Lafayette Square near the White House in the District of Columbia for historical, civic, cultural, and educational purposes and to further the purposes of the Act of June 5, 1860 (12 Stat. 35) chartering the National Gallery and School of Arts; the Act of March 3, 1863 (36 U.S.C., 251–253), chartering the National Academy of Sciences; the Act of March 3, 1891 (26 Stat. 1093), providing for a National Conservatory of Music; the Act of March 3, 1901 (31 Stat. 1438), chartering the General Federation of Women's Clubs for educational, literary, artistic, and scientific culture; the Act of June 3, 1906 (34 Stat. 804), chartering the National Education Association of the United States; the Act of February 4, 1913 (37 Stat. 660), chartering the National Institute of Arts and Letters; the Act of April 17, 1916 (39 Stat. 51), chartering the American Academy of Arts and Letters; the Act of July 5, 1935 (49 Stat. 457), chartering the American National Theater and Academy; the Act of October 26, 1949 (16 U.S.C., 468–468e), establishing the National Trust for Historic Preservation; and the Act of August 1, 1956 (36 U.S.C., 661–630), chartering the National Music Council. The Administrator is authorized and directed to restore the Belasco Theater to a condition at least equal to its condition at the time it was acquired by the Federal Government, and to accept contributions of money which shall constitute 'charitable contributions' for purposes of section 170 of the Internal Revenue Code of 1954 (relating to deductions for charitable, etc., contributions and gifts), for the purpose of assisting him in the restoration of the Belasco Theater.

"(b) The President is authorized to create such interagency committees and advisory committees as in his judgment may be of assistance in carrying out the purposes of this section. The provisions of section 214 of the Act of May 3, 1945 (59 Stat. 134; U.S.C., sec. 691), shall be applicable to any interagency committee created pursuant to this section."

There's Not Much Fidelity in Cuba Now

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. SIKES. Mr. Speaker, as an example of the Communist influence on the Castro regime in Cuba, the information included in the following article by Virginia Prewett in the March 29, 1960, issue of the Washington Daily News, should alert our country and people to a growing menace in our hemisphere and dispel any false notions about the nature of that regime. At the same time, it demonstrates how active the Guatemalan Communists are in Cuba. There are strong indications that their next goal is to restore free and democratic Guatemala to its former Communist-dominated status. If this should happen, it would be a prelude to further defections and a major disaster to the security of the Western Hemisphere.

The above-mentioned article follows:

THERE'S NOT MUCH FIDELITY IN CUBA, NOW

(By Virginia Prewett)

Maj. Ernesto (Che) Guevara de la Serna, Cuba's economic czar, has created a regime within a regime at Havana with Cuban lieutenants he recruited while leftists ruled Guatemala in the early 1950's.

Guevara made his reputation as Russa's agent in the Guatemala adventure. Central American intelligence sources say he is now military commander of communism in the Caribbean.

NOT FIDEL

His henchmen are untouchable. When Premier Fidel Castro wanted to jail one Guevara man as a Trujillo double agent, Guevara not only prevented this but got his friend into Castro's secret police.

Guevara's men are picking teams of young Latin American exiles to be Guevara's nerve ends in new Castro-type regimes elsewhere.

Guevara's economic power makes recruiting easy. In Havana, an inexperienced Guatemalan, aged 28, was made "intervenor" in the American-owned multimillion-dollar Otis Elevator Co.

"Che" Guevara, an Argentine, came to Guatemala in the late 1940's while leftist Dr. Juan Jose Arevalo was President. Never a card carrier, he formed part of the upper Communist apparatus created earlier by the wily Russian Ambassador to Mexico and Guatemala, Constantin Oumansky.

STRATEGY

After President Jacob Arbenz succeeded Arevalo, Guevara fell out with Arbenz over the slowness of Guatemala's communization. Guevara then became "war plans" officer for Arbenz' agrarian reform chief, Maj. Alfonso Martinez Estevez. "El Che" there perfected the technique of having a Government representative lead—or order—landworkers to seize properties without legal processes. This is standard procedure in Cuba today.

The sauve, resolute New World commissar meanwhile formed his personal cadre of case-

hardened Communist Cubans. The "graduates" of the Communist takeover of Guatemala and later additions now so thoroughly control in Havana that, intelligence services say, Premier Castro could not shake loose from them even if he wanted to.

The bearded Premier is their psychological prisoner because they offer him the international power his ego ardently craves, say these informed sources.

The names and records of the Guatemala-tested Guevara shadow-government in Cuba trace back through the Caribbean legion even to the International Brigade in Spain. They include Eufemio Fernandez Ortega, former Arbenz bodyguard, who is the man Guevara put into Castro's secret police; and Alfredo Flores Alamo, sometime political terrorist, now in Cuba's Ministry of Government. Other key men include Julio Castello Dumas, writer for the Castro-lining La Calle, who is Guevara's agent among Dominican exiles.

Another is Guatemala alumnus Jorge (Nilo) Risquet Valdez, a top power in Cuba's Socialist youth movement, who is preparing the future for Guevara and Moscow.

CBR Weapons Gain Favor

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. SIKES. Mr. Speaker, I submit herewith several very enlightening comments on the subject of CBR. These should help to dispel unrealistic agitation against the development of a proper defense in this field. I urge the careful reading of each of the following:

[From the Baltimore Sun, Apr. 3, 1960]

NERVE GASES GAIN FAVOR AS WEAPONS—CHEMICAL WARFARE IS REGARDED AS ATOMIC BOMB ALTERNATIVE

(By Mark S. Watson)

WASHINGTON, April 2.—A public properly worried by the continuing threat of atomic warfare must unmistakably face the new but real possibility of still other types of unconventional warfare now coming to wider attention.

These others would employ exotic chemicals and germs, even the discussion of which has been so repugnant to civilians—and most military professionals—that there still is little public awareness of the existence of germ-chemical weapons.

But troubles are not ended by sweeping them into a corner, and within the recent past many thoughtful observers, hitherto silent, have reluctantly begun to discuss CBR (chemical-biological-radiological) warfare publicly.

USE OF WEAPONS FORESEEN

It is plainly suggested that if there develops a nuclear stalemate, as sometimes predicted, some nation will resort to weapons quite as effective in their way as the A-bomb, and in some respects much more so. These weapons, unmistakably, are the transportable germs and the incapacitating gases.

The burden of the discussion generally is that—as with gas-warfare preparations during World War II—the United States would not initiate use of the new gases or germs or radioactive materials, but that it must be prepared to defend its population against their use by an enemy.

And defensive mechanisms can be devised only by knowing intimately the deadliest forms of these materials; hence, the United States must first create them for laboratory study and subsequent defensive planning.

ACTIVE DEFENSE URGED

But beyond this preparation of masks, shelters, and other passive defenses from enemy C–B–R attacks, the military now states firmly there must be an active and substantial defense.

This would take the form of retaliatory resources, with which to counter enemy aggression instantly—that is, established C–B–R weaponry of the United States' own.

In this there is a parallel to the concept of the United States' present atomic-weapons, primarily as a retaliatory threat and very real deterrent to atomic war. The same concept prevailed in World War II with regard to poison gas; the United States had it on hand in case Germany or Japan should use it, but it was not employed—because the enemy did not use it, and also because other weapons were thought to be more effective anyway.

Up to a few months ago even the United States military referred to C–B–R projects with greatest caution, because of the known public antipathy to them.

TRUDEAU HERALDS CHANGE

There has lately been a change, heralded by the plainspeaking Lt. Gen. Arthur G. Trudeau, military chief of Army research. Trudeau in a public address declared that, if humane considerations are to guide the Nation, it should know that newly developed gases are more humane than shells and bullets.

Dr. Herbert F. York, the Defense Department's civilian director of research and engineering, speaking last week before a Senate committee, mentioned without apology work upon "chemical and biological weapons capable of a wide range of effect from short duration incapacitation to lethality."

Facing an unpleasant reality with more courage than most civilian bodies, the American Chemical Society next Friday, in Cleveland, will hold a significant symposium on "Chemical and Biological Defense in Perspective."

Speakers will be Maj. Gen. Marshall Stubbs, the Army's chief chemical officer; Dr. Leroy D. Fothergill, of the Biological Warfare Laboratory at Fort Detrick, Md.; Dr. Conrad E. Ronnenberg, chairman of the American Chemical Society's Committee on Civil Defense, and other experts in chemistry and public health.

"It is the intention to give the most comprehensive picture of the chemical and germ threats that has ever been given," said the society's announcement, "and to bring these threats into proper perspective with the radiological one." The last reference is to aspects of atomic warfare.

PERSPECTIVE SOUGHT

Abroad there has been somewhat more frankness about public discussion of chemical-biological weapons, possibly because of proximity to Russia, which has pointedly demonstrated its own prowess in C.B.R. techniques, including defense equipment issued to individual soldiers.

Even the gas horrors of World War I have been scientifically reanalyzed both here and abroad to show, for example, that after the initial panics of lethal gases in 1915, the combatant nations found it more profitable to use temporarily crippling gases.

Thus, Col. Donald E. Yanka, of the Army Chemical Corps, points out, in Army magazine, that of 46 chemical agents used in World I, only 5 were lethal. Further, that while "one third of all U.S. casualties during that war were caused by gas, only 2 percent of these died, compared to 25 percent who died from the effect of other weapons."

[From the Baltimore Sun, Apr. 4, 1960]

MILLENNIUM DEFERRED

If anyone is so optimistic as still to believe in a happy ending to the world's troubles in the immediate future his hopes must have been rudely shaken by Mr. Mark S. Watson's report yesterday in the Sunday Sun that should atomic warfare be banned, chemical, biological, and radiological warfare is ready to take over. We are told that methods are being perfected by which the germs of deadly diseases may be spread among an enemy and that there now is available a wide selection of gases varying in power and quality from those that paralyze to those that kill.

Once upon a time old-fashioned people resigned themselves to the world as a vale of tears from which man had no real escape until he passed elsewhere. That attitude of resignation was widely supplanted by reliance on the achievements of science. Well, science keeps on achieving all right, but the prospect of war and related discomforts is not notably abated. One comforting thing, though: if we learn to outlaw nuclear weapons we will have some experience on which to start outlawing germ, gas, and radiological warfare.

[From the Temple (Tex.) Daily Telegram, Mar. 30, 1960]

HIGHLY DEVELOPED GERM WARFARE COULD HELP DETER AGRESSORS

They come to Fort Detrick, the Army base outside Frederick, Md., from all parts of the country. They include scientists, teachers, clergymen, students, farmers, housewives. They quietly picket the 1,700 civilian scientists and 400 military personnel engaged in the Army Chemical Corps project of defending this country by preparing for germ warfare.

These earnest people want to halt germ warfare. That is exactly what the chemists want, too.

The Army way has proved the more effective. In past wars, the fact that we were prepared for gas warfare kept the enemy use of gas to a minimum. Germ warfare was banned by tacit consent, for the simple reason that we could have retaliated in kind.

We must continue to develop this capability, not because we want to use it, but to keep the enemy from loosing germs on us so long as he knows we could flood his country with the killers, too.

[From the Army magazine for April 1960]

MICKEY FINN ON THE BATTLEFIELD—SOME FACTS ABOUT CHEMICAL AGENTS THAT CAN KNOCK OUT AN ENEMY WITHOUT KILLING HIM

(By Col. Donald E. Yanka)

The concept of nonlethal, incapacitating chemical agents is not entirely new. Of the 46 chemical agents used during World War I, only five were truly deadly. A study reveals that one-third of all U.S. casualties during that war were caused by gas. However, only 2 percent of these died, compared to 25 percent who died from the effects of other weapons.

After World War II the potentials of nonlethal chemical compounds were not seriously considered. Attention was focused on the newer, highly devastating weapons. Such preoccupation is not unusual, as an incident from World War I will illustrate.

A British chemist suggested using mustard gas in 1915, 2 years before the Germans resorted to that gas in battle. "Does it kill?" he was asked. "No, but it will disable enormous numbers of the enemy temporarily." "That's no good to us," he was told. "We want something that will kill."

However, during the past 5 years, the U.S. Army Chemcal Corps has been spurring its

study of new drugs and compounds which are truly disabling; that is, agents that temporarily disable large groups, but these people will recover with no harmful long-term effects. One of the difficulties, of course, is to define what would be a military casualty in these terms.

The significance of incapacitating agents is worth serious thought. The possibilities of nuclear stalemate, and the probability of our being forced into limited wars, require a new look, especially at how to fight in areas that may be occupied by our friends.

Chemical warfare offers a possible solution. Unlike nuclear or high-explosive warheads, which destroy or maim both men and machines, chemical agents affect only man and not his resources. Furthermore, while lethal chemical weapons destroy humans, incapacitating agents disable them only temporarily. Consequently, they can be used in areas where friends and enemies have become mixed.

An incapacitating compound can be described generally as one which, when delivered in an effective dose, disables a soldier from performing his duties for a militarily significant period, but which will allow him ultimately to completely recover without medical aid. Some chemical compounds become effective after various times and remain effective over varying periods. For example, incapacitation may begin after seconds of exposure and last only until those exposed get back into fresh air. On the other hand, the onset of effect may take from minutes to an hour, and the period of disablement may range from 1 to 3 days.

Disabling chemical compounds fall into two broad classes: those which temporarily immobilize the mental faculties—in effect, neutralizing a person's will to resist; and those which produce physical distress for a significant period, such as severe discomfort, anesthesia, paralysis, or immobility.

An example of how an incapacitating agent works on the mental faculties is the famous performance of the drugged cat. The effects of this psychochemical completely changed the natural antagonism of this cat toward a mouse. As the drug wore on, the cat's character completely reversed. Highly terrified, it cringed and leaped about in the cage to keep its distance from the mouse.

Knowledge of a number of compounds of this type has become universal through published medical and chemical scientific literature. A derivative of lysergic acid (LSD–25) is the only one so far announced in this country. However, to show that we have no monopoly, Major General Drugov, of the Soviet Union's Military Medical Service, has said: "Special interest attaches itself to the so-called psychic poisons [mescaline, methedrine, lysergic acid derivatives] which are now used for simulation of mental disease."

However, experimental work with this type of material is still in the early stage. The military potential of these compounds, as well as methods for providing effective protective measures against their possible use on us, must be adequately explored.

These so-called psychochemicals, causing effects that resemble psychosis, or that serve as stimulants, tranquilizers, or sedatives, can produce psychological incapacitation. The manner in which disability is achieved, however, may be immaterial to a commander who is interested only in military immobility. He may desire different forms of incapacitation to fit certain tactical or strategic conditions. For example, if we can impair a man's ability to integrate time and distance, it could seriously interfere with his landing an aircraft, or firing a gun from, or at, a moving vehicle. On the other hand, a more subtle and less recognizable incapacitation perhaps might be more important if it impaired the effectiveness of a trained unit by transforming it into a disorganized group who would no longer obey orders or would obey them incorrectly.

However, psychochemicals are not the whole story. In some instances they could be the lesser story. Physically incapacitating compounds could also be used, perhaps to better advantage, in many situations. Since a soldier must think, see, hear, stand, lie, or move as needed, and work with his weapons or tools, it is possible to render him ineffective by interfering with any one of these physical functions. For example, severe watering of the eyes, as produced by tear gas, is a mild form of physical disablement. Other compounds are known which irritate the lungs, temporarily lower the blood pressure, induce severe vomiting, disturb body temperature, physiologically impair vision, or bring on involuntary bowel movement or temporary anesthesia. In battle these effects, in contrast to those of the psychological agents, are truly immobilizing since they produce an effect that is militarily measurable. Anesthesia or lower blood pressure may ultimately prove to be the most useful, since they physically immobilize an enemy.

While many compounds are already known which have incapacitating capabilities, these characteristics in themselves do not necessarily make them suitable for military use. To be significant in a military use, and to permit economy in employing them, they must produce their effects through very small doses. While the disabling dose should be very small, one which might result in permanent disability must be larger by many orders of magnitude. This is a significant characteristic that distinguishes incapacitating compounds from lethal agents. We must also be able to produce these materials in large quantities at relatively modest cost, from resources available to the United States. Further, the supply of materials must be constant over a significant period, since they must be on hand for immediate use when the need arises. It is also highly desirable that these compounds be difficult to detect by smell or sight, to protect against, and to counteract by medical treatment.

Since we do not now, and may never, know exactly what an enemy is going to use against us, or when, a program of surveillance, research and development is vital, regardless of the ultimate role that incapacitating agents may assume. Necessarily, some of this work cannot be made public at this time. It is clear, however, that our buildup of adequate defenses inevitably must be based on knowledge of all types of compounds that might possibly be used against us; how they act on the human system; how they might be disseminated; what means we can develop to obtain warning and detection of their use; how we can protect ourselves; and what antidotes or treatments can be developed for on-the-spot first aid that will pharmacologically reverse the process at will and defeat the enemy's purpose.

There is a definite military use for incapacitating agents. The Army's Chemical Corps is endeavoring to provide our country with adequate means of protection against such chemical weapons.

Pesach, 5720—Passover, 1960

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. MULTER. For people who share the precious heritage of the Jewish faith, history, and cultural traditions, the Passover is, of all seasons of the year, perhaps the fullest of religious depth, historical significance, human warmth and youthful gladness.

It is a reminder, in the prescribed foods of the Seder, as well as in the four questions asked threat and their answers, of one of the greatest events of history, the delivery of the children of Israel from their bondage in Egypt.

It is a reminder of our reliance, then and now, upon divine providence. It is an exacting test of the knowledge and wisdom of the father, in replying to his son's four questions, and a stimulus to the faith and courage of all who share in the ceremony. In this religious ceremony, in this family meal, in this glad festival, families are drawn together, renewing their old bonds of affection, and resolving anew to live in the warmth of these human relationships and religious traditions.

In the singing and storytelling, in the ceremonial sharing of the wine, in the beautiful words of the benediction that concludes the Passover service, we feel ourselves brought together in affection and happiness—parents and children and guests, and all the broad world upon which we call down the blessings of redemption, and peace, and justice, and brotherhood.

Religion and Politics

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I insert a copy of an editorial by David Baxter which appeared in the Extension, a national Catholic publication.

While Reverend Baxter is an Evangelical minister, many of his writings are published in national Catholic magazines which indicates his profound concern over the basic moral and spiritual responsibilities which our citizens should assume.

The editorial follows:

RELIGION AND POLITICS
(By David Baxter)

Just why most service clubs and other organizations ban discussion of religion and politics is a question. They should be the most discussed subjects instead of the least discussed. Religion is the most important interest in the world, for it directly concerns one's eternal destiny. Politics comes next for, in one way or another, it affects our everyday lives in this world, our homes, wages, living standards, and freedom.

Yet, mention religion and someone will remark, "Well, everyone to his own religion. It doesn't matter what you believe just so you live right." Such people do not seem to realize that living right depends on believing right, for, as the saying goes, "As a man thinks (believes) in his heart, so is he." Good works are based on something. There is a reason why one performs them—and that something is belief, or faith. St. James expressed it clearly in saying, "Shew me thy

faith without works, and I will shew thee, by works, my faith."

And politics. "I don't want to talk or think about politics," is a common expression. Yet these same ignorant people, who often pride themselves on being well educated, are among the first to bellyache when the tax bill comes in and they find their lives and affairs being regulated by other people who do think about politics.

People to whom religion and politics are taboo have no business pretending to be good Christians, in the first instance, or good citizens of the United States in the second, whether or not their ancestors came over on the *Mayflower*. God disapproves of cold Christians ("the charity of many shall grow cold") and He utterly casts out lukewarm ones ("But because thou art lukewarm, and neither cold nor hot, I will begin to vomit thee out of My mouth." Apoc. 3:16). Likewise, in political affairs the Apostle Paul warns: "Let every soul be subject to higher powers, for there is no power but from God: and those that are ordained of God" (Romans 13: 1).

The hot Christian is also hot in obeying God, including subjection to and active interest in the powers that be. Pope Pius XII showed his understanding of this some years ago in declaring that Catholics should not be confined to the four walls of ecclesiasticism but should take an active part in citizenship and political affairs. Many great Protestant leaders have also made this point, refuting those who insist that religion has nothing to do with politics and that Christtions should confine themselves to spiritual matters only, remaining aloof from things political.

It so happens that in America the powers-that-be do not consist of rulers, as was once the case. The powers-that-be are the American people, self-governing through representation. The United States is not a lond of rulers and ruled (although it's getting to be, thanks to those who are willing to be ruled). It is a government of, by, and for the people. "We, the people," through our elected representatives, are the Government, Federal, State, and local. Everyone is, in effect, "the Government."

Now how is any good Christian American going to be subject to the powers-that-be, of which he is one, unless he takes an interest in his self-government and plays an active part in it? That's politics. The moment one becomes an American he's as much a part of the political system as anyone else. His opinion is important and his vote equals that of the President. To shirk his duties as a citizen is to shirk his duties as a Christian obedient to God's power and that which He has delegated to the self-governing American people. That the Founding Fathers understood this is clear from their statements and from such engravings on our coins as "In God We Trust," not to mention the oath of allegiance—"one nation indivisible, under God."

Morality follows religion. If we believe in morality, it leads us directly into politics. Moral government depends on a moral "we, the people."

Sometimes people are interested in politics the wrong way—the way of greed and jealousy. Many without much ambition or initiative have one idea in mind—to get something away from those who have "gotten ahead." Only an immoral candidate for office would represent such people in accomplishing their aim, so governmental offices, from Washington to Pumpkin Center, are often held by unscrupulous politicians. If a man is unprincipled enough to rob one citizen to benefit another who supports him, he will have no scruples about robbing his own class the first chance he gets.

On the other hand, let's say a man has, by honesty, initiative and thrift, been such a good manager that he has made a success of his farm, business, profession or art. One should manage his own affairs successfully before undertaking to manage the even more important business of the people. Therefore, the fellow who has a long and good record to show in his own life is the very one the people need to represent them and handle their business.

Here, too, immoral selfishness has often cost the people the best kind of representation. Some voters may not like a successful person because he's successful, is better off than they are and is not likely to tax others to support them in order to get their votes. In many cases, too, such men refuse to seek office because of their own selfishness. They can make five times as much money in their private pursuits than a political office pays. Election would be a sacrifice on their part and they don't want to make any sacrifices. That shows a lack of good citizenship.

Yet the offices are there and must be filled. When good men will not take them, bad men will—and greedily seek them. Add that up and you come out with the vilest kind of political system. That is why Christians of high morality must also be good political citizens, according to the divine admonition, applying Christian ethics both as voters and candidates for office. They simply can't escape the fact that, in America, they are the powers that be, ordained of God.

"The wages of sin is death." That goes for political sin, too. One reaps what he sows. A certain State office, let us say, is to be filled. Henry Thorndyke, a devout churchman and successful citizen, isn't interested. He's busy and doesn't want to make the sacrifice. So John Criminalis, a racketeer, runs for the job and is elected. John promptly creates more State jobs and bureaus to hand out booty to his henchmen, calling for more State expense. Thorndyke, who has earned his money, finds bigger and bigger chunks of it being taken away from him by men who never earned a nickel in their lives. He paws the air and denounces "crooked politics," but whose fault is it? He reaps what he helped sow. Instead of becoming more active politically and making a little sacrifice, the worse he gets hurt the more apt he is to shout, "Politics are rotten. I don't want anything to do with politics." The less he has to do with the system to which he was born, the more will he be harmed by unscrupulous men who do.

I know a State representative who has been in office over a dozen years. Few of his constituents outside of his hometown have ever heard of him. Yet in the capitol, in legislating, he is their representative, their mouthpiece, acting in their name. He has not accomplished one outstanding thing for his district in all those years. He simply is paid by the taxpayers. Some legislation he's voted on has even been injurious to many of the folks back home. Still, they get what they deserve in not discharging their duties as Christians and political citizens.

This representative has been opposed but once. Able men haven't wanted the post because it would be a small sacrifice on their part. The man who does hold it is a lawyer. He represents special business interests among his clients in his home community and his chief interest is to keep an eye on legislation that might affect them. Thus, the job is profitable to him. He simply represents special, selfish interests and not the common people of his district. It is not his fault. It is the failure of people who aren't interested in politics—but are certainly interested in their tax bills, increased farm costs, and the like.

Christian youth especially should be taught the American political system and develop a liking for it. They should be shown how Christian morality can in the most vital way be applied to politics as a service to humanity. They should learn the original basic principles of the major parties and make a choice. As they are committed to the spiritual teachings of their church, they should likewise be morally committed to the great principles of their chosen party, even if those principles have been betrayed now and then. They must see that religion and morality are inseparable partners and that morality must be used in self-government, in obedience to God.

How really important is all this? Well, it happens to have this significance: the only alternative is communism, in which the people are not the government and the government itself is not the "powers-that-be," ordained of God. The Communist government says it is God. I needn't add that if Christian Americans do not take any great interest in politics, Communists certainly do.

Grassroots Thinking To Create an Imaginative Foreign Policy

EXTENSION OF REMARKS

OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. FOLEY. Mr. Speaker, more than ever before in our history our American citizens are thinking and talking about our relations with other countries and peoples of the world. This exercise of our basic democratic birthrights has made our country the leader of the free world. Only by continuous vigorous exercise of these rights shall we remain free and democratic.

A recent example of grassroots thinking on foreign policy matters was sent to me. I am including it in the CONGRESSIONAL RECORD both for the purpose of informing the Members of the Congress of the constructive proposals as well as to lend encouragement to all citizens in our country to think deeply about the problems of our times and speak out on their proposed solutions to these problems:

KENSINGTON, MD., *April 7, 1960.*

Hon. JOHN FOLEY,
House Office Building,
Washington, D.C.

DEAR JOHN: The foreign policy statement developed by the Democratic precinct workers of 13–40 was prepared by a committee of the following: Sanford (Sandy) Gottlieb, chairman, Bob Adams, Phylis Jason, Anna Leder, and Doris Lutzky. Sandy Gottlieb brought up the subject at our November 23, 1959, precinct meeting. His idea of the Democratic workers in the precinct going on record with their views on some of the crucial problems facing our Nation met with overwhelmingly favorable response. I have never seen such enthusiasm at a precinct meeting.

The committee met several times during December and January and came up with a statement at our precinct meeting of January 25, 1960. There was much discussion of and modification of the committee work before it was unanimously approved and referred back to the committee for final drafting.

We have sent copies of the statement to all the Democratic precinct chairmen in Montgomery County as well as the members of the Democratic State Central Committee for Montgomery County. We hope to introduce this statement at the next meeting of precinct chairmen with view toward its ultimate adoption by that body. We hope that

our views can climb up the ladder of the Democratic Party and be of some assistance at the national convention this summer. Anything you can do, JOHN, to help us in this effort to serve our country and our party will be greatly appreciated.

Sincerely yours,

H. ROWLAND LUDDEN,
Chairman, 13–40 Democrats,
Montgomery County, Md.

BUILDING A LASTING PEACE

(Foreign policy statement of Democratic precinct 13–40, Kensington, Md.)

If the Democratic Party is to win the 1960 elections, it must respond to the peace issue with imaginative and practical proposals. Expressions of good will must be translated into positive programs if freedom is to prevail in a world without war. Building a lasting peace requires more than brinksmanship, personal diplomacy, and muddling through. The foreign policy of the United States must be stabilized through wisdom and careful planning based on analysis of our interests and our power. Platitudes are no substitute for policy.

A Democratic policy for peace must be based on a realization that both Communist and non-Communist nations share a common interest in the will to survive. Unless ways are found to settle outstanding conflicts and permit the rival systems to compete in peace, both sides face the risks of an uncontrolled arms race leading to levels of tension where the slightest error could bring mutual suicide.

We believe the United States, in conducting the struggle with the Communist countries, should emphasize use of diplomatic, economic, and ideological weapons. This would help remove the dangers of the arms race and permit us to wage more vigorously throughout the world the struggle for freedom.

In staking out the ground rules for our foreign policy, we find four areas of fundamental importance: (1) Total diplomacy, (2) the conclusion of disarmament agreements with adequate inspection and control, (3) economic aid to underdeveloped countries, and (4) strengthening the United Nations.

1. TOTAL DIPLOMACY

Since the conflicts that have formed the substance of the cold war are real and not imaginary and since the problems that mark the transition of colonial peoples to independence are potentially explosive, renewed efforts of total diplomacy are needed to lessen international tensions. And all-out effort at adjustment and accommodation by all available diplomatic means must be undertaken and carried through on a long-range basis.

Summit meetings are only one method of trying to resolve international conflicts. They may prove useful either to negotiate settlements or to announce agreements reached through hard, professional bargaining by trained diplomats. It should be recognized that meetings of heads of government are no cure-all for the profound problems mankind now faces.

Increased use should be made of the United Nations as one of the diplomatic channels for resolving conflicts. We must constantly search for ways and times in which the U.N. can be most profitably utilized.

We also call upon the United States to take the lead in submitting international disputes to the World Court. This is a step in the direction of extending the rule of law in international relations. Our Government can make a practical show of good faith by abandoning its present position that it alone can determine whether a dispute falls within the jurisdiction of the World Court.

2. DISARMAMENT

We enthusiastically endorse the statement of the advisory committee on science and technology of the Democratic Advisory Council that, under the present "balance of terror" policy, the triggering of a nuclear war by mistake, by misadventure, or by miscalculation is a constant danger. These scientists have called for worldwide disarmament agreements incorporating proper safeguards which would made a sudden, devastating attack impossible, whether by atomic, biological, or chemical weapons.

An important first step toward this ultimate goal would be the conclusion of an agreement to stop the testing of nuclear weapons, under a worldwide network of monitoring stations.

Arms control agreements of this kind would establish the machinery of international inspection, lessen tension and distrust, and permit the diversion of resources into the long-range fight against poverty, disease, and illiteracy in the underdeveloped countries—countries which are fast becoming of crucial importance in the world.

We welcome the Democratic Advisory Council's proposal for the establishment of a National Peace Agency as a permanent planning group to draw up blueprints for disarmament and aid to the underdeveloped nations. This would help fill the almost complete vacuum in the area of planning which has characterized the Eisenhower administration's approach to foreign policy.

3. ECONOMIC AID

Underdeveloped countries the world over are trying to raise the funds to create 20th century economics. They obviously do not have all the capital needed to finance schools, hospitals, roads, powerplants, factories, water supply, and communications systems, ports, and railroads.

The Communists, as in China, are raising capital by squeezing it out of the labor of an already impoverished people. This coercion, plus Soviet aid, may well build a modern economy for China, but in the absence of political and personal freedom.

Free countries, such as India, are making great sacrifices but still need outside aid if they are to establish sound economies. If they do not succeed, their young democratic institutions will not survive.

To help the underdeveloped countries establish self-sustaining economies without which they would fall prey to the pressures of totalitarian communism, we urge increased, long-term foreign aid from the United States and its allies. So that this aid may be given and received in the most mutually helpful manner, increased attention should be given to channeling it through the United Nations. In addition to calming the fears of possible political "strings" being attached to the aid, use of the U.N. would allow the maximum planning and sharing of the burden and of the fruits of economic aid.

4. STRENGTHENING THE UNITED NATIONS

Greater reliance on the United Nations to help meet international problems of all kinds would give the world organization more "muscle," permitting it to function more meaningfully in the future.

The U.N. Trusteeship Council has already been serving with great success as "midwife" in the birth of new nations from trust territories in Africa. Such specialized U.N. agencies as the World Health Organization, the Food and Agriculture Organization, and UNICEF have provided invaluable guidance and assistance in meeting basic human needs. Continued and expanded use of the U.N. and its agencies can help bridge the gap from disease to health, from poverty to plenty, and from illiteracy to knowledge for untold millions.

Within the present structure of the U.N. it might be possible to establish one institution which could help maintain world peace in specific situations: a permanent U.N. peace force which could serve as a buffer has been proven by the U.N. presence in the Gaza Strip between Egypt and Israel. A U.N. peace force could be lightly armed and staffed by technicians trained for observation and inspection. Such a group might be linked to the inspection machinery of disarmament agreements.

CONCLUSION

These recommended policies and areas of endeavor do not spell out a complete program for the United States in these difficult times. They merely indicate certain desirable main guidelines. They also indicate that there are no easy solutions and no cure-alls.

Peace cannot be bought in a bargain basement. Increased efforts are needed from all segments of our society. An expanding economy is needed to provide the sinews of a better life and the tax base to foot the monetary bill. Constant vigilance, planning, and leadership must come from our public officials.

But even active leadership is not enough. Hard thinking and intelligent political action by the people must constantly guide their elected representatives.

Shrimp Import Controls

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Mobile (Ala.) Press of Friday, April 8, 1960, which gives a good statement on shrimp import controls. Well, it is certainly timely. This editorial gives the facts, and I shall not add to them. We have had hearings before the U.S. Tariff Commission on this matter. Our Merchant Marine and Fisheries Committee, of which I am vice chairman, and chairman of its Subcommittee on Fish and Wildlife, handles commercial and sport fisheries, and held hearings on some phases of this problem. We have sent a group from our committee to sit in at the Geneva Conference on the Law of the Sea, and I know we will work out something there on fishing rights in the waters of each nation. There certainly will have to be some controls on shrimp imports, if our own people are to survive, and they will survive. I have also introduced a bill, H.R. 8926, as the shrimp industry in my district has been badly hurt by cheap foreign imports, and some of our fishermen have been obliged to sell their boats as they could not afford to sell their shrimp at the prices they were offered.

I also include a press dispatch (UPI) which appeared in the Mobile Press under date of April 9, 1960, "U.S. Shrimp Industry Peril Cited." The figures cited in this article show that shrimp imports supply 47 percent of the U.S. market now, compared with 4 percent in 1939, and that imports have doubled since 1955; from 53,800,000 pounds to 106,600,000 pounds in 1959.

The articles follow:

[From the Mobile (Ala.) Press, Apr. 9, 1960]

U.S. SHRIMP INDUSTRY PERIL CITED—BRIEF IS FILED WITH TARIFF BOARD BY THREE GROUPS

WASHINGTON.—The three domestic shrimp industry organizations have told the U.S. Tariff Commission that increasing imports could virtually eliminate shrimp fishing in the United States.

The National Shrimp Congress, Inc., the Gulf Shrimp Canners Association, and the National Shrimp Breaders Association filed a joint brief yesterday with the Tariff Commission. The brief backed up testimony given by the groups at Commission hearings last month. Shrimp importers also appeared at the hearing to argue against the domestic industry's claims.

The Tariff Commission has been directed to report to the House Ways and Means Committee by May 9 on the effect of shrimp imports on the domestic industry.

The brief summarized the arguments given in the March hearings, citing statistics that showed:

Shrimp imports supply 47 percent of the U.S. market now, compared to 4 percent in 1939.

Imports have doubled since 1955: from 53,800,000 pounds to 106,600,000 pounds in 1959.

A projection of imports shows that foreign countries will be sending 303,000 million pounds, or 99 percent of the U.S. market, by 1965.

"Imported shrimp consistently undersell the domestic catch in virtually all categories," the brief said. "Together, these facts will force a virtual elimination of domestic fishing for shrimp."

The brief called for a system, under which each importing country would be given quotas. Imports over a country's quota would be charged a 50 percent duty under the industry proposal.

[From the Mobile (Ala.) Press, Apr. 8, 1960]

SHRIMP IMPORT CONTROLS APPEAR IN ORDER AT THE PRESENT TIME

There is much merit in currently considered Federal legislation to control shrimp imports.

Such a step is needed to prevent the domestic shrimp industry from economic collapse.

Identical bills introduced in both houses of Congress do not seek to prohibit or cut back imports, but actually to expand them in orderly fashion.

Spokesmen for the domestic shrimp industry readily concede the need for continued imports, since American shrimpers can supply only about 60 percent of current market requirements. H.R. 8769, the industry-backed bill, provides not only for continuation of imports at the highest historical levels, but for steady, substantial increases beyond those levels in the future.

Approximately 50 countries export shrimp to the United States. The domestic industry is concerned over the prospect that unrestricted imports may bring about widely fluctuating prices and wreck both the United States and traditional foreign suppliers such as Mexico, Panama, and Ecuador.

Many south Alabamians, Mississippians, and Floridians have large investments in boats and other shrimp facilities. It would be unfortunate to place these people in jeopardy of being forced out of business by foreign imports.

We strongly urge passage of this law protecting an important division of the gulf coast's economy.

Advisory Board Supports C. & O. Canal National Historical Park, H.R. 2331

EXTENSION OF REMARKS

OF

HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. FOLEY. Mr. Speaker, at the recent meeting of the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments, the membership of this distinguished group of American leaders unanimously supported the passage of H.R. 2331 "To create the C. & O. Canal National Historical Park and Parkway." I take this means of bringing the full report of the Board to the attention of the Members of Congress:

ADVISORY BOARD URGES TWO NEW UNITS FOR NATIONAL PARK SYSTEM

Creation of a new national historical park and a new national monument has been recommended to Secretary of the Interior Fred A. Seaton by the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments.

The Board, which met in Washington, D.C., March 21–23, today forwarded to Secretary Seaton the following recommendations:

1. Early enactment of legislation, now before Congress, which would authorize establishment of a 15,000-acre Chesapeake and Ohio Canal National Historical Park, from the Nation's Capital through the mountains of Maryland. Secretary Seaton previously endorsed the legislation.

2. Designation of a Missouri area as Ozark Rivers National Monument. The Department of the Interior is now reviewing a National Park Service report which asks that the proposed monument include some 113,000 acres along about 190 miles of the Current Jacks Fork, and Eleven Point Rivers.

The Advisory Board also commended the Department for its efforts to secure congressional cooperation to provide essential protection of Rainbow Bridge National Monument, Utah, against "irreparable physical and esthetic damage as the result of the construction of Glen Canyon Dam," and urged that this effort be continued and implemented in every possible way.

A statutory body created by the Historic Sites Act of 1935, the Advisory Board is composed of 11 nonsalaried members appointed by the Secretary of the Interior. The act specifies that the membership "include representatives competent in the field of history, archeology, architecture, and human geography."

In addition to commenting on Rainbow Bridge, the Board forwarded six recommendations to the Secretary.

The C. & O. Canal recommendation noted that the advisers were reiterating their 1955 call for protection of the historic waterway. They said the canal park unit is needed "as a memorial to America's westward expansion and a monument to the canal area." The Board said it "hopes that enactment of the pending legislation will enable the Nation to realize this park opportunity without further delay."

The advisers also commended and supported the position of the service with respect to zoning Yellowstone Lake in Yellowstone National Park and recommended "that the three lower arms (of the lake) be closed to power boats as proposed in the plans of the National Park Service." The Service plans to restrict power boats from a portion of the lake to retain that area's wilderness nature.

Another resolution noted that, as fine as the National Park System is, it is not complete and there are significant areas of scenic, scientific, and historic significance that should be considered on a systematic basis for suitability and eligibility for inclusion in the system. The Board urged that "a national park system more nearly adequate for the foreseeable needs of the United States * * * be planned and appropriate measures taken to acquire and conserve these irreplaceable portions of our national heritage before they are lost."

Under the Park, Parkway, and Recreation Study Act of 1936, the Park Service cooperates with other Federal and State agencies in planning for adequate facilities. Regarding such surveys, the Board particularly commended the Park Service for its seashore and Great Lakes shore surveys made with donated funds. The Board urged the Department to take all appropriate means so that the experience and findings of these studies may be made available to the Outdoor Recreation Resources Review Commission and to other agencies of the Government and the public "at the earliest practicable date."

The Board also commended the Service's State park cooperation program and asked the Department to strengthen and expand it "since adequate and sound State park conservation programs are perhaps the backbone of park conservation in the United States."

Members of the Advisory Board are: Frank E. Masland, Jr., of Carlisle, Pa., Chairman; Harold P. Fabian, Salt Lake City, Utah, chairman of the Utah State Park and Recreation Commission, Vice Chairman; Dr. Edward B. Danson, Flagstaff, Ariz., director of the Museum of Northern Arizona, Secretary.

Also Dr. E. Raymond Hall, University of Kansas, Lawrence, Kans.; Dr. John A. Krout, vice president and provost, Columbia University, New York, N.Y.; John B. Oakes, New York City; Earl H. Reed, Chicago, Ill., Fred Smith, Newark, N.J.; Carl I. Wheat, Menlo Park, Calif.; Dr. Robert G. Sproul, president emeritus, University of California, Berkeley, Calif.; and Sigurd F. Olson, Ely, Minn.

Father Thomas L. Farrell

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. FRIEDEL. Mr. Speaker, on March 10, Father Thomas L. Farrell, pastor of St. Lawrence Roman Catholic Church in Jessup, Md., passed away to his eternal reward. On March 15 in the historic Cathedral-Basilica of the Assumption in Baltimore, where Father Farrell had been ordained by the now deceased Archbishop Michael J. Curley in June 1936, a solemn pontifical Mass was offered by His Excellency Archbishop Francis P. Keough of Baltimore, for the repose of Father Farrell's soul which climaxed his full and priestly life, with His Excellency Bishop Sebastian and over 100 priests and monsignori participating in this beautiful and impressive ceremony before a basilica filled to its very doors with former parishioners, loved ones, and friends of Father Farrell from all walks of life.

Father Farrell was only 50 years of age when he died; but in those 50 years he lived a full and fruitful priestly life. Prior to his ordination he studied at Georgetown University and St. Mary's Seminary in Baltimore. After his ordination in 1936, he served as a curate at St. Mary's in Govans, at St. Mark's at Catonsville and the last 3 years as pastor at St. Lawrence's at Jessup.

In 1940, Father Farrell volunteered for military service as a chaplain and for 5 years was the beloved padre of the 36th Field Artillery Group through seven battles in the invasions of North Africa, Italy, Southern France, and then Germany. When he returned home, he remained active in the military Reserve, holding the rank of lieutenant colonel at the time of his death.

While at St. Lawrence's at Jessup, Father Farrell had the care of the Maryland House of Correction for men, the reformatory for women, and the Patuxent institution.

Father Farrell was a priest's priest, a gallant and courageous soldier, a GI's padre, and a Christlike servant of God's children—the sinless and the sinful, the poor and the rich, the weak and the strong, the sick and the healthy—indeed everyone, of whatever station, race or creed, in need of God's comfort and consolation.

I was deeply impressed by the eulogy to Father Farrell delivered at the Solemn Pontifical Mass at the Assumption Cathedral by Father Thomas M. Brew of the Society of Jesus, Rector of the Jesuit Retreat House "Manresa on the Severn" at Annapolis, and Father Farrell's lifelong friend; and I am including this eulogy as part of my remarks so that my colleagues may read this moving, heart-warming tribute to this hero-priest on that solemn occasion:

"Being made perfect in a short space, he fulfilled a long time" (from the "Book of Wisdom," ch. 4, verse 13).

Most Reverend Archbishop Keough, Most Reverend Bishop Sebastian, Right Reverend and Very Reverend Monsignors, Very Reverend and Reverend Fathers, Good Sisters, loved ones, and friends of Father Farrell:

At a time like this, when many hearts—mine included—are heavy with sorrow, I realize only too well that human words can be pretty futile. But it is only proper for the consolation of the living, the many friends and relatives of Father Farrell here present this morning, that some final thoughts in memory of this devoted and beloved priest be spoken.

It has been my good fortune to have known Father Farrell as long as I can remember. He was my best friend. His death is a great personal loss to me as it is to everyone who knew him. I find consolation—as you can and must—in the firm belief that God's ways are not our ways; that Father Farrell's priestly work is finished and that Almighty God in His wisdom has called home this priest to an eternity of peace and happiness with Him whom Father Farrell loved and served so devotedly and faithfully in his relatively short life here.

Of worldly goods, Father Farrell has left behind mighty little but to each and every one of us here today—priest, religious sister or brother, lay person—man, woman, child, he has left something much more precious and valuable. He has left us example of his priestly life, a life which was completely dedicated to the love and service of God and his fellow man.

As Father Farrell's mortal remains lie here before the altar, his priestly life has now come full circle. It was here in this historic Basilica of the Assumption that he was ordained a priest in June 1936; here with his ordination classmates he cocelebrated with Archbishop Curley his first mass as a newly ordained priest of God. This morning the solemn pontificial Mass offered by His Excellency Archbishop Keough, for Father Farrell and for the repose of his soul climaxes his full and fruitful priestly life.

Little did the newly ordained Father Farrell dream on that bright morning in June nearly 24 years ago that his priestly duties would take him far beyond parish limits—to foreign countries as an Army chaplain—and here at home—into hospitals and prisons. Little did he realize when death came so suddenly the other day that through his priestly ministrations, so many people had been helped by him and brought closer to God. Little did he realize, while living, the full value and impact of his work for God. Such was the humility of this great priest.

Recently, His Holiness, Pope John XXIII, in an address to the Rome Synod made reference to the acts of the Council of Trent concerning priests as follows: "Nothing is more effective for encouraging piety and the worship of God among Christian people than the life and example of those men who have dedicated themselves to the divine ministry." In a remarkable way, Father Farrell's life and example have advanced the Kingdom of Christ on this earth.

In that same address which was an explanation and amplification of the priestly character as outlined by the Council of Trent, the Holy Father went on to point out that the three basic elements of the priestly character are to be found in the head, the heart, and the tongue of the priest. I submit that Father Farrell's life and work as a priest are a fulfillment of the statement of the Holy Father.

To begin with the head, and in the words of the Holy Father, "It is by the head that one measures the doctrine, the prudence, the good judgment of a man of the church, of a priest of Christ." Father Farrell's preliminary studies were made at St. Joseph's Parochial School and Gonzaga High School in Washington, D.C. Then followed St. Charles and Georgetown University. His philosophical and theological studies were completed at St. Mary's Seminary. Through it all, while he was not the most brilliant student, he was never far from the top of his class. In his student days, he proved himself to be an energetic, steady, and consistent worker, a trait that was to be much in evidence throughout his priestly career. Father Farrell realized that there was no easy way to be educated, that studies had to be worked at, and he applied himself accordingly with the thought that here was his professional knowledge, the tools with which he must work to be a successful laborer in the vineyard of the Lord. He never forgot that the priest in order to be an effective instrument in the hand of God, must never cease studying. Consequently, even though his days were busy and the time for reading limited, he made the most of his opportunities to keep himself well-informed, well-educated.

That he had the requisite qualities of mind spoken of by the Holy Father is evident from his prudence as a curate, his good judgment under pressure, as an Army chaplain in the heat of battle, and his administrative ability in his later years as a pastor.

God gives to all of us certain talents to use in the living of our lives and the working out of our salvation. Sad to say, some of us never discover what our talents are, or knowing them, fail to use them to the fullest extent. I think that one great reason for Father Farrell's effectiveness as a priest can be found in the fact that he recognized his talents and made the best use of them for God and in God's work.

One such talent was his athletic ability. He not only played on the teams during his school years but he was able to teach young people the fundamentals of football, baseball, and basketball. He recognized full well that athletics were a means to an end. He made use of competitive sports and games to teach the young people entrusted to his care the important and necessary lessons of teamwork, self-discipline, courage and manliness. Also, he taught them how to be graceful winners and good losers. Father Farrell, with his teams at St. Mary's, Govans, and at St. Mark's, Catonsville, was wisely building natural virtues to achieve supernatural ends. He had a marvelous way with young people.

One phase of Father Farrell's priestly life is not too well known. Like most men who have known the heat and fury of battle, who have seen men wounded and die, he talked very little of his war experiences but they were many in the 5 years he spent in the service of his country as a military chaplain. In 1940, when war had broken over Europe but before this country was drawn into World War II, Father Farrell left St. Mary's, Govans, for military duty. The next 5 action-packed years were spent far from home at Fort Bragg, N.C., England, in the invasions of North Africa, Sicily, Italy, Southern France, and finally Germany, during the course of which he won seven battle stars—the soldier's field uniform for a time replaced the cassock. The man of peace had become the beloved Padre of the 36th field artillery group. This was the outfit he joined at Fort Bragg and with it he remained all through the war. There was more than one brush with death. One day in Africa the jeep in which he had been riding struck a land mine only seconds after he had gotten out of it. The GI Chaplain's Assistant was killed, but Father Farrell had been mercifully spared. His work was not yet done.

As a priest Father Farrell preached numerous sermons—from the pulpit in the church—in military camps, in hospitals and prisons but he had no illusions about his eloquence as a speaker. What he had to say was said in a simple, sincere and straightforward way and consequently had a deep effect upon his hearers. Though he did not realize it, his best sermon was his own life. His most effective work involving the priestly tongue was done in the confessional, in the instruction of converts, in informal and personal meetings with those who had a problem or needed encouragement. For one in trouble or burdened with sorrow, he always had a kind and encouraging word. In all the years I have known him, I cannot remember his speaking ill of anyone.

But it was in the realm of the heart that the priestly character of Father Farrell preeminently stood out. He was a priest after the heart of his Lord and Master, Jesus Christ. Selfless devotion to duty best describes this priest as he went about his Father's business. He had a special care for the sick—whether it was a sick call late at night or in the middle of dinner, or whether it was bringing Holy Communion to one with a lingering and crippling illness. No matter how busy he was or how much he might have been inconvenienced where his own comfort was concerned, he would drop everything at a moment's notice if anyone wanted or needed him. He was friendly and approachable: the young, old and middle-aged equally felt at home with him. To all he gave a genuine interest and a sympathetic

understanding such as is found in few men. He was patient, with human weakness, and kind with a kindness he must have inherited from his dear mother, where the people committed to his care were concerned, be they young or old, rich or poor, learned or uneducated—all had an equal claim on Father Farrell. He was everybody's priest.

Thousands came to his wake. They came from far and near. Grown men surreptitiously brushed back a tear: a young person whom he helped years ago wept openly and unashamed. They came from his parish, St. Lawrence, Jessup, where he spent the last 3 years of his life as pastor of that growing parish and endeared himself to the hearts of his people. While at Jessup, he had the care of the Maryland House of Correction for Men, the Reformatory for Women and the Patuxent Institution. Father Farrell was equally at home with the prisoner, the teenager and the elderly person. Still others came from St. Mary's, Govans, where he began his priestly work. Many more came from St. Mark's Catonsville, where he spent 10 busy years ministering to all classes of people. Fellow soldiers of the 36th Field Artillery Group, came considerable distances for a last rendezvous and prayer for a comrade in arms. Many sisters and fellow priests paid their respects. Truly, Father Farrell was the layman's priest, the soldier's priest and the priest's priest.

As I watched them come and go, the question kept coming back to my mind—what is the secret motive, known only to himself and to Christ, our Lord, that impels a Father Farrell so consistently to go far beyond the call of duty, to give and not to count the cost, to fight and not to heed the wounds, to toil and not to seek for rest, to labor, and not seek for reward save that of knowing that he is doing God's will?

In trying to discover that secret, I took a last look around Father Farrell's room in the rectory at Jessup. I saw on his desk a pen and pencil set with this inscription—"Father Thomas L. Farrell—We miss you—The Catonsville Midget League, June 21, 1956." Near one of the shelves of the bookcase was a baseball autographed not by big leaguers, but by the St. Mark's 1948 C.Y.O. Champs. These items told their own story but still I had not found the secret of Father Farrell.

Next I turned to the bookcase and removed his well-torn copy of the New Testament. What appeared to be a bookmark actually was a neatly folded but often-used piece of paper on which was typed "The Prayer of a Soldier in France," by Joyce Kilmer, and I read:

My shoulders ache beneath my pack
(Lie easier, cross, upon His back.)
I march with feet that burn and smart
(Tread, Holy Feet, upon my heart.)
Men shout at me who may not speak
(They scouraged Thy back and smote Thy cheek.)
I may not lift a hand to clear
My eyes of salty drops that sear.
(Then shall my fickle soul forget
Thy agony of bloody sweat?)
My rifle hand is stiff and numb
(From Thy pierced palm red rivers come.)
Lord, Thou didst suffer more for me
Than all the hosts of land and sea.
So let me render back again,
This millionth of Thy gift. Amen.

I reread it and then it suddenly dawned on me—those last four lines—"Lord, Thou didst suffer more for me than all the hosts of land and sea. So let me render back again this millionth of Thy gift."

And there I believe is the secret of Father Farrell.

May his soul and the souls of all the faithful departed, through the mercy of God, rest in peace. Amen.

Address by the Honorable Dewey Short, Assistant Secretary of the Army, at Appomattox Day Observance Evansville Civil War Roundtable, Evansville, Ind., April 9, 1960

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. DENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an address made by the Honorable Dewey Short, Assistant Secretary of the Army, at Evansville, Ind., before the Evansville Civil War Roundtable, on Appomattox Day Observance, April 9, 1960.

ADDRESS BY THE HONORABLE DEWEY SHORT, ASSISTANT SECRETARY OF THE ARMY, AT APPOMATTOX DAY OBSERVANCE EVANSVILLE CIVIL WAR ROUNDTABLE, EVANSVILLE, IND., APRIL 9, 1960

My friends, it is indeed a pleasure to join with you this evening in observance of the anniversary of the peace established at Appomattox 95 years ago. I also deeply appreciate the honor conferred upon me by being asked to address the same group which has previously heard such profound students of the Civil War as Bell I. Wiley, Maj. Gen. Ulysses S. Grant III, and Bruce Catton.

Last fall I was deeply disappointed when I found it impossible to come to Evansville to be with you at your 96th anniversary program commemorating Lincoln's Gettysburg Address. I had fully intended to be here for that event, but unfortunately the "battle of the budget" was at its height then in the Pentagon, and now they are still waging it with intense ferocity on Capitol Hill, so I am lucky even to be with you tonight. I admire "Bish" Thompson for his unrelenting tenacity, however, for it was through his efforts that I return to the great Hoosier State.

"Bish," as a fellow alumnus of Baker University, it is good to see you and thanks again for inviting me to be with you here tonight.

I approach the subject of the Civil War—and particularly Appomattox—in utmost humility because I do not believe a man has ever been born who fully understands the cause, the conduct, and the consequences of the Civil War. The most expert and impartial historian finds it difficult, if not impossible, to fathom the bottomless depths and to assay the real meaning of this most terrible of fratricidal conflicts. Once a great philosopher said: "The day is deep and deeper than the day can dream." Life goes deeper than logic and the heart has reason that it knows not of. Maybe this is why a study of the War Between the States has so many devotees such as you and me. It is endlessly interesting, always absorbing and ever challenging.

Since a youngster, I have been a voracious reader of accounts of the Civil War and, as I grow older and the more I read the less I seem to know and understand about it. If you are like me, I am sure that often in baffling moments you are tempted to give up in despair, but then there is always a tug to draw you back to the difficult task of trying to interpret its true meaning and profit by its lesson.

No American can consider the events which transpired at McLean House in Appomattox Courthouse, Va., on April 9, 1865, without being profoundly moved. Moved by the dignity, the simplicity, and solemnity of the scene—moved by the realization that the leaders of two great and brilliantly led American armies had met to end the strife that had rent the Nation assunder for more than 4 terrible years. Each side had fought long and desperately for a cause it believed to be right, be it the right of the State to govern itself or a faith in the preservation of a United States. And each side tragically left behind a toll of honored men who gave the last full measure of their devotion.

Yes, the scene that Sunday afternoon 95 years ago was a somber one. One Union officer describing it wrote: "We walked in softly * * * very much as people enter a sick chamber when they expect to find the patient dangerously ill." The contrasting appearances of Grant and Lee further provided an interesting historical footnote to the setting. General Grant, with his mud-spattered uniform which, except for the shoulder straps, would have indicated a private, was of careless appearance. His stubby brown hair and beard, his comparative youth and lack of height were not commensurate with what one might ordinarily associate with the supreme commander of the U.S. Army. On the other hand Lee, distinguished in appearance, erect in his military bearing, impeccable in his faultless uniform, presented a striking contrast.

The conference itself reflected the great understanding 4 years of war had brought. It was reserved and dignified and yet at the same time warmly and wholly human. Grant's terms of surrender embraced the bare necessities, tempered with justice and imposed in such an atmosphere of conciliation as to minimize the humiliation of the vanquished. Officers and men of Lee's command were to be released on giving their paroles not to take arms against the United States until exchanged; all arms and public property were to be relinquished.

At this point Grant's eyes, resting momentarily on Lee's splendid sword, said: "This will not embrace the sidearms of the officers, nor their private horses or baggage." Lee was visibly touched by this concession, which, he said, would have a happy effect upon his army, and accepting Grant's magnanimity, he asked if his soldiers might also keep their own mules and horses. Grant acceded to this, saying they would need their animals to work their farms. He went on to offer to supply rations to Lee's army, which had just about reached the ends of its stores. General Grant thus was generous in his terms, avoiding any appearance of exultation and showing a genuine respect for the feelings of his erstwhile foe.

The confrontation at Appomattox was one of gentlemen acting in a way befitting the dignity of man, and it is an occasion upon which all Americans may look with pride. Appomattox is also just another fascinating part of the story of the Civil War, and in our planning for the centennial of that great conflict we must constantly bear in mind that it must be a centennial of commemoration and dedication for all Americans, for out of the drama and strife of that war we will find lessons that will guide us today.

One hundred years ago this Nation was plunged into civil war. Though 1860 was still a year away from actual battle, the decision had already been made and America was hopelessly, helplessly, yet manifestly and inevitably moving toward war. This decision, it is obvious, had been reached sometime before; when, no one can say. No specific incident nor circumstance can be singled out as the cause of this state of affairs.

Some would point to William Lloyd Garrison, others to John Brown; and yet others to the intractability of the slaveholders of the great southern plantations. But no man

nor any single event can specifically be named as the causal factor for the dread decision. The decision was the product of the time; a time when America was growing up—bursting, as it were, its seams in boundless expansion—a time when America was beginning to realize that individuals must cooperate if this mighty Union of States was to assume a position of preeminence in the world. It was inevitable that the Nation should have growing pains in such times; it was unfortunate that they resulted in war.

But out of the holocaust, heartbreak, misery, horror, and tragedy of civil war was born a new unity. Never before had so much hell—both during the war and after—been endured for an accomplishment so magnificent. That this Nation was to become a leading world power was its destiny; that this Olympus was to be achieved with such honor, integrity, morality, and valor is testimony to the strength and determination of the American people.

Now a century has passed into eternity. Today our problems are much as they were then. The details are different, the disputes not the same; but the mosaic of events is strikingly similar. Today, we do not have bleeding Kansas or John Brown's raids, but today we do have Berlin, Korea, and Matsu and Quemoy.

Today our outlook is based on a framework of nations within a world structure rather than just a community of states within a single nation. Now the question at issue is the very same that it was a century ago, and that question—as then—is freedom. Before the Civil War it was freedom of men, freedom of States apart from the national whole, and freedom of geographical segments to determine their own ends. In that debate each side believed sincerely, deeply, and emotionally that its arguments were completely valid. The South was thoroughly convinced that it should be allowed to secede from a union it no longer understood and whose laws and attitudes were working to dissolve a system long held honorable and viable. The North, just as determined, held that a nation destined for world leadership should not be at odds when history was grooming it for the dawn of greatness.

Many historians have sought explanations for the mighty conflict. They were many, complex, and imponderable—but the chief cause, no doubt, was the fight for extension of the slavery system. After his election to the Presidency in November 1860, Lincoln wrote to Alexander H. Stephens of Georgia with whom he had served in Congress and who later was to become Vice President of the Confederacy: "You think slavery is right and ought to be extended, while we think it is wrong and ought to be restricted. That, I suppose, is the rub. It certainly is the only substantial difference between us." This same sentiment was clearly expressed in Lincoln's first inaugural address.

Today we are locked in a struggle with an ideology that is attempting to destroy our concept of freedom. When we look at the Communist leadership in the Sino-Soviet bloc, we see uninhibited dictatorship. There is no step, no risk, no course that they are not willing to take to carry out their avowed intention to bury us. Communist philosophy, to our way of thinking, refutes itself before it fully matures into a philosophy. We know and understand that a philosophy with no consideration for humanity is a philosophy that should not and cannot long exist.

America's philosophy is one that we have embraced since the beginning of our country. It is a philosophy that we share with our allies today, and it is one that we can believe in and fully trust. The belief that every man and every country should be free to choose its own course is one of the most basic, yet most noble verities given man. It is a belief that we have entered war to uphold. And when I think of our Civil War, I think one of its most magnificent aspects was that each side, in its own way, was fighting to uphold the principle of freedom.

The brilliance, the determination and the courage of such men as Lee, Jackson, Lincoln, and Grant must inspire us as we recall their efforts. Often as I sit in my office in the Pentagon, I find myself glancing up at the fine portico of General Lee's mansion to recall the difficult decision that he made there and the strength of character, patriotic devotion, and the great spiritual resources he brought to that trying moment. Certainly for these traits and for the brilliance and humanity of his leadership, he deserves his sacred place in the hearts of all Americans. For these were values found on both sides of the conflict, even when the division it symbolized was at its deepest. That these men and these values should be applauded and held up as truth by this Nation is something that is as fine as it is unlikely.

But these characteristics went well beyond the minds and souls of the war leaders; they extended, to a large degree, to every man engaged in the Civil War. Be they generals or privates, be they one man fighting for the Union and his brother cast as a rebel, be they great thinkers or determined farm boys; they all felt the religiously emotional impact of this struggle. At Seven Pines, the Wilderness, Manassas, and Bull Run, they were compelled by this impact and they fought battles whose description is at once horrible and magnificent.

But, though we can admire and praise the many fine things that sprang from the experience of Civil War, we must never forget that this was America's great essential tragedy. As do all great tragedies, it bred false hope in the form of 90-day enlistments and a picnic atmosphere. "One rebel can kill six Yankees any day," they cried in the South, and in Washington people packed picnic baskets to go watch the Union quickly defeat the South at Bull Run. With banners flying, fifes shrilling, and spirits soaring they touched off what was to become the most horrible war in history. Through incredible hardship, near starvation, and gruelling warfare the men of the North and South fought a war for 4 years that they were promised would be over in 6 months at most. They saw two generations of Americans lose half of its number to death or injury; they saw families split, towns wiped out, traditions wrecked, and records lost. They saw the democratic process losing its force, and, in doing so, wrecking the dreams of this country's ancestors. They knew that "war is hell" long before William Tecumseh Sherman told them that it was, for they could see in this war the tragedies of great men becoming doomed and a nation finding itself smashed on the rocks of malcontent.

America, which had historically been so strong, was lost. The fabric of union had been irreparably rent and no one could be found to weave an acceptable pattern. But more than this our Nation was caught up in a conflict that in many ways made no sense, had no pattern or justification. At its nadir it was an emotional experience comparable to the Dark Ages of Europe. There was little hope and less reality. This was compounded by the fact that nearly everyone in this country felt the real, personal effects of war.

The totality of this experience shocked America to the point that its memory was indelibly engraved on the American mind. The people looked back and saw an ordeal that might have been avoided, and they vowed that this country would never again become similarly involved. Out of ashes, out of terror, out of confusion this country once again became bound together. The weavers of union used a much more viable thread this time and wove a fabric that has withstood the greatest financial crisis, the most devastating depression, and the greatest two wars of history. America entered the Civil War and adolescent and came out mature. She felt the impotence that is war and determined that America could no more afford such folly. The mature America gathered strength and confidence and in a relatively short time parlayed her new-found unity and stability into a position of world power.

What are the implications and lessons of this darkest chapter in our history? The most astute and renowned historians would perhaps say there are not and cannot be any final and conclusive answers as to what the war really meant. As Bruce Catton has so well stated: "We are brooding over a deep, haunting enigma; over a riddle that can never quite be solved." We do know, however, that slavery and secession were the great bones of contention before this savage struggle and we also know that today slavery has been abolished and that the Union has been preserved. Slavery no longer exists, the Union does.

Often I have said, and I still believe, that all beauty is born of pain and that the deepest understanding in life comes through suffering. I hope no one here will think me sacrilegious when I say that at time I feel that the Civil War was America's Gethsemane and Calvary. Of course there were hotheads on both sides of this conflict but many good people, both in the North and the South, wanted to avoid bloodshed and earnestly prayed that this cup of woe, if it be God's will, might be taken from them. Yet, if it were necessary to abolish a great evil, and particularly if it were necessary to preserve the Nation and save the Union, they were willing to go through the tortures of war, the agony of the cross, to achieve these goals.

Anyway, the war came with its thrilling and saddening story of heroism and meanness, of wisdom and folly, where the best and the basest in men were born. Through the fiery furnace of the Civil War much of the dross in our national life was destroyed and on the hot anvil of armed conflict were forged the hard links in a chain of unity born through a common suffering and loss. All discord did not disappear with cease firing but through a shared sacrifice which both sides well understood, there came a sympathy and understanding never known before. Appomattox may have spelled the end of the Confederacy but it also gave birth to a new united and stronger Nation. After the Crucifixion came the Resurrection of a new purified, unified and glorified power. The greatest victory General Grant ever won was when he allowed Lee to retain his sword and his men to keep their horses. Never before or since has the vanquished been treated by the victor in so noble a manner.

So the Civil War that was begun rather gaily and lightly, which many thought would soon be over, was ended only after 4 long years of bloody struggle which had led more than 600,000 men through disillusionment, pain, and hardship, to death. The war did not divide this country because the country was already divided; in a strange, inexplicable and mysterious way the Civil War actually united the North and South through a great common sacrifice and tragic experience.

As we plan to commemorate the centenary of this war, it seems to me that our first task must be to communicate these lessons to all Americans. We must cast our commemoration in the same die that the war was cast. It must be a sober affair, one that will try to define the intensity and tragedy of that great war. We must fight those who would wish to clothe the Civil War in a gown of romance, because if this were to happen we would be prostituting and destroying one of this Nation's noblest experiences. We must try to recreate the emotion and in-

tensity that went into this effort and try to explain that the horror of war came because our country was unprepared to tackle the problems that confronted her squarely and honestly.

By following these rules I feel we can achieve a double purpose. First, we will be commemorating the Civil War in a way which will reflect judgment, sobriety, and determination of purpose. We will be doing much to destroy false notions about the war, and we will replace them with a conception that will give strength and dignity to the event as well as to the people of the Nation. No one can ask, no one will ask, more of us than this. And by achieving this first purpose we will necessarily achieve the second.

I mentioned earlier that we are facing today many of the problems that confronted this country at the outset of the Civil War. We face an implacable foe determined in purpose; and that purpose is our destruction—moral, economic, physical, and intellectual. In this struggle we have the strongest weapon of all and that is conviction. With conviction weak nations have wrecked mighty empires; without conviction great states have fallen.

America added conviction to her arsenal after she found unity from war. In binding together in the spirit of Appomattox, in founding an ever-stronger Nation, she proved to herself and to the world that, by God, under God, and with the help of God our American constitutional Republic is the finest form of government the world has yet seen. Of this we are convinced.

In our centennial, then, let us insure that all Americans learn how we gained this conviction; by doing so we shall be shoring the foundations of our country at a time when we need all the strength and unity we can muster. We have learned our lesson—and at what a price. Today America is "liberty and union, now and forever, one and inseparable."

My friends, we have a great and noble task before us; a task that in many ways will help to strengthen this Nation in her purpose and perspective. Surely it is worthy of our most profound effort. God help you and me to preserve America because America is God's best chance to save the world.

The Explosion

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. BOYKIN. Mr. Speaker, under unanimous consent to extend my own remarks I include an advertisement in the Cotton Trade Journal of April 8, 1960, entitled "The Explosion." This article is signed by my lifelong, fabulous friend, the one and only Donald Comer, whose father was the Governor of the great State of Alabama, and who also served in the U.S. Senate. Donald Comer also has another great and good and brilliant brother, Hugh Comer. Every word Donald Comer says in this great article in my judgment is more than true.

In 1957 we imported over 4 million yards of cloth to put our mills out of business. In 1958, just a year later, Mr. Comer states that we imported over 8½ million yards, and in 1959, 82½ million yards. These figures, as I understand, came from the U.S. Department of Commerce. Please note what one of our largest newspapers has to say, the Birmingham News, of Birmingham, Ala., of February 25, 1960. Also please note what the Underwear Institute of February 24, 1960, has to say. Please note what the Cotton Trade Journal of February 26, 1960, said where they quoted what that great leader, Senator RICHARD RUSSELL, had to say on this subject. Mr. Charles A. Cannon of the Cannon Mills is quoted by the Southern Textile News of November 7, 1959, as saying:

It's plain murder. Foreign products can take your jobs, and that is too high a price to pay for cheap goods.

I know we all agree with Mr. Cannon. Something has to be done not only to protect our way of life, but to protect our industries not only in the textile business, but in every business we have. There is absolutely no way to compete with the prices they are paying labor in Tokyo. My committee and I held hearings there just before last Christmas. I was amazed to find that Tokyo is the largest city in the world—larger than New York City or London. I talked to many people there. The women, so I was told in the presence of many other people, were getting 50 cents a day, and started to work at daybreak and worked until dark. It is the same in Hong Kong, Formosa, Pakistan, and India.

This article, entitled "The Explosion," speaks for itself, and I think we have already had the explosion, but there is still time to protect our industry and the thousands upon thousands of men and women working in these mills, not only in our beloved State of Alabama, but in practically every State in this Nation.

The advertisement follows:

The explosion of textile imports can destroy the vital U.S. textile industry just as surely as can the explosion of an intercontinental ballistic missile. Cotton cloth imported from Hong Kong, India, Pakistan, Formosa, and Korea is threatening to destroy the great American textile industry—and the rate of acceleration of textile imports is still rising.

In 1947, 4.1 million yards.
In 1958, 8.6 million yards.
In 1959, 82.5 million yards.
(Source: U.S. Department of Commerce, Bureau of the Census.)

NATIONAL COMMENT

Memphis Press-Scimitar, April 1, 1960:

"WASHINGTON.—Representative E. C. GATHINGS has asked the U.S. Tariff Commission to help him fight increasing cotton product imports which, he says, are driving domestic cotton farmers in the Memphis area out of business. 'A whole area of new countries has entered our markets. With the lower cost cotton available to their mills and with their cheap labor, it is not possible for our domestic industry to compete with them,' Representative GATHINGS said."

Southern Textile News, January 30, 1960: "Over 115 million square yards of gray goods alone came into this country from foreign mills during 1959, compared to 50 million yards during 1958."

The Corset and Brassiere Association of America, February 24, 1960: "In 1957, exportation of brassieres from Hong Kong to the United States began. The volume reached approximately 540,000 in 1958, about 1,400,000 dozen in 1959. Over this period, exports from the Philippines have risen to more than 600,000 dozen."

New York Mirror, January 22, 1960, Victor Riesel:

"JAPANESE INVASION HITS GARMENT FIRMS

"ROCHESTER, N.Y.—President Eisenhower's Cabinet has been concerned over another invasion of the United States—by Japanese beautifully hand-tailored men's suits, Hong Kong men's shirts, women's blouses, pajamas for old and young and ladies' unmentionables. This invasion is costing our garment manufacturers well over $200 million a year—and our needleworkers tens of thousands of jobs."

Birmingham News, February 25, 1960: "In Alabama it is essential that concern about such (textile) imports is emphasized—it means bread and butter on many a cotton mill worker's table."

Underwear Institute, February 24, 1960: "Imports from Hong Kong of knit underwear, nightwear, and knit shirts in 1959 were 223 percent greater than in 1958."

Daily News Record, February 18, 1960: "Census Bureau figures through last November show that between 1958 and 1959 imports of cotton cloth increased by 70 percent from all countries."

Daily News Record, March 15, 1960:

"WARNS OF STRANGULATION FROM UNLIMITED IMPORTS

"CHARLOTTE, N.C.—An official of the Nation's largest textile organiaztion warned Monday that the domestic industry 'is in danger of strangulation from foreign imports if they are permitted to come into this country in unlimited quantities.' "

The Cotton Trade Journal, February 26, 1960: "Senator RICHARD RUSSELL, Democrat of Georgia, said he believed Congress would be derelict in its responsibility to the American people 'if we do not compel the State Department and other agencies of Government to take some action to assure the survival of what is left of our textile industry.'

"Senator JOHN PASTORE, Democrat, of Rhode Island, warned that if this Nation does not become more realistic in its trade policies the domestic textile industry cannot survive."

Associated Press report, New York: "Senator KENNETH B. KEATING, Republican, of New York, has prepared a second revision of his bill to protect American industries from low-wage import competition. This is part of the fight against excessive imports of textile fabrics and apparel."

American Textile Reporter, January 28, 1960: "In 1958, imports of shirts from Japan and Hong Kong had amounted to 2 million dozen. In the United States, an average plant producing 1,000 dozen shirts per week (50,000 dozen per year) employs 150 persons. Imports from Japan and Hong Kong, therefore, represented the production of 40 average American plants employing 6,000 persons.

"Total imports of cotton dress and sport shirts from Japan and Hong Kong in 1959 had been running 10 percent of U.S. domestic production of those items, and over, undermining American standards of living and damaging responsible American manufacturers."

The Thread Institute, Inc., February 19, 1960: "We are vitally interested in this entire import problem, particularly in connection with the flood of apparel and other textile imports in which thread is used. To the extent that these finished articles displace domestic production, thread consumption in the same proportion would be curtailed and American jobs jeopardized."

Southern Textile News, November 7, 1959: "Just plain murder. That is why we were glad to see Charles A. Cannon, of Cannon Mills, give some straight talk on this subject. He said, 'It's plain murder. Foreign products can take your jobs, and that is too high a price to pay for "cheap" goods.' "

The New York Times, February 18, 1960: "The textile and apparel industries in this country are in grave danger because of a flood of foreign imports, their leaders warned yesterday. Meeting here to discuss the cost of helping to free world trade, representatives of a score of associations in the field joined to urge speedy adoption of high import barriers and extra duty payments on imported goods.

"They said that such merchandise enjoyed an unfair competitive advantage because of substandard labor practices. The industrialists agreed that strong action must be taken to preserve the domestic industry."

DONALD COMER,
Chairman of the Executive Committee, Avondale Mills.

Diplomatic Conferences

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1960

Mrs. KEE. Mr. Speaker, during the next 8 or 10 weeks several important diplomatic conferences will be held. The world is entering a fateful period, and what happens at these high-level talks between world leaders could well determine the course of history during our lifetime.

Recently Premier Khrushchev, of Russia, ended a visit to France. Prime Minister Macmillan, of England, made a hurried trip to Washington to confer with President Eisenhower. President De Gaulle, of France, is scheduled to visit the United States soon. And in May, the summit conference, bringing together the heads of state from the world's major powers, will be held.

There is a feeling of cautious optimism in Washington. Perhaps, after almost 15 years of intense cold war during which the world has lived on the brink of atomic war, a break is in sight and a tentative beginning can be made toward reaching a new understanding.

No one here expects all of the many serious world problems to be solved overnight. Nor can we look forward to the Russians discarding their expansionist policies for one of sweet reasonableness.

But at least there are indications that Russia wants to reach an accommodation and to ease some of the tension. They have made the overtures. The United States and its allies must explore the possibilities.

Certainly it does no harm to talk with the Russians provided we are not taken in by the Russians and allow our defensive strength to deteriorate. It is possible the Russians are aware of the fact that the hydrogen bomb and fantastic new delivery systems built around long-range missiles have made it entirely too dangerous to substitute bluster and bluff for serious diplomatic negotiations. The consequences of touching off a war through a miscalculation of American intentions are too horrible to contemplate.

At present, the United States and its allies are talking with the Russians about a suspension of nuclear weapons testing. Both sides have made concessions and according to the President there is a fair chance of reaching an agreement backed up by a sound, self-enforcing inspection system.

Such an agreement would be a long first step toward disarmament. Negotiations are also underway looking toward a disarmament agreement but the progress here has been slight to say the least.

I am sure everyone would like to see a workable plan agreed upon to enable the nations of the world to put an end to the arms race. The world is spending hundreds of billions each year on arms. As long as the Russians remain a serious threat to world peace, we have no other choice.

We would rather devote the money we are forced to spend on arms to more useful purposes. And I am sure the people would solidly support disarmament if we could be assured it would be accepted universally and that it would be enforced.

Until such a plan can be agreed upon and put into effect, we will have to continue our defense program, regardless of cost. We cannot let up. If we relax for one minute the Russians could well take advantage of the opportunity and launch a surprise attack.

We can remain strong and yet let Russia and the rest of the world know that we are ready at all times to reach an understanding through diplomatic channels.

That is why I am glad to see President Eisenhower agree to talk with Mr. Khrushchev at the summit and to visit Russia later on. We have to persist in our efforts to find a peaceful solution to the world's problems. We can talk with the Russians without appeasing them or permitting our strength to wither away.

Statement of American Federation of Technical Engineers Regarding Settlement of Bethlehem Shipyard Labor Dispute

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the letter received from Russell M. Stephens, president, American Federation of Technical Engineers, in Washington, D.C.

The letter follows:

AMERICAN FEDERATION OF
TECHNICAL ENGINEERS,
Washington, D.C., April 11, 1960.

Congressman THOMAS J. LANE,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LANE: I wish to take this opportunity to thank you for your efforts toward the settlement of the east coast Bethlehem Shipyard strike by being signatory to the resolution submitted to the President of the United States, calling upon him to establish a factfinding board for the purpose of seeking solution of the dispute.

While I have not seen the President's official reply to your resolution, it has been reported in the press that he will not intercede in this controversy except upon the direct request of the parties which must reach an agreement. It has further been reported that should the parties jointly request that the President designate a factfinding board to assist him he would give serious consideration to such a request.

On behalf of my organization, the American Federation of Technical Engineers, AFL–CIO, representing 850 striking draftsmen at the Fore River Shipyard, Quincy, Mass., I have dispatched the following telegrams to the President:

"Mr. David W. Kendall in his announcement of your decision to take no action upon the petition of 106 Members of Congress to establish a Presidential Factfinding Board in an attempt to aid in settlement of the Bethlehem Shipyard labor dispute, inferred that there is a possibility of your intercession upon the direct request of the disputing parties.

"The American Federation of Technical Engineers, AFL–CIO, representing 850 striking draftsmen at the Bethlehem Fore River Shipyard, Quincy, Mass., hereby makes such direct request upon the basis as outlined in the above mentioned petition.

"By copy of this telegram, Bethlehem management is urged to join with us in requesting your good offices in an attempt to expedite an honorable settlement."

Knowing of your sincere wishes to be of assistance in settling this dispute I respectfully request your assistance in urging the Bethlehem Steel Co., Shipbuilding Division, to join us in our request to the President for the establishment of a Factfinding Board as outlined in your resolution.

Thank you for this and past favors.

Sincerely yours,
RUSSELL M. STEPHENS,
President.

Import Duties on Certain Coarse Wool

SPEECH
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. MILLS. Mr. Speaker, H.R. 9322, as amended by the Committee on Ways and Means, would make permanent the existing suspension of import duties on certain coarse wools used in the manufacture of carpets, papermakers' felts and certain other products.

The Committee on Ways and Means held public hearings on this bill and, as amended, the bill enjoys the support of all segments of the wool industry including the carpet industry, the papermakers' felt industry, the wool growers and the wool trade.

The Committee on Ways and Means was unanimous in recommending the enactment of this bill.

As I have indicated, there is presently in effect a suspension of duties on certain coarse wools imported under bond for use in the manufacture of rugs and carpets. This suspension was provided in Public Law 418 of the 85th Congress and continues until June 30 of this year.

The rug and carpet industry has traditionally enjoyed the privilege of duty-free importation of the coarse wools necessary in the manufacture of carpets. Because of the change in competitive conditions in the world market and the declining availability of certain types of coarse wools, the Congress broadened somewhat the types of coarse wools eligible for duty-free importation by the carpet industry in enacting Public Law 418 of the 85th Congress.

When the Committee on Finance of the Senate reported favorably the legislation that subsequently became Public Law 418, it also called on the U.S. Tariff Commission to make a thorough study of this whole subject. The amendments adopted by the Committee on Ways and Means to H.R. 9322 reflect certain considerations brought to the attention of your committee by the report of the U.S. Tariff Commission as well as by representatives of the domestic industry that appeared at the public hearings which the committee held.

The committee adopted two amendments to the bill. First, it extended the duty-free importation privilege with respect to the coarse wools under consideration to the papermakers' felt industry. Thus, any competitive disadvantage that the papermakers' felt industry might face in competing with the rug industry for the supply of coarse wools available in the world market, would be removed.

Secondly, the committee removed a limitation in existing law which has prevented the Secretary of Agriculture from developing and promulgating new and improved standards for the grading of imported wools. This amendment was supported by the Department of Agriculture and by the domestic wool-growing industry.

Thus, as reported unanimously by the Committee on Ways and Means, H.R. 9322 has the support of all segments of our domestic wool industry.

I urge enactment of the bill.

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield to the gentleman from West Virginia.

Mr. BAILEY. Naturally I am suspicious of any proposal to take articles off the dutiable list. May I ask the gentleman if representatives of the Wool Growers Association testified before the committee?

Mr. MILLS. Yes; they did. They appeared in the hearings. The gentleman understands the wool industry has been concerned about the inability of the Secretary of Agriculture to have authority to promulgate these new methods of classifying wool. In the interest of taking care of their problems, the committee adopted this second amendment to which I have already referred. The wool growing industry is very anxious to have that particular provision enacted into law.

Mr. BAILEY. Will the gentleman advise the Members of the House if there is any of this coarse grade of wool produced in this country?

Mr. MILLS. The carpet industry has always had to obtain its coarse wool from the world market. As I pointed out, the industry has always been able to do that duty free. There is very little if any of this type of wool grown in the United States, so that this action would not, in the opinion of those who testified before the committee, pose any threat whatsoever to the wool growing industry here in the United States.

Mr. BAILEY. May I say to the distinguished chairman of the Committee on Ways and Means that my State of West Virginia is building up its wool industry. We are anxious to know whether this is going to be beneficial or injurious to our efforts in the State. Apparently there is no danger in this legislation in that connection.

Mr. MILLS. I do not think there is anything adverse to that industry in the gentleman's State in this bill.

Mr. BYRNES of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. MILLS. I yield.

Mr. BYRNES of Wisconsin. It should be noted that one of the primary objectives of the legislation is to make raw materials not available in the United States available to our domestic manufacturers so as to improve the competitive position of domestic products of the United States in world markets. This legislation represents an endeavor to do something to put our producers in a better competitive position.

Mr. MILLS. The gentleman's point is well taken. It is one of the very important reasons for the adoption of the bill.

To Abolish Capital Punishment, H.R. 870

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. MULTER. Mr. Speaker, in connection with my bill, H.R. 870, I commend to the attention of our colleagues the following compilation which has been forwarded to me by Mr. J. A. H. Hopkins, of Westport, Conn.:

CAPITAL PUNISHMENT

1. WHAT ARE OUR CHURCHES SAYING?

United Presbyterian: "Condemns the death penalty as tending to brutalize the society that condones it, and in 1959 went on record accordingly."

Protestant Episcopal resolved that "the taking of human life is the province of God and not within the rights of man."

Union of American-Hebrew Congregations resolved, "There is no crime for which the taking of human life by society is justified."

United Lutheran Church is now making a study of this question.

Roman Catholic Church: "You ask me the stand of the church on capital punishment. Well, the following extracts from Mr. J. D. Conway's excellent article on the subject in the Catholic Digest of May 1959 in answer to this question are worth remembering:

" 'Is capital punishment licit in our modern advanced society? Do we need it to protect us from crime? Is it effective as a deterrent to the criminal? Should it be abolished?

" 'The question is raised by some shocking crime. Our calm reason is perturbed by vivid pictures of life and death, of violence and vengeance, of justice or atrocity. We discuss the subject with our instincts and sentiments rather than with good sense.

" 'In answering your question, I would like to propose the thesis that the church is naturally inclined, by history, doctrine, spirit, and example to favor abolition of the death penalty in our modern society.

" 'The church's history should give her little sympathy with the death penalty. Our Divine Founder was the victim of an execution which was expeditious, arbitrary, and unjust. His death brought great benefits to us, but no Christian would want to be identified, even remotely, with Pontius Pilate. When we inflict the death penalty we are cast vaguely in his role.

" 'A few years ago the discussion of this subject became intense when a reprieve from the Governor of California arrived at the prison 2 minutes late. Those 2 minutes meant eternity for the victim in the gas chamber.

" 'Her divine master advocated only one kind of severity: rigorous control of self. His message was always one of forgiveness. He brought people back to life on various occasions, but He never put anyone to death or recommended that anyone be executed.

" 'And it is worthy of note that those States which have discarded the death penalty have lower rates of capital crimes than similar States which retain the penalty.

" 'The same can be said for the 30 nations of the world which have abolished this penalty; nearly all of them report decreases in crime. It is significant that the only great nation to restore it is the U.S.S.R. Russian leaders boasted loudly of their advanced social thinking when they discarded capital punishment in 1947.

" 'The church has never exacted the death penalty by her own authority.

" 'The United States hangs on to this traditional punishment more tenaciously than any other advanced nation.' "

2. WHAT ARE OTHER PEOPLE SAYING?

Lewis E. Lawes, warden of Sing Sing: "A poll of wardens show that 90 percent thought capital punishment should be abolished."

Charles Dickens wrote: "Not all their united efforts pursued through all our united lives could persuade me that * * * executions are a Christian law."

Thackeray said: "I came away from Snow Hill that morning with a disgust for murder, but it was for the murder I saw done. * * * I pray to Almighty God to cause this disgraceful sin to pass from among us, and to cleanse our land of blood."

F. L. Hoffman, LL.D., Prudential Life Insurance Co., said: "No evidence can be produced to show that capital punishment acts as a deterrent, or hindance to even the worst of murder records conceivable. The death penalty, rather to the contrary, acts as a deterrent to swift and adequate justice; imposes heavy burdens upon taxpayers as the result of long trials, fosters sensationalism of the worst possible type, and stains the civilization of those who enforce it."

British Parliamentary Select Committee, 1929–1930: "Our prolonged examination of the situation in foreign countries has increasingly confirmed us in the assurance that capital punishment may be abolished in this country without endangering life or property or impairing the security of society."

The American Political and Social Science "Annals" states: "The presence or absence of the death penalty makes no particular difference in the amount of murder * * * the death penalty is inconsequential as a deterrent."

The Royal Commission (of England) studied this question in 1949–1953, and reported: "The general conclusion which we have reached is that there is no clear evidence in any of the figures we have examined that the abolition of capital punishment has

led to an increase in homicide rate, or that its reintroduction has led to a fall."

3. WHAT ARE THE UNDISPUTED FACTS?

(a) That in the States wherein capital punishment has been abolished the homicide record for each 100,000 persons has run from sixth-tenths of 1 percent to 2.5 percent, whereas in the States where it still exists it has run from 5 percent to 11.8 percent; and

(b) That during 1956–58 there were 21,324 municipal murders of which only 1,362, or 6.31 percent, have occurred in the abolition States (a decrease of 11.65 percent), while in the States retaining capital punishment there has been 19,962, or 93.66 percent (an increase of 19 percent).

Water—Our Most Important Natural Resource

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. SAYLOR. Mr. Speaker, at the annual meeting of the National Wildlife Federation held recently in Dallas, Tex., one of the most timely papers was presented by James T. McBroom, Chief, Branch of River Basin Studies, Bureau of Sport Fisheries and Wildlife of the Department of the Interior.

Mr. McBroom is recognized as one of the outstanding authorities on the use of our water supply, both as a natural resource and as a means of outdoor recreation.

The reception of Mr. McBroom's statement met with such great acclaim by the delegates to the convention that I want to commend it for the reading of my fellow conservationists and sportsmen.

The statement follows:

PRESERVATION OF OUTDOOR RECREATIONAL VALUES IN THE FACE OF OTHER DEMANDS FOR WATER

(By James T. McBroom, Chief, Branch of River Basin Studies, Bureau of Sport Fisheries and Wildlife, Department of the Interior, Washington, D.C., at the Annual Meeting of the National Wildlife Federation, Dallas, Tex., March 5, 1960)

Water is our most important natural resource.

We often hear this statement, and it very likely is true.

But is it—really?

How about the human resources of the Nation? It may be said that human resources are not natural resources in the usual sense of the word. But few will deny that the welfare of the Nation depends most of all upon human resources of the body, the mind, and the spirit.

I submit that any program for the use of water or any other material natural resource is seriously deficient if it does not adequately serve these vital human resources. Unfortunately, most of us take water for granted, as if it were air. We assume that there will always, somehow, be plenty of it around. As we are rapidly beginning to realize, this may be an unhappy delusion. It is dawning upon us to our dismay, that water is not as limitless as air—that it is available only in a fixed and limited quantity—that its quality in terms of fitness for human uses is the concern of everyone.

The United States has always been proud of her capacity for growth and development. With our enterprise and with our storehouse of natural resources, we have seen ahead nothing to limit how far we could go as a nation. So if we run short on any product of the soil, the forest, or the mine, we'll import it or develop new methods or substitutes and keep right on going as the most powerful and richest Nation on earth.

But what'll we do if we run short of water? We can't very well import it. We have made much progress in learning how to manufacture it from the oceans. However, the extent to which it may supplement natural water supplies very far inland is problematical. Inland brackish waters are another possible source.

Nevertheless, it is a pretty sobering question we have to ponder as to whether we shall bump our heads on the ceiling of our water supply in our growth and development as a Nation. If and when we do, we can grow no more. Will we run short on water first, before we run out of enough food, minerals, and forest products? Think about that one.

Nobody needs to get alarmed about this—at least, not yet. We are told that we are not short of water. There is still plenty of it for the country as a whole. Our water problem is simply that there is not enough in the needed place at the needed time and the needed quality, which can be made available at the needed price. Even so these problems are serious at the affected places and the affected times. Witness the restrictions we have seen in cities where cars have gone dirty and lawns have gone to destruction for lack of water. Witness also the acres of farmland which have reverted to desert, because water got too scarce, too expensive, or too impure.

One of the sobering facts, of course, is that water demand is growing at a rate of about three times the rate of population increase even though our population, like that of the rest of the world, is exploding. But here again there is no cause for immediate alarm. A good part of this demand is for nonconsumptive use; that is, the water performs its service and is returned to its stream or river with little loss of quantity. But here the problem is quality. Many nonconsumptive uses may fundamentally change the physical and chemical characteristics of the water. Here we could witness the plight of 12 cities on the Neosho River in Kansas. According to Russell G. Lynch, in his excellent booklet on "Our Growing Water Problems" written for the National Wildlife Federation and published last year, these 12 cities all take water from the river. Lynch reports that at times in the 1953–54 drought, the entire intake from the river to each city's waterworks was no more than the sewage discharged by the city next above.

In view of these difficulties, it is not surprising that water has long been a No. 1 problem child in the natural resources management of the Nation. Recently, the Senate Select Committee on National Water Resources listed and summarized the commissions and committees which have been organized to deal in whole or part with the National water problems. It is an amazing list.

It all began when, under the influence of George Washington, commissioners were appointed to consider plans for improved navigation on the Potomac River. That river must be the holder of some kind of record because it is still being studied, and some of our neighbors around Washington, D.C. call it now the most undeveloped major river system in the United States.

Then, beginning in 1808, Secretary of the Treasury Albert Gallatin undertook the preparation of his report on roads and canals, which is said to have ushered in the waterway policy of the United States.

In just this century there have been no less than 21 commissions, boards, subcommittees and similar groups which have been concerned in one way or another, in whole or in part, with solving the Nation's water problem. Incidentally, not until the report of the Senate Select Committee on Investigation of Executive Agencies of the Government in 1937 is there any mention of fish and wildlife in relation to the water problem in the summary prepared by the present select committee.

It may be well at this point to take a brief overall look at the nature of our water supply. For this purpose we can refer to the information provided to the Senate Select Committee on National Water Resources by Dr. Luna Leopold, Chief Hydraulic Engineer of the Geological Survey, and the son of the famous Aldo Leopold, the revered father of modern wildlife management.

As we all know, our water supply comes from rain and snow. According to Leopold, "If the total quantity that falls on the United States within an average year were spread evenly over the country, it would stand 30 inches deep." About 21 inches returns to the atmosphere through evaporation and transpiration. The other 9 inches draining from the land surface and seeping into the ground constitutes the useable supply. From it, we now withdraw about 3 inches, says Leopold, of which 2 inches returns back to the stream network. Of the 3 inches of water withdrawn for use, 80 percent is from lakes and streams, and the remaining 20 percent is from wells.

Forty-six percent of our total water demand is for irrigation; a similar percentage is utilized by industry; and public uses like cities and towns take the remaining 8 percent. Irrigation accounts for 80 to 90 percent of all water consumed. At the present time, the Nation is using about 270 billion gallons per day. By 1980, we will be using more than twice as much—or almost 600 billion gallons. Most of the increase will be for industrial purposes in the eastern part of the Nation.

In some parts of the country water is being mined by pumping it from the ground at a far faster rate than it is being replenished. We are told that, in 1958, ground water was removed from a 25,000 square-mile area in the high plains of Texas here and in New Mexico 140 times faster than it was being replenished.

It will be clear, however, that despite localized water shortages in time and place, the Nation is not about to run out of water. But we do have a water problem—or rather, several of them—that is getting more and more serious as time goes by. And we are doing something about solving the problem aside from organizing commissions and committees to deal with it. Most important, we are developing our river systems through the construction of dams, reservoirs, canals, and other control works. We are also engaged in a large program of water quality improvement.

The water resources program of the Federal Government is a very large one. The budget for fiscal year 1961, for example, calls for an appropriation to the Corps of Engineers alone of $936.4 million for civil works; to the Bureau of Reclamation of $313.9 million; and to the Department of Agriculture of $42.8 million for its watershed program. Added to these sums are many millions of dollars which will be expended at the same time by licensees of the Federal Power Commission, local groups that cooperate with the Department of Agriculture in the small watershed program, and others.

Everywhere, at an ever-faster rate, men and machines are busily engaged in either (1) changing the characteristics of rivers, lakes, bays, and estuaries from those provided by nature or (2) changing the undesirable characteristics of these water

bodies caused by man back toward the way nature made them.

In January of 1954, there were 1,300 reservoirs of 5,000 acre-feet or more in the Nation, with a total capacity of 278 million acre-feet and a total surface area of 11 million acres. By 1969, there will be several hundred more reservoirs with a total additional area of 4 million to 7 million acres.

Now let us get down to how outdoor recreation values, specifically those related to fish and wildlife conservation, fit into the picture of these pressing water problems and the tremendous water resources program which is underway to cope with them.

As the scramble for water grows keener, and the water resources program grows larger, the job of preserving a place for fish and wildlife in cutting up the water resources pie grows evermore difficult and complicated.

The members of the National Wildlife Federation along with hundreds of thousands of other citizens are convinced that fish and wildlife are living natural resources of great value to the Nation. Like other living things, fish and wildlife must have adequate, suitable water. The demands of our growing population and economy for water in industry and agriculture and for municipal purposes threaten to take away the water living-space of fish and game. They must have a share of the Nation's water if they are to survive. Much is at stake in that survival.

We measure progress, in our fast-moving civilization, in terms of growth of our cities and towns, expansion of industrial output, new housing starts, high birthrate, and increases in gross national product. We are a prosperous, bustling Nation. At the same time, we are shocked by the physical and emotional breakdown of men and women in their prime, resulting from the stress of modern-day living. Adequate opportunities for fishing and hunting and related forms of outdoor recreation are the finest antidotes for stress. Fish and wildlife conservation equates very closely with the conservation of human resources, as we have said—the most important of all.

The people of the Nation realize that. The recreational demand for fish and the wildlife is spiralling upward at a tremendous rate. A recent issue of Life magazine devoted to recreation and use of leisure time aptly described the demand for water-based recreation as a kind of "aquamania."

It was brought out that expenditures by Americans for leisure-type activities has now reached an amazing $40 billion a year, or more than 8 per cent of the gross national product. Much of this is based on the availability of water resources for recreation, which, in turn, depends in large part on opportunities for fishing and, to a lesser degree, hunting. According to Life magazine, the recreational boating business was a $2 billion industry in 1959. It has grown to this size from a level of less than a third of that amount in 1951. According to statistics published by the Outdoor Boating Club, the principal trade association of the boating industry, somewhat more than half of the reasons given for boat purchases is that the new owners eventually use their craft for fishing. Thus, each activity is stimulated by the other.

In 1955, there were 25 million fishermen and hunters over the age of 11, who spent $3 billion in pursuit of their sports; they traveled 10.4 billion miles in their automobiles. The importance of fishing to the economy of a State is suggested by the fact that, according to Life, Florida's deep sea fishing industry, including sport fishing, is nearly as large as her citrus and cattle industries combined. As much money, it is said, is spent on dogs as is spent on legal services by the people of the Nation.

The numbers of fishermen and hunters in the Nation are increasing at a rate far faster than the popultion. Between 1948 and 1958, population increased by 18.7 percent. During the same period, the sales of fishing licenses increased by 43.3 percent, and those of hunting licenses by 29.6 percent.

The basic problem for those who contend for a place for fish and wildlife in dividing up the water and related land resources is a difficult and compounding one. It is this: the demand for adequate opportunities to enjoy fish and wildlife rsources is growing at a rate far faster than the population increase itself. At the very same time, the natural water and related land habitat for fish and game is being destroyed or altered at an increasingly rapid rate to serve the needs of an expanding population and economy.

As the adverse demands of civilization have marched farther and farther into the natural domain of fish and wildlife, much has been accomplished for their conservation by the Federal and State agencies who are charged with this responsibility. Federal and State hatcheries supply nearly 15 million pounds of fish and annually for stocking of lakes and streams. The National Wildlife Refuge system comprises a total of nearly 18 million acres devoted primarily to the conservation and welfare of wildlife. Other millions of acres devoted to same purposes are contained in State refuges and other wildlife management areas.

However, these installations, important though they are, cannot maintain the fish and wildlife resources of the Nation by themselves. It is not possible or feasible to assign the entire responsibility for fish and wildlife conservation of this Nation to the refuges, the fish hatcheries, and the wildlife management areas of the State and Federal Government and then forget about it, assuming that it has been adequately taken care of. These facilities can represent, at best, only the nuclei for the fish and wildlife conservation needs of the Nation.

What is needed—and what is a must—in order to maintain fish and wildlife in the national way of life and economy is for the Congress, the State legislatures, and the agencies and organizations of the country who deal in land and water resources programs, to give genuine recognition to the needs of fish and wildlife in the planning and construction of facilities and projects.

Project units in the water resources program cannot and should not be built on the basis of plans designed to serve the interests of navigation, irrigation, flood control, and hydroelectric power in the most effective, efficient, and least costly manner for those purposes alone. It may be necessary to forgo the ideal development for these purposes in order to develop all of the water and related land resources of the Nation so that the project may be somewhat less efficient and a little more costly from the standpoint of navigation, irrigation, flood control, and power. This may be necessary to order to preserve and enhance the living natural resources and their associated recreational and commercial values. These can no longer be dismissed or brushed aside with only token consideration in the name of progress.

It must also be recognized that fish and wildlife conservation in water resources development cannot be accomplished free or even cheaply. Substantial sums, though moderate in comparison to other project costs, must be devoted to means and measures to conserve and develop fish and wildlife resources in water-control projects.

There is one strong point of view in this Nation that those who would develop our rivers for economic uses by man, such as irrigation, navigation, hydroelectric power, and flood control, have some kind of special right to the Nation's waters. To some who hold this point of view, water tumbling down its natural channel is sinfully going to waste. Those who like to keep rivers as Nature made them are usually branded by these people as reactionaries who want to lock up our natural resources. Any suggestion that the project developer spend project funds to develop and conserve a stream's fish and wildlife resources for the benefit of outdoor recreation many times meets with a reaction ranging from mild shock to outrage.

This attitude will have to be changed if fish and wildlife resources as we know them are to be conserved in connection with water resources development. It will have to be replaced by full and free acceptance of the idea that fish and wildlife values may be as important as irrigation or hydroelectric power and that the costs of providing for the protection of these resources is just as much and just as appropriately a part of project costs as those for turbines and generators. In a few cases, indeed, there must be acceptance of the idea that a river, as Nature made it, contributes most to public welfare in its natural state—that it should be left that way because damming it or diverting it would create less public benefits than they would destroy. What we need to strive for is optimum water resource development, rather than maximum water resource development.

A recent example in Arkansas illustrates the point. It is the case of the Greers Ferry Dam, now under construction on the Little Red River to provide for hydroelectric power and flood control. The Fish and Wildlife Service, cooperating with the Arkansas Game and Fish Commission, completed a report in 1957, long before construction of the project was undertaken. In this report, it was forecast that the reservoir behind the dam would significantly increase fishing opportunities over the stretch of river it would flood out. But it also noted the substantial value of the warm-water fisheries in the 79 miles of stream below the dam. It was recommended that multiple-level outlets be installed in the dam in order that this warm-water fishery could be preserved. The dam, as planned, will have low-level outlets which will discharge cold water into the stream, and it is expected that this will destroy the existing warm-water fishery. At the same time, neither the water nor the stream will have conditions suitable for a trout fishery except on an expensive put-and-take basis. It is not expected that the stream can maintain itself as a trout fishery.

This recommendation for multiple-level outlets met with resistance because of its cost. That cost was estimated at $600,000, and this seemed to the construction agency to be much too high, even in view of its relation to the total estimated project cost of $50 million. Despite strong representation at high levels, the project is being built as planned, without provision for the downstream fishery. In citing this example, I do not wish to appear critical of any agency or person. I merely use it to demonstrate the evidence of a prevalent attitude of those in control of our water resources program that fish and wildlife conservation is a fine thing as long as it costs little or nothing. As I have said, we have somehow got to get accepted the proposition that such costs are a legitimate and appropriate part of overall water resources costs.

This brings me to my final point. It is how conservation is brought about, whether it is in connection with the water resources program or otherwise. Nearly everyone is in favor of conservation. It is one of those nice, comfortable concepts, like home and mother that no one can be opposed to. Then why is it that conservation accomplishments usually involve such a struggle? Why do organizations like the National Wildlife Federation have to battle so hard for conservation victories?

To begin with, conservation is public business, generally carried on by public agencies of the Federal or State Government. In saying this, we don't overlook or underrate the excellent conservation accomplishments of many forward-looking private industries, although, taken together, these are on a far narrower scale than the conservation programs of the State and Federal public agencies.

Ours is a Government of law, not of men. This means that the most imaginative and efficient administrator of a State or Federal conservation agency may do only what he is authorized to do, and no more. Even though it is clearly apparent to him that a certain course of action should be taken to accomplish conservation results, he may not follow that course of action unless he is authorized to do so by his legislature or by the Congress.

This, then, means that conservation legislation is the key to conservation as a whole. Without effective conservation legislation, the administrator is shackled and hobbled in carrying out his program.

Here's another fact: conservation means some sacrifice or relinquishment of privilege on the part of interests who make use of natural resources. These interests, acting from very human motivations, are naturally reluctant to make these sacrifices or give up these privileges. In the democratic way, they make their influence felt in the Nation's legislative halls. This is one reason why conservation legislation is not easy to come by, and why conservation is such a battle.

In any event, legislation is essential to conservation. Without legislation, conservation can only be an exercise in the creation of slogans and catch phrases, and the raising of banners and armies to joust with windmills. All of us in the conservation field might just as well face up to that fact of life, despite the problems it may create.

One of the fundamentals in our Nation is that water is public property. The right to use it is derived from a government, mostly the State government. The manner in which water is divided and developed is controlled by law, whether that law be a State water code, or an act authorizing the construction and development of a huge project by the Federal Government. How those laws are written will determine, in the final analysis, whether water development needs for flood control, hydroelectric power, and agriculture can be met without sacrificing outdoor recreation values.

Interest Rate Ceiling

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues an editorial which appeared in the New York Times, Friday, April 8, 1960, entitled "The 25-Year 4¼s."

The editorial follows:

THE 25-YEAR 4¼S

The Treasury has included in its program of new financing an issue of long-term bonds, the first of its kind to be undertaken in almost a year. The new offering will carry a coupon rate of 4¼ percent and will mature 25 years hence.

Reading this announcement some persons may have asked themselves: "What about all this controversy between the administration and the Congress over the interest ceiling of 4¼ percent on new issues with maturities of 5 years and longer, which, we have been told, has effectively debarred the Treasury from the long-term market now for close to a year? Was that a fact?"

The interest-rate ceiling is no less a fact in April than it was in January, or, let us say, in June 1959. What has happened is that the market's views on security prices and yields, which are always in a state of change, have undergone an exceptionally sweeping change within the past 2 months. This has been conspicuously the case with respect to the changes that have taken place between yields on interest-bearing securities on the one hand and equity securities on the other.

Anticipating the business recovery of 1958 and stimulated by fears of inflation and momentary doubts concerning the U.S. dollar, the investment-speculative community launched a veritable stampede into equity securities early in that year, which was to produce in its advanced stages an "inverse spread" between the market yields on common stocks and interest-bearing securities of almost unparalleled dimensions and duration. During the greater part of 1960 we have witnessed much evidence that this situation was reversing itself and that the traditional pattern (in which interest-bearing securities normally sell at yields substantially below those of common stocks) was being restored. This tendency has been marked by both rising yields on equities and declining yields on bonds.

The impression seems to have gained considerable support from these changes in bond yield evaluations that the yield patterns of 1958–59 are now a thing of the past; that the Treasury is at last free to issue long-term securities regardless of rate, that the issue of the bond-rate ceiling is now dead. Such conclusions might prove eventually, though not necessarily permanently, justified by events. It is highly premature to say more than that at the present time.

Forand Followup

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

Mr. ROBISON. Mr. Speaker, in the CONGRESSIONAL RECORD of April 10, 1960, I included in my extension of remarks an editorial from the Binghamton (N.Y.) Press opposing the Forand bill. As a followup, I now include an editorial from the Binghamton Press of April 9, 1960, which is self-explanatory. Also included is an editorial from the Christian Science Monitor of April 8, 1960.

The editorials follow:

[From the Binghamton (N.Y.) Press, Apr. 9, 1960]

ALTERNATIVE TO FORAND BILL NEEDED

Whether or not any final action is taken on the Forand bill at this session of Congress, medical care for the elderly is beginning to look like one of the major issues of the election campaign.

That is regrettable because the issue is real and it deserves a wiser and more intelligent approach than that of partisan politics pointed at luring votes.

Republicans, including Vice President NIXON, are reported trying to put together a health-insurance-for-elderly plan that will blunt the vote-appeal of the Democratic-sponsored Forand bill. A health insurance plan in the image of the Forand bill would prove a trap for Republicans, not an advantage.

An alternative to the Forand bill should omit its excessive costliness and actuarial unsoundness. It should omit the Forand bill's compulsion, its inequities, and its certainty of evolving socialized medicine. Even if health insurance for the elderly were to be part of the social security system, it could be associated with it to cover need that really exists and obviate the socialization and paternalism that the Forand bill portends.

What the elderly need is health insurance at fair and reasonable rates that can't be cut off by insurance companies in the beneficiaries' later years when they most need it. Group health insurance should be convertible to individual policies upon a worker's retirement.

Persons over 65 on average require 2½ times the medical care of persons under 65. Insurance rates need to be raised to a level where those under 65 help to meet costs of those over 65.

Or instead of a Forand bill, the Government could subsidize such private insurance, thus guaranteeing coverage at rates within the means of the beneficiaries. The overall need is not for a Government insurance structure that would bypass Blue Cross, Blue Shield and existing private insurance in general.

The Forand bill does not provide coverage for more than 4 million elderly persons outside of the social security system. The insurance structure it proposes would cost many times the current estimates. Linked with rising costs of social security, the costs would be so excessive that the solvency of social security itself could be undermined.

Medical care for the elderly poses problems calling for studied approaches beyond merely the demagogues' lure of votes built around the image of offering something for free. Americans in or approaching their latter years deserve something better than the illusion, the unsoundness, and the demogogic fraud of the so-called Forand bill.

And if the Republicans are enamored of the vote-getting potentialities of an insurance-for-the-elderly plan, they'd better forget it, or come up with an alternative that makes fiscal sense and is really aimed at the social problem rather than just at luring votes.

[From the Christian Science Monitor, Apr. 8, 1960]

DIRECTING THE AID TO THE NEED

The Senate subcommittee on problems of the aged and aging early this year reported that, "The No. 1 problem of America's senior citizens is how to meet the costs of health care." Its hearings produced poignant testimony of the need for help in paying for medical care after retirement.

The subcommittee recommended a course that has since been endorsed by three candidates for nomination for President and has become the subject of an intensive campaign by organized labor: That the old-age and survivors insurance system under the Social Security Act be extended to provide medical service benefits for all persons eligible in that program.

This proposal, as typified in the Forand bill which has been defeated in the House Ways and Means Committee but may yet be pressed in the Senate, contemplates an addition of one-fourth of 1 percent to the

payroll taxes presently collected for OASI, which are scheduled to reach 9½ percent in 1969. Whether such an additional tax would finance the plan is problematical.

But several points are clear. One is that nearly 14 million beneficiaries and probably an additional 2 million surviving dependents would immediately become eligible for hospital and nursing home care under the bill. Another is that all the participants in the old-age insurance program, constituting approximately 9 out of every 10 Americans, would be taxed whether they wished it or not for what some describe as an entering wedge of compulsory socialized medicine.

And after all this, there would remain almost 2 million men and women who do not have the benefit of coverage under OASI but who are on old-age assistance or general relief in the various States. These people probably have the greatest need of aid in meeting their health bills but they would not be helped by the Forand bill. Others who are working beyond the age of 65 because they have to or choose to would presumably have to retire to qualify.

Meanwhile, in order to help those whose old-age benefits are not enough to cover doctor bills, the OASI aid would also be given out of the payroll tax to some beneficiaries who have independent resources or private pensions. This expensive blanket method is not the only way of achieving the purpose.

The administration, through Arthur S. Flemming, Secretary of Health, Education, and Welfare, is exploring possibilities of aiding the expansion of voluntary medical and hospital insurance in some way which would give the greatest assistance to those least able to pay and would avoid underwriting the bills of those with ample means. Eight Republican Senators have filed a bill to assist according to need in paying the premiums on voluntary insurance for the elderly.

One point should be kept clear in the controversy over medical care for the aged. The fact that certain groups oppose the shotgun methods of the Forand bill does not necessarily signify that they are against doing anything whatever for the ill and needy. It may signify that they believe there are more effective ways of channeling the aid where the need is greatest.

April Is USO Month

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1960

Mr. LINDSAY. Mr. Speaker, this month has been designated as "USO Month." Most people have associated USO with parties and shows for our men in uniform. But to us who have had the privilege of serving in our armed forces it means more than that. It means a deep and abiding concern by our people on the homefront for those whom they have sent to the four corners of the world in our defense.

This organization, made up of voluntary groups, has immeasurably assisted in the religious, spiritual, social, recreational, and educational needs of our men and women in the armed forces. It has provided much needed services; community and travel information, counseling on personal and family problems, housing bureaus, discussion groups, craft classes, games, snack bars—to mention only a few.

Truly, it has provided our men and women in uniform "a home away from home."

Its services have tremendously boosted the morale of our men and women in uniform which, in turn, has placed them in combat readiness which is essential in moments of tension.

USO activities are not confined alone to our armed forces personnel here at home; it extends to such places overseas as Anchorage, Fairbanks, Kodiak, Balboa, Cristobal, Nice, Paris, Casablanca, Athens, Salonika, Rhodes, Istanbul, Naples, Rome, Seoul, Guam, Manila, Tokyo, and Honolulu.

Needless to say, the USO has, since its inception in 1941, done and is continuing to do immeasurable service to the Nation, particularly to armed forces personnel.

It is fitting, therefore, that on this occasion of USO Month all Americans give their unstinting support to a worthy cause being performed by these unsung heroes.

I earnestly hope for the USO more power and continued success.

Secretary Mitchell's Program To Upgrade American Farmworkers

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. PELLY. Mr. Speaker, the following editorial from yesterday's New York Times has reference to Secretary of Labor James Mitchell's proposal for the protection of farmworkers of America. I commend its reading to my colleagues:

PROTECTION FOR FARM LABOR

Secretary of Labor Mitchell deserves support in his efforts to improve the conditions of American farmworkers, especially of those migrants whose lot he has called "ultimately intolerable in a society wealthy enough to correct it." Two moves in this campaign, of which he spoke in an address last week, are evidence of progress being made—and promised.

In February 1959, Mr. Mitchell cited a minimum wage for farmworkers as an essential first step toward lasting economic improvement and said that the Labor Department would make a special study of the "desirability and feasibility" of taking that step. He now says that the findings, which will be released before the end of this month, will be strongly favorable and firmly buttressed by facts.

He also reported on his efforts to limit the mass importation of Mexican workers under Public Law 78—some 450,000 of them each year—which has a depressing effect on the wages and working conditions of American farm labor. This was the conclusion of a group of distinguished and impartial consultants whom he had appointed to study the situation. They have also made recommendations for the improvement of the Mexican farm labor program. These will be the basis for proposals by the Labor Department before the present law runs out in June 1961.

Meanwhile, Mr. Mitchell is waging a strong fight to block amendments to the law, backed by influential growers, which would weaken what protection is now given to American workers and would bog down the law's administration by a sharing of powers with the Department of Agriculture. Such amendments should not pass. Nor should any bill extending the law be approved that does not strengthen its safeguards of the wages and working conditions of our own farm labor. We await with interest and concern Mr. Mitchell's proposals as to how that should be done.

Foreign Service Institute Training

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mrs. BOLTON. Mr. Speaker, in order to clarify some of the confusion over the Foreign Service Institute training, I am inserting with my remarks three items:

First. The analysis of the vacancies in classrooms on the days the Appropriations Committee investigators made their reports.

Second. A comparative survey of cost estimates for language training at the Foreign Service Institute in Washington with those of other educational institutions.

Third. The "Report on Language Training in the Foreign Service Institute" prepared by J. Milton Cowan, director, division of modern languages, Cornell University; Henry Grattan Doyle, former dean of Columbian College, George Washington University, and secretary treasurer of the National Federation of Modern Language Teachers' Associations; Stephen A. Freeman, vice president and director of the language schools, Middlebury College; and W. Freeman Twaddell, professor of linguistics, Brown University, and past president, Linguistic Society of America. May I call special attention to their conclusions that—

We are in unanimous agreement that the Department's language training needs cannot be met more economically or effectively by nongovernmental facilities.

An analysis of the days on which the Appropriations Committee investigators made their count of classrooms in use at the Foreign Service Institute shows the following:

First. Many vacancies were due to the fact that Air Force sections had been released for flight duty.

Second. A number of the hard language—Arabic, Russian, and so forth—students were in area studies during the time of the investigation.

Third. A number of classrooms had been contracted for by the ICA for a large language training program, which was later withdrawn.

It is my understanding that the investigators made four separate checks on 4 different days. Explanations were provided them as to why the classrooms

were vacant, but this information was not used.

There follows the language training cost estimates:

A survey has been conducted in the interest of comparing the cost estimates for language training at the Foreign Service Institute in Washington with those of other educational institutions. Letters were sent out to 12 reputable institutions requesting estimated costs of training based on prescribed specifications in accordance with quality control procedures established by the Institute in connection with contract services rendered to it. The replies varied considerably in the amount of information received. Some institutions submitted quotations based on FSI's specifications; some quoted but with admitted omissions. Three universities declined to bid and therefore are not listed on the table.

The comparison of costs is based strictly on a calculation of the cost per section hour for up to six students and does not necessarily mean that the instruction, services and facilities are in each case comparable. While quotations were submitted in various ways, the costs have been calculated to a standard unit; namely, the cost per section hour of training.

The costs quoted by the universities and commercial schools were not supported by detail showing the elements of expense which they included. The institute's costs include, first, tutor and linguist salaries; second, salaries of language laboratory staff; third, costs involved in the development and preparation of language training materials; fourth, other staff salaries; fifth, training supplies and equipment; sixth, administrative supplies, equipment, and reproduction costs; and, seventh, rent. The Institute's costs do not include a portion of certain standard centralized administrative support costs such as those of the Office of Personnel, Office of Finance, Office of Budget, and some general service operating expense. The results of this survey indicate that none of the universities or commercial schools has quoted a cost for comparable training below the cost of training by the Foreign Service Institute.

I include also the following cost estimate per section hour of language training at the Foreign Service Institute in fiscal year 1959 compared with estimates submitted by commercial schools and universities:

	Foreign Service Institute	Commercial school A	Commercial school B	Commercial school C	University A	University B	University C	University D	University E	University F
I. Common languages (world): French, German, Italian, Portuguese, Spanish	$6.77	$9	$7	$7.55	$17.78	$11.16	$9.17	$9.05		
II. Less common languages (hard):										
Bulgarian	6.43	10	8				9.17	9.05		$7.65
Burmese	7.53	12					9.17	9.05		
Cambodian	7.66	12					9.17	9.05

A REPORT ON LANGUAGE TRAINING IN THE FOREIGN SERVICE INSTITUTE, DEPARTMENT OF STATE

A panel composed of Stephen A. Freeman, vice president and director of the language schools, Middlebury College; Henry Grattan Doyle, former dean of Columbian College, George Washington University, and secretary-treasurer of the National Federation of Modern Language Teachers' Associations; W. Freeman Twaddell, professor of linguistics, Brown University, past president, Linguistic Society of America; and J. Milton Cowan, director, division of modern languages, Cornell University, in response to a request by Assistant Secretary of State, Lane Dwinell, made a survey of the langauge training conducted at the Foreign Service Institute (Arlington Towers, Virginia). Messrs. Twaddell and Cowan were able also to visit and observe the FSI Arabic training in Beirut, Lebanon, while they were in the Middle East on other business. The panel was specifically requested to bear in mind a statement of the House Appropriations Committee in action on the Department's fiscal year 1960 appropriation, to wit:

"Instances were also uncovered where the cost of teaching certain languages appeared excessive. The Department is again directed to ascertain if these languages cannot be more ably and more economically taught in existing reputable educational institutions."

Members of the panel conferred with officers of the Department and the administration of the FSI. They were provided with full information concerning policy and practice. All facts and information requested were provided by the staff of the FSI and in every respect the panel had full cooperation. Panel members visited classes in practically all of the languages offered at FSI, discussed teaching problems with the staff linguists and tutors, and talked with the student trainees. They also examined the teaching and testing materials prepared at FSI, observed examination techniques and audio-visual facilities. These activities, together with the considerable information available to the panel prior to the visits and the ready cooperation of everyone at the school, enabled the panel members to obtain a comprehensive view of the problems involved. Members of the panel shared their experience through continuous reporting and discussion and arrived at a high degree of unanimity in their judgments.

GENERAL COMMENTS

The task of the FSI is to provide high-quality training in a wide variety of languages for a wide range of trainees. There are inherent difficulties in operating such a program. There is the difficulty of recruiting and holding a competent staff against the attractiveness of university jobs. Many first-class people have left FSI in recent years for university posts. There is the necessity for preparation and constant revision of teaching materials needed for very special requirements. There is the problem of distributing staff time efficiently under conditions where the student input is irregular and frequently unpredictable. Irregularity of student input, both as to numbers and starting dates, is at present outside the control of the FSI. Certainly the FSI has a greater collective experience in dealing with this difficult situation than any other institution in this country.

Despite the complexities of the FSI operations, the panel notes from a comparative study that the instructional costs per section hour at FSI are below those quoted for courses of a comparable number of contact hours of instruction by commercial language schools and universities in the Washington area as well as by other universities throughout the country. It is well known that few universities are interested in handling contract work in intensive language instruction unless they can be guaranteed a relatively large number of students coming at regular intervals preferably coinciding with the regular semester opening dates. It should also be emphasized that universities are highly specialized in their language offerings with very few able to handle more than the common languages. Universities have found the costs of maintaining a standby staff of native tutors and professional linguists for the training of a small number of students in out-of-the-way languages to be prohibitive. Commercial language schools may give the appearance of offering a wide range of languages, but this is done without the distinguishing characteristics of modern high-quality intensive language teaching, namely, control of the operation by a professionally trained linguist and utilization of linguistically sound materials.

We are in unanimous agreement that the Department's language training needs cannot be met more economically or effectively by nongovernmental facilities. We see no

evidence that the teaching of certain languages can be accomplished more economically outside the FSI without a loss of quality in the instruction. Any attempt to fragment the program by farming out some languages can only aggravate the overall problem. Our recommendation is that every effort be made to improve and strengthen the program of the FSI.

The remainder of this report is devoted to factors which influence the definition of such terms as efficiency, economy, effectiveness, etc., in language teaching, as well as to concrete suggestions for improvement of the teaching program at the FSI.

POLICY QUESTIONS

The FSI is a service agency for the Department and incidentally for other agencies. It must stand prepared on short notice to begin instruction in any of a large number of languages for varying numbers of trainees, the latter often of widely varying language-learning ability. This means that it must at least have standby staff for these languages and, during periods when no instruction is offered, these people can be engaged in research and implementation which will make instruction, when offered, more effective. Thus, the FSI must have an extremely flexible program.

The ideal language-teaching-learning situation is one where approximately six students of roughly equal ability begin an intensive clas sat the same time. Economically such a class is a basic unit. It requires one full-time tutor who is a native speaker of the language and the part-time supervision of a professional linguist. If there are four such units under supervision of the linguist, the picture is fully rounded out. The out-of-class activities of the tutors and the linguist are devoted to the preparation of class materials and other operations, such as testing, supervised study, etc. Such a program allows for sectioning of students according to ability as the course progresses. Any deviation from such a program shows a loss both in economy and effectiveness.

We recognize the difficulties in arranging assignments of Foreign Service personnel, but we strongly urge that the Department do all it can to stabilize starting dates for language courses and insure that reasonable class sizes are maintained. To the extent that this is not done, the Department must be aware that reduced effectiveness of instruction and an increase in costs and possible inefficiency are an inevitable result.

Another question which we wish to raise is the extent to which other agencies use FSI facilities. There is an advantage to this so long as it makes use of standby staff. However, it is conceivable that such operations might actually work to the detriment of the Department's best interests, especially at times when there is a shortage of professional linguists. The whole matter should be reviewed from time to time.

We have no criticism of the Department's policy of training in the "world languages," French, German, Spanish, regardless of whether or not the person trained is to be assigned immediately to an area where the language is essential. However, the Department must at all times work for an assignment policy geared to the training activities. Language training is expensive, chiefly because the salaries of the trainees amount to approximately twice the actual cost of instruction. Any training in a language prior to assignment to an area where it is needed is a real investment.

Criticism which arises when a trainee, upon completion of a language course, is assigned to an area where he has no use for the newly acquired language skill pertains to the Department's assignment policy mentioned above and not to the operations of FSI.

ACADEMIC NATURE OF THE TEACHING OPERATIONS

The FSI is an educational operation and must continue to be understood and defined as such. The language-teaching profession in this country has been pleased to note that the Department has so handled its language-training facility. The employment of professional linguists, their participation in professional meetings, conferences, and other activities, the production of scientifically sound teaching materials and, more recently, the possibility of having these materials made generally available through the center for applied linguistics, are all welcome developments. Without these the FSI would quickly atrophy into a sterile teaching operation in the hands of untrained native speakers.

In order to maintain its leadership in the field, the Department will have to continue in competitive recruitment with colleges and universities for linguists and tutors. It must be able to attract and hold these in terms of salaries, workload, job security, job satisfaction, and advancement. We are prepared to support requests for additional budgetary provisions especially for linguist-supervisors. The most noticeable shortcoming we observed in the teaching at FSI was inadequate supervision of the native tutors.

It is important to recognize the fact that an academic operation is not a clock-punching operation. Full-time workers in educational institutions devote their time to a number of different activities. No teacher in an intensive language program can put in 8 hours effectively in the classroom. We incline to view the figure of approximately 6 hours a day, which is current FSI practice, as too high. When one considers the number of tasks which have to be performed before effective classwork can be conducted, it is clear that both linguist and native-speaking instructors must devote a large portion of their time to activities outside the classroom. Job descriptions for linguists and teachers must be broad enough to include the creation of all kinds of teaching materials, supervision of study periods, attendance in the language laboratory, testing, training of new teachers, grading, office reports, and so forth.

The materials problem is perennial. For the kind of work being done at FSI there are no entirely adequate materials even for the languages commonly taught in our schools. The foreign language texts which commercial publishers find it profitable to produce could cover at most the first 2 months of an intensive course. Since FSI must provide continuation training, it is often better to build from the very start in order to have a coherent total program. For the hard languages the work has to start from scratch because of the dearth of usable materials. The preparation of systematic day-by-day practice materials is a formidable task, but without these materials classwork does not attain full effectiveness. The FSI program also needs extensive, carefully planned tapes, audiovisual materials, and a wide variety of readings.

It might be expected that there would ultimately come an end to material preparation. Experience has shown, however, that no materials are ever perfected once and for all. Improvements in the scientific analysis of languages, in teaching techniques and changes in the needs of trainees constantly require larger or smaller changes.

The academic atmosphere may at times appear to certain observers to be somewhat lag, but it is in reality very productive because it induces people to focus on getting a job done for the sake of the job. This is the goal sought after in highly organized industry where all too often people conform to the prescription of getting a job done for the sake of conforming to the prescription.

SUGGESTIONS FOR IMPROVEMENT

We have talked over in some detail with the staff of the FSI proposals which might lead to improvement of their program. The suggestions which follow are based on a more liberal interpretation of utilization of the time of the native speaking tutors than is currently being made. There seems to be developing in auditing and accounting an interpretation that the tutors are only earning their salaries when they are actually teaching in class. We have already indicated that we consider this to be a wrong interpretation and one which could lead to neglect of those all-important preparatory functions which provide maximum utilization of class time.

We feel that there should be more outside preparation on the part of the trainees for the time spent in class. We would like to see experimentation with the reduction of the number of classroom hours. This would afford more time for supervised study and work with recorded materials in the language laboratory. Such an arrangement would make possible more training for reading proficiency in those languages which have an alphabetical writing system. Coverage of larger quantities of informative reading would contribute appreciably to the improvement of students' ability to perform in class.

We recommend cutting the six class-hour day to four hours for classes which have only one or two students with a corresponding increase in the amount of outside individual study. Tutors could be made available for this purpose. Experience with these small classes may point the way for revisions in the plan for larger classes.

We felt, on the basis of our observations, that better utilization could be made of the time of the linguists. Their greatest contribution is in supervision of classes and it seemed to us that they were too much involved in administration.

In conclusion, we believe that the Department should consider making a usable command of a "world" language a requirement for entrance into the American Foreign Service.

Community Facilities Act of 1960

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. BLATNIK. Mr. Speaker, almost 3 years ago the President's Special Assistant for Public Works Planning advised him:

In almost every category of public works, severe shortages have arisen. Our highways, water and antipollution facilities, hospitals, transit systems, school buildings and others have fallen, on the average, below minimum acceptable requirements.

The report to the President cited two specific examples—highways and water supply—to dramatize the extent and urgency of the Nation's public facilities needs.

With regard to highways the President was told:

The Nation has fallen so far behind in highway construction that 80 percent of the highway needs for the next 10 years are really backlog.

The President's reaction was to recommend a substantial cutback in high-

way construction. Congress did not agree and has enacted legislation designed to assure an adequate program of highway development.

With regard to water, the President was told:

To meet our needs for water, conservation is the order of the day. We cannot manufacture this necessity of life. We must store and use it more efficiently, learn to convert saline waters, and find ways to improve the distribution of it. Most important of all, our rivers will have to be cleaned, and adequate treatment facilities installed to prevent upstream pollution. To accomplish this job, we need almost 8,000 municipal treatment plants alone, and, in all, some 17,000 facilities, public and private, to insure that all of the potential sources of pollution are adequately controlled.

The President's reaction was swift. Within 6 months he recommended that Federal aid to communities for the construction of needed waste-treatment facilities be cut back by 60 percent and terminated altogether by 1960. Congress again disagreed and enacted legislation expanding Federal aid in this vital field, only to have their efforts thwarted by a Presidential veto.

As a member of the House Committee on Public Works I am especially interested in these two areas of public works—highways and water pollution control. But the public works problem does not end there. As the President's public works planning assistant further advised him 3 years ago:

These examples are unfortunately typical ones. In almost every field in public works—hospitals, schools, civic centers, recreational facilities—shortages are the rule, not the exception. In almost every category we are falling farther and farther behind in meeting even current demands. Backlogs, inadequate replacement schedules, urgent new requirements are characteristic of public works problems across the Nation.

In short, Mr. Speaker, the lack of adequate community facilities has become the most critical domestic problem we face today. According to Walter Lippmann in a recent article:

This is the central issue of our time, and no one who is interested in public life can ignore it.

To meet this issue, and it seems all others, the President and his advisers recommend that we reduce the share of the national income which is spent by the Federal Government. In their view, it seems, the purpose of our economy is to make bigger and better automobiles with higher and wider tail fins and other shining consumer baubles and gadgets. This philosophy was expressed recently by the Chairman of the President's Council of Economic Advisers when he said:

As I understand an economy, its ultimate purpose is to produce more consumer goods. This is the object of everything we are working at: to produce things for consumers.

Maximum consumer consumption is a worthy object, Mr. Speaker, but is it truly our ultimate purpose? Does our national strength increase in a direct ratio to the number of television sets or souped-up automobiles that are purchased each year? Have we become so affluent, smug, and self-satisfied that we think we can lead the world to peace, with justice and freedom for all, on our Detroit-made chariot viewing the latest adult western?

The sacrifice of public needs to private consumption has left its scar across the length and breadth of this Nation. The President's own expert on public works confirms this. In certain specific areas such as highways, water pollution control, education, airports, and housing the Congress has attempted to enact adequate programs designed to cope with the problem, and fill the needs in these areas. Without exception the administration has thwarted these efforts with vetoes, threats of vetoes, and reduced budget requests.

In the general field of community facilities, also, legislation has been delayed by administration opposition. Nonetheless, Mr. Speaker, I feel it is our duty to the American people to consider and enact a bill designed to encourage and stimulate local community facilities construction. Our local communities are unprepared for the new demands being placed upon them for additional public services. They are simply unable financially to support them. It is essential, therefore, that we institute a program on a national scale which will provide these communities with loans at reasonable rates of interest with which to finance these projects.

Apart from the social and community aspects of such a program, Mr. Speaker, its enactment would greatly bolster and strengthen our economy. As was pointed out recently by the Committee on Banking and Currency under the chairmanship of the able and distinguished gentleman from Kentucky [Mr. SPENCE]:

By providing long-term financing on extremely favorable terms, local governments will be encouraged to undertake community facilities and public works which will have a strong generating effect on the economy.

According to reports just received, Mr. Speaker ,the economy needs such a boost. Unemployment for March shows 4.2 million unemployed. Instead of a seasonal increase in employment usually realized the past month showed instead an actual increase in unemployment. Other economic indicators show a dangerous softening in our economy that we must begin to cope with now before it is too late.

I have today introduced a bill to accomplish this purpose, Mr. Speaker. It would authorize Federal loans to municipalities for public works construction with major emphasis on hospitals, nursing homes, water and sewer works, and other community facilities. Under leave to extend my remarks, I include the following section-by-section summary of the bill:

COMMUNITY FACILITIES ACT OF 1960—SECTION-BY-SECTION SUMMARY

SHORT TITLE

The first section of the bill provides that the act may be cited by its short title (the Community Facilities Act of 1960).

COMMUNITY FACILITY LOANS

Section 2 extensively amends title II of the Housing Amendments of 1955 so as to expand the public facility loan program presently provided by that title.

Section 201 of the new title II sets forth the congressional policies which form the basis for the expanded program embodied in the bill. After expressing the long-established policy of the Congress to assist and encourage the development of well-planned and healthy communities (an objective which in many instances would be thwarted by the community's lack of financial resources without such assistance), and finding that the immediate construction of essential community facilities (including nonprofit hospitals and nonprofit nursing homes) would enhance the public health and welfare and contribute substantially to achieving the steady economic growth essential to a full-employment economy, it is declared to be the policy of the Congress and the purpose of the new title II to extend credit to aid municipalities and other political subdivisions of States in providing essential community facilities (and to aid in the modernization and construction of nonprofit hospitals and nursing homes) where such credit is not otherwise available on equally favorable terms.

Section 202(a) authorizes the Community Facilities Commissioner to make loans to municipalities and other political subdivisions of States (including purchases of their securities and obligations) to finance the construction, repair, and improvement of specific community facilities, and to make loans to nonprofit hospitals and nonprofit nursing homes (including purchases of their securities and obligations) to finance specific projects for hospital or nursing home construction, repair, or improvement.

Section 202(b) sets forth certain restrictions and limitations upon the Commissioner's authority to make these loans:

1. No loan may be made unless the assistance applied for it not otherwise available on equally favorable terms and conditions (and no securities or obligations may be purchased unless they cannot be disposed of at public sale on equally favorable terms and conditions). All loans must be of such sound value or so secured as reasonably to assure repayment; and participations are permitted.

2. The maximum maturity of any such loan is 40 years.

3. Any such loan will bear interest at not more than the average annual interest rate on all interest-bearing obligations of the United States forming a part of the public debt, as computed on the preceding May 31 or November 30; except that loans made for projects in communities of 5,000 or less will bear interest at the rate applicable to REA loans.

4. The total amount of funds available for such loans at any time will be allotted to States (i.e., to communities within such States) in proportion to their population. Amounts allotted to any State but not used can be reallotted by the Commissioner after a reasonable period (not less than 2 years).

5. Of the total amount of funds available for such loans at any time, at least 25 percent will be reserved for water and sewer works and at least 25 percent for hospitals and nursing homes. These reservations are computed without regard to State allotments under paragraph 4.

6. Of the total amount of funds available for such loans at any time, at least 33⅓ percent will be reserved for communities of less than 50,000. This reservation is computed without regard to State allotments under paragraph 4 or the special reservations under paragraph 5.

7. The amount of any such loan may not exceed the development cost of the project or (except in the case of a hospital) $5 million.

8. A loan for a hospital or nursing home may be made only after the Surgeon General has certified that it complies with certain provisions of the Hill-Burton Act. Loans for hospitals or nursing homes in

metropolitan areas which are covered by approved area-wide hospital plans will have a priority. Funds to be used for hospital or nursing home projects will be allotted among the several States on the basis of population, relative need, and other pertinent factors.

9. Loans for water and sewer works and other public facilities (except hospitals and nursing homes) will be granted under a system of priorities based on financial and community needs, with primary consideration being given to need for more adequate water and sewer facilities, particularly those which would serve rural areas, areas with small financial resources, and suburban areas adversely affected by extensive construction (existing or proposed) of federally insured or guaranteed dwellings.

10. No loan may be made for a publicly owned public utility which would compete with a regulated privately owned public utility unless the State regulatory agency determines that the community requires an increase in service which the existing utility cannot meet.

Section 203 authorizes appropriations aggregating not more than $1 billion which, together with loan repayments (including repayments of loans made under the old title II), would constitute a revolving fund to be used by the Commissioner in carrying out the program.

Section 204 provides that the Commissioner shall have the same functions, powers, and duties for purposes of this title (in addition to those specifically vested in him by law) as the Housing and Home Finance Administrator has for purposes of the college housing program, to the extent delegated to him by such Administrator.

Section 205 contains definitions of terms used in the new title II—"Commissioner," "State," "community facilities," "hospital," "nursing home," "nonprofit hospital," "nonprofiit nursing home," and "development cost."

Section 206 provides that the Commissioner shall require the application of the Davis-Bacon Act and the payment of time-and-a-half for overtime on all projects assisted under the program.

RESERVE OF PLANNED PUBLIC WORKS

Section 3 of the bill amends section 702 of the Housing Act of 1954 to increase by $50 million the amount which may be appropriated to the revolving fund which is established under such section 702 and from which the Housing and Home Finance Administrator makes advances to public agencies for the maintenance of a reserve of planned public works.

Moral Principles Should Be Paramount

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. MULTER. Mr. Speaker, not only does the United Arab Republic continue to violate international morals and the resolutions of the United Nations but it also is now stirring up trouble in countries in the Western Hemisphere.

There is more than ample evidence that Nasser's agents are operating throughout the Caribbean, in Cuba and in the Republic of Panama, as well as elsewhere. We will never be able to make him behave nor prevent other Nassers from cropping up all over the world if, on the one hand, we condemn by moralistic resolutions their conduct, and, on the other hand, make grants and loans to them so that they can carry on their nefarious conduct.

It is quite true that the grants and loans are always made for purposes and projects which are in complete harmony with our desire to improve the standards of living and the economies of free peoples the world over. But when foreign countries misuse their own funds for the building up of war materiel for purposes of aggression, we aid their unjust and immoral cause by freeing their own funds for that purpose as we make other funds available for peaceful purposes.

The recent World Bank loan to the United Arab Republic is a typical example of how the free world should not act with reference to a country that has established its immorality in international affairs by flaunting everything that is good and decent.

The following editorial from the New York Herald Tribune of April 12 is most apropos:

THE SUEZ BLOCKADE ISSUE PERSISTS

If U.N. Secretary General Dag Hammarskjold were a man given to bluster and denunciation, his recent statement on Egypt's blockade of the Suez Canal against Israeli shipping would merit little attention. But precisely because Mr. Hammarskjold customarily avoids the slightest indication of annoyance or displeasure his assertion that the detention by the Egyptians of the Greek ship *Astypalea* "goes against the principle upheld by the United Nations" has all the force of a rebuke to Cairo.

That the rebuke will go unheeded is a reasonable assumption, for President Nasser has so far ignored all efforts by Mr. Hammarskjold to obtain either an end to the United Arab Republic's blockade or a least a modification which would permit Israeli cargoes in foreign-owned ships to pass.

Mr. Hammarskjold, discouraged though he has every right to be by Nasser's rebuffs, indicated in his statement that he intends to pursue his efforts to arrive at workable practices in the Suez Canal. We're glad he hasn't given up. But we would like to see him get some positive support from those nations—especially our own—which have an interest in maintaining freedom of navigation in general and preserving the peace in the Middle East in particular. Even Prime Minister Nehru of India, who is currently entertaining President Nasser, could do worse than bring up the subject of Suez in his conversations with his distinguished guest.

Mr. Speaker, the Congress will shortly be asked to act upon H.R. 11001, a bill sponsored by the State and Treasury Departments to provide for the participation by the United States in the International Development Association which is being created as an arm or a division of the International Bank for Reconstruction and Development, often referred to by its initials "IBRD" and more commonly known as the World Bank.

In connection with that bill, I have suggested that the World Bank Board of Governors adopt, by Board action, a policy which would enunciate the principle that no member who declares itself to be at war with another member could borrow money from the Bank. The startling answer came back that for the Board of the World Bank to enunciate such a policy would in effect be an admission that they made a mistake in granting a loan to the United Arab Republic. I accordingly am urging an amendment to H.R. 11001 which will provide, in so many words, that no loan shall be made by the International Development Association to any member which claims to be at war with any other member.

There can be no sound objection to such an amendment. The Departments undoubtedly will urge, as they have already done, that such a provision will require a renegotiation of the underlying agreement. The answer is that no matter how long it might take for such renegotiation, the United States, which claims to be the leader of the free world, has no right to sacrifice moral principle because it might take a little time to negotiate what is morally right and proper, and, above all, sound in international law.

What has already happened with the United Arab Republic might very well happen in the Caribbean, in Central America, or in South America. We would be the laughing stock of the world if we contributed our gold to the World Bank to be loaned by it to countries bent on destruction of world peace.

Can any American in his right mind condone the making of a loan to the Republic of Panama if it attempted to seize the Panama Canal? All of the trouble we are having now with reference to the Panama Canal is directly traceable to what Nasser did with the Suez Canal. If Egypt had a right to violate its international obligations and take the Suez Canal, the Republic of Panama has the right to do the same with the Panama Canal.

Both the Republic of Panama and Cuba are members of the World Bank and are signatories to the underlying agreement sought to be approved by H.R. 11001. Most of the Central and South American countries are also members and signatories. Shall we permit the World Bank to make loans to Cuba if it seeks to invade any of these countries? Will we permit the World Bank to make loans to any of these countries who attacks a neighbor? The questions answer themselves.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1960

Mr. BECKER. Mr. Speaker, at the request of the Citizens Action Committee, I am inserting herewith the resolution which is self-explanatory, commending the Subcommittee on Foreign Affairs in the matter of foreign aid.

The resolution follows:

Whereas the question of the character and extent of foreign aid given by the U.S. Gov-

ernment, its planning and administration, have long been the subject of great concern to many Americans; and

Whereas a subcommittee of the Foreign Affairs Committee of the House of Representatives has recently submitted its report, after having inspected foreign-aid installations in 17 countries, involving over 40,000 miles of travel; and

Whereas that report finds that there is evidence of careless planning and lax administration in many of the areas visited; and

Whereas the economy of American taxpayers and the prestige of our Government in the eyes of distant countries suffer seriously as a result of extravagance and maladministration in those fields: Now, therefore, be it

Resolved, That the Citizens' Action Committee of Nassau and Suffolk Counties, N.Y., at its executive board meeting of April 6, 1960—

(a) Commends the operation of the aforenamed subcommittee and the intention to scan carefully the expenditure of taxpayers' money in foreign aid, and

(b) Urges that the International Cooperation Administration plan only for such projects as will positively promote practical improvement in the living standards of the people who receive our assistance and enable them to be self-supporting as early as possible; and be it further

Resolved, That copies of this resolution be sent to the chairman of the subcommittee, to Long Island Representatives and to Senators JAVITS and KEATING.

Smaller Business Association of New England Recommendations to the Congress

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a few of the recommendations of the Smaller Business Association of New England to the Congress:

RECOMMENDATIONS OF SMALLER BUSINESS ASSOCIATION OF NEW ENGLAND

TAXATION

Tax deduction for plowback investments

Here is our program for taxation. During the next 15 years, the United States must create 20 million new jobs in order to support our expanding work force. If small businesses are to contribute their share of these jobs, they must have more capital funds to reinvest for expansion and modernization. The only possible source of this capital is income which a business receives after taxes. May we remind you again of the parallel between the family-owned New England business and our relationship with Uncle Sam? Many old New England firms have faded away because members of the family took away too large a portion of the earnings, leaving the company in a state of economic anemia.

A good farmer regularly plants a section of his acreage in clover and then plows it under, thereby enriching the soil so it will produce a bigger crop. Similarly, plowback of additional earnings after taxes will generate additional taxable income, resulting in more revenue for the Treasury. According to the National Association of Manufacturers, for each 1 percent of economic growth, the Federal Government gains a billion dollars in additional revenue.

The need for tax exemptions to provide incentives for more invested capital in small businesses has long been recognized by Congress. A series of bills have been introduced over the past few years which are designed to furnish such incentives. A typical provision in these bills allows a deduction equal to the additional investment in the business for the taxable year. That deduction would not exceed $30,000 or 20 percent of the net income of the business; the lesser amount to be the deduction. We strongly urge legislation permitting such a plowback deduction, primarily for capital invested in equipment needed to expand and modernize.

More flexible depreciation rates on purchases of new and used equipment

Our present standard of living has been achieved by incorporating technological advances into our industrial economy. We have outproduced other nations because our industrial plan has been considerably more efficient.

This is no longer true. Today, the industrial efficiency of Western Europe and Japan is approaching our own, while their wage rates are a fraction of those which we pay. Our present system of depreciation allowances is hampering improvement of our industrial efficiency. The United States is the only major industrial county which has failed to modernize tax laws relating to depreciation (table 1). Canada with rates twice as fast as our, Great Britain with 30 percent in the first year, West Germany with high rates in the early years and a maximum ir 10, Denmark allowing 50 percent in the first 5 years, France with an inflation adjustment; Belgium, Italy, Sweden, Argentina, Chile, and Japan, all have modernized their depreciation allowances, either to allow for replacement costs, or to provide rapid depreciation, or both. As a result of our unrealistic depreciation policies, all businesses are hard-pressed merely to replace wornout equipment, let alone to expand and modernize their plant facilities. The smaller the company, the more acute the problem.

Table 1

Canada: Twice U.S. rate.
Britain: 30 percent first year.
Denmark: 50 percent in 5 years.
West Germany: 10 years or less.
France: Inflation adjustments.

Inflation alone has made our depreciation allowances inadequate. The Lithographer's National Association, for example, points out that a press which cost $31,400 in 1935 would cost $128,000 to replace today.

Our depreciation allowances are based on long machinery life, a concept which may have been valid in the 1930's, but which is not applicable in today's rapidly evolving technology. Obsolescence has become a much more important factor in depreciation than wear and tear. A recent study by Johns Hopkins University revealed that a modern machine tool has an obsolescence cycle of 5 to 10 years, yet our present depreciation policies require companies to take 15 to 20 years to write off such equipment. According to a McGraw-Hill survey made in 1958, out of a total of $300 billion in U.S. capital assets, $95 billion of plant equipment was considered obsolete.

Technological obsolescence is the result of research; the greater the research, the faster the obsolescence. Consequently, fixed rates of depreciation are no longer practical. We believe that the rate at which an investment in equipment is written off should be left to the discretion of the company involved, rather than being dictated by the Government by law.

A bill introduced in February for the Secretary of the Treasury would require that profits from sales of depreciated equipment be taxed as ordinary income instead of capital gains. According to Secretary Anderson, this will make it possible for the Treasury to allow more flexibility in writing off plant equipment. We are inclined to go along with Secretary Anderson's proposal, but before we agree to support it we want more than a vague promise of flexible depreciation. We recommend that depreciation rates be left to the discretion of business management and urge that this provision be so stated in the law. Such a provision is not merely a concession to business. It is essential to the expansion of our economy.

Uniform application of judicial decisions by the Bureau of Internal Revenue

The Bureau of Internal Revenue frequently produces uncertainty in business operations by refusing to be bound by decisions of the lower courts concerning enforcement of tax laws. We urge your support of legislation designed to provide uniform application of judicial precedents in the administration and enforcement of the internal revenue laws, thereby reducing this uncertainty which hampers business growth.

Tax exemptions for voluntary retirement plans by self-employed individuals or partners

We believe that the self-employed are entitled to the same kind of security provided to those who are employed by others. At present, professional men, and others who are self-employed, cannot make any tax deductions for amounts that are set aside for their retirement. In the interest of basic fair play, we urge legislation to correct this situation. We hope that the Senate will complete the work already started in the House where a bill providing for such an allowance has been passed.

SMALL BUSINESS SHARE

In August 1959, the Senate Committee on Small Business reported that small business' share of prime contracts had dropped 7.7 percent in 1958, and that it appeared to be Defense Department policy to emphasize the role of small business as subcontractors rather than prime contracts, in weapons system procurement. Yet the same report reveals that small business' share of subcontracting had declined 4.1 percent since 1955.

Certainly, measures should be taken to insure that qualified small businesses receive a bigger share of Government contracts, both prime and sub, for manufacturing and research. In the public interest, more use should be made of the facilities and know-how which are available from small companies. Procurement officials should be reminded that the operators of small businesses are not small in intelligence, ability, or imagination, and that their operational efficiency is not necessarily lower than that of big business.

PROCUREMENT

Require SBA approval of facilities contracts

One of the major detriments to small business subcontracting is the issuance of facilities contracts to major prime contractors without sufficient review of the available capabilities of small subcontractors in the same area. In many instances, the Government is providing capital funds to prime contractors for purchase and construction of facilities and services which are already available in competent small shops. If the prime contractor subcontracted some of his work to these small firms, such capital investments would be reduced. As a result, not only would small businesses be strengthened, but the contract could be completed at lower cost to the Government.

We suggest statutory authority for the Small Business Administration to approve or disapprove requests for facilities contracts. Such authority would parallel that now in effect for Certificates of Competency, a program which is being effectively administered by the SBA.

Strengthening of SBA's set-aside program

Although the SBA's set-aside program is making progress in increasing participation of small firms in prime contracting, it is not yet as effective as it should be. The intent of this program is that all invitations to bid be reviewed by SBA representatives before issuance, so that certain items can be set aside for qualified small businesses. Such review is now permissive rather than compulsory, however, and many invitations to bid are sent out by the procurement agency before they can be reviewed by SBA. Consequently, contracts are frequently awarded before SBA can act.

Bishop James Walsh: A Symbol of Our Time

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 16, 1960

Mr. HALPERN. Mr. Speaker, the world was shocked and horrified on March 18 when the Chinese Communists brutally sentenced Bishop James Edward Walsh, the last high foreign prelate of the Roman Catholic Church in mainland China, to 20 years in prison on charges of conspiring to overthrow the Red regime.

The announcement came just 24 hours after the Communists had sentenced Bishop Ignatius Kung Pin-mei of Shanghai and 13 other Chinese Catholics to terms ranging from 5 years to life.

Bishop Walsh had been in China at the end of World War I and returned in 1948. He remained at his Shanghai post after the Communists took over the next year. He refused an offer to return home in 1955. "Should I be the one to constitute an exception just because the situation is bad in this combination graveyard and kindergarden?" he wrote on 1956. "Our good friends will have to throw me in or throw me out."

The ridiculousness of the Chinese charge against the ailing prelate was set forth by Secretary of State Herter in a strong statement heartily approved by the entire country.

Bishop Walsh was a missionary and a man of God concerned with the souls of the Chinese people, not with their inhuman and tyrannical political institutions. One of the finest tributes that has been paid to this wonderful man appeared in the Tablet, the newspaper published by the Diocese of Brooklyn. In an article on April 2, 1960, entitled "Bishop James Walsh: A Symbol of Our Time," Father Albert J. Nevins, M.M., portrayed the magnificent spirit of this great human being.

Mr. Speaker, under unanimous consent I include this most significant article in the RECORD.

BISHOP JAMES WALSH: A SYMBOL OF OUR TIME

(By Father Albert J. Nevins, M.M.)

MARYKNOLL, N.Y.—Bishop James Edward Walsh, of Cumberland, Md., is the happiest man in Red China today.

For when the Communists sentenced the frail, grey-haired, Maryknoll prelate to jail 2 weeks ago they helped him fulfill the ambition of a lifetime of walking more closely in the footsteps of his Master.

If the Communists think they can intimidate the 69-year-old missioner with trumped-up charges and a 20-year prison sentence, they are making a big mistake.

They are making a mistake because Bishop Walsh's values are completely opposed to their own atheistic philosophy. They cannot understand the depth of his spirituality, and because they cannot understand, they give Bishop Walsh the very things he wants.

DOES NOT FEAR PERSECUTION

The former Maryknoll superior general (1936–46) is not a man who fears persecution. Rather he welcomes it as a servant of his own cause. Ever since the anti-Christian program of the Chinese Reds was first launched in 1949, the aged bishop has time and again reiterated his intention of remaining in China and sharing the lot of the beleaguered Chinese clergy.

One of the rare letters from Bishop Walsh reached Hong Kong in 1956. In it, he unequivocally stated his determination to remain at his post in Shanghai as long as possible:

"Here in Shanghai I share the lot of Chinese clergy who cannot leave, who must bear the brunt of all pressure and annoyance. They are the key factor in the church situation in China these days. There is some good, I think, in giving them a little help or encouragement, if only a moral gesture. I like to be with them. I don't like to do anything to separate myself from them of my own volition.

"I've been in some comedies in my day, but I've never seen anything to match this outside of Leon Errol in the 'Mexican Spitfire's Baby.' I think my useless old hulk is made into a propaganda item to indicate liberty of religion but is that something to worry about? I believe our clergy is very anxious to do what is right and are very good in general, and are presently struggling hard to keep the church in operation and uncompromised.

"Moreover, the principle urged on all here for 6 years, and urged very much by me, was that nobody should budge. Should I be the one to constitute an exception just because the situation is bad in this combination graveyard and kindergarten? The place is one thing and the dear, patient people another.

"Thus our good friends will have to throw me in or throw me out. What does it matter in the case of an old fellow in the sere and yellow leaf like me? To put up with a little inconvenience at my age is nothing, it seems like a privilege to me. 'I reckon that the sufferings of the present time are not worthy to be compared with the glory to come.'

"Besides there's another thing. I am as meek and as mild as the next person, at least I try to be. But I am a little tired of being pushed around on account of my religion. My religion is all right; I don't see anything wrong with it. Anyhow, I don't feel inclined to get off the earth just because some people dislike it. I don't hold it against them. But what I say is—let them come and put me off."

WHY HE IS PERSECUTED

Some observers are speculating that the recently intensified Red drive to establish an independent church for Chinese Catholics is connected with the bishop's imprisonment, and that the Reds may have tried to use him to accredit their schismatic movement. It is feared here that Bishop Walsh—who is the last remaining foreign missioner in Red China—along with the Most Rev. Ignatius Kung Pin-Mei, bishop of Shanghai, may have been subjected to severe brainwashing efforts in preparation for a nationwide Communist propaganda move. Having failed in their attempts to coerce the two bishops into cooperating with the Red church setup, in desperation the Communists, it is surmised, retaliated by punishing both prelates with long prison sentences.

Word reaching the Maryknoll mission in Hong Kong indicates that the Communist regime has been stepping up its efforts to widen the breach between the Vatican and the patriotic Catholic Church of China. The Communists claim that already 32 Chinese validly ordained priests have been consecrated bishops without formal appointments through Rome. This is considered as the foundation of the schismatic movement.

The elimination of Bishop Walsh as a genuine representative of the Vatican in China would just about ring down the curtain on the successful destruction of the church in China.

From this standpoint of sheer Red propaganda it would have been highly advantageous to have had a nonoriental bishop who, as an official Vatican representative, would either condone verbally, or actively participate in, the consecration of more schismatic bishops.

Obviously any participation by Bishop Walsh in the Communist plot to separate the church in Red China from Rome could have been accomplished only if the Reds had been able to destroy, through brainwashing, the personality of the aging American bishop.

Meanwhile, radio broadcasts out of Communist China continue to boast that a dangerous American spy has been apprehended and punished. In sentencing a 69-year-old man already in feeble health, to 20 years in a fetid Communist prison, the Chinese Reds know they are sentencing him to death. But again they play into the hands of a man whose lifetime wish has been to follow Christ completely, even to martyrdom.

What of the Future for Textiles?

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. JONAS. Mr. Speaker, it has been apparent for some time now that the alarming increase of imports constitutes a grave threat to the domestic textile industry. This industry is too important in the economy of our country to be liquidated by allowing foreign producers to capture the domestic market. Approximately a million citizens of the United States are employed in the domestic textile industry, and wages amount to around $3 billion a year.

One of my constituents, Mr. Harry L. Dalton, vice chairman of the board of American Viscose Corp., recently discussed this alarming situation in a well-reasoned talk to the Charlotte chapter of the Society for Advancement of Management. The picture he paints is indeed an alarming one. The time is at hand when positive and constructive steps must be taken to limit the flood of textile imports which constitutes such a threat to one of the great and most important industries of our country.

Under leave to extend my remarks in the Appendix, I include the speech of Mr. Dalton and commend it to the attention of my colleagues in the House for their most careful consideration.

WHAT OF THE FUTURE FOR TEXTILES?

Food, shelter, and clothing being the three basic needs of mankind, and the misdeeds of Adam and Eve having established a conscience for clothing, the future of textiles for apparel would seem to be assured as long as there are people. And, on that score, the population outlook is commonly described as "explosive."

Thereare, of course, other majojr demand factors than apparel to affect the textile future, and these are similarly heartening. The great and growing demand for household textiles is buoyed by the ever-increasing aggregate of housing facilities. Automotive markets, requiring textiles for tire fabric, seat, and floor coverings, side and headlinings, and so on, are also a steadily growing outlet among the many industrial uses for textiles.

So, the future demand for textiles is sure enough. There are, however, sobering questions as to how fully American textile and apparel factories will share the fruits of that rosy market outlook. The serpent in this particular Garden of Eden is the threat of foreign competition. I want to discuss that problem with you tonight, but before I do, there may be some among you who would be interested in a more statistical appraisal of the textile future.

THE TEXTILE MARKET BY 1970

For their satisfaction, I can report that painstaking studies of future demand for textiles are being undertaken both by the U.S. Department of Commerce and by the International Cotton Advisory Committee, each to cover textiles broadly and regardless of fiber content. The former survey is in response to recommendations resulting from the Pastore committee's investigation of textile production and commerce. It will evaluate the long-range future of textiles, as population, income, buying habits, and competitive circumstances change. It will consider the effect of competition from other materials, such as paper and plastics. Another study will appraise the prospect for new and expanded uses for textiles. These findings are due some time after mid-1960.

Meanwhile, for those who would like an immediate peek into the textile crystal ball, the staff director of the Pastore committee has made a statistical projection to 1970 for broad woven fabrics, the largest segment of the textile industry. He has weighed the variables of population growth, per capita consumption trends, productivity, and the relative increase of imports compared with exports, based on the decade 1947-57. He arrived at these interesting conclusions:

Using 1957 as the base year, he thinks by 1970 our population should expand at least 25 percent, or an average of about 2 percent a year. But, because of declining per capita consumption of textile yardage, he anticipates that the American textile market may grow only 15 percent, or little more than 1 percent a year. Finally, he expects that domestic production will increase less than 10 percent, from 1957 to 1970, or an average of only three-fourths of 1 percent per year compared with an approximate 4 percent gain annually for all manufacturing industry.

That restricted prospect for the American textile industry results substantially from the disconcerting anticipation that textile imports will expand by 350 percent, while exports decline 22 percent. Whereas, U.S. exports of broad woven textiles in 1957, at 615 million yards, exceeded imports by a ratio of almost 5 to 1, the expectation for 1970 is that imports at 625 million yards will surpass our shipments abroad by 30 percent. The truly shocking part of this outlook is the forecast of a 24 percent drop in total textile employment, which could be of serious concern to North Carolina, where textile manufacturing is the leading industry, its value added by manufacture being twice that of the next ranking industry, tobacco manufactures. Textile mills, employing roughly one-fourth million persons, with an annual payroll approaching $700 million, accounts for nearly half of all workers in all manufacturing industries of North Carolina.

Since this forecast and some subsequent comments relate to the so-called Pastore committee, it might be well to describe the origin and purpose of that committee briefly. Senate Resolution 287, of the 85th Congress, recognizing the nagging problems of the textile industry, authorized the Senate Interstate and Foreign Commerce Committee "to conduct a study of all factors affecting commerce and production, including (a) the extent, nature, and causes of the decline in interstate and foreign commerce; (b) the decline in employment; (c) the effects of policies and programs of the Federal Government on the industry; and, (d) the impact of commercial policies of other nations on the industry."

PASTORE COMMITTEE FINDINGS

The resulting Pastore committee, a subcommittee to study the textile industry, was chaired by Senator JOHN O. PASTORE, of Rhode Island. Other members, all from States with important textile interests, were Senators Thurmond, of South Carolina, Bible, of Nevada (wool), Purtell, of Connecticut, Payne, of Maine, and Cotton, of New Hampshire. The staff director was Dr. William H. Miernyk, director of the bureau of business and economic research, Northeastern University, who made the forecast for 1970, which we have just examined.

This Pastore committee held hearings between July and December 1958 in Washington and New York City, also in New England and South Atlantic textile centers, including Charlotte, N.C. and Clemson, S.C. Based on its findings, the committee recommended, among other steps, the creation of a Textile Interagency Committee in Government and the Textile Industry Advisory Committee to deal exclusively with textile problems. These committees are to keep both Congress and the executive departments informed of all new textile developments and their probable consequences.

Appropriations were voted and research awards have been made for studies of "cost factors entering into textile fabric production in the United States and representative foreign countries," "factors influencing fluctuations in the textile industry," and "new uses for textiles," in addition to the "long-term outlook for consumption of textile products," already described. Further, the Census Bureau has been given funds to undertake new statistical series on fabric inventories, sales, and unfilled orders, areas which have always been a serious void in textile marketing information.

Returning to our main theme, the future for textiles, the real question is to what extent will American mills share the future market for textiles. The Southern States have an especially important stake in that answer. They have made great strides to date, as demonstrated by the records of the past decade. They should rightfully be entitled to a full share of the future textile market, but they are facing a keen competitive struggle with imports.

The Pastore committee clearly foresaw that contest and recommended strongly that U.S. foreign aid, trade agreements, export and other programs be administered in full recognition of their potential impact upon the domestic textile industry, especially in view of the expansion of textile capacity abroad. It recommended more realistic interpretation of the peril-point provision of the Trade Agreements Act, faster action on escape clause cases brought before the Tariff Commission, and regulating the flow of foreign textiles into this country, by quotas if necessary.

TEXTILE PROMINENCE OF THE SOUTH

Approximately 1 million workers are dependent on the American textile industry for employment and annual wages of around $3 billion, with the South Atlantic States accounting for about half of the total. In value added by manufacture, these States increased their share of the national total from 38 to 47 percent in the last 10 years. North Carolina, the No. 1 textile producing State, hires 23 percent of all employees and has raised its share of the national total output from 15 to 21 percent in the past decade. The Tar Heel total of $1.1 billion is almost as great as the combined values added by textile manufacturing in the next two ranking textile States, South Carolina and Pennsylvania.

Since the Southern States and cotton have been regarded traditionally as synonymous, it may not be realized generally that the manmade fibers industry, which I represent, constitutes a major factor in the South's economic life. There are 46 plants producing these fibers in the South, shipping $1¼ billion of products annually and employing over 60,000 people with an annual payroll in excess of $250 million. Our industry purchases over $500 million worth of materials, mainly pulp and chemicals, which also are among the South's major industries.

The great bulk of American Viscose Corp. production is concentrated in the South, with our largest rayon plants being at Nitro, W. Va., and Front Royal, Va., and our largest cellophane plant at Fredericksburg, Va. The nylon plant of Chemstrand Corp., which we jointly own with Monsanto Chemical Co., is at Pensacola, Fla., and the Chemstrand acrilan plant at Decatur, Ala. Another nylon plant is planned for Greenwood, S.C.

All of the foregoing adds up to the unmistakable fact that the South generally and North Carolina particularly have a very important stake in what happens to our domestic fiber and textile industries, and in seeing that their products and workers are not to be engulfed in a flood of imports from low-wage foreign countries. And I say "flood of imports" deliberately in the face of what is actually happening in many areas. Let's take rayon stable, for example, the product made at our Nitro and Front Royal plants. Foreign suppliers shipped a whopping 83 million pounds into this country in 1958 and the final record for 1959 will exceed 115 million pounds or a gain of 40 percent. That means the equivalent output of two average-sized American plants and the jobs that are involved. It means also that imports have already taken 25 percent of the domestic market, and Government has turned a deaf ear to our plea for relief.

IMPORTS A MAJOR THREAT

One of the textile trade associations has listed the three major threats to production, employment and prices in this country as: (1) cotton manufactures from Hong Kong, (2) woolen and worsted fabrics from Japan and Italy, and (3) manmade fiber fabrics and low-cost manmade fiber from Europe and Japan. Imports of woolen and worsted fabrics, it estimates, supplied 11 percent of the domestic market for apparel fabrics in 1959 in comparison with 3½ percent in 1950. The United Kingdom had traditionally supplied the bulk of this import trade, but last year the greatly enlarged foreign share was divided about evenly three ways between England and the still lower wage sources, Italy and Japan.

U.S. imports of cotton textile yardage and garments from Hong Kong rose so sharply in

1959 as to constitute almost 80 percent of the tremendous 248 million yard total in the Japanese self-enforced quota of shipments to the United States. Man-made fiber manufactures also have been rising sharply from these low-cost areas, Japan having shipped us 3.8 million pounds of fabrics and knit apparel in 1958 and a thumping 11 million pounds, or nearly three times as much in 1959.

This alarming flood of imports is by no means confined to textiles. It is a too general phenomenon. The devastating effect on specific industries or products is too often lost in general statistics on imports relative to total consumption. Passenger auto imports, for instance, increased from 259,000 vehicles in 1957 to 433,000 in 1958 and to 668,000 or 10 percent of our domestic market in 1959. At the same time, U.S. passenger car exports were declining from 142,000 in 1957 to 122,000 in 1958 and a mere 104,000 in 1959.

Similarly, U.S. imports of foreign steel and manufactures have risen from 1.2 million tons in 1957 to 1.5 million in 1958 and, abetted by our steel strike, spurted to 4.4 million tons in 1959. During the same interval, U.S. exports dropped steadily from 5.2 million tons in 1957 to 2.7 million in 1958 and to a meager 1.5 million in 1959. Imports are supplying an estimated 55 percent of the domestic market for barbed wire, 38 percent of nails and staples, and 27 percent of concrete reinforcing bars, to illustrate the impact on individual items.

That impressive story of the inroads of imports on American markets, often with concurrent losses of exports, could be extended much farther if time permitted. We might mention just one more trade where American products and jobs are being displaced by imports from a low-wage country, that is, radio apparatus and parts, primarily from Japan. Here imports rose from $3 million in 1955 to $28 million in 1958 and to $73 million in 1959.

TRADE AGREEMENTS ACT OUTMODED

I have spent my entire business life in the textile industry, and with my roots deep in North Carolina soil. No one has ever had cause to believe me to be a "reactionary, conservative protectionist," the epithet commonly applied by the international do-gooders to anyone who dares to speak in behalf of American industry and jobs when they are threatened by foreign competition. I am impelled, however, to talk to you frankly about the serious problems confronting our country from our foreign policies, particularly as exemplified in the Trade Agreements Act. America needs some critical soul searching on this vital issue.

Congressman DORN of South Carolina was the first southern Congressman to vote against the Trade Agreements Act (1953), but he has seen an increasing number of colleagues from the traditionally free-trade South awaken to the dangers inherent in continuing that course.

I do not intend to thump the tub of wage disparities, the well-known fact that wage rates in the United States are 10 times those prevailing in Japan and 3 or 4 times those paid in Europe. There is no need to repeat to this audience the fact that United States tariffs have been reduced about 75 percent in 25 years to the point where they are among the lowest of any major industrial nation. I am sure, also, that you who have tried to export North Carolina textiles are well aware of the fact that most foreign countries have invoked widely protectionist measures little known or used in the United States—such as quotas or even embargoes, exchange restrictions, import licenses and so on. A Ford car, for example, costing around $3,600 in the United States, is delivered for about $8,000 in England, $8,200 in France, and $5,800 in Italy, because of duties, taxes, and surcharges imposed by those countries.

The Trade Agreements Act, first advocated by Cordell Hull, has never been titled "reciprocal" except by the freetraders who want to give the impression that America is obtaining payment in kind for its tariff reductions. The United States has not obtained reciprocal benefits from the actual operation of the act, and now after 25 years the generosity of Uncle Sam has brought us to the point where imports are increasing while exports decline and where indeed we need a complete new approach, possibly even a protectionist approach.

Recently, with urging by our own State Department, a number of foreign countries have got religion with respect to their exclusion of American products, but despite much ballyhoo the signs of repentance unto good works have been doubtful. This move came only after the plight of the United States from an imbalance of international payments forced a token threat to foreign countries enjoying increasingly easy access to our market while practicing protectionism at home and thereby rebuilding their own economies.

"BUY AMERICAN" RESURGENCE

That threat consisted of the decision of the Development Loan Fund to insist on a "buy American" policy for foreign recipients of our loans. To understand the extreme significance of that decision, you must recognize that our foreign policy is shaped essentially by the Department of State, which vigorously opposes the "buy American" policy of requiring our economic aid, grants or gratuities to be spent for American goods or services. Instead, it strongly favors worldwide procurement in expenditure of such funds.

Realizing that background, you can understand just how critical is the fiscal situation of the United States which enabled Treasury Secretary Anderson to force even this limited "buy American" policy, when the directors of the affected Development Loan Fund include the Under Secretary of State for Economic Affairs (Dillon) and the Director of the International Cooperation Administration, who answers to the Secretary of State.

The trend of increasing imports on top of declining exports had accentuated the net deficit of $3.4 billion in our international balance of payments in 1958 and a $3.8 billion deficit in 1959. The net result is a genuine threat to the fiscal stability of the United States, possibly even to the gold standard, and certainly to confidence in our position of leadership among the free nations of the world. Hence, the unusual decision that development loans must be expended in this country and the rash of promises to relax restrictions on U.S. exports.

The State Department opposition to "Buy American" is almost as strong as we might expect to emanate from selfishly interested foreign state departments, so stout in fact that immediately after public announcement of the Development Loan Fund decision, numerous State Department spokesmen, including the Secretary of State, took every opportunity to assure all and sundry how limited ($400–$500 million per year, DLF estimate) the effect would be and how unlikely that this policy would be extended to our other far more substantial ($1½ billion plus for ICA, etc.) foreign aid or grants. Now all of this is simply to point up to you how formidable is the opposition that American industry faces within our own Federal Government on any question involving foreign competition.

GATT ACCENTUATES IMPORT BURDEN

As we move into the 1960's this problem of import competition is certain to plague us more and more. GATT negotiations are already scheduled for later this year and in 1961, under the 1958 extension of the Trade Agreements Act, which can reduce American tariffs another 20 percent. As far as textiles are concerned, the Pastore committee of the Senate affirmed the loss of 717 textile mills and the displacement of nearly 200,000 employees from 1946 to 1957, and has concluded that the textile industry is substantially affected by import competition.

It is painfully demonstrable that foreign textiles are not kept from the American market by presently existing duties, but rather that imports are rising generally and in specific cases threatening to get out of hand, as with Japanese and Hong Kong textiles and apparel. Under those circumstances there is no reasonable justification for reducing duties further. A delegation of prominent textile officials has impressed that fact upon the President, requesting an indefinite moratorium on textile duty reductions. May I suggest that you who are concerned for the future of the American textile industry consider using your influence to the same effect.

The first line of defense for American industry against import competition is, of course, efficient, economical production and effective merchandising. But there are many postwar industries throughout the world which vie with our technological progress and, in addition, benefit from sharply lower labor costs. Among these are Germany and Japan, whose manufacturing operations average hourly earnings of 56 cents and 22 cents, respectively, compared with $2.23 an hour in the United States, underwritten by our Fair Labor Standards Act and the Taft-Hartley Act.

On this score the Pastore committee noted that "however efficient American mills might be, they are unable to undersell manufactures in other countries where labor standards and wage rates are so far below American levels. Both textile management and textile labor agreed that if textile labor standards are to be protected"—and you and I know they will be—"control must be exercised over the flow of foreign textile products into this country."

American capital is mobile. It can and has located plants abroad. To the extent that it does, however, American jobs and income are being exported, because of the comparative immobility of labor. I suppose it would be possible to contemplate America becoming simply a nation of distributors of foreign merchandise, but perish the thought. Rather than falling in line behind the pied pipers of our free trade foreign policy, each one of us as consumers ought to consider carefully what that proferred imported bargain may mean in loss of American jobs and income. Consider, if you will, that it is the high level of wages in American industry, not the wages of the service trades, that supports the high standard of living in the United States.

The decision of the Development Loan Fund is symptomatic of the serious crisis in our international policies, of the risk to our fiscal stability and to our leadership of the free world. America has indeed been the arsenal of the free world. It cannot dissipate the strength of its production industries and remain that bulwark of human freedom and democracy. We are sorely in need of an agonizing reappraisal of our foreign trade and aid policies. That is vital to the future of the textile industry in America—which is so important to North Carolina, to the South, and to the entire American economy.

It is indispensable if we are to maintain the United States of America as "the land of the free and the home of the brave."

Save Our River

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. SAYLOR. Mr. Speaker, the Evening Star of March 30, 1960, printed a letter to the editor from F. S. Wilson entitled "Save Our River." I do not know Mr. Wilson, but I think all true conservationists should be interested in what he wrote. For this reason I want to insert it in the RECORD following my remarks.

We have spent billions of dollars in this country building huge mainstem dams on our rivers. This has been done in the name of conservation. The people and organizations backing these big dams claim to be conservationists—but are they? A true conservationist will not unnecessarily sacrifice one irreplaceable natural resource in order to develop another or wastefully spend Federal funds that could be more gainfully employed in a sounder method of preserving our resources.

Water and land are our two greatest irreplaceable resources. The conservation of both is essential to our national economy. Promiscuous construction of large mainstem dams, however, is not the answer to conservation of either.

To conserve both land and water we should start by retaining the raindrop as near as possible where it falls. This is accomplished best in two primary stages. The first stage entails contouring, sodding, and reforestation of the land. This stage will not always retain all the water, so a second stage should be construction of smaller temporary retention reservoirs where necessary in the upper reaches of the watershed. These first two methods of attack will retard runoff and greatly reduce erosion of the soil. This is of extreme importance because of the many years it takes to build up even a quarter of an inch of topsoil. It is also very important because it builds up our ground water supply which in many cases is becoming critical.

After the potential of the first two stages has been exploited, it may still be necessary to construct some dams on the mainstem of our rivers for flood control, navigation, irrigation, and other water uses. But, Mr. Speaker, there is no engineer, irrespective of his ability, who can tell us with any degree of accuracy, how many mainstem dams we need, what size they should be, or where they should be located until we have utilized the potential of stages one and two.

Our so-called planners have put the buggy before the horse. They wanted to build large dams. The less spectacular approach of preserving our soil and construction of small dams in the upper reaches of the watershed has not appealed to them. Often the construction of large dams has actually depleted both our land and water supply. Construction of large reservoirs frequently inundates some of our most fertile lands permanently. This forever deprives us of the use of these lands for production. The Tennessee Valley is a good example of this. In the name of flood control it permanently flooded more land than was ever subjected to infrequent floods.

While we build big dams, flooding valuable land, we let our reservoirs gradually fill up with irreplaceable topsoil because we have not protected our watersheds. In talking about the conservation of water we also forget that ground water and water flowing in our streambeds from return ground water does not evaporate like it does from the surface of our large reservoirs. We can actually develop storage on rivers to the extent that we lose more water from evaporation than we conserve.

Mr. Speaker, I am afraid that those in charge of our conservation programs and those pseudoconservationists, both individuals and organizations, who are so vociferous in their demands for big dam construction are more interested in other things than they are in true conservation. Read the releases of the Bureau of Reclamation and the Army engineers and see how many times they point with pride to their developments as being the biggest this and biggest that. A committee of the Congress visits Russia and comes back with the report that the Russians are building a bigger dam or hydroelectric plant than we have over here. Immediately, certain elements in this country begin the cry that we have to start a crash program of more and larger dams over here in order to keep ahead of them. It seems to make no difference whether the dams are needed, whether they are economic or what other resources they may destroy, just so they are bigger and there are more of them.

Even some otherwise conservative businessmen may want a big dam—not in your or my area but in theirs—if it will drop a big payroll in their trading territory.

Probably the most ardent supporters of the big dam are the Government power advocates. They want the Government to build more hydroelectric developments, irrespective of the need for power in the area or regardless of economic feasibility, so long as it will supply their tax-exempt distributors with some federally subsidized power. And they use every subterfuge in the book to get the Government involved—navigation, flood control, irrigation, and all the rest.

Mr. Speaker, we have our bureaucrats wanting to build something spectacular; our businessmen wanting a big Government payroll dumped in their backyard; and the public power crowd wanting more Federal subsidy—so the big dam program goes on in the name of conservation while true conservation takes a back seat. We can go ahead spending ourselves into bankruptcy on plans guided more by selfishness than by accomplishment.

It is too bad that we do not have more unselfish, intelligent people in this country taking an active interest in our conservation program.

The letter follows:

SAVE OUR RIVER

I was glad to see your March 24 editorial, "Save Our River," and I am sorry this is not one of the items I see in your "50 Years Ago in the Star." It is too late now to save "our river." I should like to quote as pertinent some extracts from "Road to Survival," an alarming and well-authenticated book published by William Vogt, an expert on conservation and wastage of natural resources, with a preface by Bernard Baruch. This is pertinent to your appeal to the Army Engineers.

"Effective conservation has been made impossible, in many parts of the world, by man's failure to recognize the indispensability of scientific treatment. When a man is sick, he goes to a highly trained general practitioner who may send him to a specialist. A sick river valley is vastly more complicated than a sick man. In some parts of the world the sick valley may be subjected to the blundering management of a lawyer. In the United States we are likely to turn it over to an Army engineer. Is it any wonder that flood peaks are steadily rising?

"It [elementalistic thinking] is partly responsible for the antics of such people as Army engineers, who seem literally incapable of understanding the necessity of beginning flood-control work on the hilltops.

"To reduce temporary floods by building a series of dams that would permanently submerge some of the richest land in the world—the project of the U.S. Army Engineers—would seem to compound the foolishness. We can no longer afford to waste fertile fields beneath hydroelectric reservoirs. We do not have enough good land to meet current needs.

"In the southeastern part of the United States 13 costly major reservoirs have been filled to the top of the dam with the products of erosion over an average of less than 30 years. Engineers have not found an economical method for cleaning a reservoir once it is filled with sand and mud. * * * During the past 100 years the Potomac River has carried more than half a billion tons of soil past Washington. * * * Small wonder that the deep harbor into which came ocean-going ships from the seven seas has filled with silt and is now the site of the Lincoln Memorial.

"An especial danger is that the Engineers will be turned loose before adequate studies have been made. To locate dams without them—as the Army Engineers and Bureau of Reclamation have been doing—seems like irresponsible abuse of both the land and the taxpayer."

In view of these statements, it appears that the plan to build big dams and pools north of Washington is going to be much less effective in the long run than reforestation of denuded slopes. And most certainly, in view of past failures, any plan of the Army Engineers should be scrutinized by scientists with broader backgrounds than the engineers have.

F. S. WILSON.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Are We Shadowboxing With Competition?

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my own remarks, I include therein, in the Appendix of the RECORD, an address by Eric Johnston, president of the Motion Picture Association of America, before the annual banquet of the Mayflower Warehousemen's Association, at the Shoreham Hotel, Washington, D.C., on Saturday evening, March 19, 1960.

Mr. Johnston is one of our foremost and most enlightened business executives and he has consistently presented in his public addresses a balanced analysis of our national problems.

The address follows:

ARE WE SHADOWBOXING WITH COMPETITION?

It is a pleasure to be here with you this evening, to welcome the Mayflower Warehousemen's Association to our Nation's Capital, the greatest warehouse of the free world. For Washington these days is not merely the legislative center of the United States. It is also a gathering place for the free world's loftiest dreams and aspirations.

There is no catalog that could possibly cover everything you'll find in this remarkable city—the treasures of our Government in our National Archives Building, the storehouse of Western civilization in our Smithsonian Institution, the broad vistas of man's communications in our Library of Congress, the voices of all nations in the embassies lining our broad avenues.

There is so much to see here, so many points of view represented, that it's no wonder many a visitor is at times dismayed, at times overawed.

Our taxi drivers are perhaps the only ones who can really find their way around town. Not long ago, one of these masters of transport felt a tap on his shoulder. His passenger, pointing toward the Archives Building, read aloud the legend that appears there.

The legend says: "What Is Past Is Prologue."

"What's that 'goobledygook'?" the stranger asked.

"That's easy," the taxi driver replied. "What that means is, 'You ain't seen nothin' yet.'"

With this doctrine, I am heartily in accord. It is this promise that animates, inspires, and drives our American dream, that puts us in orbit as compelling among living men as any orbit possible in lifeless space.

But there's another aspect to America. Sometimes there are periods of indecision, of self-doubt, of rigid and alarmist thinking. Some think we are in one of these moments now. There is certainly a good deal of whimpering and howling going on.

But I trust we shall escape the fate of that businessman—perhaps he was a warehousemen—who found time for a vacation a few years ago. His favorite diversion was hunting. He went south to a recommended hunting lodge, hired a recommended hunting dog for $5, and went into the fields.

The dog turned out to be a champion. The businessman soon had his full bag of game and went home in high spirits.

The following year, the businessman returned to the lodge and asked to hire the same dog again. "Oh, that's the dog we call 'rugged individualism,'" said the hound's owner. "He rents for $10 now."

The hunter agreed to the price. He went into the fields and the dog once again proved himself superb.

Next hunting season, he was back again, asking for "rugged individualism." "Oh," said his owner, "we call him 'private enterprise' now. And he rents for $20."

The businessman paid up quietly because he wanted to be sure of catching his game. And once more the dog behaved splendidly.

Then another year came. Again the merchant looked up his hunting companion. But this time the hound's owner was despondent.

"Oh, you don't want that old dog any more," he said. "He's ruined and it's your fault. You overpaid him. Last spring we renamed him 'Affluent Society'—and now he just sits on his haunches and howls."

Well, as I noted, there's considerable howling these days—about real problems that confront our society—and about fancied and frenzied problems that are conjured up out of nothing.

We must distinguish between them, between the substance and the shadow of our national challenge.

Tonight I want to discuss competition—to try to distinguish between the shadow and substance of what is truly one of the underlying problems of America today.

The competition I shall discuss is not economic competition within the United States. It is the competition of nations within the Western World.

At stake in this struggle is the economic soundness and stability of the whole free world. For if there is one thing certain on this changing globe, it is that the West must be strong enough to discourage the Communist powers from embarking on any foolish or hazardous adventures.

In this capital of light industry and heavy thinking, there is today considerable stirring in the economic fraternity. Some of this thinking takes rather sharp exception to the conventional view of affairs among our people—the pleasing view that we are now embarked on the soaring sixties, the surging sixties, the all-satisfying and stupendous sixties.

This conventional and easy view of our future sees ours as an ever-expanding economy—with more production, more consumption, more abundance, more everything for everybody.

But not all economists wear such rosy-tinted glasses. As these gloomier prophets look at the economic horizon, they see some serious dangers ahead for the United States. As they foreshadow it, we may be headed not for the soaring but perhaps for the slumping sixties.

And what is it that they see?

They see three principal signs of danger, three trends which can greatly damage our American economy.

I should like to discuss these trends with you, for I most certainly share the view that they can be perilous unless we recognize them, understand them, and take purposeful steps to head off their dangers.

Let me summarize these three trends in this way:

The first is that with skyrocketing costs we shall price ourselves out of world markets.

The second is the hazardous outflowing of our gold and our dollars. This is the dollar gap, the deficit in our international trading balance with other countries.

The third is the instability of commodity prices on which the lesser developed countries depend for their economic health. Anything that undercuts the economic base of these countries inevitably affects us, the entire Western World, and invites raids and depredations from Soviet Russia and Red China.

These are all mouth-filling pronouncements. They might sound fascinating in a school of advanced economics. But what business have I in intruding them on you on such a pleasant evening?

I do it because every businessman, every citizen of America, man and woman, can have their lives and their livelihoods altered and disrupted by these economic manifestations of costs and dollar gaps and commodity prices.

So let me discuss these three trends in a little more detail.

FIRST, PRICING OURSELVES OUT OF WORLD MARKETS

What we're really talking about here is productivity, another one of those mouth-filling words the economists love to bandy about. And what does it mean? The measure of productivity is simply this: how much one man produces in 1 hour.

As we all know, the way to keep costs and prices within reasonable bounds is to increase productivity, the output per man per hour.

In productivity, we've always been the world's champion. We gave the world the assembly line. We have constantly invented and developed new tools and techniques to improve our efficiency. A revolutionary machine was barely installed in a plant before its successor was on someone's drafting board somewhere.

This quest for productive efficiency gave us an unmatched position for decades. It meant we could produce in vast volume and bring to the people of America greater benefits than man has ever known.

But now it is no longer true that we occupy the pinnacle alone. Others are coming up. Our productivity today is not increasing at the same rate as it is in some of the other industrial nations of the Western World.

And what has been the result? The result is that other nations have been able to cut into international markets where we were formerly preeminent. This is most noticeably true in manufacturing.

I'm not bemoaning competition. I'm not lamenting the fact that Britain and Germany, France and Italy and Japan are increasing their exports. I don't envy the other fellow.

But what I do say is that we need to look inward to ourselves. If we are in danger of pricing ourselves out of world markets, it's our own fault and we can't pass the buck to anybody.

What do we do about it?

I won't elaborate, but I would like to suggest some things we should avoid doing and some things I think we should do.

The worst thing to do would be to try to create an economic Fortress America by raising tariffs and by placing barriers against our foreign competitors. In the long run, that's the surest way to sap our economy, not to strengthen it.

The things that we should do must be basically the constructive actions of labor and management, of private initiative, of private enterprise in America.

Labor may think it is feathering its own nest when it engages in featherbedding. But featherbedding always makes an economy less efficient, not more efficient. And in that process, labor itself is victimized.

The great labor unions of America should welcome and assist in the introduction of new techniques, new machines, of automation in all of its potentials. Our economy has always taught this lesson: That machines don't do away with jobs, they create more jobs.

The unions, in cooperation with Government and with management, should encourage their members to acquire the skills that our scientific and technical advances require today. This is the way to get ready for new jobs that new machines create. The unions have the stature and the ability to participate in this joint effort. They must recognize that you don't go forward by looking backward.

And labor should also exercise statesmanship in gearing its demands for wage increases to the rate of increased productivity. This is the only sound basis for increased wages. It would be a powerful brake on inflation, which is the greatest robber of the weekly pay envelope. And it would assure our ability to compete on even terms in the international marketplace, to compete successfully throughout the world.

Management, too, needs to snap out of old-fashioned, outmoded, encrusted thinking. Too much management thinking today centers on ways to restrict markets, to fence in and limit competition. The emphasis should be on opening up markets and fostering competition.

If labor is guilty of featherbedding, management is guilty of destructive practices too. One is nepotism—padding the payroll with your next of kin. Others are devices enabling managers to perpetuate themselves in office beyond their creative usefulness, devices that are responsive neither to the will of the stockholders nor to the needs of the Nation.

Management should have more faith in itself and in America. There should be more farsighted planning.

Above all, management should constantly invest more and more in facilities to expand production. And it should stand on its own two feet and break the habit of running to Government for handouts and subsidies and special protection. Why, some of our businessmen who talk the loudest about free enterprise are among those most frequently seen in the corridors and lobbies of Washington.

I know it's easy to say what's wrong and what should be done about it. But I also know that without a new frame of mind, a new attitude on the part of both labor and of management, there is a serious danger that the economists may be right—that we may indeed be pricing ourselves out of the world market.

Rich as we are, powerful as we are, America can't live in the world without a substantial and increasing foreign trade. Today, management and labor still have a chance to carry this forward. Tomorrow may be too late.

Tomorrow, the people of America may call on the Government to step in, and once in, Government will never again be disentangled from a position of decisive influence and control over American industry and over American labor.

This is what is likely to come to pass if we are content merely to shadowbox with competition, instead of truly engaging in competition. Competition may be a hard taskmaster. But its rewards are unlimited.

Now for the second danger—the hazardous outflow of our gold and dollars.

A wise economist-statesman once said: "The American dollar is the sun of the solar system of our world economies. If the sun should explode, or shift in the heavens, the whole order of things would be violently changed."

There has been no explosion so far. But the dollar has been slipping away from our shores. In the last 2 years, it has been flowing out at the rate of $3½ billion to $4 billion a year.

We have a vast amount of gold stored in Fort Knox. But even that glistening pile is not inexhaustible.

Why have we been losing dollars abroad? A quick review of recent history will cast some light.

Fourteen years ago, Europe came out of the war prostrate, flat on its back. Two jobs needed to be done. One was immediate repair and rehabilitation. The other was long-range reconstruction. America stepped in to do both jobs. Since the war, we have poured tens of billions of dollars into Europe.

But Europe still needed something else. Following the war and in the early days of rehabilitation, communism swept over the continent. It almost engulfed two or three of the Western countries.

The danger was not merely internal. The Soviet Union, a reawakening giant, tightened its grip on Eastern Europe and threatened the West from the outside.

Again we stood beside Europe. We helped to build that sturdy defense shield, the North Atlantic Treaty Organization, and into this effort we have poured additional tens of billions of dollars.

It was not just humanitarianism that motivated us in these tasks, although this was a significant factor. Our self-interest also demanded it. A weak and defenseless Europe would surely have become a communized Europe. And a Communist power on the opposite shores of the Atlantic, like a Nazi power earlier, would have threatened our security and our whole future.

During this period, in order to build their internal economic strength, many of the countries of Europe adopted tariffs and barriers to the importation of products from the outside. This particularly affected American products.

After all these years, with our help and with heroic efforts of its own, Europe has more than recovered. It is now prosperous.

Yet many of the restrictive measures that might have been justified when Europe was weak are still retained. And our foreign trade suffers as it tries to scale these barriers.

In America, we have followed a different course. We have been lowering our tariffs, our trade restrictions. Consequently, the industrial nations have been steadily increasing their exports to the United States.

To sum up, these are the two main reasons for the dollar gap, our heavy expenditures and investments overseas, and the failure of our exports to redress the balance.

Our economic and financial assistance has not been confined to the industrial nations of the West. We have also been spending vast sums in the underdeveloped countries. This is a load we have shouldered thus far almost alone.

As I said earlier, there has been no explosion yet in our economic solar system spinning around the dollar.

But isn't it palpably obivous that the outflow of our gold and dollars can't go on forever? It must be eased and reasonably soon.

I think it is time to call upon our partners in the West to do two things:

First, we should call on them to dig deeply into their own funds to share with us the burden of providing adequate aid and assistance to the underdeveloped nations. The stability of these countries is no less important to our Western industrialized partners than it is to us. Our partners are capable of taking a full share of this responsibility. It is time they do so.

And, second, we should call on our Western partners to tear down the whole tangled web of tariffs and duties and restrictions and limitations that have been built up against exports from the United States. They are no longer justifiable. They are no longer excusable.

We should all set as our ultimate goal the transforming of the Western community into a large-scale free trading unit—an Atlantic common market.

And now for the third danger facing our economy—the instability of those countries which rely on the export of raw materials for their economic life.

In this economic arena, I'm referring not merely to the newly independent countries of Africa and Asia, but also to some long-established countries, especially in Latin America.

In many of these lands, the price of one product or one commodity determines the economic stability of the whole country.

Let me name a few.

In Brazil, there's coffee. If the price of coffee in the United States falls by 1 cent a pound, it means the loss of many millions of dollars to Brazil. In smaller Ecuador, the loss is $8 million if the price in America drops by 1 cent.

There is Chile, where the price of copper in the world market spells the difference between prosperity and economic distress, between large scale employment and massive unemployment.

The story repeats itself all over the globe, along the whole great tier of countries that lie athwart or below the equator—from Asia through Africa to South America.

With their unbalanced economies, these nations have largely become pawns with little control over their fortunes on the international chess board.

Why is it a danger to the United States when Brazil loses millions on the price of coffee, or Bolivia on the price of tin, or Malaya on the price of rubber, or Pakistan on the price of hemp?

These distant events endanger us on two scores.

They endanger us because we are rapidly exhausting our domestic source of many raw materials. We need the raw materials of these countries to keep our own industrial plant going.

And they also endanger our security. We can't afford to let these countries collapse. If they should collapse, Soviet Russia is all too ready and eager to pick up the pieces.

Is there anything we can do about it? Yes, plenty.

Over the long term, together with the other industrialized nations, we need to extend the fullest possible assistance, skills, and know-how to these nations, helping them to move from a one-crop or one-product economy to an advanced and many-faceted economy.

For the shorter term—and this needs our immediate attention—our country should take the leadership in initiating international conferences to develop programs to stabilize raw commodity prices in the world market.

This has pitfalls and manifold difficulties. But it can be done. And when it is done, it can be the best bulwark to stave off Communist encroachments while the countries have an opportunity to develop rounded, balanced, and self-sustaining economies.

I have tried to sketch for you what some economists call our three deadly perils.

I've also sketched some ways in which I think we can overcome and dissipate these perils in the months and years ahead.

But of this we may be quite sure. These dangers won't vanish merely by wishing them away. And they won't vanish by being smothered in the complacency of a so-called affluent society—because an affluent society today can become a has-been society tomorrow.

This has happened before to complacent societies. And there is no reason to think it can't happen again.

If I were to assess these three deadly perils in terms of our country as I know it, I would say that the economists are too pessimistic. They are operating on the theory that America can't rouse itself and face up to sacrifices and difficulties, however necessary they may be.

But this is not the America I know. Nor do I think it is the America that any of you here would recognize and be proud to call your native country.

In a sense, I suppose there's always a need for pessimists in the world. They serve a useful purpose. They are the ones who keep nagging at our coattails to alert us to the open manhole around the next corner. And, besides, if there were no pessimists, how would you recognize their opposite number, the optimists, the believers, who always lead us to victories?

We have a choice today, a very clear choice. We can sit down like the hound dog and howl to our heart's content. Or we can set off again up the rugged trail that has always beckoned Americans in the past, the trail that leads up through difficulties and hardships to the stars.

Being an American, I know the choice we will make.

First Run of the Pony Express Reenacted

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. HULL. Mr. Speaker, a very fine article by Gary Chilcote in the St. Joseph (Mo.) Gazette describes the events in St. Joseph as its citizens celebrated the 100th anniversary of the pony express.

Under leave to extend my remarks, I include the article by Mr. Chilcote:

THOUSANDS CHEER AS PONY EXPRESS RELAY HEADS FOR SALT LAKE

The pony express came to life yesterday while thousands of Midland Empire residents cheered the reenactment of the start of the enterprise 100 years ago.

The departure of the first rider, Lee Shifflett, Wathena, Kans., climaxed the colorful ceremony held at the Pony Express Museum under clear skies and bright, warming sunshine.

The celebration was reenacted exactly 100 years from the day the first pony express rider galloped toward California. Signaling the start of yesterday's ride was a cannon roar at 1:45 and a slap of the horse by the mayor just as was done on April 3, 1860.

Traffic Sgt. Tom Farmer estimated the crowd at 7,500. Traffic was heavy in the vicinity of Patee Park and sheriff's deputies assisted in keeping the street open.

Congressman WILLIAM R. HULL, who addressed the crowd just prior to the start of the rerun, reminded his listeners of the stirring scene which took place there a century earlier, an important drama in the development of America.

"A young man—it matters not whether Johnny Fry or Billy Richardson or Alex Carlyle—mounted his horse and galloped off through the gathering darkness on the first leg of a perilous journey which today symbolizes the 'winning of the West,'" Congressman HULL stated.

"It is not difficult for us to recapture the excitement and significance of that day. As we retell and reenact the events of 100 years ago, we share in its color and drama."

Congressman HULL closed his talk by pointing out that St. Joseph was the birthplace of a great episode of American history, and recommended that the city dedicate itself to the job of carrying forward, with similiar courage and enterprise the American goals so nobly served by the pony express.

The Sixth District representative was introduced by Mayor Arthur J. Meers, who assumed the role of 1860 Mayor M. Jeff Thompson. He delivered a talk which was given by the controversial mayor at the start of the pony express.

Missouri's Gov. James T. Blair also took part in the centennial observance along with other dignitaries.

"This is a great day for the residents of St. Joseph," Governor Blair said. "I am very pleased to be here for the celebration, and offer my sincere congratulations to all those sponsoring the event."

Kansas Gov. George Docking, who was present with his wife and Mr. and Mrs. Gene Sullivan, formerly of St. Joseph, also spoke briefly to the crowd in front of the restored pony express stables.

Master of Ceremonies Richard Hope gave a brief history of the restoration of the pony stables.

Earlier in the day, several hundred persons filled Penn Street in front of the stables to observe the religious services. The Reverend Cecil Franks, pastor of Patee Park Baptist Church, conducted the service, with Mayor Arthur Meers handing out souvenir Bibles to the 70 riders who made the rerun westward. Both the Reverend Mr. Franks and Mayor Meers were dressed in 1860 style for the celebration.

"Today, as in the days of the Pony Express, we depend upon prayer to help us in our daily living," the minister said. "You can be sure the Pony Express riders of 100 years ago turned to prayer when they encountered troubles on their rides."

A chuck-wagon breakfast followed the religious services, with noon activities focusing on a Burlington Railroad exhibit of an 1860 type locomotive and replica of the first mail car placed into use here in 1862.

The train was located just a block from the museum at Eighth and Olive Streets, and attracted thousands of visitors during its 2-day display.

On hand to add color to the event were Indians from the Iowa Tribe headed by Chief Frank Dupee. The Indians performed dances and songs after the first rider left the stables. Other "Indians," really members of a local riding club, carried out a mock chase on South Ninth Street as Lee Shifflett rode toward the Pony Express Bridge.

A band concert featuring western melodies was played by the Central High School Band.

Better Try Again

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. DENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial entitled "Better Try Again" from the Plainfield Messenger, Inc., of Plainfield, Ind., and written by Mrs. Ellen C. Curtis, editor, dated January 21, 1960, as follows:

With Congress in session again, World War I veterans are bringing some facts before them which they hope will be sufficient to get a pension bill on the statutes which will give these aging members of our citizenry a little compensation for the service which they rendered in the 1917–18 war. Ten thousand of them are dying every month—360 every day, 15 every hour, 1 every 4 minutes.

It is high time that the Government begin easing the last few months, days, hours, and minutes of this vanishing army, which performed so gloriously at Chateau-Thiery, Bellau Woods, Mt. Faulcon, in the Muese Argonne and on other fronts in those days 43 years ago. These men are now from 60 to 75 years of age and have never had any financial recognition for their services.

Strange as it may seem, veterans of World War II and Korean war, who have had so much from the Government, are foes of a plan to pension the World War I veterans because of the prohibitive cost. We'd like to ask just one question: Who has been paying the cost of their education, their pensions, their GI loans and other benefits? If you stop to think, you'll realize it has been for the most part, the veterans of World War I.

With the death rate among the World War I veterans as high as it is today, the cost of pensioning them will go down about 6 percent the first, 12 percent the second, and therefore by 1976 only 6 percent of these men will be living and the cost of the proposed pension will have been reduced by 95 percent.

Barracks No. 1178, Brazil, through its commander, Harold E. Stearley, is doing everything in its power to bring the matter before the attention of the present Congress. Every veteran of 1917 should write his Congressman urging support of a pension bill for the long-forgotten men of World War I.

Centennial of the Pony Express

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. HULL. Mr. Speaker, the city of St. Joseph, Mo., celebrated the centennial of the pony express, one of the dramatic chapters in American history, on April 3.

It was a fitting celebration of a date—April 3, 1860—about which there is no dispute. On that day 100 years ago, a rider left St. Joseph on the first leg of a journey which, along with subsequent pony express odyssies, made a substantial contribution toward the winning of the West.

It is to be regarded as regrettable that there has been a controversy this year as to the date on which the pony express centennial should be celebrated. The city of St. Joseph, which was the point of origin of the pony express and its headquarters, has had its observance on the historically correct date. The centennial will be observed again in July in other locales and although this is similar to celebrating Independence Day in Octo-

ber, it is nonetheless to be hoped that these events will be as successful as was the one in St. Joseph.

Mr. Speaker, I had the honor of delivering the principal address on the occasion of the pony express centennial in St. Joseph and under leave to extend my remarks in the RECORD, I desire to include an editorial from the St. Joseph News-Press which touches upon my talk but more importantly discusses the relationship between the pony express and modern-day St. Joseph:

PRIDE AND INSPIRATION

There was inspiration in the remarks of Congressman WILLIAM R. HULL at St. Joseph's salute to the pony express yesterday.

And there was inspiration for those in the crowd before the historic shrine of a boisterous era of American history in the reenactment of those events of 100 years ago.

Today, St. Joseph's centennial program is a matter of history. It joins that first day of the pony express as another date in the years and events which are America.

But, for those who make the effort to take note of the day—and there were thousands—there is a touch of pride in self and city, and added inspiration for the future which wasn't there before.

St. Joseph, a city of wealth in things historical, could well look upon events of last weekend as a lesson in such things as pride and inspiration.

Those qualities run high among the people.

And although the pony express centennial celebration was pushed by but a handful of this city's leaders, the people came through with an outpouring of participation far surpassing the expectation of anyone.

So, St. Joseph perhaps should take note. A city must be an inspiration to its residents to grow, even to survive. The material is here in abundance. If properly evaluated, its restoration and preservation properly directed and properly financed—privately or with public money—St. Joseph could become an effective tourist city—an endless inspiration to its residents and to those attracted to it.

If, however, we continue to overlook the value of our natural shrines, they will die—a little each passing day—until there may be nothing inspirational remaining for those of other generations which someday may want again to pay respects to the historical greatness of St. Joseph.

Captive Europe and the Summit

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. MONAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to draw the attention of the Members of Congress to a statement by Senator THOMAS J. DODD which appears as the lead article in the current issue of Free World Review.

In this article, Senator DODD makes the argument that we would be on sure ground—legally, morally, and politically—if we raise the issue of the captive nations at the forthcoming summit meetings; and he argues further that this is the only way in which the West can go over from its present defensive position to a diplomatic offensive.

Because of its significance, I include the text of Senator DODD's article, entitled "Captive Europe and the Summit," in the RECORD. I believe that Senator DODD has formulated his proposal in a manner which makes it appear both logical and politically realistic.

The article follows:

CAPTIVE EUROPE AND THE SUMMIT

(By THOMAS J. DODD, U.S. Senator)

If the Western Powers continue further along the path they followed so far at Geneva, the forthcoming summit conference may very well result in a new "Munich."

On the other hand, if the Western Powers go to the summit with a clear awareness of what is at stake, the summit may yet be used as an opportunity to seize the initiative from the Kremlin and reverse the sorry trend of recent years.

As the distinguished editors of Protracted Conflict have pointed out, the cold war has thus far been conducted according to a one-sided set of rules. It has always been fought on the territory of the free world, while the territory controlled by the Communist world has been considered sacrosanct. We have fought back against Communist offensives—sometimes successfully, sometimes unsuccessfully—but we have never ourselves launched a political offensive or counter-offensive.

I fear that if we continue to adhere to this self-imposed set of rules through very many more years of cold war, the free world will be lost.

At the forthcoming summit meeting the Communists will endeavor to confine the discussion to Berlin, as they did so successfully at Geneva. If we permit them thus to limit the agenda to the territory of the free world, the conference, almost inevitably, will result in a further retreat by the West. Somehow the West must find a way of going over to the offensive. But how do we do it, and at what points?

In my opinion, the only answer to this question is—the captive nations. On this issue we are on sure ground—legally, morally, and politically.

Legally, we can point to the series of postwar covenants assuring the captive nations of the right to choose their governments in democratic elections.

Morally, we can invoke the Atlantic Charter and we can point to the overwhelming vote by which the U.N. General Assembly condemned Soviet intervention in Hungary.

Politically, there is no issue on which the Kremlin is more sensitive or more vulnerable.

There may have been a time when the Kremlin believed that it could crush the spirit of resistance in the captive nations and ultimately produce a generation of Communist robots. If they seriously entertained this illusion, the events of the past few years have certainly destroyed it. In quick succession there have been the East German uprising, the Poznan uprising, the Polish revolt against Moscovite control, the Hungarian revolution, the Tibetan revolution.

That the will to freedom which exploded so heroically in Hungary in October 1956 remains unsubdued was once again proved by the spontaneous emotional mass demonstration which greeted Vice President NIXON in Warsaw. Marguerite Higgins quoted a senior European diplomat as saying that the Warsaw demonstration convinced him that, if it came to war, the Kremlin would have to place the whole of Poland under military occupation.

In my opinion, this is a great understatement. If it came to war in Europe, the Kremlin would have to place its entire satellite empire and much of the territory of the Soviet Union under military occupation. This task alone would strain the resources of the 100 Red army divisions west of the Urals. As for the 75 satellite divisions, there is a far greater chance that they would fight on our side than that they would fight on the side of the Soviet Union.

I believe we should call Khrushchev's bluff by saying these things frankly to him. And, having done this, I believe we should place before the summit conference a package deal that calls for—

(a) Free elections under U.N. supervision in East Germany and the captive nations;

(b) Disengagement in depth on both sides of the prewar Soviet frontiers;

(c) A nuclear test ban and a substantial degree of disarmament, with adequate inspection; and

(d) Increased East-West trade, including the extension of credits.

The liberation of the captive nations, in my opinion, is the one objective for which we should be willing to pay with substantial reciprocal concessions. If the Soviets were to agree to liberation, then we could afford to offer such concessions without endangering our future security.

From the Soviet standpoint, the package deal I have outlined would have definite advantages. It would enable them to disembarrass themselves of the troublesome, rebellious captive nations under the protection of a face-saving formula. It would offer them security, disarmament, trade credits—all objectives that have figured high on their list of demands. And, in pursuing this line of argument, it might be pointed out to them—in all accuracy—that their relations with independent, non-Communist Finland have in many respects been more satisfactory than their relations with some of their satellites.

In pursuing the objective of liberation, we should use all the devices of diplomacy. We must first of all establish our strength and persuade the enemy that we are aware of his weakness. We must place him on the defensive by shifting the arena of diplomatic controversy to territory under his control. We must offer counterconcessions that are not only intrinsically valid but provide the enemy with a face-saving formula. We must show ourselves as persistent in pursuit of our goals as the enemy is in pursuit of his.

And finally, we must hold forth to the world the possibility of genuine coexistence.

(The dictionary defines imperialism as a "doctrine leading to the territorial expansion of a state or to its domination of others.")

Year	Countries	Population (thousands)	Area (square miles)
	ANNEXED OR UNDER SOVIET ADMINISTRATION		
1940	Part of Finland	450	17,600
1940	Estonia	1,122	18,300
1940	Latvia	1,951	25,400
1940	Lithuania	2,957	21,500
1945	Part of German East Prussia.	1,187	5,400
1945	Part of Poland	11,800	69,900
1945	Part of Czechoslovakia	731	4,900
1945	Part of Rumania	3,700	19,400
	Total	23,898	182,400
	CONTROLLED BY U.S.S.R.		
1945	East Germany	18,807	42,900
1945	Poland	26,500	120,355
1948	Czechoslovakia	12,340	49,381
1947	Hungary	9,750	35,902
1948	Rumania	16,100	91,584
1946	Bulgaria	7,160	42,796
1946	Albania	1,175	10,629
	Total	91,832	393,547

In all, within 8 years Moscow succeeded in extending its control over an area of 575,947 square miles with 115,730,000 inhabitants.

Only one power used the Second World War as a cover for its own territorial expansion—the Soviet Union.

Former State Senator Andrew J. Sordoni of Wilkes-Barre Honored by Wyoming Valley Hospital

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record, Thursday, April 7, 1960:

PLAQUE CITING SORDONI GIVEN LOCAL HOSPITAL—TRUSTEES' TRIBUTE SALUTES OLDEST MEMBER FOR WORK

Singular honor was paid former Senator Andrew J. Sordoni last night with the unveiling in the lounge of Wyoming Valley Hospital of a bronze plaque paying tribute to his dynamic leadership, broad vision, and great generosity.

The ceremony followed by a year the opening and dedication of Wyoming Valley Hospital's reconstructed and expanded facilities. Its reconstruction, achieved by two valley-wide general drive for funds, was done in two separate construction phases over a 5-year period. With a valuation today exceeding $1,500,000, it is one of the country's most modern hospitals in equipment and facilities. Known originally as the Wyoming Valley Homeopathic Hospital, it was founded in 1911.

The plaque was a gift to the hospital from the 19 members of the board of trustees honoring Andrew Sordoni, its oldest trustee (since 1936) and president for 16 years. The plaque bears a relief of President Sordoni and is inscribed in part: "This plaque is erected by friends who have been privileged to share in his efforts to make the hospital a center of growing service to the people of Wyoming Valley."

The unveiling was preceded by a dinner given President Sordoni in the hospital's new cafeteria. It was attended by the board of trustees and the medical staff. Judge Frank L. Pinola served as dinner and gift chairman.

Judge Pinola noted that the Sordoni Enterprises, which comprise 14 organizations, are this year observing their 50th anniversary. He said, "Senator Sordoni has instilled that same dynamic drive and enthusiasm with which he developed his business enterprises into everything he has undertaken—the Wyoming Valley Hospital stands today as an outstanding example."

Members of the board who personally contributed the plaque include David S. Davis, vice president; Eugene Goldstein, treasurer; Alexander W. Dick, secretary; Ben Badman, Jr., administrator; Senator Harold E. Flack, Thomas H. Kiley, George J. Kintz, Andrew J. Sordoni, Jr., Abe N. Soloman, Ralph Lisman, Max Roth, Judge Frank L. Pinola, Roy E. Morgan, Reuben H. Levy, L. Verne Lacy, Dr. Eugene S. Farley, Attorney Robert J. Doran, and John S. Cresko.

The plaque was made by Spencer Industries and the relief of Sordoni was executed by Gilroy Roberts, chief sculptor of the U.S. Mint in Philadelphia.

As spokesman for the hospital board, Dr. Farley, in a brief address of presentation, declared, "We join together on this occasion to honor the man whose vision, leadership, and generosity have made possible the great gains of the last 5 years of constructive effort.

"At a time when it seemed that our plans for construction were bogged down, it was Andy Sordoni who gave life to those long delayed plans. He did this by assuring substantial gifts if we, as a board and staff, would undertake to raise the balance required for completion of our plans of construction. Happily, we accepted the challenge he placed before us."

Dr. Farley continued, "Andrew Sordoni is a builder. His greatest satisfaction comes from constructive effort." Declaring Sordoni started life with few material advantages, he said, "He has always possessed other advantages. First among these, a devotion to his mother and to her memory. Second, a burning desire to accomplish something of significance. Third, vision and a driving force to attain the ends to which he set his heart. Like other successful men, he has ultimately directed his energies and resources into efforts that relate to the welfare of his neighbors and his community."

He concluded, "In presenting this plaque we are expressing our warmth of feeling for the man who held us together. We can add to his honors but little, we can add to friendships immeasurably. We thank him for the privilege of participation in his efforts to build a hospital that can render outstanding service to this and to coming generations."

Mr. Speaker, in acknowledgment, President Sordoni said:

I am humble in this honor you show me and, yet, I am proud—proud of being associated with such men as you. You can rightfully take pride in what you have done for your fellowman. Thank you for your part in making Wyoming Valley Hospital one of the finest in spirit, facilities, and accomplishment.

Courier-Journal Rated Near Top Among Nation's 1,755 Daily Papers

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. NATCHER. Mr. Speaker, for the second time in 1 week the Courier-Journal of Louisville, Ky., has been designated as among the country's 10 great newspapers. This is a distinction the Courier-Journal has regularly achieved over the years. In the latest survey—a private nationwide poll of publishers—the Courier-Journal rated fifth among America's top 10 daily newspapers.

When the Courier-Journal had been in existence for a period of 40 years, Henry Watterson, inspired leader of the newspaper, who had become affectionately known throughout Kentucky and the South generally as Marse Henry, gave it a new name when he wrote:

Forty years of shine and shower have passed over the good gray head of the Old Lady at the Corner.

From the time Marse Henry penned these words, the Courier-Journal has been fondly known as the Old Lady at the Corner, and it is gratifying to note that the Old Lady at the Corner is continuing in the high journalistic tradition established by one of its early leaders.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in the April 11 issue entitled "Courier-Journal Rated Near Top Among Nation's 1,755 Daily Papers."

The article is as follows:

COURIER-JOURNAL RATED NEAR TOP AMONG NATION'S 1,755 DAILY PAPERS

A pleasant form of lightning has struck the Courier-Journal twice in a week.

America's top 10 daily newspapers, selected by publishers in a private nationwide poll, were announced today by New York publicist Edward L. Bernays.

The Courier-Journal was rated fifth among the 10.

If you think you say this same story last Monday you are almost right. On that day the magazine Practical English announced results of a survey conducted by Scholastic magazine. This one was among editors, and the Courier-Journal, though one notch lower, sixth, was rated relatively higher because 15 dailies were named to the list of "most superior" papers.

The Baltimore Sun, listed in a 1952 survey of publishers by Bernays, was displaced by the Los Angeles Times among this year's top 10.

VOTE PERCENTAGE FOR COURIER-JOURNAL RISES

Among the Nation's 1,755 daily newspapers the top 10 this year, as released by Bernays, were:

The New York Times.
The St. Louis Post-Dispatch.
The Christian Science Monitor.
The Washington Post and Times Herald.
The Courier-Journal.
The Milwaukee Journal.
The Kansas City Star.
The Chicago Daily News.
The Los Angeles Times.
The New York Herald Tribune.

The percentage of publishers voting for the Courier-Journal had increased from 38 percent in 1952 to 39.54 percent.

The 10 leaders have a combined daily circulation of about 4 million and a combined Sunday circulation of more than 4,500,000. Confined to no one section of the country, they covered an area from the Atlantic to the Pacific.

In both surveys by Bernays, publishers were asked to name the 10 papers that, in their judgment, "best live up to the ideals set forth by Joseph Pulitzer, Adolph S. Ochs, and Thomas Gibson."

SMALLER DAILIES ARE PRAISED

Pulitzer was publisher of the old New York World; Ochs, publisher of the New York Times; and Gibson, publisher of the Rocky Mountain Herald, Denver.

In announcing results of the survey, Bernays said: "An interesting and significant fact in the current survey is the frequency with which publishers pay tribute to the high standards and idealism of smaller dailies with only regional circulation.

"Time and again, respondents emphasized in personal notes that they were sure there were many other papers in the country as deserving as those that would undoubtedly rank highest in a nationwide survey simply because the big-name papers would be known to far more publishers than the smaller circulation journals."

In both the 1952 and the 1960 surveys, the following statements by Pulitzer and Ochs

were furnished the publishers as the basis for their judgment on present-day adherence to the criteria established by those famed individuals:

Pulitzer, as the salutatory of the New York World, May 10, 1883: "An institution that should always fight for progress and reform, never tolerate injustice and corruption, always fight demagogues of all parties, never belong to any party, always oppose privileged classes and public plunderers, never lack sympathy with the poor, always remain devoted to the public welfare, never be satisfied with merely printing news, always be drastically independent, never be afraid to attack wrong, whether by predatory plutocracy or predatory poverty."

Ochs, on assuming control of the New York Times, August 18, 1896: "It will be my earnest aim that the New York Times give the news, all the news, in concise and attractive form, in language that is permissable in good society, and give it early, if not earlier, than it can be learned through any other medium. To give the news impartially, without fear or favor, regardless of party, sect, or interest involved; to make the columns of the New York Times a forum for the consideration of all public questions of public importance, and to that end, to invite intelligent discussion from all shades of opinion."

The Young as Citizens

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting survey paper prepared by Thomas J. Curtin, director of civic education, Massachusetts Department of Education, for the 1960 White House Conference on Children and Youth:

THE YOUNG AS CITIZENS

(By Thomas J. Curtin)

From all sides one hears the cry that Americans need to understand the meaning of the democratic way of life if they are going to live it and be willing, if necessary, to die for it. To instill such love of democracy in our youth, we must know what democracy really means, and practice it in such a way as to inspire them.

One sign of our failure to achieve this measure of devotion was the behavior of some of our young men as prisoners of war in Korea. Maj. William E. Mayer, an Army psychiatrist, has estimated that out of 4,000 POW's, one-third yielded to the brainwashing of the Chinese. An additional 13 percent were accused to crimes committed while in POW camps and were tried in court-martial. Yet our GI's were not subjected to torture. Why did so many yield?

Major Mayer believes that the effectiveness of Chinese brainwashing indicates serious weakness in the characters of these Americans and shortcomings in their education. Our American educational system failed to give first place to teaching the duties and responsibilities of citizenship. He says, "Just being well adjusted so that you can have a wonderful time in our comfortable country isn't enough."

When questioned by Major Mayer, many of these GI's said they weren't taught enough in school about the American system—our history, politics, economics. They didn't know enough about the U.S. Constitution, its guarantees of personal freedom and human rights. These things should be learned at home and at school, the major believes, and learned early.

He recommends increased attention in education to teaching what democracy is, how it operates, what its achievements are, and also admitting where it has failed—a completely realistic, honest presentation of our own system. And a similar, honest presentation of the Communist system. "Anyone who is cognizant of both," he says, "knows that our system sells itself on its merits; there is simply no comparison. If you have the facts about both, you are going to choose ours." [1]

A similar point of view is expressed by Gross and Zeleny in their book, "Educating Citizens for Democracy":

"Much has been said for and against indoctrination in American schools * * * many American educators have been afraid of the word, which seems to suggest totalitarianism. But there is nothing wrong with the idea that the democratic doctrines, beliefs, and methods are the ways for us to follow and that the Communist and other totalitarian ways are not for us. * * * essential facts about historical and contemporary types of governments should be studied and compared with ours. America will not suffer in the comparison." [2]

Some reference to pertinent information about Russia and communism are included in the bibliography at the end of this paper.[3]

Another indication of our failure to properly educate our youth for democracy is afforded by a 1947 poll of high school students which found that: 41 percent felt there was no value in sending telegrams to Congressmen; 41 percent regarded communism and fascism as the same; 46 percent were against women holding office; 57 percent agreed that the average citizens should be aloof from dirty politics; 57 percent thought democracy depends fundamentally on free business enterprise, overlooking the rights of the individual as the prime factor.[4]

Educators and youth leaders who wish to teach the meaning of democracy will find helpful information in John J. Mahoney's book, "Education for Citizenship." In this book, and before that in his "For Us the Living," he pioneered an approach to civic education which has become the basic pattern for the program of the State of Massachusetts.

These are the objectives of the Massachusetts State Department of Education civic education program:

1. A progressive approach toward that balance and maturity of individuality which is required for constructive participation in democratic society.

2. Adequate understanding of, and wholehearted allegiance to the democratic way of life.

3. Understanding of the major features of the present international situation and the problems involved in the attainment of world peace.

4. Appreciation of the rights, privileges, and protections which political democracy insures, and a deep sense of personal responsibility for making them available to all, without discrimination.

5. A keen interest in human affairs and a desire to participate effectively as a citizen in a democracy.

6. A determination to apply intelligence to personal participation in political affairs.

7. An understanding of the need for effective selections and training for political leadership and a clear appreciation of the role of leadership.

8. The will to abide by the laws and support their enforcement.

9. A grasp of the understandings and attitudes needed by citizens to make the American scheme of free enterprise work with maximum efficiency in our democratic society.

10. The earnest desire to develop and maintain intergroup understanding, respect, and good will.

11. The will to translate into civic behavior the basic [5] teachings of character education and religion.

These, then, are the kinds of behavior which mark the good citizen. A bad citizen, is characterized by the reverse, by shortages in civic behavior like: intolerance, poltical irresponsibility, lack of ethics, emotional maladjustment, and economic illiteracy.

To be effective, education must be put to use, good citizenship must be practiced. The Columbia University citizenship education project has emphasized that the skills of American citizenship, like any skills, are applied in action. They point out that effective citizenship must necessarily be active, and that it must be learned through action.[6]

It must be learned, too, in a democratic atmosphere.

THE DEMOCRATIC SCHOOL

The spirit of democracy cannot develop in an atmosphere which is undemocratic and which is dominated by people who use authoritarian procedures. This lesson was forcefully pointed out to the schools about 20 years ago when the world was acquiring a fuller understanding of the threat of totalitarianism. Democratic education was carefully analyzed in "Learning the Ways of Democracy," on the basis of how democracy was then lived in 90 American high schools. The analysis merits repetition now in the face of newer challenges to a society which has faith in its schools:

Democratic education has as its central purpose the welfare of all the people.

Democratic education serves, each individual with justice, seeking to provide equal educational opportunity for all, regardless of intelligence, race, religion, social status, economic education, or vocational plans.

Democratic education respects the basic civil liberties in practice and clarifies their meaning through study.

Democratic education is concerned for the maintenance of those economic, political, and social conditions which are necessary for the enjoyment of liberty.

Democratic education guarantees to all the members of its community the right to share in determining the purposes and policies of education.

Democratic education uses democratic methods, in classroom, administration, and student activities.

Democratic education teaches through experience that every privilege entails a corresponding duty, every authority a responsibility, every responsibility an accounting to the group which granted the privileges or authority.

Democratic education demonstrates that far-reaching changes, of both policies and procedures, can be carried out in orderly and peaceful fashion, when the decisions to make the changes have been reached by democratic means.[7]

More recently the northeastern commissioner of education emphasized the importance of the "social climate of the school" in fostering the democratic spirit when they wrote:

"If the procedures and tone of the school are essentially democratic, then our pupils are gaining experiences in and from democratic living. On the contrary, if the procedures and tone of the school are authoritarian in nature, then there may be a real conflict between the words our pupils hear

Footnotes at end of speech.

from us and the lives we force them to live in the school. Learning the ways of democracy calls for a deliberate effort to establish a social atmosphere that is essentially democratic." [8]

The school administrators of the Nation gave further support to this viewpoint by devoting a whole chapter of their 1954 yearbook, "Education for American Citizenship," to the significant role of the individual school. While recognizing the importance of programing in citizenship for an entire school system, the commission underscored the point that success or failure is realized in each individual school. Here is where citizenship is experienced. This is the setting in which critical thinking, the understanding of social values, and the practice of socially acceptable behavior can be learned. Since the individual school is, or can be, the focal meeting place of pupils, the people of the neighborhood or community, and the school personnel, it is the logical place in which to initiate and develop education in and for citizenship.

The Detroit citizenship program was organized and developed on the premise that the best way to improve civic behavior would be to encourage each of the eight participating schools to make a concerted effort in the direction of self-improvement. As a result, the specific undertaking was conducted on a "whole school" basis involving the cooperative efforts of faculty, students, parents, and the study staff. At the conclusion of the experiment, the Detroit authorities were agreed that these cooperative procedures did bring about significant changes in the citizenship education programs of the participating schools.

The final results of the Detroit citizenship education study, upon which these programs were based, is reported in Stanley Dimond's "Schools and the Development of Good Citizens." Chapter 4 presents test data of students' reaction toward democracy. As a result of these data, three major projects were developed for teaching democracy at junior and senior high school levels. The following conclusions were reached:

"Emotional appeals were successful chiefly in large group situations; they were less effective in classroom situations.

"The intellectual approach was effective when sufficient time was devoted to discussing democracy in class.

"Opportunities for democratic participation seemed inadequate, with student government needing more attention.

"Opportunity for pupils to participate in out of class and community activities was largely neglected.

"Improving mental health is an important approach to good citizenship.

"Individual teachers and schools should be careful not to overemphasize one way of teaching democracy and minimize others." [9]

Additional evidence in support of the contention that the democratic school is a prerequisite for the making of good citizens emanates from the Kansas study of education for citizenship, from which the following statement was taken:

"So far as our evidence goes, social studies work in the senior high school does not seem to have a great effect in changing attitudes. Where changes did take place it may have been the total school environment which was operating to bring them about rather than any specific instruction." [10]

EMOTIONAL HEALTH

One of the earlier reports of the Detroit study bore the title "Emotional Adjustment: A Key to Good Citizenship." The place of emotional adjustment in citizen education became so important in the minds of the study staff that they made it the major conclusion of the citizen education study.[11]

Footnotes at end of speech.

The northeastern commissioners of education, independently, arrived at a somewhat similar conclusion. The committee which developed the policy document wrote:

"A basic concern in civic education is the development of well-adjusted mature individuals. There is increasing evidence that well-adjusted boys and girls are more constructive citizens in the school, and are less likely to fall for crackpot ideas than are those boys and girls who are not adequately adjusted because of pressing, unmet, social, and emotional needs." [12]

Kenneth F. Herold in the 1951 yearbook of the National Council for the Social Studies stressed the need to be concerned with emotional adjustment in order to effect better civic behavior:

"It is 'healthy to be democratic' but it also is equally true and important to remember that people have to be healthy to be democratic.

"Democratic living makes tremendous demands upon the feelings, and without the emotional stability essential to the healthy give and take of cooperative planning and action the going will be difficult.

"Finally, democratic and responsible human behavior is dedicated living. It is living for others, and to the highest level of one's own dignity and worth." [13]

Helping students to achieve emotional maturity presents a real problem for secondary school teachers who may be so concerned with their pupils' achieving subject matter mastery, significant as this is, that they sometimes overlook the need to understand their pupils. One vital factor in guiding young people into more satisfactory human relations is the necessity for teachers to understand youth as it sees itself.

UNDERSTANDING YOUTH

How does youth see itself? How is youth affected by serious personality difficulties, by growth factors, by the concern for popularity, by hopes and fears for the future, by the desire for reasonable standards, by feelings toward school, by the dilemma of being partly children and partly adults?

Remmers and Radler have summarized the physical, sexual, and social concerns of adolescents and at least three other studies throw further light on the subject. The survey research center at the University of Michigan conducted a study of adolescent boys (1955) for the Boy Scouts of America, and a study of adolescent girls (1956) for the Girl Scouts of America. A third survey was done by audience research in 1957 for the Camp Fire Girls.

The Boy Scout interviews of 1,045 youths 14 to 16 found that 8 out of 9 felt that parents made rules for the boys' benefit; 83 percent wanted information on vocations; 41 percent admired their dads most among adult acquaintances; 57 percent worried about achievement in school and jobs, and 29 percent about acceptance by girls and friends; 58 percent wanted more responsibility; and 31 percent belonged to no organizations, including school clubs.

The Girl Scout study of 1,925 girls 11 to 18 indicated that they valued feminity (one-third wanted to be like their mothers); were affected by adolescent problems like dating and adult concerns like jobs; most wanted middle-class status and middle-class husbands; all shared the ideal of helping other people; most wanted to be nurses, teachers, and secretaries (only 10 percent chose long careers); wanted parents to make the rules; desired adultlike responsibilities; feared dating even though they did date; considered their girl friends as a crucial source of self-esteem; worried over appearance and social skills; and preferred social activities(dances, etc.) to sports, games, and contest skill activities.

The Camp Fire Girls study revealed some very interesting insights into the attitudes and opinions of the adult leaders of this program concerning the girl membership. The difference between what adults believe adolescents are like and what children say they are like give us cause to study the relationship further. The girls say they accept and prefer to have adult leadership in their groups, but they want their leaders to show an understanding attitude, and treat them as mature people.

Zeleny and Gross in "Educating Citizens for Democracy" state very clearly what they feel are "youth's expectancies of society." They credit McNassor for several of the following points:

"Youth wish their integrity and worth to be respected, and in the same manner as does any mature individual in a free society.

"In a free society youth desires freedom, adventure, and security.

"Youth has a strong desire to assume responsibilities which lead to the approval of associates, including peer groups." [14]

McNassor, in an article appearing in the California Journal of Secondary Education of February 1958 invites school authorities to give consideration to some of the following key factors in adolescent development: adolescent perceptions of self, social order, ethic guidelines, and the opportunities modern life presents to fulfill yearnings for personal significance, love, and creative work.

McNassor further suggests that youth should be challenged more to deal with the critical issues in government and with the human conditions and problems in social organization; that there be more focus on the meaning of life to them; that smaller schools, or schools within schools be structured to provide a sense of belonging. (A good example is the "House" system which is in operation at Brookline (Mass.) High School.)

The civic educator who wishes to know his children and youth better has a wealth of resources to turn to. The monumental research of Arnold Gesell and his associates at what is now the Yale Clinic of Child Development, provides "a developmental psychology of infant, child, and youth—normal youth—in the settings of home, school, and urban community." [15]

Dr. J. Roswell Gallagher, founder of a "hospital of their own for adolescents," has written many articles and books which youth workers will find helpful in discerning the causes of adolescent behavior.[16]

BETTER HUMAN RELATIONS: EDUCATING FOR ALTRUISM

The ideal of brotherly love has probably been stored in the mind more than it has been translated into overt behavior. It deserves as much attention as the concept of the freeman, because there can be no real freedom for the individual without an accompanying care and concern for the other fellow.

The need to train astronauts to explore the heavens captures the imagination, excites extraordinary technological activity, and commands heavy financial support. The need to develop altruists who may lead us to Heaven or, at least, may help to make this a better world, all too frequently is dismissed as time-consuming "do goodism." An enlightened self-interest would seem to require the development of more astronauts and more altruists if we are going to give further leadership to the family of nations.

Gross and Zeleny point out that "the dominant idea of our American democracy is the sense of worth of the individual. Furthermore, it recognizes the common or social good, aiming to balance the individual value on the one hand and the social value on the other." [17]

Rosenberger states that if a sense of social responsibility is not developed in the individual, the purposes of education are defeated. Unless education implants a per-

sonal sense of responsibility for the welfare of others it can only result in mental cleverness. He adds, "The person lacking a sense of social responsibility will not fulfill his or her obligations to society, and may be a menace. Such a person can be as destructive as a raging bull moose, with an antler spread of 6 feet, turned loose in an art museum." [18]

Action programs in school and community which are designed to educate youth for social responsibility are not new. However, such programs, in which young volunteers work under adult leadership or guidance, are growing in numbers and importance, and will continue to grow.

The fact is that with society's prolongation of childhood, young people are isolated from opportunities to work with adults for a better community. However there is a growing desire in many communities on the part of adults to include young people with adults in working on community enterprises.

Some advice for adult leaders on how to work successfully with youth is to be found in Dorothy M. Roberts' "Partners With Youth." She points out that genuine partnership is only possible if the young people feel adults have confidence in them. The author suggests that leaders should work within the range of teenage interests and abilities; work with rather than for teenagers; decide on projects mutually.[19]

The vital need to stress self-direction in educating youth for social responsibility in and through the school is clearly stated in a special issue of the Journal of Education Sociology which bore the title "Youth as Citizens: A Study of Adolescent Self-Direction and Social Responsibility." The authors expressed the need for youth leaders to study changing adolescent character. They observed that many adults today are concerned about evidence of antisocial adolescent behavior. A feeling persists that social controls are not being adequately accepted by adolescents as a basis for action; they are not being internalized. Uneasiness spreads as to whether we will have enough teachers and other adult workers to hold the increasing adolescent horde in some kind of line.

A more appropriate and hopeful approach is to seek, as intensively as we can, ways in which schools can release the energies of boys and girls for their own responsible social self-direction and socially responsible behavior in and through appropriate learning experiences organized by adequate adult and school intervention. If this is achieved, individual adolescent mental health will benefit, social controls will be more readily accepted, and the need for adult directive leadership will be lessened.[20]

THE CONCEPT OF LAW

A significant objective of the Massachusetts civic education program is the will to abide by the laws and support their enforcement. This involves everyone's attitude toward the place of law in our society. It is the writer's firm conviction that schools, in particular, have not adequately met their obligations to impress on all young people the fact that we have a lawful heritage, and that one of the most distinguishing factors (if not the distinguishing factor) between our way of life and totalitarianism is our concept of "a government of laws."

Juvenile delinquency should be considered within the total framework of the place of law in American life. It is such a vital problem, however, that it requires special attention from the school. The responsibility is not exclusively the schools' but schools can, and sometimes do, cause delinquent behavior, or they can prevent children from becoming delinquent. Teachers and school administrators should make it their business to create the kind of total school climate and services which will make better citizens of all students.

In the schools and out, we must help children learn to abide by the laws. As is pointed out in "Delinquent Behavior—Culture and the Individual," "limit setting is a vital element in permitting and assisting every child to learn rules and regulations and to abide by them. The child must learn what is expected of him, and this is true in every culture and subculture." [21] Gallagher and Harris point out too, that "such a thing as a conscience needs to be developed. It doesn't just happen. From their earliest years, when still very little, boys and girls need to learn increasingly to distinguish right from wrong. This does not mean that they should be bombarded with endless 'No's' and punished and frustrated and inhibited to the point of becoming little automatons. But controls and conscience will be needed in adolescence and they won't be there if the difference between right and wrong isn't taught—and taught consistently, simply, firmly, and kindly, from very early childhood." [22]

SOCIAL RESPONSIBILITY

As shown above, idealistic and altruistic people but politics at the low end of their interest scale. The disapproval of "dirty politics" is understandable, but there is something wrong with our teaching when young people, who should be active in civic affairs, fall by the wayside and become ciphers in a government "of and by the people."

SOME "CITIZENSHIP IN ACTION" PROGRAMS

Many fine programs do attempt to train youth for the responsibilities of citizenship. Some are essentially school-centered, others are sponsored primarily by community youth-serving agencies. In many cases, youth benefits from the cooperation of schools and community organizations.

The School Bureau of the United Community Services of Metropolitan Boston conducts a youth program in social service. More than 5,500 volunteer workers from 187 secondary schools (public, parochial, and independent private) have given over a quarter of a million hours of service in 84 "Red Feather" health and welfare agencies during the past 3 years. Not only have these young people met many of the needs of the agencies, but also, through a series of field trips, seminars for teachers and students, and courses interpreting social services, a climate has been established for understanding what democracy implies. One of the most meaningful ways in which young people who participate in this program obtain recognition and acquire further understanding of social responsibility is the inclusion of some of their representatives in the membership of the Youth Citizenship Conference held annually at Tufts University. In 1959, this conference focused on the theme, "We Are Our Brother's Keeper." Particular attention was given to exploring in depth the "why" of volunteering for social service.

Similar programs are also carried on in Baltimore, Cincinnati, Detroit, and other communities. In some instances, they involve joint action of schools and "Red Feather" agencies; in other instances, the schools work with Junior Red Cross chapters.

In New York City, there are more than 200 school civics clubs functioning in the elementary and junior high schools. For more than 10 years, these clubs have provided leadership training for thousands of children and made it possible for them to perform hundreds of good deeds in services to school, neighborhood, city, this Nation, and other nations.

Examples of the national youth agencies which have greatly enriched their community service activities are the Boy Scouts, Girl Scouts, Campfire Girls, Kiwanis, YMCA, YWCA, the Boys Clubs of America, the Future Farmers of America, and 4–H.

Training of youth for political responsibility has been carried on for many years by the American Legion, which sponsors Boys' State; and by the American Legion auxiliary, which conducts Girls' State. Some other stimulating programs which concentrate on equipping youth for practical politics are the Massachusetts Student Government Day and Student Government Exchange, and the Syracuse University Youth Day.

Yet "scattered," "sporadic," and "conflicting" could be applied to this multiplicity of these volunteer community service programs involving many young Americans in school and community settings. Studies are needed to find out why youngsters participate in these services; their values should be compared against those implied in the writings of Jacob, Sorokin, Allport, and Sills and the techniques of adult leaders should be refined to reduce possibilities of serious errors with reference to student volunteer services.

In summary, then, the Massachusetts program calls for the development of civic behaviour consistent with the goals found empirically and through research to be conducive to better living together. The need for "action research" continues.

Teaching our youth how to be good citizens in a democracy requires that we understand the meaning of democracy and practice it in an inspiring way. We have not entirely succeeded in doing this in the past, and must now rededicate ourselves to the task if we are to preserve our free democratic way of life.

The school is the logical place where young people can learn about our democratic system. To accomplish this purpose, the school must itself be democratic and encourage democratic activities by the students.

The emotional adjustment of our youth plays its part if citizen education is to be successful. To assist in such adjustment, teachers and youth leaders must better understand young people.

Teaching altruism is an aid to developing respect for democracy, as it teaches concern for the opinion and welfare of others. Young people can learn altruism first-hand by participating in volunteer social service programs under the guidance of youth leaders. Such leadership should seek to develop well motivated self-direction by youth itself as an education in citizenship.

Leaders in citizen education should take every opportunity to work with social psychologists, cultural anthropologists, and other social scientists whose research findings can enhance their efforts to educate for better civic behavior. What we accomplish in training our young to be good citizens is not only essential to our own survival as a free Nation, but will also have its impact on the peoples of other countries in this small world.

CONCLUSION

Therefore the development of the young as citizens involves four important interrelated elements:

1. Democratic character (psychological).
2. Democratic concepts and values (ideological).
3. Understanding democratic government (political).
4. Democratic opportunities in the community (experience).

These elements need to be developed through all the instruments of education, family, school, church, and community agencies.

Dennis Allen and the Race Relations Society of San Diego County

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. WILSON. Mr. Speaker, one of San Diego County's most distinguished citizens has recently retired as president of the Race Relations Society of San Diego County. This fine group was established by Dennis Allen in 1924 and he continued in the position of leadership for 34 years until recently when he relinguished it for reasons of health.

Many distinguished Americans, including Minority Leader CHARLIE HALLECK, have addressed this group at its annual meeting over the years.

Under unanimous consent I include as a portion of my remarks a letter recently received from Dr. Frank B. Gigliotti, who has just been named president of the group and who is carrying on in the same fine tradition that has exemplified the work of Mr. Allen:

THE INTERNATIONAL
SUPREME COUNCIL,
ORDER OF DEMOLAY,
Lemon Grove, Calif., March 23, 1960.

Hon. BOB WILSON,
Member of Congress,
House Office Building, Washington, D.C.

DEAR BOB: You will be interested in knowing that I have taken over the presidency of the San Diego Race Relations Society of San Diego County. As you know, Dennis Allen has been president of this organization for 34 years, for it was organized in 1924. It has done a great work as it affects racial minority groups in the San Diego area. The national secretary of the Urban League said, some 3 years ago, that San Diego was 30 years ahead of any other community in the United States on the matter of the solution of interracial problems. This condition has been made possible because of the foresight, vision, courage, and consecration of Dennis Allen and the small group of people that have cooperated and worked with him in solving problems great and small.

Major General Van Deman, former Chief of Military Intelligence of the United States, said to me one day, prior to his death, that Dennis Allen had done more to keep communism from taking hold among the minority groups and especially the Negro, in San Diego and in southern California, than any other person that he knew. He went further to say that Dennis Allen is a great patriot, and a great American, and a great public servant. His kindness and humility and understanding of other people's problems is like that of any early Christian apostle.

The Honorable Frank F. Merriam, Governor of California from 1933 to 1939, appointed Dennis Allen chairman of the California Race Relations Commission. This commission laid a great ground work for a better understanding amongst the various racial groups throughout the State of California and when a small group of short-sighted individuals in the assembly failed to provide any means for financing of the work of this commission, Dennis Allen and a small group of the people of California did the work without compensation or remuneration and even paid their own travel expenses. I believe that work of this kind, as you and I know it, should not go unnoticed or unappreciated. He has always taken a great interest in the friendly relations between our country and our neighbor, Mexico. For years there has been a Race Relations Day at the Rotary Club in Tijuana. Dennis Allen has always been the honored speaker with a few exceptions when I have gone down with him while I was chairman of the Governor's committee for the employment and rehabilitation of the handicapped. He has always taken a very active part in the civic affairs of San Diego, and especially of Logan Heights.

In taking over the presidency of this organization and in following such men as Dennis Allen and Dr. Peter Lee, that fine Chinese gentleman, who has found it impossible to continue as president of the society, I hope that God will give us the wisdom, the courage, the patience, and the ability to continue this fine patriotic work.

With regards and prayers, I remain,
Your friends,
FRANK B. GIGLIOTTI, D.D.,
Active Member.

Text of Pony Express Centennial Address by Representative William R. Hull

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. HULL. Mr. Speaker, it was a privilege for me to make the principal speech April 3 at the centennial celebration of the pony express in St. Joseph, Mo.

Under leave to extend my remarks, I include my speech on that occasion:

TEXT OF PONY EXPRESS CENTENNIAL ADDRESS BY REPRESENTATIVE WILLIAM R. HULL

Governor Blair, Governor Docking, Mayor Meers, distinguished guests, ladies and gentlemen, thank you very much. It is an honor to be with you on this memorable occasion.

This great celebration has been made a reality through the efforts of a great many public-spirited citizens and I want to take this moment to congratulate each and every person who has contributed, in time and effort, to the success of this occasion.

To try to list the names of all these citizens would be quite impossible but I do believe it is fitting for us to pay tribute to the memory of one man who did much to make this day one to remember.

I refer of course to our friend, the late Karl Goetz, and I know that all of us wish he could be here with us to enjoy this great day.

Ladies and gentlemen, near this spot 100 years ago, a stirring scene in the drama which is the development of America was enacted.

A young man—it matters not whether Johnny Fry or Billy Richardson or Alex Carlyle—mounted his horse and galloped off through the gathering darkness on the first leg of a perilous journey which today symbolizes the winning of the West.

It is not difficult for us to recapture the excitement and significance of that day. As we retell and reenact the events of 100 years ago, we share in its color and drama.

Through the eyes of Johnny Fry or Billy Richardson we can look west, across our familiar river, at the huge untamed territory lying beyond the outpost States of the Mississippi Valley.

In all this vast expanse between our Missouri River and California is a pioneer land, where the Indian and the buffalo roam at

will, where civilized people are few and far between, and where the yoke of law hangs lightly on every shoulder.

On the western rim of the Mississippi Valley, the land begins to rise across semiarid stretches to the foothills of the Rockies.

Beyond these towering mountains lay more than a thousand miles of plateau and basin, split by mountains, slashed by valleys, and blistered by deserts.

Across the plains and mountains and deserts, trails have been worn deep by the tread of oxen and the grind of wheels, and near the trails are many graves.

This vast, rich dominion is yet to be conquered and exploited. In 1860, the territory is American, but just barely.

This is the challenge to the men of the pony express: To link East with West, to provide a fast communication link between the old territory east of Missouri with the new area west.

The difficulties to be surmounted are formidable. We must overcome savages and weather and terrain, and brave hundreds of unknown dangers which lurk along the trail from St. Joseph to Sacramento.

The reward is $25 a week and immortal glory.

In the San Francisco newspapers, an advertisement has appeared. It reads: "Wanted, young skinny, wiry fellows not over 18. Must be expert riders willing to risk death daily. Orphans preferred. Wages $25 per week."

That is a quaint way to recruit employees by present-day standards but remember, this is 1860, and today in St. Joseph there are any number of fellows who, with the vision of $25 per week, will gladly change places with Johnny Fry or Billy Richardson.

Although the businessmen who are in charge of the operation, Messrs. Russell, Majors, and Waddell, do not know, their pony express venture is destined to become a financial failure.

In less than 2 years, it will be a business of the past.

But in that short span of time, it will make contributions to the development of America which will be forever inscribed on the pages of our history books. Its significance is unquestioned. The pony express has blazed a new trail from east to west, the trail of communication.

By swiftly conveying news of great national importance from Washington and the East to the Pacific coast, the pony express cements the loyalty of the Western territory to the Federal Union in the perilous days of 1860 and 1861.

It opens the West to orderly progress and seals its loyalty to the Nation.

Thousands of people preceded the lonely pony express rider across the great reaches of the West, but he helped open the door for many millions to follow.

Today, of course, is 1960 and the world has turned over many times since the pony express rider dashed away from these stables, which are now a great historical shrine.

Times have changed a very great deal. The transmission of a message from St. Joseph to Sacramento, for example, can be accomplished almost instantaneously, instead of in 10 days.

But this city of St. Joseph, which we love, still is an important crossroad of our Nation. It remains a vital link between the old East and the still young and ever growing West.

Likewise, we in St. Joseph still face challenges, as did the intrepid men of the pony express whom we honor here today.

And I believe we can take a page from the book of these men who, whether by personal design or accident, wrote a courageous chapter in the history of our country.

Today, our Nation still is threatened by savages, of a different sort.

We still must contend with perverse weather and the occasional obstinacies of terrain.

In a word, we are plagued by the same type of conditions and circumstances which beset the heroes of the pony express, although perhaps they appear in a different guise.

Our national goal is not too much different than it was in the boisterous 1860's, the achievement of a strong and stable America and the perpetuation of our own form of democracy.

To solve our national problems and achieve our national aspirations, we can certainly borrow the quality which distinguished above all others the riders of the pony express, courage.

We must acknowledge that the greatness of our country has not been easily achieved, and cannot be easily protected. We must realize that no goals worthy of the name can be attained without sacrifice, and to sacrifice requires courage.

We must unswervingly protect and augment what we know to be our just credo, that every person born by the grace of God has the right to live in freedom and pursue happiness, regardless of origin of birth, race, color or creed.

In this troubled world, we must strive to bring about a moral rejuvenation which alone can achieve the lasting peace which nuclear bombs and diplomatic convolutions cannot possibly achieve.

Yes, even though our world today is in many respects a world apart from that of the men of the pony express whose work immortalized this spot at which we are gathered, we can borrow very liberally upon their qualities to build an even better America.

St. Joseph, Mo., the proud birthplace of a great episode in American history, is the best place in the world to dedicate ourselves to the job of carrying forward, with similar courage and enterprise, the American goals so nobly served by the pony express.

My friends, the men of the pony express pursued a dream, and captured it.

Let us have the courage to do the same.

Mortgaging Our Future

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. DAGUE. Mr. Speaker, my voting record in this body has been consistently on the side of sound financing and I continue to believe that a sound fiscal policy is our greatest bulwark against communism. The maintenance of such defenses means that we must continue to resist these recurring raids on the Federal Treasury and we must respond with a resounding "no" to every proposal that would have to be financed with borrowed money.

My good friend, Wilmer M. Thomson, of West Chester, Pa., has called my attention to a recent statement made by Budget Director Stans which appeared as a recent news item and which is herewith set forth to lend emphasis to the threat to our ever-increasing debt:

BUDGET CHIEF WARNS NATION—SAYS IT MUST STOP PILING UP DEBT

SAN FRANCISCO, March 22.—The boss of the Federal Budget Bureau warns that America must "stop compulsive spending, stop living on Government credit cards and fight an economic war as we would a military war."

Maurice H. Stans, addressing the 41st annual convention of the Associated General Contractors of America, said the national debt of $290 billion "is far from all we owe for the past."

SOME ITEMS NOT LISTED

"Here are some items it doesn't include: Our already accrued liability for military requirement is about $30 billion," he said. "Our unfunded present accrual for retirement benefits for civilian Government workers is almost $28 billion.

"Future pensions, compensations and other benefits voted to veterans will cost about $300 billion. The $290 billion current public debt, plus over $350 billion of future obligations for past services, plus $98 billion of commitments for future Federal spending adds to the almost incredible total of nearly $750 billion.

MORTGAGE ON FUTURE

"That is the Federal Government's mortgage on America's future—on ourselves and our children—beyond the regular annual cost of defense, welfare, and commerce.

"Is it any wonder that your President pleads for a sense of proportion, for a limit on compulsive spending, for a passion for responsibility?"

In this connection my attention was also called to an editorial which appeared in the Philadelphia Bulletin on March 26 and which further emphasizes the fallacy of coming to Washington for handouts which by the name of things will be added to the national debt, the interest on which costs each one of us $225 annually. This editorial is included in full as follows:

OUR RICH UNCLE

The popular conception of Uncle Sam envisions an inordinately rich old gentleman who has no need to consider the size of his expenditures, whether measured in hundreds of thousands, or millions, or billions. This conception involves the further idea, often applied in practice, that he is a soft touch. He is therefore expected not only to spend lavishly on his own household, but to support projects that are logically the obligations of States and lesser governmental units.

This picture of the great white father is erroneous and dangerous. Where does Uncle Sam get the money he spends so freely? From his nephews and nieces. He takes it away from them in taxation. But he is not satisfied—cannot be, on his present scale of living—with what they must give. They must also lend. For he spends more than his income. He borrows what's needed to make ends meet. He therefore has run up the biggest debt the country ever heard of.

Federal spending in excess of needs for defense of the country, Federal failure over the years to reduce the debt even in periods of great prosperity, Federal failure to curb the inflationary spiral, has reduced the value of the dollar, the stability of which is the basis of national welfare. If this tendency toward reckless spending goes uncurbed, the whole economy might tumble like a house of cards.

No political party likes to preach the doctrine of Federal economy in a year when spending makes votes. But commonsense makes it obligatory that voters everywhere shall be warned of the dangers that lie ahead. The laws of economics are immutable.

Election year or no election year, it is time to stop, look, and listen; time to realize that a lot of Uncle Sam's fabulous wealth is on paper; time to remember that the mere annual interest on what he owes comes to more than the total cost of running the Government only a few decades back.

The voice of Senator HARRY BYRD has for years been the voice of one crying in the wilderness, but common prudence demands that he shall have more listeners.

Wyoming Valley's Famous Concordia Singing Society

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extremely interesting and informative feature story, written by Mr. Sheldon C. Wintermute, as told by Mr. Paul M. Loefflad, which appeard in the Wilkes-Barre Sunday Independent on April 10, 1960:

A STAR IN THE SONG SKY FOR 81 YEARS—TOO FEW AWARE OF BROAD FAME OF CONCORDIA

(By Paul M. Loefflad as told to Sheldon C. Wintermute)

Preserving Wyoming Valley's priceless heritage of good choral singing is the 81-year-old Concordia Singing Society which still boasts of members of all nationalities, all walks of life, and all faiths.

In its early years Concordia listed in its ranks an American Indian as one of its best baritones.

Concordia has been on the lips of local music lovers so long that most people forget how long.

In fact the present generation has little knowledge of the singing history written by this unique group—including winning the international singing competition at Newark, N.J., in 1906 and doing it the hard way—singing the winning number in German when the membership included English, Irish, Welsh, Scots, French, Italians, Poles, Lithuanians, and Swiss, as well as some Germans and an American Indian.

PLAN MAY 20 CONCERT

Concordia has had high and low points of both popularity and membership in the four decades that have passed, but the quality of its music has never suffered as will be recognized when the 81st anniversary concert is presented Friday night, May 20, at Irem Temple.

If there is such a title as "Mr. Concordia" it must go to the late Adolph Hansen, who directed the singing society from 1889 until his death in 1942. The present director is Howard C. Williams, head of music in Central Luzerne County Jointure Schools.

Concordia came into being in 1879 when a few members of the defunct Wilkes-Barre Mannerchor organized the new society.

The first president was John Reichard, one of the foremost residents of the city and founder of Reichard & Weaver Brewery. He and the other organizers of Concordia voted to meet in famed Landmesseer's Hall and announced the aims would be to encourage male choral singing, music appreciation, and to provide social entertainment for members.

HAD OWN ORCHESTRA

In the first 10 years the chorus had four conductors: Theodore Bottger, Jacob Reig, Karl Krebs, and Louis Praetorius. Membership was not restricted to Germans as is generally believed. Through the support of Harrison Wright, Ridgeway Wright, Andrew H. McClintock, and other prominent men of the community, Concordia gained favor with residents of all nationalities.

During the first 10 years a women's chorus was organized and concerts included mixed choruses. A symphony orchestra also had been formed, for which the society bought instruments at considerable expense. This orchestra gave additional concerts.

Later the women's chorus was disbanded in order to concentrate on male chorus singing.

Adolph Hansen became director in January 1889, when the chorus numbered only 22 members. His voiced opinion of that time was "some could sing, others could not, and their chief asset was the spirit of 'Gemuthlichkeit;' discipline was unknown and independence prevailed."

He further recalled "at his first rehearsal they faced in every direction except toward me—an array of backs and profiles. I sat down, but they sang on regardless. I told Mr. Schappert, father of the later well known Dr. N. L. Schappert, they apparently didn't need me; they sang just as well without my direction."

OPENED OWN HALL

During the early period of Hansen's directorship the chorus increased in numbers and included some of the best singers of the community, including Joseph Atkins, Anthony C. Campbell, John Seibel, Thomas Darling, Arthur Hillman, S. S. Chan, and Joseph Burns. The society by this time outgrew its original home and moved to Concordia Hall, presently the Manfield, South Washington and East Northampton Streets.

In 1892 the Cambro-American Society, a Welsh organization, promoted a competitive eisteddfod, to which were invited three local German singing societies, Concordia, the Sangerbund, the Liedertafel, and the Liederkrantz of Scranton. The prize was $100 and a German flag. Concordia won this contest easily.

Through the efforts of President William Schrage in 1893 Concordia Hall was remodeled and improved. This attracted many new sustaining members and the society's membership rolls soared to more than 400.

Early in 1900 the choral group entered the prize singing contests of the Northeastern Singing Association in competition with societies from Maine to Maryland. Concordia went to Brooklyn with a chorus of 65 men and sang in the second class, competing with 17 societies. Concordia won first prize and brought home a Wisner grand piano which is still being used by the chorus. This victory established Concordia as one of the foremost singing societies in the Nation.

HAD PERFECT SCORE

Encouraged by this success Concordia entered the first-class contest at Baltimore in 1903 with a chorus of 95 men. The prize song was a very difficult number in German, but Concordia won first prize with a perfect score.

In 1906 Concordia went to Newark, N.J., to sing in competition for the Kaiser prize, the most coveted of all competitions, and won.

In 1905 a grand silver jubilee concert was held in the 9th Regiment Armory in which Concordia and all the German societies and the Mason Glee Club, a Welsh organization, took part.

Following 1909, an interesting period in the history of Concordia developed with the formation of a group within the society called the Roaches. It promoted and presented minstrel shows. Mr. Hansen recalled one of the features of the show of Laning Harvey arrayed as an angel in pink tights and ballet skirt, making a most amazing descent from heaven by sliding down a diagonally strung wire rope, with wings flapping.

Commemorating the centenary of the birth of Richard Wagner in a worldwide festival promotion in 1913 the society gave a Wagner concert in the 9th Regiment Armory with a chorus of 200 voices, a full orchestra from Boston and guest soloists.

In 1926 the chorus participated in a competitive sing held in New York City sponsored by the Associated Glee Clubs of America. It won first prize and again in 1929 in New York took first honors.

AT WORLD'S FAIR

In the spring of 1939 Concordia appeared at the New York World's Fair in a group of 3,500 voices in a great outdoor concert sponsored by the Associated Male Choruses of America.

The year 1939 saw the society's greatest celebration and the community's greatest musical event—Concordia's 60th anniversary and Adolph Hansen's 50th year of continuous active directorship.

Concordia, in 1940, joined with the Wilkes-Barre-Scranton Sinfonietta in a combined concert, and in 1941 the society presented the 109th Field Artillery Benefit Concert, in conjunction with Orpheus Glee Club, Shawnee Choral Society, Wilkes-Barre-Scranton Sinfonietta, Alexander's Band, and John D. Stark Post American Legion Band.

HELPED CHRISTEN CRUISER

Participating in the ceremonies at the laying of the keel of the cruiser *Wilkes-Barre*, at Cramp Shipyards, Philadelphia, September 1941, Concordia played a major role in the program.

In 1947 the chorus participated in a mass chorus sing at White Plains, N.Y., under the sponsorship of the Associated Male Choruses of America, and again in 1952 at Atlantic City at the Eastern District Festival of the Associated Male Choruses of America when it was the only group to sing alone.

During the summer of 1954 Concordia was the guest of Lions International Convention at Madison Square Garden, New York, on Pennsylvania Night.

Following the death of Adolph Hansen in September 1942, Prof. Paul Gies, head of the music department at Wilkes College, assumed the baton of the chorus. On the death of Professor Gies in January 1948, the directorship went to Charles H. Davis, supervisor of music at Elmer L. Meyers High School. Upon the resignation of Davis in 1954, Clyde Owens, West Pittston, was appointed director. Following Mr. Owens resignation the directorship was assigned to Howard C. Williams.

No Amount of Self-Serving Industry Explanation Can Whitewash the Record of Television Violence—The New Educational Television Bill Gives Promise of Something Better Than the Present Mindless Fare of Murder and Whodunits to Which Our Children Are Exposed

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. McDOWELL. Mr. Speaker, every parent who is concerned over the present mindless fare of murder and whodunits

to which our children are exposed—and this is all of us—has been immensely heartened by the action of the Committee on Interstate and Foreign Commerce of the House of Representatives in favorably reporting H.R. 10609. This bill amends the Communications Act of 1934 to establish a program of Federal matching grants for the construction of television facilities to be used for educational purposes.

We learn this morning that 45 parents watched 185 Washington, D.C., television programs during children's viewing hours last month and tried to keep track of the violence. A total of 114½ hours of monitoring brought the violence totals up to 281 assaults, 117 killings, 19 robberies, 16 kidnapings, 10 murder conspiracies, 6 dynamitings, 5 tortures, 3 arsons, 3 extortions, 3 jailbreaks, 1 lynching, 1 bombing and 1 suicide. The parents monitored the four Washington channels when viewing by children is heaviest—4 to 9 p.m. weekdays and 8 a.m. to 9 p.m. on Saturday and Sunday. The study was a project of the Walnut Hill Elementary School Parent-Teachers Association of Falls Church, Va. No amount of self-serving industry explanation can whitewash this record, which was reported by the alert and able radio and television editor of the Washington (D.C.) Post, Lawrence Laurent, in that newspaper on April 13, 1960.

During the 85th Congress the Senate passed educational television construction grant legislation and, after holding hearings on the subject, the House Interstate and Foreign Commerce Committee favorably reported the bill—but too late for the House to take action. During the present Congress the Senate again passed an educational television construction grant bill (S. 12), and the House Interstate and Foreign Commerce Committee held extensive hearings on the Senate-passed bill and on several companion measures in the House, including one which I had sponsored.

Following these hearings a clean bill was introduced which represented the committee's consensus. Now this bill has been reported with certain further amendments. As reported, the bill would authorize a maximum appropriation of $10,000 for the development of a State program for the construction of educational television facilities, and not to exceed $750,000 for matching grants to any State's governmental and private nonprofit agencies concerned with educational television.

The purpose of this splendid legislation is to speed up the establishment of additional educational television stations by assisting the several States in the development of State programs for the construction of educational television facilities and by aiding governmental and private nonprofit agencies.

The new committee bill is patterned after the Hospital Survey and Construction Act, commonly referred to as the Hill-Burton Act, which has successfully assisted in the establishment of literally scores of hospitals throughout the Nation with the aid of Federal matching funds. The educational television legislation which I sponsored, along with others, the principles of which are incorporated in this new measure, would make it possible for the Delaware Educational Television Association to qualify for assistance under the act in establishing an educational television channel in Delaware in cooperation with the Philadelphia Educational Association in the event that channel 12 is assigned to it for this purpose.

I include herewith as part of my remarks two splendid editorials from leading newspapers in Delaware, as well as an article from the Washington (D.C.) Post:

[From the Wilmington (Del.) Morning News, Apr. 4, 1960]

BETTER TV FARE IN "PRIME TIME"?

(By Thomas R. Dew)

If ever anything was misnamed, it is what is being presented to us in Delaware as educational television.

I admit that I'm stumped when it comes to finding a more suitable adjective. "Cultural" sounds too intellectual and perhaps snobbish, yet this really has some definite "cultural" aspects.

"Community" television is about as close as I can come, and even that doesn't fill the bill adequately.

I refer, of course, to the four-way race to gain control of channel 12, which the Federal Communications Commission is now in the process of adjudicating. Who will win is anybody's guess.

Three of the applicants are commercial enterprises, including Rollins Broadcasting Corp., which presently owns radio station WAMS in Wilmington. The fourth is WHYY, Inc., of Philadelphia, supported by the Delaware Educational Television Association. WHYY now operates channel 35, an ultra-high frequency channel, as an educational television outlet—but this can reach only sets which have been equipped with converters, which cost the set owner roughly $65.

If I could tell the FCC how to decide this case today, I would tell it without hesitation to award channel 12 to the educational television interests.

It wasn't always thus. Two months ago I would have urged that it be given to the commercial interest which showed most clearly it would operate channel 12 in the best interests of the people of Delaware. I was skeptical of educational TV because it sounded as if it were beamed at the schools exclusively; in short, there was nothing in it that would interest me, and that it would be aimed at too small a segment of the public to really be worthwhile.

Why the change of heart?

A month ago I visited the studios of WHYY in Philadelphia. I asked pointed questions about finances and programing. I saw how it operates.

And that's why I say that educational TV is a misnomer. What is proposed here is not a program that is aimed at school children.

If our schools choose to get into the picture and use channel 12 if it becomes available for this purpose, that's their business. They will be offered the opportunity to select programs which they can fit into their curricula. But there are too many school districts in the proposed area of reception; it would be folly to think that all their needs could be met through this medium.

If they want to use it, fine. It will be up to the individual school district to decide the extent of use—and to pay for it in proportion.

What does appeal to me is the opportunity presented by this proposal to receive good programs during the so-called prime evening time. If WHYY is granted the license to operate channel 12, it will broadcast from 9 a.m. to 12:15 a.m. next day—and that means that a good chunk of time is going to be devoted to programs other than those beamed at the schools.

These programs would include symphony orchestras (the Wilmington Symphony is already tentatively listed for a series by WHYY); features on current issues, and Delaware issues have a prominent spot in the proposed schedule; and strictly cultural shows—here WHYY says it would go out and solicit many of Delaware's fine cultural centers, such as Hagley and Winterthur, for assistance; and many others. There also would be much Delaware news.

These are things which I would like to have the opportunity to tune in on during the evening hours.

Another factor colors my thinking. I have a 2-year-old son who is just now discovering television. I would like him to have the opportunity to view something other than is offered on the three channels we now receive, something which will truly broaden his horizons and take him beyond what I myself or the schools he will attend in the future can impart to him.

Not only children, but adults as well could have their horizons broadened by educational TV. WHYY is a member of National Educational Television, which is growing so rapidly that some people call it the fourth network. Through NET, WHYY can get the use of a wide variety of video tapes, many of them prize-winning presentations, which utilize many of America's most valuable cultural, scientific, and natural resources.

In conclusion, two short notes:

1. Richard L. Burdick, managing director of WHYY, has assured us that the money it would take to set up operations of channel 12 with studios in Wilmington and a transmitter in Glassboro, N.J., is in hand, and there is more than $16,000 to spare. Also committed is the money to run the station for the first year.

2. I do not subscribe to the argument that Philadelphia interests are trying to take over a Delaware prerogative any more than I subscribe to the argument that Wilmington and New Castle County are trying to take over the entire State of Delaware and remake it in their own image. Channel 12 would remain Delaware-based, and Delaware would have equal representation on its board of directors.

I might not always tune in channel 12 if it were given to educational TV, but I sure would like to have the chance.

[From the Delaware State News, Dover, Del., Mar. 21, 1960]

WANT MORE TV RETURNS?

(By Joe Smyth)

VHF channel 12 in Wilmington was recently vacated by an independent commercial broadcaster who could not keep up with the pace set by the three commercial Philadelphia stations.

The reason for the failure of this broadcaster, and the two others before him, is simple—they could not make enough money to justify the operation. Why? Because independent stations cannot afford to sign up the best programs—hence, not many viewers—hence, not much advertising.

The "Big Three" of television, CBS, NBC, and ABC, have all of the popular stars tied up, either on high-priced contracts, or on high-priced guest appearances. Naturally the three Philadelphia channels, being network stations, can drive any competitive independent program planner in Wilmington out of his mind.

Four broadcasting companies have entered bids with the Federal Communications Commission for the use of the now vancant Wilmington channel.

Three of them, Rollins Broadcasting, Goodman Associates of Chicago, and Metropolitan

Broadcasting of New York, are commercial. If one of those three get the broadcasting rights, I assume we will end up with more lady wrestlers, corny local shows, and old movies.

The fourth broadcasting company to bid for FCC permission to use channel 12 is WHYY. Being education television, and nonprofit, it does not have to sell commercials; in fact, it cannot charge for time at all. WHYY operates with donated funds only.

Forty-five ETV stations operate by these means in the United States. Several of these have annual budgets approaching $1 million. They provide some of the best programs in the country.

During the school day much in-school broadcasting would be done. But after school hours and during the evenings, ETV stations do some magnificent programing for adults—educational programing.

WHYY would help the problem of education for our children, opening the entire world of nature and science to them, replacing the sadism and violence now pushed at them. But adults are not forgotten. WHYY plans programs for adults who know they are adult, and who want to watch TV aimed at mature and intelligent grownups.

The choice facing Delaware is the choice between more commercial television "left-over" quality, the crumbs left by the three networks * * * or noncommercial TV as a contrast to and change from commercial programs.

I do not ask that all of the westerns, and other noneducational programs, be thrown out. I do assert that we have enough of that type program already. Why add more of them, when we can instead have programs available, for those who choose to watch them, that will improve our minds and our country?

[From the Washington Post, Apr. 13, 1960]

PTA WENT LOOKING FOR VIOLENCE ON TV PROGRAMS AND FOUND IT

(By Lawrence Laurent)

Peoples and programs: Forty-five parents watched 185 Washington TV programs during children's viewing hours last month and tried to keep track of the violence. This was a project of the Walnut Hill Elementary School Parent-Teachers Association, Falls Church.

A total of 114½ hours of monitoring brought the violence totals up to 281 assaults, 117 killings, 19 robberies, 16 kidnapings, 10 murder conspiracies, 6 dynamitings, 5 tortures, 3 arsons, 3 extortions, 3 jailbreaks, 1 lynching, 1 bombing and 1 suicide.

The parents monitored the four Washington channels when viewing by children is heaviest (4 to 9 p.m. weekdays and 8 a.m. to 9 p.m. on Saturday and Sunday).

Victor O. Reinemer of 1907 St. James Place, Falls Church, was chairman of the TV survey committee.

Timely, Reasonable

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arizona Republic of Friday, March 4, 1960.

TIMELY, REASONABLE

An educational training manual of U.S. Air Force Reserve was recently strongly denounced by powerful liberal groups in Washington. It was said that the manual was unfair and insulting to the Christian churches and to the National Council of Churches in particular. The manual, so we were told, had recklessly accused the National Council of Churches of harboring pro-Communists in its midst. Public indignation against this Air Force manual was so great that the appropriate authorities in the Defense Department in Washington felt compelled to withdraw it from circulation, and offered full apologies to its critics.

We have studied the full text of the manual very thoroughly and very carefully, and we cannot understand why it was withdrawn. Nor can we understand the reasons of those Washington VIP's who saw fit to apologize for it. Maybe their utter ignorance concerning Communist problems is their excuse. We find the manual a very timely, a very reasonable and a very admirable document. We see nothing wrong in the fact that it was used as textbook material for Reserve training courses by the U.S. Air Force. Quite the contrary, we think the educational department of the U.S. Air Force should be congratulated for having done such an excellent job in exposing the underground Communist activities in the U.S. churches.

In the first place, the manual warns all Air Force personnel of the dangers of Communist spying activities, giving actual examples of the successful—for the Communists—work done by very skillful Communist agents. The manual then discusses the Communist technique of confusing gullible people with well-sounding words and phrases about peace, democracy, social justice, international trade and the like, which mean different things to the Communists. Democracy, for example, in Communist phraseology, means the dictatorship of the one-party Communist regime. Peace means an international settlement on Communist terms. Social justice means the Communist system of injustice, discrimination, and terror. What's wrong in pointing out these very obvious—but often forgotten—truths concerning the deceitful ways with which Communist propagandists work?

The manual then gives concrete and documentary evidence proving that many ministers of the church, including a lot of prominent members of the National Council of Churches, have sponsored and supported—and continue to sponsor and support—both open Communist political groups and drives, and so-called Communist-front organizations. The manual quotes prominent U.S. Christian ministers arguing that Jesus Christ was, in fact, a Communist, and that the Soviet Union today follows Christ's teaching of brotherhood, equality, and justice. Considering the Communist slave labor camps, in which tens of millions of innocent human beings have perished, considering the Communist police terror system—the most cruel terror system known to man—it is, indeed, breathtaking to see preachers of the Gospel of Christ praise the Red murderers as humanitarian social workers and saint-like missionaries. Yet such preachers exist in America today. What's wrong if an Air Force manual names them and quotes their fantastic, not to say blasphemous, hymns of praise to the most sinister killers and torturers in history?

The manual ends with a simple, but well defined and beautifully phrased definition of the American way of life, and in contrast, of the Communist political purpose—to subjugate all human activities, all economics, all morality, all religion to the iron will and discipline of the Communist state.

Our only regret is that the "controversial" Air Force manual has not been distributed outside the personnel of the Air Force Reserve. We think it should be read by all Americans, from all walks of life, of all professions, all religions, and all political affiliations. The manual can displease or anger only people who know nothing about communism, or who consciously or unconsciously serve the Communist cause.

Crusade for Economic Equality

EXTENSION OF REMARKS

OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mrs. GRIFFITHS. Mr. Speaker, the National Association of Letter Carriers has presented their case for a pay raise most succinctly. It is as follows:

CRUSADE FOR ECONOMIC EQUALITY

Average gross pay for a letter carrier: $4,640 a year; $370 a month; $89.23 a week; $2.23 an hour.

This wage scale is far below 1960 standards of pay for workers in comparable jobs.

It is even below the average wages for garbage collectors, street sweepers, grocery clerks, parking meter atendants and others in traditionally low-paid and comparatively unskilled jobs.

Why? Letter carriers have received too few increases, too small increases, too many vetoes.

Approximately 380,000 of the 550,000 postal employees are in level 4—this salary scale totally inadequate for today's needs.

Year by year the letter carriers have fallen further behind in their struggle for economic equality. During the past 11 years they have received only four increases. During the same period workers in similar or comparable categories have received increases almost every year.

THE POSTAL PAY STORY OVER THE PAST 11 YEARS

1949: Small pay increase.
1950: No increase.
1951: Public Law 204.
1952: No increase.
1953: No increase.
1954: No increase because of veto (discharge petition necessary).
1955: Public Law 68 passed (after another veto).
1956: No increase.
1957: No increase because of veto (another discharge petition).
1958: Public Law 426 passed.
1959: No increase.
1960: (?).

Letter carriers received too few pay raises, too small pay increases, too many vetoes.

WHY SELECT THE YEARS 1949–60?

Because these years represent a period of unparalleled dynamic economic development. Both the manner and the standard of living have changed. Prices have advanced. So have wages. This has added up to a better and fuller life for everyone except letter carriers and other Federal employees.

During the years 1949–60, the gross national product increased from $258.1 billion to $483 billion. Personal income increased from $182 billion to $387 billion.

The following pages contrast the pay increases received by letter carriers with those received by other workers in comparable categories during these years.

(NOTE.—Each difference of 10 cents per hour represents a difference of $208 per year.)

Pay schedules for letter carriers and post office clerks, level 4, postal field service

Level	Step	Annual salary	Hourly rate	Gross pay		Amounts withheld			Net take-home 2-week pay	Net take-home annual salary
				Monthly pay	2 weeks' pay	Life insurance	Retirement 6½ percent	Federal tax, man, wife, 2 children		
4	1	$4,035	$1.94	$336.25	$155.19	$1.25	$10.09	$9.30	$134.55	$3,498.30
	2	4,175	2.01	347.91	160.58	1.25	10.44	10.70	138.19	3,592.94
	3	4,315	2.07	359.58	165.96	1.25	10.79	11.40	142.52	3,705.52

Letter carriers received too few increases, too small increases, too many pay vetoes.

READ 'EM AND WEEP

The average number of wage increases given to workers in the 48 categories widely scattered from 28 States cited on the preceding pages is more than 10. During that time letter carriers received only four increases. Workers in the 48 categories cited received pay increases averaging 68½ cents more an hour than letter carriers received.

This adds up to an average increase of $1,424.80 a year more than that given to letter carriers.

WHERE IS THE MONEY COMING FROM?

Should the Federal budget and the so-called postal deficit be the determining factors in granting or denying a postal pay raise? Here are the facts:

Federal budget: In his budget message, the President estimated that in 1961 there would be a surplus of $4.2 billion. This shows that money is available for a decent increase. Our payments of interest on the national debt rose from $7.671 billion in 1959 to $9.385 billion in 1960. (This is an increase of $1.714 billion.) In 1958 we spent $2.231 billion on foreign aid. In 1959 this was increased to $3.780 billion. (This was a $1.549 billion increase supported by the Eisenhower administration.) This year the President proposes another increase of $1 billion.

Why should the taxpayers' money be available for everything under the sun except to give a decent living wage to letter carriers and other Federal employees?

WHERE IS THE MONEY COMING FROM?

The Post Office Department, in a recent press release, had this to say about the postal deficit: "In the 13 years from July 1946 to June 1959 the postal deficits totaled $6.8 billion—nearly half the total increase in the Federal debt in the same postwar period."

How silly can you get? Using this same yardstick, the deficit of the Defense Department was 30 times the increase in the national debt. The deficit of the Department of Agriculture was 3⅓ times the increase in the national debt. The deficit of the Department of Commerce was 1½ times the increase in the national debt.

The cost of the interest on the national debt was 5⅓ times the increase in the debt itself. The cost of foreign aid was 1½ times the increase in the national debt.

WHY PICK ON THE POSTAL EMPLOYEE?

When the Post Office Department hires a consulting firm or an engineering firm does it insist that the employees of those firms should work at a subsistence pay level? Did the Post Office Department insist that the Intelex Corp. should install the "Turnkey" operation at Providence, R.I., on a less-than-cost basis? Does it insist that the Food Machinery and Chemical Corp. should conduct its Operation Gateway at a loss? Does it insist that those who supply its equipment, or lease quarters for postal facilities or serve it in any other way should do so at a loss to themselves? Of course not. Then why should the postal employee—among all the people the Post Office Department does business with—be the only one who is expected to live on subsistence wages?

A LETTER CARRIER'S WAGES ARE AT SUB-SUBSISTENCE

In 1825 Postmaster General John McLean said that he had no intention of paying postal employees a sufficient compensation to provide them a livelihood without other means of support. After 135 years the philosophy of the Post Office Department remains the same. A compilation of more than 20,000 family budgets submitted by letter carriers within the last 6 weeks reveals the following: 95 percent of the letter carriers are family men; 31 percent have to hold down a second job; 43 percent of their wives work; and 93 percent operate at a deficit.

The average letter carrier's family operates $903 a year in the red—what kind of a life is this?

POOR PAY DRIVES POSTAL EMPLOYEES INTO DEBT

The annual report of the Detroit Postal Employees Credit Union reveals that during the year 1959, postal employees made 5,985 short term loans which amounted to $5,038,774.27. This was an increase of over 19 percent over 1958.

The following is a breakdown showing purposes for which loans were made:

Purpose	*Number*	*Percent*
Consolidation of bills	1,616	27.0
Home improvements	1,376	23.0
Medical expenses	1,017	17.0
Automobiles	1,018	17.0
Car repair	419	7.0
Vacation	150	2.5
Income tax	120	2.0
Insurance	120	2.0
Christmas	90	1.5
Education	59	1.0

It has become necessary for the credit union to establish a budget department to help postal employees who are in serious financial difficulty. These are employees who, in dire need and emergency, have borrowed from one or more finance companies, made purchases from various department stores and now are unable to make these payments from their postal paychecks and still pay their housing, food, utility bills, and other necessities.

After counseling the member concerning his income, family, and needs, an amount is determined and is left each payday for these payments. The budget department then disburses the money to the various creditors. At the present time, 205 Detroit postal employees are being assisted in this way. Each payday, approximately $10,000 is paid on these accounts. Also, the number of employees requiring this assistance is continually increasing.

Record of number of loans and amount

1955, 4,375	$2,575,743
1956, 4,482	2,952,234
1957, 5,232	3,605,106
1958, 5,659	4,230,653
1959, 5,985	5,038,774

For the periods indicated the amounts listed are the total loans granted to the members of the Lawrence, Mass., Post Office Credit Union:

The year ending Oct. 31, 1958	$33,339.85
The year ending Oct. 31, 1959	46,019.86
4 months ending Feb. 29, 1960 [1]	17,714.28

[1] (If projected to the close of the fiscal year, the total will exceed $50,000.)

Membership in this credit union is limited to active postal employees of Lawrence, Methuen, and North Andover, Mass. There are now 160 members.

The average number of borrowers is 90 at the close of each month.

These figures are typical of conditions existing all over the Nation.

The Post Office Department, in its official publication the Postal News admits that the workload of the letter carrier has gone up by leaps and bounds because of the increased volume.

Increased workloads and increased efficiency should equal increased pay.

Questionnaire Results

EXTENSION OF REMARKS
OF
HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. LANGEN. Mr. Speaker, our office has just finished tabulating the results of a questionnaire which we sent out earlier in the session to residents of Minnesota's Ninth Congressional District. This questionnaire deals with eight of the issues facing this body, and the 7,027 replies which we have thus far received have been evaluated both totally and in five separate occupational groupings.

In the hope that the opinions expressed in this poll might be of benefit to my colleagues, I am calling them to the attention of the House at this time.

Comments and a percentage summary follow:

1. In the field of Government spending, the replies which we received indicated an overwhelming majority in favor of payment on the national debt or, at least, a balanced budget.

2. In response to the agricultural question, 63.5 percent of those replying indicated their favor with some type of controls and supports. The differences of opinion with regard to what form this program should take, however, reflect the general lack of agreement on how best to improve agricultural income and reduce taxpayer expense.

3. Regarding our mutual security (foreign aid) program, a large majority was almost equally divided between appropriations smaller than last year and appropriations the same as last year; 5.5 percent voted for increased foreign aid spending.

4. A raising of the present $1,200 limitation on outside earnings of those receiving social security benefits was favored by a majority of those who replied. This majority was largest among business and professional people, and smallest among those who are presently retired. A majority of farmers replying were against the raising of this limitation.

5. Together with the question concerning agriculture, that regarding a medical and surgical health plan for social security recipients resulted in the greatest difference of opinion. The replies against such a proposal were 1.1 percent larger than those in favor. Replies against were more common among business and professional people; replies for were more common among retired and salaried people.

6 and 7. A majority of those who replied were against Federal financial assistance for school construction, and a very large majority were opposed to such aid for teachers' salaries. This was uniformly true among all groups, with the exception of professional people, who comprised about 10 percent of the total replies. Those in this occupational grouping, while substantially opposed to Federal assistance for teachers' salaries, voted slightly in favor of aid for construction.

8. The large majority in all groups who voted in favor of Federal legislation to deal with such situations as the recent steel strike indicated the general response to such labor-management disputes.

PERCENTAGE SUMMARY

1. Which approach to Government spending do you believe will best serve the Nation's economy at this time? (1) Deficit spending, 2.9 percent; (2) a balanced budget, 37.1 percent; or (3) income exceeding outgo, permitting payment on the national debt, 56.1 percent. No opinion, 3.9 percent.

2. Which do you believe will best serve to bolster farm income, and at the same time decrease costs to the taxpayer? (1) Increased controls and supports, 12.5 percent; (2) reduced controls and support, 20.4 percent; (3) increased use of the soil bank principle, 5.2 percent; (4) a combination of controls, supports, and increased use of the soil bank, 25.4 percent; or (5) absoltuely no Government participation in agriculture, 29.9 percent. No opinion, 7.3 percent.

3. Do you believe this year's budget for our Nation's mutual security (foreign aid) program should be (1) Smaller than, 44.8 percent; (2) roughly the same as, 44.2 percent; or (3) larger than, 5.5 percent—the approximately $3.1 billion appropirated by the Congress last year? No opinion, 5.5 percent.

4. Do you believe the present $1,200 limitation on outside earnings for those receiving social security benefits should be raised? Yes, 54.6 percent; no, 43 percent; no opinion, 2.4 percent.

5. Do you believe this country should institute a medical and surgical health plan for those receiving social security benefits which would be administered and financed by the Social Security Administration? Yes, 47.9 percent; no, 49 percent; no opinion, 3.1 percent.

6. Do you believe the Federal Government should provide financial assistance for elementary and secondary school construction? Yes, 42.5 percent; no, 53.3 percent; no opinion, 4.2 percent.

7. Do you believe the Federal Government should provide financial assistance for teachers' salaries? Yes, 19.8 percent; no, 76 percent; no opinion, 4.2 percent.

8. Do you believe the latest steel strike has shown a need for Federal legislation in this field? Yes, 80.4 percent; no, 15.6 percent; no opinion, 4 percent.

Report on the University Model United Nations

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD a report on the University Model United Nations—U.M.U.N.—which was held in Montreal, Canada during the early part of February.

This report was prepared by Walter J. Nicgorski, a senior at Georgetown College, who led the three-man team representing the United States at that meeting. I would like to add that Mr. Nicgorski is the son of Mr. and Mrs. John W. Nicgorski who reside in the 4th Congressional District of Wisconsin. He is an outstanding student and has recently received a Woodrow Wilson fellowship, and a Danforth Foundation fellowship, for graduate study in the field of political science. The Georgetown College delegation which he led at the University Model United Nations received the "Best Delegation Award" from the sponsors of that conference.

The University Model United Nations was sponsored by four Montreal universities and underwriten by the Canadian Government. Student delegations representing almost every member of the United Nations participated in the event. The delegations were composed of United States and Canadian university students and of foreign exchange students studying in the Western Hemisphere. They debated issues which are confronting the United Nations Organization and adopted various resolutions mentioned in Mr. Nicgorski's report.

I was pleased to receive Mr. Nicgorski's account of the conference and I believe that his comments about student opinion on a number of international issues may prove of interest to the membership of this body:

MONTREAL'S UNIVERSITY MODEL UNITED NATIONS

(By Walter J. Nicgorski)

The University Model United Nations is sponsored by four Montreal universities and underwritten by the Canadian Government. The sponsoring universities are McGill, Montreal, Sir George Williams, and Loyola of Montreal. Most of the sessions of the U.M.U.N. are held at either Montreal University or McGill University; the delegates from universities all over North America are put up at a hotel in downtown Montreal and are transported to the daily sessions by special busses.

Insofar as it is possible, the sponsors of the conference attempt to have foreign exchange students represent the country of their own origin and/or citizenship. Almost every nation in the United Nations was represented at the 1960 event. A number of nations sent diplomatic advisers from their Ottawa embassies or their missions at the United Nations in New York. These advisers helped their respective delegations to understand the policies of their own countries and aided the student delegates with floor strategy, parliamentary tactics, etc.

Besides sessions of the Security Council, the Economic and Social Council, and the General Assembly, there were certain other events in the course of the weekend. Such events were addresses to the assemblage by various Canadian and/or United Nations dignitaries, such as the present leader of the Loyal Opposition in Canada, the Honorable Lester Pearson. There were also panel discussions on the world problems of overpopulation and disarmament. The latter panel heard from representatives of both the United States and the Soviet Governments; Prof. Otto Nathan, well known for his association with Einstein and his work in pacifist circles was also heard on this panel. As you may realize, such events yielded excellent opportunities to contact the opinions of the world's youth on many of the critical problems of today.

The U.S. delegation from Georgetown University was made up of James Cadden, of Washington, D.C.; George Giard, a Rhodes scholar-elect, from Dallas, Tex., and myself. Our official advisers were Mr. Richard Pederson, of the U.S. Mission to the U.N., and Mr. Albert Rosen, specialist on China in the U.S. State Department.

SECURITY COUNCIL

The one item on the agenda of the Security Council was a resolution concerning the establishment of a United Nations Peace Force. This resolution was introduced by Ceylon. There were a considerable number of amendments of a minor nature. The United States and the United Kingdom were concerned that the original resolution in intent went too far toward actually establishing such a peace or police force without providing for a preliminary working out of details before final commitment by nations. The resolution was overwhelmingly favored by almost all students and was eventually passed with both the United States and the Soviet Union voting in favor of it. A copy of the resolution, finally passed as I have it from the records available to me, is found under addendum I.

GENERAL ASSEMBLY

The assembly first took up the question of admittance of Red China to the United Nations. This resolution as for all the others that were actually discussed at the U.M.U.N. had been placed on the agenda by the sponsors of the conference. The resolution calling for the General Assembly's recognition of the government of the People's Republic of China as the authorized voice of China in all United Nations' bodies, as well as recognizing the same republic as the de jure government of China, was formally introduced by Poland. The United States immediately introduced a moratorium resolution to apply to Poland's resolution. This move met with the disfavor of the majority of the students as well as with the officials of the conference who used their influence over the Assembly in this matter. The sentiment of the ma-

jority seemed to be that though the United States succeeds in using the moratorium on the Red China question in the real United Nations, no harm could come from a good thorough student discussion on this subject of admittance of Red China to the United Nations and recognition of the government of said China by the General Assembly. There was considerable agitation for more than merely the defeat of the U.S. resolution on the moratorium, for some students as well as, of course, the official advisers of the Communist-bloc nations were anxious to see this assembly of students endorse a policy contrary to the wishes of their government. I may say, without a doubt, that the U.S. State Department seemed fully aware of the propaganda value for the Soviets to which a Communist victory on the China question might lead.

The moratorium, as was expected, was defeated, and a more extensive discussion of the China question ensued. The Polish resolution was finally defeated after almost 2 days of discussion; the margin of victory on the substantive question came very close to the actual margin in favor of the moratorium resolution in the real U.N. Assembly. Student sentiment and opinion appeared to be very much opposed to the U.S. use of the moratorium procedure to face this issue. Such a tactic seems to leave these students with the opinion that the United States cannot face the issue in open debate. The assembly never seemed to realize that in the real U.N., as Mr. Pederson noted many times, substantive debate takes place though the moratorium question is technically considered only a procedural question. One other observation of student opinion on this question is that I feel that many non-American students are very much in favor of admission of Red China to the United Nations. American (U.S. citizens) students seemed to be divided on the question. A copy of the resolution introduced by Poland and defeated by the Assembly is included as addendum II.

The Assembly then considered a resolution proposed by Canada and aimed at having the United Nations take initial steps toward prohibiting the use of outer space for military purposes and furthering a plan for the peaceful uses of outer space. A substitute resolution of the same intent was proposed by Denmark and was finally passed.

ECONOMIC AND SOCIAL COUNCIL

This Council considered a resolution that would have the United Nations through the Food and Agriculture Organization work out a plan for the distribution by a U.N. agency of alimentary food surpluses of certain nations of the world and for the establishment of an International Emergency Food Bank. Many of the small nations felt that this was necessary in order that underdeveloped countries in need may get help without going directly to those countries with surpluses and hence getting themselves involved in world politics to an extent. The United States though in general agreement with the resolution urged caution about the extent of commitment involved in the resolution in light of the previous failures of the FAO to work out a plan satisfactory to all nations concerned. This resolution was finally passed.

I have just one general comment that I think is of some importance. Throughout the days of the conference in both formal and informal meetings, I had many opportunities to discuss the topics of world politics with Canadian students as well as with representative students of many other nations. It was somewhat surprising for me to discover that these students conceive of the cold war struggle in a totally different way than do American students. The world's present picture for them is, in their own words, one of "two great powers leading the world to destruction." They (and the same was evident in the statements of some of the Canadian political and intellectual leaders in the speeches and panel discussions) not infrequently referred to the "militarism" of the United States and the "eminent rationalism" or the "rationalizations" of the U.S. State Department. That the United States is taking the leadership in defending a certain set of values especially dear to the West brought smiles of doubt and cynicism to the faces of these students. There were, of course, exceptions to what I say; I have only tried to describe what I considered to be predominant sentiments.

ADDENDUM I: SECURITY COUNCIL—RESOLUTION No. 1

Noting that the recent years have seen frequent threats to international peace and security;

Considering that in many such instances, an international police force might be of some help in maintaining international peace and security especially in boundary incidents;

Conscious that a United Nations Emergency Force has proven itself useful and effective in the Israeli-United Arab Republic dispute;

Noting that under article 43 of the charter, the members have pledged themselves to make available to the Security Council, on its call and in accordance with a special agreement or agreements, Armed Forces, assistance and facilities necessary for the purpose of maintaining international peace and security;

Considering that it was suggested by the Secretary General, as early as 1948, that a permanent United Nations guard be created, which was then to group some 800 men (res. 297–IV);

The Security Council—

1. Requests the Secretary General to intensify his consultations with member states on establishment of a U.N. police force to be available for observation and/or patrolling at the request of member states and under the decision of the General Assembly;

2. Invites all members to inform the Secretary General of their views of the manner in which they are willing to make manpower and equipment available for the implementation of this resolution;

3. Requests the Secretary General to organize for the next regular session of the General Assembly, a complete report of an acceptable organization of such a force, its budgetary implications and the members suggestions and offers on this question.

Proposed by Ceylon.

ADDENDUM II: GENERAL ASSEMBLY—RESOLUTION No. 1

Conscious that the United Nations Organization is an organization striving for world understanding through a world forum;

Believing that the members, cannot choose their fellow members according to their own individual preferences or dislikes;

Recognizing that the Government of the People's Republic of China has effective power over the territory and population of China;

Noting that in all previous instances, the de facto power of a government has always been the criterion to recognize its accredited representatives as the member's authorized voice;

Considering that the obligations of a member state of the United Nations could only be carried out by a government with a reasonable expectancy of permanence, which actually exercises control over the territory of that member and commands the obedience of its people;

Conscious that the United Nations cannot afford, for the sake of international institutions through which negotiations can take place and settlements can be reached;

Considering that any conventional or nuclear disarmament agreement, without the inclusion of the People's Republic of China, would fall short of what is needed for effective control and security in the eastern part of the world;

The General Assembly—

1. Recommends that the members recognize the Government of the People's Republic of China as the de jure Government of China;

2. Hereby recognize the representatives designated by such government as the authorized voice of China in all United Nations bodies.

Proposed by Poland.

Dr. Murry H. Fly

EXTENSION OF REMARKS

OF

HON. J. T. RUTHERFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. RUTHERFORD. Mr. Speaker, one of Texas' greatest educators, Dr. Murry H. Fly, passed away in Odessa, Tex., on April 4, 1960, after a lifetime of dedicated service to his profession and his fellow men. The people he helped numbered in the thousands, and I think that every person whose life was touched by Murry Fly is better for it. I personally will always owe him a debt of gratitude for the guidance and kindly assistance he gave me during my formative years. It shall always be a matter of deep pride and personal satisfaction to me that I had the opportunity to graduate from a public school system which Murry Fly guided with wisdom, kindness, and a dedication almost beyond belief.

At the time of his passing, Dr. Fly was president of Odessa College, which he founded in 1946. The college started first as a dream of Murry Fly's, but he was not one to idly dream and do nothing about making it a reality. When the Odessa College was first founded, students met in borrowed or makeshift classrooms, utilizing whatever facilities were available. But Murry Fly was a builder and in the 14 years he served as president of Odessa College he fashioned an excellent, modern school with many beautiful buildings located on its own campus. Those houses of learning will stand as a monument to Murry Fly, and the good that he did will continue to be reflected in the thousands of young people who attend Odessa College in years to come.

Before founding Odessa College, Dr. Fly served for 24 years as superintendent of Ector County schools, and it was here that I first came to know him when I was a schoolboy looking for the leadership that he provided. Prior to his long and distinguished service with the Ector County schools, Dr. Fly had served as superintendent of school systems in Red River County, Collin County, and Strawn County, all in Texas. On July 1, 1959, he celebrated his 50th year in education, and received justly deserved tributes from friends, outstanding citizens,

former students and fellow educators all over the world.

Dr. Fly was himself the product of the rural public schools of his native Mississippi, and received his bachelor of arts degree at East Texas State College. He took bachelor of arts and master of arts degrees from the University of Texas, and graduate work at the University of Chicago and Denver University. He received his doctorate degree at Texas Tech College.

Dr. Fly was born October 8, 1886, at Friar's Point, Miss., and in 1913 married Mildred Hamm, of Fort Worth, Tex. From their long happy union came five sons and two daughters, each of whom are outstanding people worthy of their heritage, and I am proud to call them my personal friends.

Dr. Fly was a tireless worker for any cause in which he enlisted. He served his community in many ways, and was proud of the fact that he had a record of 24 years of perfect attendance in the Lions Club. He served as governor of 2–T–2 District, Lions International, and held 1 of the 11 international keys presented in the history of international lionism. He was active in many educational and teachers organizations, serving in many elective capacities within them. He also served a term as president of the Odessa Chamber of Commerce, and was a devout member of the First Christian Church.

I extend my sincere sympathy to Dr. Fly's bereaved widow, to his children, grandchildren and other relatives. I feel a sense of personal loss in his passing, but I am consoled by the thought that the good works he did will live on.

Franklin Pierce Adams

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. MONAGAN. Mr. Speaker, I was saddened recently to read of the death of Franklin Pierce Adams, the famed columnist, "F.P.A.," who for so many years conducted the noted "Conning Tower" column in various metropolitan newspapers.

For those of us who came of age in the twenties and thirties, "F.P.A." and his column had a place in our lives which has never been duplicated.

Urbane and witty, Adams through his life fostered a respect for classical learning, a love for good literature and a sense of the importance of the ability to construct a clear and coherent English sentence.

In a time when regard for cultural matters was not as current in America as it is today, Adams through the persistence of his efforts inculcated in his readers an interest in great poetry, in notable writing and in artistic creation generally which was then encouraged by too few others in positions of such influence.

To remember how we awaited his translations of Horace, his Gilbertian verse or his weekly diary in the style of Samuel Pepys is to evoke the atmosphere of another day.

It is my conviction that we as a nation must return to adherence to many of the values which Franklin P. Adams thought important and which we have thoughtlessly discarded in the hectic war and postwar years.

Franklin P. Adams' efforts to raise our American cultural standards have been monumental and I can think of no finer tribute to his memory than to say that these efforts are still bearing fruit.

Accolade to Atlantic City Commissioners

EXTENSION OF REMARKS
OF
HON. MILTON W. GLENN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. GLENN. Mr. Speaker, in New Jersey, a certain form of municipal government widely used is the commission form, with either five or three commissioners, according to population, and who in turn elect one of their members as a mayor. One of the unusual aspects of this form of government is that it has its own special election date, and the candidates run without any official designation of a political party. It is a political nonpartisan election.

The largest city in my Second District of New Jersey is Atlantic City, the mecca of thousands of vacationists every year, and the convention capital of the world. It was incorporated as a city in 1854 and was under a councilmanic form of government until 1912, when it adopted the commission form with a mayor and four commissioners. During all these years, there was never an election without opposing candidates or tickets, and I may say many Atlantic City elections of the past were turbulent to say the least.

This year on May 10, there will be another election for five commissioners, and for the first time in the history of Atlantic City no opposing candidates have filed to oppose the incumbents. This is so unprecedented it calls for comment.

The present commissioners are Mayor Joseph Altman and Commissioners John O'Donnell, Meredith B. Kerstetter, William F. Casey, and Richard S. Jackson, and they are all candidates for reelection. As natives of Atlantic City, they have seen and lived through many periods as the prosperity of Atlantic City follows the economic trend of the Nation. It is a health and pleasure resort with little industry, and has annual problems to face with a fluctuating population of 60,000 in winter to over 300,000 in summer, on an island 5 miles from the New Jersey mainland. The municipal maintenance and supervision of the economy are difficult under such circumstances, but added to this is the fact that Atlantic City must compete with scores of other cities and areas as a health, and recreation resort and convention city.

Down through the years the city has held its own, but in the past decade it began to show signs of wear. True, the ocean, the beach, and the sunshine were always there, but these were not enough in this modern world.

These five commissioners under Mayor Altman—these five dedicated officials saw these things and decided the world's playground needed a face lifting—that its facilities and the economy needed help. They proceeded with a planned program of municipal renovation—removing the antiquated trolley car system running the length of the island and replacing it with buses; widening and repaving the main through streets; improving and modernizing the world's largest convention hall; rebuilding, redecking, and beautifying the world famous boardwalk; changing municipal ordinances to encourage the removal of old wood constructed side avenue hotels for modern fireproof motels with side-by-side swimming pools and ice skating rinks. These things—this encouragement—this leadership has brought results. In the last several years, Atlantic City has and is undergoing an economic revolution. Scores of new modern motels in all locations have been erected, and are still going up. Convention business is increasing, bank deposits making new records, and thousands of satisfied guests are being served weekly.

Therefore, it must be that the citizens of Atlantic City have recognized these things and do honor to their incumbent commissioners by not opposing them for reelection. They have taken cognizance of the fact that their welfare depends on the good management of their city by experienced and dedicated officials. To one in the political field, I know of no way that an electorate could better show their confidence in their elected officials than by this reelection by unanimous acclaim. I join them in this accolade to Mayor Joseph Altman and Commissioners O'Donnell, Kerstetter, Casey, and Jackson.

Enough Anthracite Coal Reserves To Last an Estimated 456 Years

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Record of Thursday, April 7, 1960:

In sharp contrast to industry estimates of reserve life expectancies of 13 years for oil and 21 years of natural gas, Government estimates place the life of recoverable reserves of anthracite at several hundred years, according to the latest Anthracite Institute bulletin.

Original reserves of anthracite totaled 23 billion tons, according to a concensus of several authorities. By the end of 1958, however, production and losses had reduced reserve to 15 billion tons. At the assumed recovery rate of 61.5 percent of reserves, the industry life expectancy at the average extraction rates in the 3 years 1956–59, inclusive, is 456 years.

Extraction is based on fresh deep and strip mining, and excludes secondary recovery from banks and rivers.

The weighted average recovery of the original coal content by underground mining several years ago was estimated to be 40.9 percent in first mining and 24.5 percent in second mining, or a total recovery of 65.4 percent. The residual figure of 34.6 percent represented coal lost by mining operations. In addition, preparation practices were estimated to have lost 4.3 percent in cleaning and sizing. Thus the total loss of the original coal was 38.9 percent.

Subsequent improvements in mining and preparation practices have reduced this estimated coal loss and thus helped conserve coal. More important from the conservation aspect is the intensive development of stripping equipment and methods, as virtually 100 percent of the coalbed is now recovered in stripping operations.

To offset these favorable factors, many mines have been allowed to flood to the extent it is uneconomical to consider dewatering.

In others, mining has been conducted in such a manner as to make future recovery impractical.

Transfer of the U.S.S. "Charles Ausburne" to the Federal Republic of Germany

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following remarks by our colleague Congressman RIVERS, of South Carolina's First District, were made at the transfer ceremonies of the U.S.S. *Charles Ausburne* (DD–570) to the Federal Republic of Germany, in Charleston on April 12, 1960.

This gallant ship was Adm. Arleigh Burke's flagship in the war in the Pacific.

These ceremonies, that I had the honor to attend, were impressive and moving, and Mr. RIVERS' splendid speech was one of the high points of this truly great and historic occasion. The speech follows:

Never before in recorded history has a vanquished nation risen from the depths of adversity to regain and reclaim its position among the freedom-loving nations of the world.

The success of the Federal German Republic in reasserting its economic position in European and world trade is due in large part to the faith and understanding of the American people.

The Congress of the United States has reflected this confidence of the American people by joining hands with the leaders of the Federal German Republic to provide it with the necessary tools to insure its freedom against possible future oppression. As a Member of the Congress of the United States, and also as a citizen of the great State of South Carolina, I am particularly aware of the problems that have faced the Federal German Republic since World War II.

As you know, we in the South have also known the bitterness of defeat. We also know the heartbreak and anguish that faces a great people when the fortunes of war turn against them. Most importantly, however, we know the burning desire of the vanquished for freedom and the right to live as a God-fearing people, and therefore, I think it is particularly appropriate that the people of Charleston have joined hands with the peoples of West Germany to assist them in their continued fight for freedom.

We in America recognize the splendid recovery which is the story of postwar West Germany. We share your hopes and aspirations for the future and therefore, I think it particularly significant that upon the occasion of the recent visit of Chancellor Adenauer, our President reassured him personally, that we would not abandon West Berlin under any circumstances.

We know that some of our allies appear not to share our strong views on this issue. However, in America we recognize full well that the future of West Berlin is inextricably tied to the future freedom of all Europe. And, to the extent that we may compromise our stand on West Berlin, to the same extent we compromise forever the principles of freedom for which we all stand.

I think it also significant that the President of the United States endorsed the necessity for future tariff reductions among the free nations of Western Europe so as to insure the continued economic growth of this vital bastion of freedom.

Great words have been said about the importance of this last destroyer being transferred to the German Republic. Nothing more need be said on this subject for I am certain that my good friend Admiral Ruge will do a masterful job of welding this latest link into the defense armor of the free nations of Western Europe.

We in America are not militarist, nor are the people of Western Germany. However, we have all learned to be realists. We know that we cannot continue to enjoy the fruits of freedom without paying the price of an adequate defense, therefore, in closing I think it important to reiterate that the cost of freedom and peace is high, but it is well worth the price we pay.

Thank you.

California's Mother of the Year

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. LIPSCOMB. Mr. Speaker, a wonderfully kind and understanding mother who resides in the congressional district it is my privilege to represent has been chosen California Mother of the Year.

She is Mrs. Emerald B. Arbogast of Eagle Rock, Calif., who was selected for this honor because of her devoted work in behalf of exceptional children.

Far from throwing up her hands in despair when her own son was born with a mental deficiency, Mrs. Arbogast accepted it instead as a privilege and opportunity to provide loving care and understanding to one of God's children less able to care for himself than most others are able to do.

She was successful in helping her son to progress to a point where he can lead a reasonably normal life, and founded the Exceptional Children's Foundation to help others. I concur heartily in the selection of her as California Mother of the Year.

Under leave to extend my remarks, I submit for inclusion in the RECORD an editorial honoring Mrs. Arbogast that appeared in the Pasadena Star-News, April 6, 1960:

CALIFORNIA'S MOTHER OF THE YEAR

Emerald Barman Arbogast of Eagle Rock, who has been named California's Mother of the Year, is an inspiring example of that small number of people who, though told something can't be done, go ahead and do it.

The achievement for which Mrs. Arbogast was honored was her work with a son, now 35, who was born mentally deficient. Ignoring expert advice that his case was hopeless, Mrs. Arbogast refused to commit him to an institution but instead worked patiently to develop his potentialities. Her efforts were a success, for her son has been enabled to live a reasonably normal life.

But her success with her son, as such, is the smallest part of it. Mrs. Arbogast, working as a nonprofessional, devised the proverbial mousetrap, so to speak, that caused experts to beat a path to her door. Her methods have revolutionized the treatment of cases like her son's.

Mrs. Arbogast did not limit her efforts to her son, however, but founded the Exceptional Children's Foundation, now grown to national stature, and serves as president of a school for retarded boys. She has played the role not only of mother but of human benefactor with distinction.

Tom Curtis: A Patriot of Vision and Courage

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. MASON. Mr. Speaker, the State of Missouri has only one Republican in its congressional delegation. That Republican Member is my committee colleague on the House Committee on Ways and Means, the Honorable THOMAS B. CURTIS. It is no overstatement to assert that what the Missouri Republican delegation may lack in quantity, TOM CURTIS, of the St. Louis area, makes up for in quality.

Editorial cognizance of TOM CURTIS' great ability and patriotic dedication to duty as a legislator has recently been taken by Dr. Raymond Moley, in the April 18, 1960, issue of Newsweek magazine. Dr. Moley's weekly column in Newsweek is captioned "Perspective," and the article devoted to Mr. CURTIS bears the heading "CURTIS Fights for Sanity." Both the column caption and the title of the editorial comment are particularly appropriate because the column regularly brings perspective to important national issues and TOM CURTIS relentlessly endeavors to deal with those issues on the basis of the facts so

that their solution will be sane and enduring.

TOM CURTIS was appointed to membership on the Committee on Ways and Means on January 14, 1953, after serving one previous term in the House of Representatives. He has rapidly advanced to a position of fourth-ranking Republican member on this important committee. His advancement has been accompanied by a tremendous growth in influence among his colleagues and by the development of a comprehensive understanding of the legislative subjects with which he is dealing. He has approached his duties with fearless advocacy of what he believes is right. He has attended to his responsibilities with patriotic dedication. He has proved himself to be an able lawyer, economist, and statesman.

Many of the major bills that have been prepared by the Committee on Ways and Means and enacted into law during the 8 years TOM CURTIS has served on the Committee on Ways and Means bear his very important contribution to their development. He has stood stanchly for a Federal tax structure that encourages economic growth in our free enterprise system. He has been in the forefront in the development of tax legislation to aid small business. TOM CURTIS has rightly believed that the greater economic opportunity for our citizens resided in the growth of private enterprise and not in the enlargement of bureaucratic Government enterprise.

With respect to our social security system this Missouri statesman has diligently worked for its improvement so that the system would more adequately and more realistically meet the needs of our citizens. He has opposed unsound amendments to the Social Security Act because they would threaten to destroy the present system. He has always been mindful of the needs of the aged and has worked to create a fuller life and greater opportunity for them.

TOM CURTIS is a man who has stood steadfastly for the principles of government in which he so earnestly believes. During his service to his country in the House of Representatives, he has earned the respect and affection of Republicans and Democrats alike. I believe it proper to summarize his dedicated purpose as being directed to assuring that the Nation he serves will be a continuously improving country for the present and succeeding generations. He believes that our generation should pay its own way rather than attempt to live off the heritage of the past or the productivity of the future.

TOM CURTIS has made his mark not only as a member of the Committee on Ways and Means but, as Dr. Moley notes, as the ranking minority member of the Joint Economic Committee and as a Member of the U.S. House of Representatives.

TOM CURTIS has proved that knowledge is power, and he has also proved that knowledge is a prerequisite to the right answer to the legislative issues of the day.

Mr. Speaker, as a part of my remarks I will include Dr. Moley's editorial comment on my esteemed friend and colleague, TOM CURTIS, of Missouri:

CURTIS FIGHTS FOR SANITY

(By Raymond Moley)

After that gaudy carnival in Wisconsin, thousands of Americans must be wondering whether democratic institutions are worth all that past generations have paid for them. What must be the reaction of the fine, educated people of Wisconsin who had to endure at first hand this onslaught of demagogery, corn, cafe society, Hollywood revels, and campaign methods cheap in taste but costly in money? It was a gross insult to the people of a fine State. Since so many politicians feel that their appeals must be made somewhere below the neckband, doubts must arise whether there is really sanity, sincerity, or intelligence in public life.

It is refreshing to turn to instances in which political success and influence in national affairs have attended men who have rejected the low road and have dared to fight for the public interest. There are such men, notably in the House of Representatives, who may well be the hope of free institutions in the United States. They are also a base upon which could be built a vitalized Republican Party, if that party chooses principle rather than the shadow of expediency.

I have already written in this space about two of them—GERALD FORD, of Michigan, and BRUCE ALGER, of Texas. There are others equally noteworthy, such as WILLIAM E. MILLER, of New York, JOHN RHODES, of Arizona, and JOHN BYRNES, of Wisconsin. Outstanding among such leaders of the future is THOMAS B. CURTIS, of Missouri.

GROWING INFLUENCE

He was born in St. Louis 49 years ago. He practiced law and in 1950 was elected to the House where he has had five terms. His continuous tenure has moved him well up in the Ways and Means Committee and he is ranking minority member of the Joint Economic Committee.

These two committee assignments have placed him in a powerful position in legislation which deals with the major domestic issues of these times, inflation and fiscal responsibility. His influence with colleagues in both parties has steadily grown. Minority reports of the Joint Economic Committee on economic growth were written under his direction. Fellow members of his committee say that in the hearings—in which were presented the fallacious concept of the "liberals" that government can promote growth by mere spending—CURTIS applied himself with indefatigable energy and sincerity.

As ranking minority member of the JEC Subcommittee on Defense Procurement he came to grips with another of the major 1960 issues.

TAPS FOR FORAND BILL

In this session his outstanding contribution to sanity has been his effort to sidetrack the Forand bill for medical aid to the elderly through an increase in the social-security tax. As ranking minority member of the Ways and Means subcommittee on social security, he assumed leadership in the contest. By assiduous study and penetrating questioning of witnesses he mastered the problems raised by the bill (a counterpart bill by Senator KENNEDY is before the Senate). His speech dissecting the measure, delivered in the House on March 24, is truly outstanding. As a result, he provided the President with a summary of the weaknesses of the proposed remedy and alternative measures for meeting the same problem. It was this summary which the President had at a Cabinet meeting when Secretary Flemming was, shall we say, redirected from some of his own ideas. Flemming was later sent to Congress to announce the President's views. It is fair to say that CURTIS almost alone has been responsible for shelving a dangerous measure which might well have passed both Houses.

In this as in other instances, CURTIS, despite membership in a minority, proved that knowledge is power. And when knowledge is joined with sincerity and drive it is irresistible.

CURTIS, with a few of his colleagues in the House, has been instrumental in saving American taxpayers billions of ill-considered spending. As gossip mounts concerning candidates for Vice President on the Republican ticket, why cannot attention be directed to one of these House Members? He would be not only an effective and informed campaigner, but an indispensable assistant to the next President, whoever he may be.

Office Automation and Employee Job Security

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. LESINSKI. Mr. Speaker, hearings held recently by the Subcommittee on Census and Government Statistics of the Committee on Post Office and Civil Service pointed up the need for adequate consideration of employee welfare in the introduction of labor-saving equipment. In this modern era of application of automation to office procedures, Federal employees are now facing threats experienced earlier by factory workers.

A very effective summary of the problems and of the steps taken to meet them by certain Federal agencies was presented to the subcommittee on March 2, 1960, by Mr. James Campbell, president of the American Federation of Government Employees. Mr. Campbell's familiarity with this problem area has enabled him to set forth some thoughtful suggestions for study by the executive agencies and the Congress. I am pleased to insert his statement in the RECORD.

The statement follows:

STATEMENT OF JAMES CAMPBELL, PRESIDENT, AMERICAN FEDERATION OF GOVERNMENT EMPLOYEES

The impact upon Government employment of technological changes in Federal Government operations calls for frequent and careful review. Whether those changes are brought about by means of true automation or by improved mechanization of processes already developed, there is a constant need to anticipate and resolve the personnel problems which are almost certain to arise.

This inquiry which has been undertaken by the Subcommittee on Census and Government Statistics of the House Post Office and Civil Service Committee should have tremendous benefit for the Government and even to a greater extent for the employees whose positions and livelihood are threatened by technological advances. In my opinion, it is a very important and a very necessary project which will bear repetition in future months, for the problem at which it is directed will constantly be manifesting changing circumstances and unusual aspects which must from time to time be evaluated anew if their adverse effects upon human values are to be kept to a minimum.

This effort to appraise the underlying problem contained in office automation, if it is to achieve the long-range objective of safeguarding job security, must determine the extent of major technological changes and then formulate and assess the personnel management problems which have resulted from those changes. Such an investigation should provide a firm basis for whatever remedial action may be suggested.

No one may validly object to the installation of laboring devices, provided the same degree of planning is devoted to determining and controlling the potentially adverse effects upon personnel as is directed to the improvement of technological processes and to the achievement of monetary savings. The long-range effects are almost certain to be beneficial to all concerned, and to oppose such advances inordinately is to impede human progress.

It is important first to ascertain the number of employees who may be displaced in the organizational unit involved and to take the necessary protective measures to safeguard their livelihood. The effect that automated or mechanized procedures will have on their future employability or earning power is of major consideration. Can their present skills be utilized elsewhere in the same bureau or division, or must they be separated from the agency altogether to seek employment elsewhere? Is retraining necessary or is it feasible? Would there be jobs available in the newly developed skill? Underlying all of these possible situations are budgetary aspects of the problem which must be resolved or possible solutions may be impractical.

The most desirable approach to putting into effect the decision to automate certain processes, which may for the present displace persons as well as revise procedures, is to view it as a personnel problem from its inception. The individual who has the principal responsibility for personnel administration should have an equal place in the initial planning group with the administrative officer, the cost accountant, the engineer, or the specialist in automation. Such procedure is more likely to develop more effective counteractive measures from a personnel standpoint than would come about if the impact on persons would be left to the final stage of planning.

In a sense what is needed is simply to apply the procedure which is fundamental to all intelligent personnel administration. As soon as it is practically possible there should be an announcement to the personnel who may be affected that new machines will be installed and the extent indicated to which present employees may be affected. A large measure of uncertainty, fear, resentment, and lack of cooperation by employees may be avoided if an adequate effort is made to maintain free and effective communication between management and employees.

This sort of communication should assure the employees that a concerted effort will be made to operate the new machines with personnel now employed and that as much training as may be necessary will be on the job and will begin well in advance of installation of equipment. If certain jobs cannot be filled within the organization, that should be stated and the reasons therefore made clear. Likewise, it should be indicated as soon as possible what individuals cannot be utilized in the new organizational structure and how that phase of the problem will be met by retraining for other work, transfer to other units, or by assistance in placement in other agencies or in positions outside Government service.

The concern of Federal employees and of their leaders that governmental management will not anticipate and fully plan for the change to automated processes is based on experience. Too often innovations whether in organizational structure or in machines have wreaked their toll in personnel simply because those in authority were not concerned with the human effects and made little or no effort to ascertain them sufficiently in advance. The specter of dismissal and unemployment looms large in the minds of Government employees when change is intimated. Automation represents the new and untried to those who are learning of it for the first time. It suggests many unknown and unanswered questions, and it is of paramount importance that a broadly premised cooperative effort be made to find the answers to those questions.

There has been a steady increase during the last several years in the use of automated equipment by the Federal Government. Large agencies having the function of collecting, analyzing, correlating or otherwise processing great masses of statistical or accounting data have adopted the use of electronic data processing machines while the same or other agencies have planned or installed equipment that will expedite their activities.

The threat which the trend toward automation in the office holds for Government employees is real and one which calls for even broader and more careful planning. The list of agencies which have embarked on automated programs grows longer each year. The Patent Office is able to make an electronic search of its huge archives in minutes instead of days or weeks to determine whether a supposedly new device is patentable. The Internal Revenue Service is using a computer to process a large proportion of its 60-odd million income tax returns. An electronic map-drawing device has aided the Weather Bureau to improve its weather forecasting. Displacements, it is claimed, have been negligible or nonexistent in these agencies.

Personnel has, however, been markedly reduced in some operations. The Treasury Department's Bureau of Public Debt, which maintains records of interest payments on the national debt, is reported as having reduced its work force from about 12,000 in 1946 to about one-fourth of that number. This reduction has come about through the use of machines to streamline the huge volume of paperwork. The same has been true of the Treasury's Disbursing Office in which advanced equipment handles the million or more checks which are written for the Government each day. This task is accomplished with fewer than half the number of employees required 3 or 4 years ago.

More and more Government agencies have installed similar equipment. It does not always involve highly complex machines of the "electric brain" type. It may come about through the adoption of more advanced techniques or of machines that have been available but not put into use in a particular Government office. Within the last 4 years the Post Office Department completed the task of mechanizing its huge payroll. The operation was changed from manual payroll methods to an electronically controlled punchcard system. Whereas 1 payroll worker was needed for each 300 employees under the manual system, the new method required 1 for each 800 employees.

During this same period the Department embarked on a sweeping mechanization program which has been termed by its planners to be without equal in industrial history. Post offices are gradually becoming large mechanized operations containing the latest mail-handling devices, such as high-speed automatic letter-facing and stamp-canceling machines, letter-sorting machines, conveyor equipment to carry mail throughout a post office building, and modern vending equipment for stamps and money orders, to mention only some of the devices being put into use.

Several agencies are engaging in automatic data processing on an accelerated scale. The Bureau of the Census has been adjusting to more and more mechanization for half a century. It was the origin of the present-day data-processing equipment and was the first agency to use high-speed computing machines. The Bureau applied electronic computers to its census activities in 1954 and succeeded in making the results of its survey available several months earlier. Wider application of automatic equipment will be made to the decennial census to be taken this year.

The Bureau of Old Age and Survivors Insurance, the world's largest insurance organization, is a pioneer in the use of electronic equipment to handle routine paperwork. The increasing use of machines at its Baltimore headquarters has made it possible to handle the increasingly larger workload resulting from the evergrowing number of persons covered by the Social Security Act.

The Veterans' Administration has played a leading role in solving the problem of what to do with persons displaced by these remarkable machines. This has been evidenced in the planned action by the VA to relieve the difficulties of employee displacement when it installs an electronic data-processing computer and a communications system linking its insurance offices in Denver, St. Paul, and Philadelphia. Installation of the complete system is scheduled for completion next year, but already it is known that it will result in the reduction of nearly 700 employees in the 3 cities.

There are already plans shaping up for relocating these who will be displaced. First there is an employment freeze by all VA installations in these areas, and the employees who will be surplused by the insurance division will be offered any job openings for which they are qualified in other VA units.

It is estimated that more than 900 positions will have to be surplused this and next fiscal year because of electronic data processing in the Department of Veterans Benefits. The number that will be surplused in insurance and in DVB by next fiscal year exceeds 1,500 positions.

The Army and the Air Force have automated programs of considerable importance. The Adjutant General's Office, the Army Finance Center, and the Army Signal Corps have adopted data-processing procedures utilizing the latest electronic equipment. The Signal Corps has used such equipment for its logistic operations in which it keeps tabs on thousands upon thousands of items of communications equipment and supplies at home and overseas. A huge data-processing machine has been put into use by the Army Ordnance Tank-Automotive Command for stock control of replacement of parts for combat and transport vehicles.

Four years ago the national president of the American Federation of Government Employees asked the Defense Department to work with employee organizations in controlling the adverse effects of automation on the Federal service. The Department policy that was later shaped up included the specific provision that employees would be trained whenever possible in the new skills that would be required for the use of automated equipment. Since that time greater attention has been given to the impact of the newer methods on personnel. The Adjutant General's Office and other Army units have sent groups of its key civilian employees to attend courses of instruction provided by private industry before procuring this modern equipment.

It is essential therefore for Congress to inquire into the extent and the future trend of this ever-broadening program of technological change in Government offices. Such an inquiry should answer important questions concerning its present and future scope and its possible adverse effects on many hundreds of civil service personnel. It should answer such questions as which Fed-

eral agencies are involved in this program. What has been the effect of the introduction of automated processes and what is the extent of the future program now in the planning stage?

Especially helpful will be the direction of this inquiry at the problems of employees recruitment and displacement. These can be studied not for the purpose of assessing blame if there be any, but of determining what improvement may be made in the manner in which agencies have been discharging their responsibilities. There should also be consideration and evaluation of training programs to prepare present personnel for new positions which will be created in the course of mechanizing many operations. Always, of course, there should be uppermost the objective of making certain that planning is far enough ahead of installation of the new machinery to permit redistribution and retraining of employees already on the job.

If the fullest measure of thought and consideration is given to the human values involved, automation can be for the Government, as it has been for industry, a source of tremendous benefits and an avenue to better and higher standards of living.

Iowa Power Line Issue

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. COAD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to submit to the Members of this great body an editorial which appeared in the Des Moines Register on April 10 of this year which concerns itself with the continuance of the construction by the Bureau of Reclamation of two electric power transmission lines in Iowa to serve the load centers of the Missouri River power marketing area in our State.

It has been my privilege to work for the construction of these transmission lines even before the proposal was first submitted to Congress last year. I have come to realize that these lines mean more to the preference customers and the people of Iowa than merely a means to move power from one point to another or to have available the facilities to obtain allotted Missouri River power which heretofore was forfeited in whole or in part. These lines when completed will serve as vital links in a vast grid of transmission networks which would provide a great many people in the Iowa marketing area with a most effective and efficient service of continuous low-cost power.

Congress should follow through on the action taken last year and pass the necessary appropriations as requested in the budget to continue construction of these transmission lines.

The editorial follows:

IOWA POWER LINE ISSUE

The privately owned power companies in Iowa are again opposing construction of a federally financed power transmission project for western Iowa.

The project calls for eventual appropriation of $8,800,000 to build two transmission lines from Sioux City to Spencer and from Sioux City to Creston. Power from Missouri River dams would be transmitted over these lines to Rural Electrification Administration (REA) co-ops and municipally owned power systems.

The power companies appear to be fighting over a dead horse on this issue. The project was authorized last year in the public works appropriation bill passed over President Eisenhower's veto. The bill contained $800,000 for survey work and design of the transmission lines. This survey work is now underway and proceeding on schedule.

The project was backed in Congress last year by all of Iowa's Representatives and by Senator TOM MARTIN. Senator HICKENLOOPER didn't take a stand on the project but voted for the public works bill. All Iowa Members of Congress have been urging appropriations this year except Senator HICKENLOOPER. He says west Iowa should get additional power from Missouri River projects but that this specific proposal is too technical for him to make a recommendation. The Eisenhower administration opposed an appropriation last year but recommends one this year.

The private power companies have opposed the project as unnecessary. They made an offer last year to transmit the public power to preference customers at reasonable rates. They claim their proposal would result in a saving to the Government. It would not, however, result in a saving to the co-ops and municipal power companies. They will benefit by the transmission lines. The Government investment will be repaid and 3 percent interest paid on it.

The private utilities are making a fight against Government favoritism of public power over private power. But the issue of public versus private power is present to only a minor degree in this project—and the private utilities lost this fight, anyway. It is our opinion that Congress should follow through on the action taken last year and make the additional appropriations essential to complete the transmission lines by the scheduled date in 1962.

Congressman Donald J. Irwin on Cuba

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. DADDARIO. Mr. Speaker, my distinguished colleague from Connecticut, Congressman DONALD J. IRWIN, is most knowledgeable about matters dealing with Latin America.

He recently made a statement concerning Cuba which prompted editorial comment in the Bridgeport Sunday Post on April 10, 1960.

Congressman IRWIN said:

WHAT MUST WE DO CONCERNING CUBA?

It is important, I think, that we respond with vigor to unfavorable and unwarranted attacks upon us by the Castro government. We must do so, I feel, with the idea in mind of protecting our interests in the rest of Latin America. At the same time, we must take every step to prevent any untoward incident that will give Castro an opportunity to attack us further. Specifically, we must halt unauthorized flights by American planes over Cuba, for such flights only weaken our position at home and abroad.

I am very much opposed, incidentally, to proposals for broadcasting directly from the United States to Cuba. Such plans, it seems to me, would be repeating the fatal mistake made during the days of Peron in Argentina when our Ambassador tried to interfere. If we broadcast anti-Cuban programs, then we will be identified as the only anti-Castro force in Cuba and all Cubans will rally behind Castro. This suggestion only underlines the need for a full-blown Voice of America program for all of Latin America which would bring to the Latin Americans a clear idea of what the long-range U.S. objectives are. The VOA would spell out specifically what our programs and hopes are for the free people of Latin America.

President Eisenhower's recent trip aroused all kinds of hopes for the roles we are to play in the future development of Latin America and we must be ready to help meet these expectations. I disagree with Mr. Eisenhower's claim upon his return from his recent goodwill tour, however. The President maintained that our prestige was never higher in Latin America. In my opinion, our position in Latin America has never been more perilous.

It is of vital important, I believe, that we explain our democratic system of government and outline the role that private enterprise can play in the development of Latin American countries. Private American capital invested abroad can do much to help Latin America meet its needs.

These remarks not only initiated the following article but caused a change of opinion within the editorial staff of the Bridgeport Sunday Post:

IRWIN REPORTS ON CUBA

Congressman DONALD IRWIN, of Norwalk, recently back from a meeting of the Caribbean Assembly and a personally financed side trip to Cuba to get firsthand impressions of the situation there, says the island republic is headed for "serious economic troubles in the near future."

All signs point to it, but despite the fact, Cubans do not want Fulgencio Batista, or anyone like him, back in power, Representative IRWIN had only 48 hours to make observations in Cuba but his fluency in the Spanish language made the gathering of information comparatively easy for him.

Anti-American attacks by Castro, he believes, should be answered "with vigor" but with the idea in mind of protection for our interests in other Latin American countries. He failed to notice, he reports, any spontaneous anti-Americanism, as he walked about the streets. Cubans knew at once he was an American, yet there was no demonstration of the hatred that has been generated by the head of the rebel regime.

The Fairfield County Congressman came away convinced that Castro's management of economic affairs will surely lead to crisis. He favors a ban on unauthorized flights to Cuba from Florida, but he is opposed to broadcasting directly from this country to the island.

We had regarded the broadcasting idea as a good one, to talk directly to the Cuban people, but Representative IRWIN says if we do it, we will be identified as the only anti-Castro force in Cuba, and all Cubans, of all shades of opinion, will rally to Fidel against the United States. That seems to be sound reasoning.

Representaive IRWIN suggests the need for broadcasting the Voice of America to all Latin American nations, to give them a clear idea of our long-range friendly objectives, spelling out our hopes and our programs for the free peoples.

Our Congressman's is the latest voice to be raised in explaining what now seems to be inevitable. Castro was big enough to lead a revolt against brutality, thievery and general economic distress. But he has proved beyond any doubt that he is not big enough to lead his nation toward prosperity and

good relations with us. His campaign against us has been deliberate, not accidental, and is without basis in fact.

This is known by the business and professional people in Cuba, and the middle-class citizens. Soon the peasants and the poorest workers will know it, too. And then things will have to change—for the better we hope.

South Dakota American Legion Winning Oration

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1960

Mr. McGOVERN. Mr. Speaker, each year, the American Legion sponsors an oratory contest on subjects related to Americanism. This activity provides an excellent opportunity for young people to express their views on public issues.

This year's winner of the State competition in South Dakota is Mr. Larry Pressler, of Humboldt, S. Dak.

I include at this point in the RECORD Larry's winning oration:

A CONCEALED THREAT TO OUR CONSTITUTION

(By Larry Pressler)

"America, we will bury you."

With these words Soviet Premier Nikita Khrushchev concluded his keynote address preceding the annual Communist May Day parade in 1957. With these words he struck fear and unrest into the heart of every American. For with these words he repeated the longtime goal of the Communist Party; namely, to rule the entire world.

Americans shuddered when they heard this, and they had reason to shudder. For they were dealing with a godless man, a man who has placed little value on human life. According to a Gallup poll taken early in 1959, the rank-and-file American citizen listed the Communist threat as the greatest problem currently facing this Nation.

I will certainly concur that the Communist threat is a great one, and should be carefully dealt with, but I sincerely believe that modern America faces a problem of far greater magnitude than the Communist threat ever has been or ever will be. I believe that while the American public has been reading and worrying about the Communist threat, it has overlooked a far greater and much closer to home problem—a problem that seriously threatens our Constitution and all that it stands for.

This problem that I speak of is a trend in America for citizens and States to turn more and more of their responsibilities over to the National Government. I define this situation as the march of power to Washington. This march of power away from the States has been in existence for the past quarter century. Each year our States are left with less and less power and, in turn, our National Government gains more and more.

For example, let us take the field of taxation. In 1940, the State governments collected 64 percent of all the taxes collected in the United States. In 1959—just 1 year ago—the State governments collected only 32 percent of the total taxes collected in the United States. If this trend continues at the same rate for another quarter century, the States will collect only 11 percent of the total taxes to be collected in 1980.

When this occurs, the States will be left as hollow shells, operating primarily as the field districts of Federal departments and dependent on the National Treasury for their support.

If we look about us, we can easily see the steadily increasing influence of our National Government. The social security plan, the national highway building program, and Federal aid to various businesses, are only a few examples of types of projects formerly handled by the States that since have been turned over to Washington, D.C.

It was the great idealist, Henry David Thoreau, who once remarked, "The government that governs least governs best." It seems that our Government is beginning to govern more and more and is beginning to reach further into the private lives of its citizens. I am quite sure that you have all heard of the North Dakota farmer who in 1957 was actually fined for raising too many acres of wheat. The wheat had been raised on his own land and had been fed to his cattle. Why then, had he been fined? Beown cattle. Why then, had he been fined? Because the National Government had set acreage controls on wheat to help reduce the surplus. This is only one example of the many ways in which private enterprise is being dangerously hampered by this trend.

The march of power to Washington has become very obvious. President Eisenhower, in a recent address to the annual Governor's convention in Williamsburg, Pa., remarked: "Groups of city mayors used to travel to their State capitals for aid. Now they go directly to Washington, D.C."

So regardless of how one looks at it, he must admit that our Government is fast becoming more and more centralized. If the present trend continues for another quarter century our Government might well be classified as a unitary type, with all the power concentrated in one place.

There are those who might say, "Well, what would be wrong with that. After all, a highly centralized government would be much more efficient. And, not only that, but our National Government seems to be handling quite well the extra responsibilities that we have already given it."

In answering these statements, I will say that I am opposed to our Government's becoming more centralized for three main reasons. First, as we encourage and promote the growth of our National Government, we are defeating and degrading the high purpose our forefathers had in adopting our Constitution.

At the Constitutional Convention, the main fear was a highly centralized power. The great men who adopted our Constitution—Washington, Adams, Franklin, and many, many others—had all lived under a highly centralized government. They realized the dangers of a unitary power and made certain that the Constitution provided for a definite division of power between the State and National Governments. They wanted Americans to have as much local home rule as possible without having to appeal to a distant and impersonal bureaucracy.

So today, by encouraging and promoting the growth of our National Government, we are undermining the painstaking work of our forefathers.

My second indictment of our present trend toward a more centralized government is this: A retrospect of historical events cannot fail to come upon the fact that a concentration of political or economical power has unerringly resulted in corruption. Many great nations, such as the Babylonian Empire, and the Roman Empire, have decayed from within and crumbled because of an excessive concentration of governmental powers.

History also tells us that this danger creeps into a nation slowly and quietly—much the same as a cancerous growth starts in the human body. And this is exactly what it is doing in our land. When I observe the growing, but unnoticed, growth of our National Government, I am reminded of one of Edgar Allen Poe's best stories entitled "The Mask of the Red Death," which is a weird tale of a wealthy prince and his guests who had sealed themselves in an elaborate country estate content that the plague which was destroying their countrymen could not enter and harm them there. While the plague was killing the populace of the nation, the prince and his friends were having dances, parties, and much other gay revelry which was climaxed by a masked ball. Everyone present wore a masked costume. It was then that the terrible plague, which killed nearly instantly, struck inside the estate. But because everyone had on a masked costume, no one noticed the presence of the plague until at last all were destroyed in its ravage.

The ill-fated prince and his friends had felt safe and secure behind those thick walls. They felt that all the danger to them was outside those thick walls, never once thinking that they could be destroyed from within.

And so it is with the American people. We feel that the main dangers to our country are external threats, such as Mr. Khrushchev and his Communist Party. But we seldom think that we could be destroyed from within. We concentrate all our attention on those external threats, while we practically ignore some dangerous trends in our own home Government. And the trend that I consider the most serious is the rapid growth of that distant and impersonal bureaucracy which Jefferson held in such dread and warned us about in such great and intense detail. For if its growth is permitted to continue for another quarter century, I am quite sure that our Constitution, our way of life, and our traditional American freedoms will be well on the way to ruin.

But how can we stop this march of power to Washington? In my opinion, the main cause of this situation is the failure of citizens and States to fulfill their responsibilities. It is much easier for us to let the National Government built our roads and dams, collect our taxes, and operate our industries than it is for us to do it ourselves.

To stop the march of power to Washington, citizens must take the initiative in carrying out local projects and stop asking for Federal aid at every turn. The individuality that was so characteristic of our Founding Fathers must be restored to the American public.

So I will say that the main responsibility of stopping the march of power to Washington lies with the common citizen—you and me. We must make a diligent effort to preserve our Constitution and all that it stands for. And we can best do so by keeping in mind that age-old maxim: "Those who would stay free must stand eternal watch against excessive concentration of power in government."

Tribute to Farrell Senior High School

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. KEARNS. Mr. Speaker, I wish to pay tribute to the Farrell Senior High School, where I was superintendent of schools before coming to Congress, on its fine record in the field of athletics.

Farrell High School is a comparatively young school so far as organized and competitive sports are concerned, having competed only since 1916. The Farrell

High School basketball team has won five State championships—1952, 1954, 1956, 1959, and 1960. This is more State championships than any other school in Pennsylvania has won—and under one coach, Mr. Edward J. McCluskey. These championships won since 1952 are in class A, the highest classification in basketball among schools in the State.

I not only pay honor to the coach, Mr. Edward McCluskey, but also to Mr. John Hetra, who succeeded me as superintendent of schools in Farrell, and who was a great basketball player and referee himself.

My tribute to the superintendent and the coach reflects back also on each and every member of the team and the student body.

To Extend the Library Services Act, H.R. 11175

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. MULTER. Mr. Speaker, on March 15, 1960, I introduced H.R. 11175 to extend the Library Services Act for 5 years. On April 5, the Subcommittee on Special Education of the House Education and Labor Committee held hearings on this and similar measures.

My statement before the subcommittee follows:

STATEMENT OF HON. ABRAHAM J. MULTER BEFORE THE SUBCOMMITTEE ON SPECIAL EDUCATION OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR IN SUPPORT OF H.R. 11175, TUESDAY, APRIL 5, 1960

Mr. Chairman, I appreciate this opportunity to appear before your committee in support of my bill, H.R. 11175, proposing a 5-year extension of the Library Services Act.

During the week of April 3 through April 9, many communities throughout America will be celebrating National Library Week. We shall be hearing and seeing such slogans as: "Read Books That Have Shaped the World," and "Open Wonderful New Worlds: Wake Up and Read."

Posters, programs, and displays will spotlight the many satisfactions of reading. One of the aims of National Library Week is to remind the American people that reading can help them to explore and to satisfy their need for a greater sense of purpose and meaning in their lives.

During National Library Week, when we are considering the multiple rewards of knowledge and pleasure gained from reading, and when we are again directing our hopes and energies to the goal of a better read, better informed America, we must be forcibly reminded that millions of our citizens are still totally without library facilities, while millions of other Americans are in the position of having to make do with very little.

Estimates suggest that something like 46 million Americans are limited to inadequate library facilities; 25 million have none at all. If these Americans who have not yet experienced the benefits of the Library Services Act are overlooked the clarion calls of National Library Week will to them, indeed, have a hollow ring.

It seems, therefore, particularly appropriate at this time to call attention to, and ask support for, pending legislation to extend the Library Services Act.

Since the 84th Congress enacted the Library Services Act in 1956, over 800 rural communities, representing a population of over 11 million, have obtained new or somewhat more adequate library services. The work accomplished clearly indicates that the Federal allotments have stirred State and county governments to make efforts that they had not been able to manage alone. Congress has shown its growing understanding of the value of programs resulting from the Library Services Act by steadily increasing appropriations.

My bill, H.R. 11175, which I introduced in the House of Representatives on March 15, 1960, would amend the Library Services Act in order to extend for 5 years the authorization for Federal appropriations. It also proposes that the Federal share for any State shall be 100 percent minus the State share. The State share shall bear the same ratio to 50 percent as the per capita income of such State bears to the national per capita income. In no case shall the Federal share be more than 66 percent or less than 33 percent. For Puerto Rico, Guam, and the Virgin Islands, the Federal share shall be 66 percent.

Current proposals for legislation to extend the act may be supported on several grounds. Two reasons particularly convince me of the merits of extending the Library Services Act:

First, the goals originally envisioned when this legislation was passed remain unaccomplished to a substantial extent, due to the fact that earlier appropriations of Federal funds lagged considerably below the amount authorized by the act. Second, since the proof of the pudding is in the eating, accomplishments reported by the States have certainly given many of us a clearer appreciation of how worthwhile the supporting expenditures are in this fruitful partnership between Federal, State, and local resources.

In New York State, for example, Federal allotments, coupled with new State aid, are stimulating the greatest period of change and growth in rural public library development that my State has ever seen. The program has led to a notable expansion of field consultant services which has been very helpful in accelerating the development of cooperative library systems.

Between July 1958 and June 1959, 5 new cooperative library systems serving 13 counties were established. A bookmobile, purchased with Library Services Act funds, has been a great success. Demonstrated on the road and exhibited at county fairs, it has made many rural New Yorkers aware of its exciting possibilities.

Presently arrangements are being made to purchase two additional bookmobiles to be used in similar demonstration projects during the 1960 fiscal year.

Another interesting project has resulted in faster communication between four library systems and the New York State Library. Teletypewriter service is now being used to speed up the transmittal of requests for interlibrary loans, thereby cutting down on the time a borrower must wait for a specially requested book.

Other developments include a program that awards scholarships to college graduates interested in rural librarianship and also provides modest grants that help pay the expenses of librarians who visit and study another New York State rural system as an aid in planning improved library service in their own areas.

In addition, over 50 regional workshops have been held, with over half of them concentrated on reference and children's library work.

Problems of rural library size and distribution and problems of securing adequately trained librarians are the tough nuts that every State is trying to crack. In 1956 the American Library Association stated in its pamphlet called Public Library Service; A Guide to Evaluation, With Minimum Standards:

"Achieving standard library facilities presents special difficulties in small cities, scattered suburbs, towns, villages, and rural areas. Even with a substantial financial effort, the small locality is often not able to buy the books needed and to employ the requisite personnel. For these reasons the many smaller libraries in the country have usually not approached the range and standard specified in national standards."

Recent studies have indicated that for real efficiency and economy a library should serve a population grouping which consists of at least 100,000 persons. To manage this, will require the kind of imagination and ingenuity that lends itself to creative and skillfully worked-out innovations.

I am told that cooperative library systems which cut across county and township lines have great possibilities in many areas. In order to reap the gains of pooling rural library resources and personnel, the smaller units are looking for ways of organizing themselves together in constructive patterns that best serve their communities.

Bookmobiles; improved communications such as that furnished by teletypewriter; more rural librarians who are trained to meet the special challenges of their work—these are some of the steps that will carry us toward the goal of making it possible for any American, no matter where he lives in our country, to be, if he so desires, part of a better read, better informed America.

Enthusiasm for the results of the Library Services Act is dramatically tangible, in the reports of State library extension agencies, in the overwhelming response of librarians, and in the many letters which have requested an extension of the act.

The satisfaction of rural librarians and communities in better serving their public is unquestioned. A great start has been made. However, every person interested in better library facilities has a distinct consciousness of what must still be accomplished if we are to be credited with making more than a small dent in the problem. We must now decide upon a less than adequate program, or one that fulfills its finer possibilities. I very much hope that the answer will be in the affirmative.

Thank you.

No Vote at All

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial from the New Republic magazine of April 11, 1960:

NO VOTE AT ALL

The world's attention has been fixed on the exhausting congressional battle that is about to end for this year, over how to give substance to the Negroes' formal right of suffrage. But there are few lines of copy in any newspaper outside Washington, D.C., on the fight to restore suffrage to those who live in the Nation's Capital. District resi-

dents are not merely denied in practice what they are due in principle; they are forbidden by law to register a choice in any election.

Bills to restore home rule to the District have been introduced in each session and been bottled up by the House District Committee, which for a variety of reasons, not the least of them the growing Negro population in Washington, has not wanted to relinquish its control over the city's affairs. But this year self-government has got one foot well in the door; another shove might take it all the way. Home rule has been approved by the Senate, and a discharge petition in the House is now within 34 signatures of the needed number. If the bill reaches the House floor, it can probably be passed. The key is in the hands of the Republicans.

More than 80 percent of the nonsouthern Democrats and only 26 percent of the House Republicans have signed the petition. The Democrats believe they can ring in an additional 20 signers, including some Representatives who earlier signed the civil rights petition; for example, KING and SAUND of California; BREWSTER, of Maryland; GRIFFITHS and RABAUT, of Michigan; COAD, of Iowa; BREEDING, of Kansas; and DENTON, of Indiana. All the Republicans have to do is find 14 more of their party who will sign up—14 out of 112 who have not.

Another opportunity is given Mr. NIXON to add authenticity to his self-portrait as the man who gets things done. He, the President, and their party are all recorded in favor of home rule. But only 3 of California's 14 Republican Congressmen have signed the discharge petition. If the Vice President were to pick up the phone and call Minority Leader HALLECK, and follow this with a call on his fellow Californian and stanchest House supporter, BOB WILSON, more than the necessary 219 names would seen appear on the petition.

Golden Agers Day

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. DADDARIO. Mr. Speaker, Gov. Abraham Ribicoff, of Connecticut, has officially designated May 15, 1960, as "Golden Agers Day." Under leave to extend my remarks, I would like to call the attention of the House of Representatives to the observance of Golden Agers Day, and to include Governor Ribicoff's statement in the RECORD:

Golden age clubs, which are increasing in number and are expanding the scope of their activities, perform an important function in Connecticut. Local, State, and Federal Government agencies are working to make it possible for older people to live out the latter years of their lives in comfort, dignity and contentment, but Government alone cannot assume the entire responsibility for this, nor should it be expected to.

Golden age clubs are providing older people with opportunities for entertainment and companionship; are an example of citizen participation in Government's efforts to create and maintain a good social structure. These clubs make it possible for older citizens to do something for themselves, which is what older people want most of all.

In recognition of the worthwhile efforts of the golden age clubs, Sunday, May 15, 1960, has been designated as "Golden Agers Day."

I appreciate the opportunity to salute Connecticut golden age citizens on this observance, and to congratulate the golden age clubs for the good work they are doing.

Senator Monroe Sweetland, Oregon Education Man of the Year for 1960

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. PORTER. Mr. Speaker, for many years the Oregon Education Association has honored Oregon's Education Citizen of the Year. The education citizen is a noneducator. He is honored for his outstanding and continuous support of education.

Oregon's Education Citizen of 1960 has a long and splendid history. He is one of the persistent and effective fighters for better education. He is a man sensitive to human needs. I am privileged to bring to the attention of this House the outstanding work of my friend, State Senator Monroe Sweetland of Milwaukie, Oreg.

I have known Monroe Sweetland for many years. He is a humble man, yet a man with many talents. He works to preserve and improve our heritage. He has proven himself many times a valuable friend of public education.

SWEETLAND CHAIRMAN OF SENATE EDUCATION COMMITTEE

Monroe Sweetland was chairman of the State senate's education committee for the 1957 regular and special sessions of the legislature. He held the same post during the 1959 regular session. He sponsored and championed many needed programs in the State. Among them were the State scholarship commission, community college authorization, and the strengthening of the public employees retirement system for educators.

In private life Monroe publishes the Milwaukie Review, a weekly newspaper which had led the fight for better schools in his area.

Under leave to extend my remarks in the RECORD, I include a more detailed account of his accomplishments, along with editorial comment concerning his work on behalf of education.

I cite first the news release dated March 18, 1960, released by the Oregon Education Association, 1530 Southwest Taylor, Portland 5, Oreg. The release follows:

Monroe Sweetland, Milwaukie publisher, was cited Thursday night as Oregon's Education Citizen of the Year by the Oregon Education Association at their State convention banquet in Portland. Presentation was made by Dr. Rex Putnam, superintendent of public instruction.

Five hundred educators attended this banquet at the Benson Hotel honoring the seventh noneducator to receive this award for outstanding continuous support of public education. Those Oregon citizens previously honored were: Robert Holmes, Gearhart (1953); Mrs. Wilma Morrison, Portland (1954); George Huggins, Coos Bay (1955); Mrs. Paul Patterson, Hillsboro (1956); Mr. Gardner Knapp, Salem (1957); J. W. Forrester, Pendleton (1958); and Mrs. Lee Bishop, Eugene (1959).

Dr. Putnam cited Sweetland's education activities which have included chairmanship of the senate education committee for the 1957 regular and special sessions, and 1959 regular session; his sponsoring and championing such education programs as State scholarship commission, community college authorization, strengthening of the public employees' retirement system for educators.

Other activities of Monroe Sweetland, Putnam pointed out, included representing Oregon in 1957 and 1959 at the Western Inter-State Committee of Higher Education in San Francisco.

Of Sweetland's contribution to education in his own community, Putnam cited his constant availability as a speaker on school issues before PTA groups, college and public school classes, and other community groups. Special tribute was paid Sweetland for his efforts in behalf of education through his Milwaukie Review newspaper. "It is a common thing to find as many as a dozen items in a single issue featuring schools," according to Dr. Putnam.

L. G. Rood, Clackamas County school superintendent, said of Sweetland: "I can think of no one in the State who has devoted more time to the betterment of Oregon education or who has constantly given unbiased support to the students and the teachers of our educational institutions."

Arthur Kiesz, superintendent, Milwaukie public schools, praised Sweetland by stating: "I have been in education for 30 years and have had an opportunity to watch lay people who contribute to education. I have come to the conclusion that Senator Sweetland's contribution to education in Oregon is tremendous and something that cannot be measured and should not be overlooked."

Monroe Sweetland is State senator from Clackamas County. Publisher of the Milwaukie Review, he and Mrs. Sweetland have two children, Barbara, a student at Columbia University, and Rebecca, a first-grader.

Featured banquet speaker was Goodwin Knight, 31st Governor of California. Toastmistress was Mrs. Mildred Wirtz.

Monroe Sweetland's leading and effective role on behalf of better education in our State has been noted in a citation issued by the Oregon Education Association. It points out his educational accomplishments.

The citation follows:

CITATION OF MONROE SWEETLAND BY OREGON EDUCATION ASSOCIATION

Whereas good quality education is of key importance to the Nation and to its individual citizens; and

Whereas general public interest and the efforts of individual leaders are essential to substantial educational progress; and

Whereas the Oregon Education Association encourages such interest and support and wishes to express its deep appreciation to all persons outside professional education who so generously aid in the development of education; and

Whereas Monroe Sweetland, Milwaukie editor and member of the Oregon State Senate, is an outstanding lay leader who has, over the past several years, devoted much of his energies toward assuring a superior educational program for Oregon and his community; and

Whereas the said Monroe Sweetland's education efforts have been numerous and noteworthy and have included the chairmanship of senate education committees, representation of Oregon at the Western Inter-State Conference on Higher Education in 1959, membership on the American field service

committee to work with high school foreign exchanges; and

Whereas the said Monroe Sweetland's efforts have encompassed all levels of education—elementary, secondary, and collegiate, constructive school finance activities, attention to school curricular matters including new developments such as educational TV, and willingness to meet with and speak to citizen groups of all kinds concerning education: Now therefore

The Oregon Education Association is privileged and proud to designate and proclaim the said Monroe Sweetland as Oregon's "Education Citizen of the Year."

The journal of the Oregon Education Association, Oregon Education, edited by Richard Barss, described the State OEA convention and annual banquet in its April 1, 1960, edition. An excerpt follows:

Oregon educators with varied subject interests met in Portland March 17 to 19 for the 57th annual OEA convention to consider a common objective—how the teaching profession can best exercise its responsibility to provide better education.

Starting with a preconvention workshop on certification held Wednesday and concluding with a Saturday morning workshop on public relations, approximately 4,500 educators heard visiting speakers, viewed films and exhibits, and participated in a record number of group and departmental meetings.

A highlight was the OEA convention banquet at the Benson Hotel Thursday evening. Honored was Monroe Sweetland, of Milwaukie, who was named Education Citizen of the Year. He was cited for his work for educational progress in the State Senate and for editorial support through the columns of his newspaper, the Milwaukie Review.

MONROE SWEETLAND HONORED

The general convention banquet Thursday night attracted 469 persons. Rex Putnam, State superintendent of public instruction, presented the Education Citizen of the Year Award to Monroe Sweetland, who is the eigth recipient of the annual citation.

Newspapers in Oregon of varying political opinion have commended OEA's selection of Monroe Sweetland as Education Citizen of the Year and told of his championing of better schools for our children.

The Pendleton East Oregonian in its March 22, 1960, editorial stated:

Anybody who has followed Senator Sweetland's career in public life knows that he is one of the best informed men in Oregon on education.

The respect that Senator Sweetland has earned in all areas of education was shown last week when the Oregon Education Association named him Oregon Education Citizen of 1960. OEA could not have made a better choice.

The Oregon Statesman in Salem published by our distinguished former Governor, the Honorable Charles Sprague, commented March 19, 1960:

The Oregon Education Association picked Senator Monroe Sweetland, of Milwaukie, as Oregon Education Citizen of 1960. This was an honor worthily bestowed. Sweetland has been an aggressive leader in the drive to improve the schools. He has supported higher State school support and urged increases in salaries of teachers so their compensation is adequate to attract able youth into the profession and fairly adjusted to contemporary wage scales and to living costs.

The Oregon Voter, a citizenship journal of opinion, has recognized Monroe Sweetland's important contribution to education in Oregon by the following article which appeared in its columns of April 2, 1960:

State Senator Monroe Sweetland, Democrat, of Milwaukie, has again received an education honor. For Oregon Education Association he received at the hands of State superintendent of public instruction, Dr. Rex Putnam, the award that goes annually to a noneducator in recognition of that person's contribution to education. Senator Sweetland of course is editor and publisher of the Milwaukie Review and in the 1957–59 sessions the senate leader on the educational programs.

Senator Monroe Sweetland has been hailed by the Capitol Press of Salem, one of our State's largest weekly newspapers, as a person who gets results and takes a backseat to no one for all-round value to Oregon education. The Capitol Press' editorial follows:

EDUCATION CITIZEN

The Oregon Education Association's designation of Monroe Sweetland, of Milwaukie, as Oregon's Education Citizen of 1960 could not have been more appropriately placed.

Mr. Sweetland's contributions of time and energy in behalf of Oregon education over the years would almost in themselves justify the award to him.

But it is in getting results that Monroe Sweetland has stood out. Without setting aside his ideals on education's ultimate goals, he has painstakingly and skillfully guided legislatures and education boards through the step-by-step practical process of laying one block upon another toward better education for Oregon's people.

For all-round value to Oregon education, Monroe Sweetland takes a back seat to no one in the State's history.

State Senator Monroe Sweetland's work typifies the great efforts by many of our citizens throughout the country to advance the needs and welfare of our children who will be the citizens of tomorrow. It is for this reason that I felt his accomplishments should be called to the attention of the House of Representatives.

The People Can Bring About Tax Reform

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1960

Mr. ALGER. Mr. Speaker, among the complex problems confronting us today the fight to preserve our free competitive system is the most important. All the threats to our way of life do not come from abroad—we are contributing to the means of our own destruction in our careless attitude toward economics. We are stifling economic growth with unreasonable and killing taxes and we are not making the effort necessary to reduce spending so that taxes may be cut and the people allowed to keep more of their own money.

We now have an opportunity to do something concrete to bolster our economy, to add strength to our system, to build the greatest defense against communism by taking action on the measure introduced by our able calleagues, A.S. HERLONG and HOWARD BAKER, which has become known as the Herlong-Baker bill and which many of us have supported by introducing companion bills. In connection with this legislation I commend, for your study, the following article which appeared in last Sunday's edition of the American Weekly:

CAN YOU CHANGE THE TAX LAWS?—YES, SAYS THIS BUSINESSMAN—IF YOU GET YOUR CONGRESSMAN ON THE JOB

(By Thomas J. Fleming)

What is wrong with our present income-tax law?

"It makes saving difficult and is stifling individual incentive and national economic growth."

So says Rudolph Bannow, president of the National Association of Manufacturers, who is always quick to point out that he is not a big businessman. He is the president of Bridgeport Machines, a machine tool manufacturing company which he founded in 1929 with some savings and $3,000 of borrowed capital.

"As a mechanic," he says, "I was able to create products with my own hands and gradually build a business. If I have strong convictions about taxes, they're based on personal experience."

As president of the NAM, Mr. Bannow has been touring the Nation 2 weeks out of every 4, talking with businessmen, politicians, and economists. He has found nothing to alter his conviction that the present tax law is ill-advised and dangerous.

"I refuse to believe that tax cheating is as widespread as some people claim, but there is no doubt that when a man sees as much as 87 percent of his taxable income taken away from him by the Government, he is tempted to cut corners.

"Even more important, our exorbitant tax rate makes it almost impossible for people to save money. Since capital is the most essential ingredient for economic expansion and in our free enterprise system can only come from the savings of individuals and businesses, it is not surprising to find that our national growth has been seriously stunted.

"For the 60 years prior to the depression, our economy grew at an average rate of 4 percent a year. Since we have imposed the current tax law, growth has slowed down to less than 3 percent. When you are dealing with a gross national product of $480 billion, this means a loss of almost $5 billion a year."

Can we do anything about it?

"Yes. That is the tragedy. Too many people seem to accept taxes as something inevitable, like the weather. Witness the old saying, 'Nothing is certain but death and taxes.' But we made the present tax law, and we can change it. In fact, there is a bill before Congress at this very moment which would do the job beautifully."

What is it?

"Representatives A. S. HERLONG, JR., of Florida Democrat, and HOWARD H. BAKER, Tennessee, Republican, both members of the tax-writing House Ways and Means Committee, have introduced a bipartisan measure which is the soundest and most realistic program for comprehensive tax-rate reform which has ever been presented to Congress.

"Rates would be reduced in annual stages over a period of 5 years, and every individual taxpayer would benefit from a tax cut of at least 25 percent. Rates on individuals in the lowest brackets would be reduced from 20 to 15 percent. Our top earners, faced with a destructive 87 percent, would be reduced to 47 percent of taxable

income, and there would be corresponding reductions in all the interim rates. Corporate taxes would be reduced from the present top of 52 percent to 47 percent."

Could we do this without putting the national budget into the red?

"Yes. Because the bill has a unique, built-in safeguard against deficit spending. There is a provision that permits postponement of the reductions in any year in which we are threatened with an unbalanced budget.

"But the biggest reason why I am convinced that we would have no budget trouble is this: the money saved by the taxpayers would flow out into our economy and help the Nation grow at a rate which would more than make up for the loss of funds to the Government.

"Every percentage point gain in growth brings in a billion dollars or more in added Federal revenue. Thus a gain of 3½ percent—only a half percent over the present growth rate—would meet the $3.5 billion cost of the legislation. There is, in fact, every assurance that, with tax brakes removed, the economy would grow at a 4 or 5 percent rate, possibly even higher.

"Moreover, the Herlong-Baker bill would be sure to act as a restraint on wild Government spending because neither the executive branch nor Congress would be inclined to press for expenditures that would cause postponement, at the 11th hour, of reductions anticipated by taxpayers.

"For the first time taxpayers would be able to see, in dollars and cents, what Government spending was costing them. But this should be only a bonus—an added inducement to pass legislation which will enable our Nation to reach the full realization of its vast potentialities for growth."

Unification of Supplies

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. CURTIS. Mr. Speaker, for the past 10 years I have been actively interested in reducing waste in common supply and service activities in the Defense agencies. I was on the so-called Bonner committee for 2 years and we made extensive investigations and reports and I can say unhesitatingly that every member of that subcommittee was of the opinion that billions of dollars could be saved if we had proper unification of the supply and service activities in the Department of Defense.

As a result of the work of the Bonner committee a bill was introduced which would have established a supply corps for the DOD. The supply corps would have been similar to the one which it was found necessary to create to integrate common activities in the several bureaus of the Navy by the establishment of the Bureau of Supplies and Accounts.

While the bill sponsored by the Bonner committee was never enacted it did stimulate sufficient action in the Senate so that the so-called O'Mahoney amendment was enacted as a rider to the Defense appropriations bill for 1953. In essence, the O'Mahoney amendment required the Secretary of Defense to issue regulations designed to bring about an integrated supply system for the DOD. In the fall of 1952 Secretary Lovett issued regulation 4000.8 which was intended to carry out the O'Mahoney amendment. Considerable progress was made at that time toward achieving economy and efficiency in the military supply activities and of particular importance was the establishment of an integrated medical supply distribution system under the Army at Alameda, Calif. This successfully demonstrated that one service could buy, store, and distribute medical supplies for all services.

I am unhappy to relate that with the advent of the new administration the idea of an integrated supply system was abandoned and the concept of three departments separately administered was advocated and pressed by Secretaries Wilson, Keyes, Thomas, Pike Lanphier, and so forth.

The single managership for medical supply was abandoned in November 1954 and it was not until a storm of protest developed as a result of the Hamburger hearings, the Hoover Commission reports, protests from the Bonner committee members and others that Secretary Wilson belatedly in 1955 began a single managership program first for subsistence and a few months later in 1956 for clothing and textiles, petroleum products, and medical supplies and equipment. The medical single managership was reinstated this time by parceling it out to the Navy which had scuttled the 1954 effort.

After 1956 no additional single managerships were established until the gentleman from Massachusetts [Mr. McCormack] with my assistance and the assistance of other Members, secured the passage of what is known as the McCormack-Curtis amendment to the DOD Reorganization Act of 1958. This important piece of legislation gives the Secretary of Defense undisputed authority to manage supply and service activities in such a way as to best achieve economy, efficiency, and effectiveness. The McCormack-Curtis amendment is much broader than the O'Mahoney amendment in that service activities are included in addition to supply activities. Little progress was achieved by the DOD under the McCormack-Curtis amendment until the Chairman of the Joint Economic Committee established a special subcommittee on Defense Procurement to consider the impact of military supply and service activities upon the national economy. The announcement of these hearings had a remarkable effect in producing results in the Pentagon, and single managerships have now been established for hand tools and housekeeping supplies assigned to the Army; and hardware, paint, and related items assigned to the Navy. Announcements are expected momentarily of assignment of automotive equipment and construction equipment.

Studies are also being made as to the assignment of 990,000 electronic electrical items. It is my understanding from articles I have seen in the papers and from other information that the usual struggle is developing as to which service will receive this single managership since great stakes are involved. I have taken the liberty to address a letter to the Secretary of Defense whom I consider to be an excellent Secretary and have admonished him to use the greatest care in the assignment of these 990,000 items which comprise a fairly large percentage of the Defense procurement budget. My letter to Secretary Gates follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 11, 1960.

Hon. THOMAS S. GATES, Jr.,
Secretary of Defense,
Washington, D.C.

DEAR MR. SECRETARY: On January 28, 29, and 30, 1960, the Special Subcommittee on Defense Procurement of the Joint Economic Committee held hearings on the impact of defense procurement on the economy.

One of the most interesting aspects of the hearings was the report made by the Office of the Assistant Secretary of Defense (S. & L.), Hon. Perkins McGuire, on "Management of General Supplies." We discussed this excellent report in considerable detail, and I was particularly impressed by the fact that a very important decision must soon be made as to the manner in which the 990,000 electronic electrical items, which I understand take a large percentage of the procurement dollar, will be managed.

I have been interested in improvement of military supply management since I have been in Congress. As you know, the McCormack-Curtis amendment (sec. 3(a)(6), P.L. 85–599) gives you great authority in deciding the manner in which common supplies and services will be handled in the Department of Defense. I am sure that you are also aware that the Congress did not desire that the Department of the Air Force duplicate supply and service functions of the Army where the Air Force had received its support. The Eisenhower-Spaatz agreements were intended to implement this congressional intent.

Still later in 1952 the O'Mahoney amendment was designed to provide beyond any doubt an integrated supply system for the Department of Defense.

The history of the road to the development of the single manager systems since the Draper-Strauss reports were first made in 1944, has been disgraceful to say the least. I have often expressed the idea that there has been a systematic parceling of common supply and service activities in order to keep each service relatively happy and in business. This parceling out system which necessitates the continuation of three or more sets of existing facilities rather than their integration, results in the "giantism" which we all deplore. I, for one, am confident that the proper integration of these common supply and service functions will result in a much smaller overall organizational arrangement than we now have in the multiple systems which place such a heavy drain upon our resources and our taxes. It will also be much more effective, efficient, and economical.

My reason for writing to you at this time, therefore, is to urge that most careful topside consideration be given to the assignment of the single manager for the 990,000 electronic electrical items. These items utilize a considerable part of the expenditure budget each year and are, of course, vitally important to weapons development and practically every other activity in each of the armed services.

I am most hopeful that the decision you reach in this matter will be consistent with the intent of the National Security Act, the Eisenhower-Spaatz agreements, the O'Mahoney amendment, and the McCormack-Curtis amendment.

This matter is of such importance to me that I am sending copies of this letter to the Director of the Bureau of the Budget, the Chairman of the Council of Economic Advisers to the President, Chairman DOUGLAS and members of the Special Subcommittee on Defense Procurement of the Joint Economic Committee, Congressman MCCORMACK, majority leader of the House of Representatives, and others who have joined with me in highlighting this matter in the last few years. It is also my plan to place the letter in the CONGRESSIONAL RECORD with appropriate remarks.

May I hear from you personally on this matter?

Sincerely,

THOMAS B. CURTIS.

Agricultural Chemicals—Helps and Dangers

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 13, 1960

Mr. WOLF. Mr. Speaker, I would like to insert into the Appendix of the RECORD an editorial from the April 1960 issue of Successful Farming, urging that farmers point out to the Congress that chemicals have become one of our most important production tools.

Just week before last I introduced a bill entitled the "Chemical Pesticides Coordination Act," to provide for advance consultation with the Fish and Wildlife Service and with State wildlife agencies before the beginning of any Federal program involving the use of pesticides or other chemicals designed for mass biological controls. I realize fully the vital role which agricultural chemicals play in America's crop production, and agree that we must protect the strides which we have made in this direction while at the same time we intensify our efforts to insure that chemicals, pesticides, and rodenticides which, after thorough research and investigation, it is determined are necessary to use are used in such a way that human health and wildlife resources are not adversely affected.

The editorial follows:

ACROSS THE EDITOR'S DESK

(By Dick Hanson)

Every farmer and farm organization should be watching with a great deal of concern, the development of farm legislation in Washington. This is a critical time in agriculture's basic needs and although we may not get much legislative change this year, the groundwork for the future is being laid. Once the groundwork is laid, change becomes more difficult.

One area in which we probably will get some changes is in the laws governing the use of agricultural chemicals. Ever since the "cranberry incident," a great many cooks have been stirring the chemical broth. The much-discussed Delaney amendment governing the use of agricultural chemicals obviously needs to be changed and improved upon.

There is a great deal at stake in this business of controlling the use of agricultural chemicals. First, no one will argue with the necessity of safeguarding the public's health. This is a basic need which can be satisfied by the enforcement of intelligent laws. Second, users of agricultural chemicals must be protected against using chemicals which may result in direct loss of crops and livestock or loss when products are marketed.

The third area which must be considered is one which has not received a great deal of discussion. Yet, it is vitally important to every farmer in this country. Agricultural chemicals are production tools. They are as vital to your chances of making a profit as good seed, modern machinery, or good land.

We have been going through a period in which the obvious means of increasing profit from farming have slowly disappeared, because of legislation and/or because of basic changes in agriculture. Many farmers have seen their allowable acres of certain crops grow smaller each year. Almost every farmer is aware of the fact that his share of the consumer's dollar grows smaller each year. And, there are many other factors today which govern how you profit from farming.

For most individual farmers, the answer to maintaining a profit from farming has been to become more efficient. And there is no doubt that the majority of you are efficient. One of your most important efficiency tools has been the increased use of agricultural chemicals. It would be difficult to imagine farming today without the use of chemicals for the control of weeds, insects, increased weight gains in livestock, and improved soil fertility. We have come to the point where we take the use of chemicals for granted. This could be disastrous.

We need to point out to our legislators that chemicals have become one of our most important production tools. We cannot afford to lose them. If a chemical is injurious to the public's health, of course, its use should be controlled. But, let's not let one rotten apple spoil the whole barrel. It could happen unless we get intelligent, workable laws pertaining to the manufacture and use of all types of farm chemicals.

It is our duty to make sure our legislators know the importance to us of farm chemicals. It is the legislator's duty to enact laws which are workable and practical for all concerned. Now is the time to let your legislative representatives in Washington know your feelings on this important subject. We rarely get what we want and need without asking for it—and we want and need the use of good agricultural chemicals. We can't afford to lose another production tool.

Need for Expanded Research in Forestry

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. WOLF. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of my fellow Congressmen the following letter I received urging my support of the request made for the research work carried on by the agricultural experiment stations:

IOWA STATE UNIVERSITY,
OF SCIENCE AND TECHNOLOGY,
Ames, Iowa, April 4, 1960.

Hon. LEONARD G. WOLF,
Congressman for Iowa, Second District,
House Office Building, Washington, D.C.

DEAR MR. WOLF: I am writing this letter to urge your support of the request made by the legislative subcommittee of the experiment station committee on organization and policy (ESCOP) for an increase of $14 million to support the research work carried on by the State agricultural experiment stations. While I am interested especially in additional funds for forestry research I am in full agreement with the request for funds for other areas.

With this letter are three inclosures which I hope you will find informative and helpful in studying this request. These are: (1) The proposed use of these Federal-grant funds, (2) the need for expanded research in forestry and reasons why the agricultural experiment stations are exceptionally well qualified to conduct forestry research, and (3) a rather lengthy statement regarding forestry research at the agricultural experiment stations.

The State of Iowa has a considerable area which is producing little of economic value at the present time. This includes something over 3 million acres of poor-quality forest land as well as close to a million acres (estimated) of submarginal land which is practically waste. We can scarcely afford to permit such a large area to continue in a nonproductive state. Research is needed to show what products can be made of the low-quality timber presently on the land, to demonstrate which tree species are best suited and how we can cash returns on such lands at an early date.

Iowa's forest and submarginal land can provide jobs for Iowa people. It is a segment of our land economy which we can no longer afford to neglect. The additional funds requested by ESCOP will help Iowa's research in forestry and other areas. We solicit your support.

Very sincerely yours,

GEORGE B. HARTMAN,
Head, Department of Forestry.

Proposed use of requested increase in Federal-grant funds in the fiscal year ending June 30, 1961

	$14,000,000	
	Dollars	Percentage
Marketing and utilization	$1,542,000	15.3
Forestry	3,346,000	33.2
Soil and water use and conservation	3,256,000	32.3
Livestock and poultry	474,000	4.7

STATEMENT ON NEED FOR EXPANDED RESEARCH IN FORESTRY, REASONS WHY AGRICULTURAL EXPERIMENT STATIONS ARE ESPECIALLY WELL QUALIFIED TO CONDUCT FORESTRY RESEARCH, AND PROPOSED USE OF REQUESTED FEDERAL-GRANT FUNDS IN FISCAL YEAR ENDING JUNE 30, 1961

1. A greatly expanded program of research in forestry and related fields is needed at once to meet the increased demand on our forests in the future for wood, forage, water, wildlife, and recreation. The demand for wood in the year 2000 is expected to be 83 percent greater than it was in 1952.

2. The two major public agencies now conducting such research—the U.S Forest Service and the agricultural experiment stations—should be adequately supported to share in this expanded effort.

3. The agricultural experiment stations within the framework of the land-grant institutions already have excellent libraries, unique and often expensive laboratory equipment, and outstanding scientists who can cooperate with forest scientists which provide the basis for developing strong programs in basic research.

4. The close association of the Agricultural Extension Service with the experiment stations assures that the results of research are placed quickly in the hands of the users—the landowners and the wood-using industry owners.

5. The graduate programs of the forestry schools associated with the agricultural experiment stations are the lifeblood of research personnel needed by all agencies engaged in forest research. Stronger research programs at these institutions mean better qualified research personnel in the future.

6. The proposed use to be made of the $14 million increase in Federal grants which is being requested is shown in the table which is also enclosed.

FORESTRY RESEARCH IN THE AGRICULTURAL EXPERIMENT STATIONS

"Timber Resources for America's Future," published by the U.S. Forest Service in 1959 predicts a demand for wood in the year 2000 which will be 83 percent greater than in 1952. Forest lands will have to meet similar increased demands for water, forage crops, wildlife, and recreation. These increased demands will have to be met in the face of a constant attrition of forest lands by (1) urban and surburban expansion; (2) construction of dams, highways, and transmission lines; and (3) withdrawal of forest lands from production in response to recreation pressures. Consequently, forest land must produce at a much higher rate and wood must be utilized more completely in the future, if the Nation's future need for wood is to be achieved. A much greater research effort is needed promptly by all agencies to provide the information needed to achieve these goals. The agricultural experiment stations should play an increasingly important role in this expanded effort.

The progress of forestry on privately owned land is retarded by incomplete knowledge of the methods for rehabilitating forest lands and of the economic feasibility of the methods that have been prescribed. We need to be able to produce better quality timber faster. The hope for accomplishing this lies in the field of genetics, a field of research which received little attention in forestry until about 10 years ago. It is believed that many of the forest insect and disease problems and improvement in wood quality can be solved through tree breeding.

The forests of the future will be manmade, either through management practices that will result in natural regeneraion or through planting of seed or nursery-grown trees. How these can be accomplished most effectively is not fully known. What the costs of and returns from these operations will be must still be determined. We have little experience upon which to draw because the virgin forests with which we have dealt in the past presented no such problems.

Although man has used wood for many purposes for centuries, information about wood properties is very incomplete. This is not surprising because wood is a very complex organic compound. Furthermore, wood is not a material of uniform physical and chemical characteristics. The wood of each of the more than 100 commercially valuable species has its own unique properties. To produce the maximum number of useful high-quality products from wood, much more must be known about the properties of each species.

With the rapidly increasing use of forest land for recreation, new problems are arising constantly. With virtually no research in progress in forest recreation, little is known about the effects of different intensities of recreational use on the forest resource, nor about the types of recreation uses best suited to different types of forest land.

Industrial development is already being handicapped in some areas because of inadequate water resource. Forested watersheds must be properly managed to conserve water and to minimize damage to land and streams through erosion, stream siltation, flooding of lowlands, and pollution of streams. Through research we must learn the interrelations and the integrated management of watershed resources to get the maximum economic product of vegetation, water, and recreation.

The few foregoing examples are used to illustrate the diversity and complexity of the problems which confront the forester in meeting the needs of the Nation for more wood, forage, wildlife, water, and recreation from forest lands. These examples would have to be multiplied many times to give a complete picture of the situation.

In spite of its unique facilities for conducting research in the diverse and complex fields of forestry and related areas of wildland management and wood technology and products, the agricultural experiment stations' forestry personnel and facilities have not been adequately supported financially to utilize their full potential. In the fiscal year 1959, $1.8 million or 1.3 percent of the agricultural experiment stations' budget of $140 million, 77 percent of which was non-Federal funds, was devoted to forestry research. Yet forestry research at the agricultural experiment stations should be contributing to the solution of the problems of the small timberland owner in the same ways that they have contributed to the solutions of the farmers' problems. Smallness is typical of forest landownership—55 percent of the Nation's commercial forest is in the hands of small owners, and one-third of all commercial forests is in 3.4 million farm ownerships, averaging 49 acres. By every measurement, productivity is poorest on these small ownerships—yet here lies our greatest dependence for future wood supplies. Neither these small forest landowners nor the small wood-using industries have resources or facilities to conduct the research which is required to develop the full potential of these lands.

Research foresters at the agricultural experiment stations have unique advantages not aavailable to many research foresters. These include opportunities for consultation with and even cooperation with workers in agronomy, soil science, genetics, agricultural engineering, entomology, botany, chemistry, physics, statistics, agricultural economics, and others. Expensive laboratory equipment such as nuclear reactors, radiocarbon laboratories, electron microscopes, controlled environment growth chambers, computing centers, and other facilities are available to give maximum efficiency to their work. Library facilities at the land-grant universities are also excellent.

The aforementioned facilities give research foresters at the agricultural experiment stations many advantages in conducting basic research—an area that has been badly neglected in forestry and related fields. If forestry research is to be most productive, an increasingly greater proportion of the research will have to be basic research.

The close association of the Agricultural Extension Service with the agricultural experiment stations assures that the results of research will reach the landowners and managers with a minimum of delay. Improved practices on the land and in the plants of the wood-using industries must come through the channeling of research information by the extension specialists to the county extension agents, and eventually to the landowner or wood-using industry plant manager.

The forestry schools at the land-grant universities must carry, to a large degree, the responsibility for training the forest research workers needed by all research agencies—Federal, State, and private. If forest research is to advance with need, more researchers trained more deeply in basic fields will be essential. Strong research programs are essential to the training of research personnel. The training of additional research workers is especially significant in the light of the long-range program for national forests which was presented to Congress in 1959. The program calls for an increase in Forest Service research of more than four times the current level during the next decade. If this is to materialize, stepped-up production of research workers is imperative.

World Legal Order

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 7, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following review by Dr. Quincy Wright of the University of Virginia which discusses Dr. Wallace McClure's new book "World Legal Order, Possible Contributions by the People of the United States." Reviewer Wright is a former president of the American Political Science Association. His review will appear in the American Political Science Review in the near future.

The review follows:

AMERICAN POLITICAL SCIENCE REVIEW—WORLD LEGAL ORDER, POSSIBLE CONTRIBUTIONS BY THE PEOPLE OF THE UNITED STATES

(By Wallace McClure, Chapel Hill, University of North Carolina Press, 1960)

In this well printed and well documented book, Dr. McClure, speaking from long service in the Department of State and present service with the World Rule of Law Center at Duke University, considers how the world legal order can be strengthened. He assumes it to be "inherent in the concept of law" that the rules of international law are "superior to and, in case of conflict, overrule legal norms of national origin or merely national applicability." The whole, he thinks, must be superior to the parts but this conclusion "is denied de facto and even de jure." Seldom have national courts enforced international law when in conflict with a clear rule of national law. "Thus power superseded in National Government, overrides the logic of human law" (p. vii).

Perhaps in his universal condemnation "of the inferiority of the law of a larger group to that of a smaller group within it," Dr. McClure goes too far. Self-determining colonies, including the United States and the Dominions, have not been willing to accept the dominance of imperial law over the law of the included nations, and federations recognize that the law of the whole cannot override the laws of the component parts within the reserved domains of the latter. There can be too much as well as too little centralization of law. Local self-government and national autonomy are valuable if not pushed too far. These observations, however, hardly apply to international law because its rules are binding only inso-

far as states have directly or indirectly consented to them. There is, therefore, no danger that international law will unduly encroach upon the sovereignty of states, and Dr. McClure properly emphasizes the opposite danger that states will not abide by the rules of the larger community, to which they have consented, expressly by treaty, tacitly by custom, or presumptively by deduction from the general principles of law recognized by civilized nations.

Dr. McClure is, therefore, on solid ground when he suggests that in the interdependent world of today the disposition of national courts to put national statutes ahead of international obligations is "ominous." He might, however, have emphasized that universal acceptance of the compulsory jurisdiction of the World Court would, in some measure remedy this situation. That Court necessarily applies international law, consequently, if foreign litigants can regularly induce their governments to initiate action in the World Court against any state whose courts have neglected international law, such a state would be likely to require its courts to give priority to international law in the future.

The book is divided into three parts, the first of which deals with the relation of treaties to statute law in the United States. While, under the supremacy clause, treaties override State constitutions and statutes, the Supreme Court has held that treaties and acts of Congress are on a parity and that the most recent expression of the national will must be applied. He examines the cases of historical sequence, demonstrating that the logical superiority of treaties was given some support in the early period, but, with the prevailing isolationism of American opinion in the later 19th century, the doctrine of equality was so firmly established that it has been difficult to shake it in the more recent period of enlarged international responsibility. The Court has, however, generally applied a treaty when it has been convinced that the Congress did not intend a later conflicting statute to nullify it. However, the "wordy and noisy movement" initiated by Senator Bricker threatened to eliminate the legal character of treaties in the domestic forum altogether. In McClure's opinion the considerable support for this movement "signified a need for the people of the United States to about face and get in step with their progressive fellow peoples" (p. 203) some of whom were amending their constitutions to assure respect for treaties in domestic law. Assurance of the "higher level of treaties over statutes," he considers, "the first contribution" the American people could make "toward strengthening the world legal order" (p. 134).

In the second part of the book the author discusses the utilization of customary international law by American courts and finds that such utilization is common but it is subordinated to other sources of national law, particularly, to statutes. He observes that "when the supremacy of treaties over statutes is accepted, acceptance of the supremacy of the whole of the law of nations over the whole of the national law would seem to follow as of course" (p. 208).

In the third section of the book attention is given to the legal structure of the world community with special emphasis on the prevention of aggression, "the great crime against international law," and the extension of the jurisdiction of the International Court of Justice. With reference to the first, the activity of the Nuremberg and other war crimes tribunals is reviewed, and also the action of the Security Council in the Korean and other "collective security" operations, with the conclusion that they contributed to "the world legal order" (pp. 230, 247). With reference to the World Court's jurisdiction, the author criticizes the self-judging (Connally) reservation made by the United States in accepting compulsory jurisdiction and hopes for its repeal (pp. 272–274). He also discusses the Interhandel case in which he considers the Department of State's "rationalization" as "the very tissue of reactionism" (p. 281), and hopes that further statements by the President, favoring "a genuine rule of law among nations," may force a salutary "reaction to reactionism" (pp. 281–282).

The author discusses other situations in which the United States has put what it deems immediate interest ahead of allegiance to international law, and suggests specific steps to avoid such action in the future. In the nuclear age a sound appraisal of national interest, he thinks, requires a strengthening of the international legal order, though he appreciates the importance of negotiation, conciliation, and cultural exchanges to provide an atmosphere in which law can flourish. He has "hope and faith that civilized men will see that civilization is safeguarded" and, paraphrasing Woodrow Wilson, declares that "the world must be made safe for law-sovereignty" (p. 326).

The volume is valuable both as a guide to practical thinking about American jurisprudence and foreign policy in the increasingly interdependent world, and as an up-to-date analysis of American precedents on the relations of national to international law. While not always easy reading, it ought to be widely read, particularly by lawyers interested in the efforts of the American Bar Association to promote the world rule of law.

QUINCY WRIGHT.

UNIVERSITY OF VIRGINIA.

Ground-Breaking Ceremony for New Federal Courthouse and Office Building in Brooklyn Civic Center

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. CELLER. Mr. Speaker, I am pleased to insert in the RECORD the remarks of my esteemed friend and Brooklyn's borough president, John Cashmore, at the ground-breaking ceremonies for the new Federal courthouse and office building in Brooklyn Civic Center, Monday, March 28, 1960. John and I entered politics together and assumed a public station 38 years ago—he as an alderman, I as Congressman. John has risen to great heights over the years by dint of honest endeavor, hard work and practical wisdom. His remarks follow:

Mr. Chairman, distinguished guests, ladies and gentlemen, each time that we have taken a step to advance the development of the civic center it has given me new encouragement, new purpose, and new incentive, to push this tremendous project to completion.

Today, we break ground for the new Federal courthouse and office building, I think we have genuine cause for satisfaction because, from where we stand, we can see that our dream of 20 years ago is now close to reality.

In these last 20 years, the obstacles to progress sometimes seemed insurmountable. We had to raise $200 million in public and private funds. We had to relocate families by the hundreds. We had to stop the project to fight a war. Then we had to hunt for materials that were in desperately short supply.

Despite all the obstacles and all the heartaches, we pushed on. Today, the Brooklyn Civic Center is now described as the greatest example of urban renewal in America.

To me, it seems highly appropriate that the U.S. Government should be represented, and well represented, in our great civic center. I have seen the model of the Federal courthouse that will stand here, and I am delighted to say that it will be an added source of beauty to our civic center, with a dignity worthy of American justice, which it represents.

Let me say right here, that we can thank the alert and vigorous congressional delegation of Brooklyn for making this day possible. Early in 1958, when the Federal Government announced that it would advance a number of construction projects, I communicated with each of our Congressmen, and both our U.S. Senators, asking that the U.S. courthouse and office building be placed under construction. I can tell you that every one of our Congressmen was on the job, and nearly $16 million was appropriated for this project.

Only a month ago, our Congressmen again came to our rescue. When the General Services Administration was about to award a contract for the construction of this building, we found that it could be constructed with marble facing for an added expenditure of $130,000. From an examination of the public buildings in this area we noticed that marble resists industrial smoke and grime better than any other building material.

We also noticed that buildings with marble facing require less cleaning and maintenance. Again, I wired to our Congressmen for help, and within 48 hours, they sent back the good news that this courthouse will be a beautiful marble edifice.

In the name of the people of Brooklyn I salute our congressional delegation and I want them to know that their efforts are appreciated.

We have now reached the point where we can honestly say that government, and especially the government of the city of New York, has done its share in the redevelopment of the Brooklyn Civic Center.

If the private enterprise will continue to invest in the commercial and residential redevelopment of the area, our Brooklyn Civic Center will undoubtedly be a model for imitation by all the great cities of America.

A Shameful Blot on Society

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. MULTER. Mr. Speaker, in connection with my bill, H.R. 870, to abolish capital punishment, I commend to the attention of our colleagues the following editorial which appeared in the United Synagogue Review, spring 1960 issue. The Review is published by the United Synagogue of America, the national organization of Conservative Judaism:

A SHAMEFUL BLOT ON SOCIETY

During the recent debate in the California State Legislature on the abolition of capital punishment, perhaps the most significant testimony came from a gentleman who spent 22 years as an official of San Quentin Prison, 11½ years as warden.

Clinton P. Duffy, who officiated at or was party to at least 150 executions in his State, said he was convinced that capital punishment was no deterrent to crime. "I've asked every man on death row during my years at San Quentin whether he thought of the death penalty before committing his crime and I have yet to hear the first man say he had," Mr. Duffy declared.

It is saddening to think that in this 20th century, the penal system of California and of so many of our other States and provinces in the United States and Canada is still burdened with the vestige of a primitive age in which justice was governed by the passion for revenge.

We firmly believe that the overwhelming majority of our citizenry regards capital punishment as barbaric and repugnant to their noblest instincts. It is our prayer that before long our lawmakers too will recognize the need to remove this shameful blot from our society.

African Freedom

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1960

Mr. BOLAND. Mr. Speaker, I should like to call the attention of the House to African Freedom Day. The observance this year is full of meaning as Africans are moving, and moving fast, toward freedom.

It is remarkable that but 2 years ago, Ghana was the single sub-Sahara African country to have achieved its independence. Africa had moved more slowly toward freedom and independence than any other major area in the world. The past 2 years have brought a virtual explosion in the drive toward freedom and independence. The greater part of the African countries are now just independent or on the very verge of independence. Two years from now, one can confidently predict Africa will be a continent of free nations with few, if any remaining colonies.

Major and sweeping changes are taking place across the face of Africa. The United States is fortunate in that our ideals are widely known and respected in Africa. Many Africans look to us for leadership on the path to freedom with confidence that it will be forthcoming. This confidence must not be disappointed.

I direct the attention of the House to an excellent editorial on African problems appearing in the New York Times of April 13, 1960:

AFRICAN FREEDOM

The observance of Africa Freedom Day comes at an electric moment in the spectacular evolution of a once-dark continent toward the sunlight of human dignity and independence.

From the Sahara to the Zambezi, from Dakar to Mombasa, the world is witnessing as astonishingly rapid and on the whole as bloodless a transference of power from the governors to the governed over a continental area as it has ever seen. It is true that to the north of tropical Africa—in Algeria—there is savage war, and to the south—in the Union—there looms the threat of eventual racial conflict even more savage than war; but in the great body of this huge land mass the mills of the gods are grinding faster and more peaceably than seemed possible only a few short months ago.

At the rally at town hall tonight marking Africa Freedom Day two of the most prominent leaders from one of the most troubled of the central African States, the Federation of Rhodesia and Nyasaland, will speak: Dr. Hastings K. Banda of Nyasaland, released from jail just 2 weeks ago, and Kenneth Kaunda of Northern Rhodesia, also recently released from prison. It is a hallmark of native African leaders to have served their term in jail for their nationalist views; but it is also a sign of the times that most of them have been released under the irrestible pressures that are churning the political life of Africa into new and perhaps ultimately unrecognizable forms.

When the first informal organization of independent African States was formed at Accra in April 1958, there were altogether only eight such countries (excluding the Union), and all but two of them—Liberia and Ghana—were strung along the northern and northeastern fringes of the continent from Morocco to Ethiopia. Since then, one—Guinea—has been added; but the amazing fact is that during the 12 months of 1960 at least 7 former colonial States will have achieved their independence: the former Italian colony of Somalia; the former Belgian colony of Congo; the former French colonies or trusteeships of Mali (Senegal and Sudan), Madagascar, Togoland, and Cameroons; and the largest (in population) of them all, the former British colony of Nigeria.

The incredible march of these states to independence does not, of course, mean that they will simultaneously achieve real freedom, for real freedom can come only with far greater political, economic, and cultural development than they have yet achieved. And this is precisely where our own country can and must help them: not only with money but with moral and spiritual support, given freely without ulterior motive and without political ties. We are at this moment standing at the crossroads of our relationship with the peoples of Africa. We can turn toward them, for their good and ours, giving them of the benefits of our own civilization, knowledge, and techniques; or we can turn our back on them, thus losing forever our only chance for friendship of 200 million people who would like to be our friends without political strings or political domination.

Disclaimer Affidavit in the National Defense Education Act

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1960

Mrs. GREEN of Oregon. Mr. Speaker, the controversy over the disclaimer affidavit in the National Defense Education Act continues. This incorrectly named "loyalty oath" has stirred up a vast amount of opposition among students, faculty members, and college presidents. The first oath—the true loyalty oath in the same act—the positive oath of allegiance, has generally speaking not been attacked and there is no serious demand in the academic world for its removal. This is a point which cannot be overemphasized, and it is a point on which there has been much confusion. The scholars and students of the country do, with ever-increasing articulateness, want the second oath, the negative disclaimer affidavit repealed, and I hope that we can get action on that bill in this Congress.

In this connection, I thought it would be appropriate if a few of the very fine statements by college presidents, AAUP chapters, and other college-connected groups, and individuals, appeared in the RECORD. One of the most persuasive statements on this subject was the resolution recently adopted by the faculty of the University of Oregon. This resolution arrived with a letter of transmittal by O. Meredith Wilson, the distinguished president of that university:

UNIVERSITY OF OREGON,
Eugene, April 9, 1960.

Hon. EDITH GREEN,
House of Representatives,
Washington, D.C.

DEAR MRS. GREEN: With this letter I am transmitting a resolution passed by the University of Oregon faculty. I should note that there were those of the faculty who wished a much stronger statement.

In my experience in this and several other institutions, I have never seen an academic faculty discuss any issue with greater care or with greater concern. I believe I would not exaggerate if I were to say that the entire faculty regrets deeply the inclusion of a requirement of an affidavit of disbelief in this or any other Federal legislation relating to educational aid. Only great respect for the intentions of the Congress and a clear recognition of our country's needs have counterbalanced their distaste for the offending requirement.

If the members of the faculty thought that the inclusion of the affidavit of disbelief as a requirement for participating in the National Defense Education Act were to become a precedent for a similar inclusion in future enactments intended to support education, they would have voted not to participate in the present act. They have such respect for the U.S. Congress that they are persuaded that this requirement will not be included in future acts, and remain confident that the Congress will yet remove the offending section from the existing acts. I urge you as a U.S. Representative to use all your influence to see that the requirement of this affidavit is removed from existing acts and is excluded from any future legislation relating to education.

I am pleased to record this faith and confidence that our faculty has in the ultimate wisdom of our legislators and public officers. I shall be deeply grateful for all you may do to justify their confidence.

Sincerely yours,
O. MEREDITH WILSON,
President.

A MEMORIAL ADOPTED BY THE UNIVERSITY OF OREGON FACULTY, MARCH 16, 1960

The faculty of the University of Oregon expresses to the president of the university its grave concern that certain recipients of funds under the National Defense Education Act of 1958 and the fellowship programs of the National Science Foundation, the National Institutes of Health, and other Federal agencies are required to file an affidavit of disbelief repugnant alike to the principles of American citizenship and to the traditions of the University of Oregon. The affidavit of disbelief serves no useful purpose. It violates the settled doctrine of American jurisprudence that an American citizen is presumed innocent unless proved guilty. It is contrary to the sound principles of academic freedom to which the University of Oregon is

committed. It singles out as objects of suspicion among all recipients of Federal funds one group—members of the academic community—as special objects of distrusts.

In his budget message of January 18, 1960, President Eisenhower stated:

"I am recommending repeal of the provision of the National Defense Education Act that prohibits payments or loans from being made to any individual unless he executes an affidavit that he does not believe in or belong to any organization that teaches the illegal overthrow of the Government. This affidavit requirement is unwarranted and justifiably resented by a large part of our eductional community which feels that it is being singled out for requirement."

The requirement of the affidavit of disbelief in the National Defense Education Act is opposed by the Oregon delegation in the Congress of the United States. It has been condemned by faculties and governing boards of the leading universities of the United States and by the leading educational organizations of the United States, including the American Council on Education and the American Association of University Professors. Although individual members of the faculty of the University of Oregon may differ somewhat in the degree of their abhorrence for the affidavit of disbelief, not a single member is known to have risen to its defense.

The people of the State of Oregon have been hostile to discriminatory legislation that reflects upon the loyalty of a small minority of public employees or recipients of public funds. The faculty recalls with pride that a decade ago, when several great universities of this country were torn by dissension over negative loyalty oaths imposed by well-meaning but misguided legislatures, the Oregon State Grange, the Oregon Department of the American Legion, and the Chancellor of the Oregon State system of higher education, with the support of the State board of higher education, went on record as opposed to such oaths and the Legislature itself declined to pass the discriminatory legislation.

If the requirement of the affidavit of disbelief remains in effect, it will tend to fix itself on higher education and to flourish as additional Federal funds are appropriated. It will, as President Robert Goheen of Princeton University has pointed out, in discussing the National Defense Education Act, restrict the university's "right to choose its own students and to accord them aid upon principles which it determines," and it thus involves a principle of great importance, that of "assuring the self-directing integrity of long-established and responsible educational institutions:" Therefore be it

Resolved, That the faculty of the University of Oregon recommend:

(1) That the president of the university express for the university its official disapproval of the requirement of the affidavit of disbelief in the National Defense Education Act, and concert appropriate action with other university administrators, faculties, and governing boards—notably those of Pacific University, Reed College, the University of Wisconsin, Harvard University, Yale University, and Princeton University—to the end that a sustained presentation of the views of many universities and colleges shall be presented to the Congress.

(2) That the president of the university, with the advice of the advisory council, appoint an ad hoc committee of the faculty to work vigorously toward the elimination of the requirement of the affidavit of disbelief from the National Defense Education Act and the fellowship programs of the National Science Foundation, the National Institutes of Health, and other Federal agencies; and be it further

Resolved, (3) That the ad hoc committee on the affidavit of disbelief be requested to make periodic reports to the faculty on progress being made toward the elimination of the requirement of the affidavit of disbelief.

(4) That the faculty, recognizing the obligation to honor the fellowships and loans now in force, records its deep reluctance to continue participation in those programs of the National Defense Education Act and the fellowship programs of the National Science Foundation, the National Institutes of Health, and other Federal agencies which require the filing of the affidavit of disbelief; and that it therefore recommends:

(a) That, in order to concert action, it communicate these sentiments to the faculties of the several State universities, the communicating agent to be the ad hoc committee on the affidavit of disbelief.

(b) That it recommend to the faculties of the universities joint action to effect the removal of the requirement of the affidavit of disbelief.

(c) That the basis of joint action shall be determined through negotiation and, for the University of Oregon, on recommendation of the ad hoc committee on the affidavit of disbelief and by vote of the faculty.

Here are other letters on this matter, from AAUP chapters, from professors, from doctors, from other individuals, from student body organizations, which have been pouring into my office:

PORTLAND, OREG., *March 7, 1960.*

Hon. EDITH GREEN,
House Office Building,
Washington, D.C.

MADAM: I respectfully request your support of the Clark-Kennedy bill repealing the non-Communist disclaimer affidavit now required of students aided under the National Defense Education Act. Such a requirement attacks the right of the student to believe as he sees fit and has no place in our laws.

Very truly yours,

JOHN L. HOWIESON, M.D.

STUDENT GOVERNMENT ASSOCIATION,
CEDAR CREST COLLEGE,
Allentown, Pa., March 25, 1960.

Representative EDITH GREEN,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE GREEN: The voting body of Cedar Crest College has passed the following resolution:

"The student body of Cedar Crest College is opposed to the disclaimer affidavit and the loyalty oath of the National Defense Education Act of 1958. It is our belief that the oath restricts academic freedom and implies a mistrust of the academic community. We are in full agreement with the principles underlying the legislative efforts of Senators CLARK and KENNEDY."

We hope that our opinion will be considered when the validity of this section of the National Defense Education Act is considered before Congress.

Sincerely yours,

THE STUDENT BODY OF CEDAR CREST COLLEGE.

WESTERN ASSOCIATION OF GRADUATE SCHOOLS,
Boulder, Colo., March 16, 1960.

Hon. EDITH GREEN,
U.S. Representative, House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE GREEN: At its annual meeting on March 1, 1960, in Berkeley, Calif., the Western Association of Graduate Schools—which is composed of 49 graduate schools in colleges and universities located in every Western State, including Alaska and Hawaii—unanimously adopted the following resolution, which I am instructed to transmit to you:

"Whereas the requirement of affidavits of disbelief or disclaimer oaths as a condition for receiving fellowships or loans is an unwarranted interference with freedom of expression and is ineffective: Now, therefore, be it

"*Resolved*, That the Western Association of Graduate Schools urge the Congress of the United States to eliminate the affidavits of disbelief or disclaimer oaths which appear in the National Science Foundation Act of 1950 and the National Defense Education Act of 1958."

Respectfully yours,

DAYTON D. MCKEAN,
Secretary, Dean of the Graduate School,
University of Colorado.

MARCH 1, 1960.

DEAR CONGRESSWOMAN GREEN: We, the undersigned, strongly favor the pending Clark-Kennedy bill which seeks to repeal the non-Communist disclaimer affidavit requirement of the National Defense Education Act. We do so because:

1. Such a loyalty oath is at best wholly ineffective in protecting our democratic institutions since a confirmed traitor loses nothing by adding perjury to his crime of treason.

2. Such a loyalty oath can at worst become, in the hands of self-styled patriots, a weapon for the suppression of unpopular, though lawful, political activity.

3. Such a loyalty oath seems, to us, to be an obvious violation of the fundamental American legalism that one is innocent until proven guilty.

4. Such a loyalty oath imposes unfair discrimination against one segment of our population inasmuch as other occupational groups which receive governmental subsidization are not required to affirm their loyalty.

5. Such a loyalty oath is an unpleasant survivor of a period of mistrust and demagoguery which did more harm to our national unity and security than could be wrought by a legion of genuine subversives.

We therefore urge you to use your office to help eliminate this insult to the intelligence and integrity of America's students and educators.

Sincerely,

Case Institute of Technology, Cleveland, Ohio: John Finnerty, James Breckinridge, J. J. Wainman, F. McCuskey, W. E. Brunk, Ronald E. Witalis, Nicholas Sanduleak, Arthur R. Upgren, Jr., C. B. Stephenson, V. M. Blanio, A. G. Davis Philip.

BLOOMINGTON, IND.,
March 14, 1960.

Hon. EDITH GREEN,
Congresswoman for Oregon,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE GREEN: As a member of the Subcommittee on Special Education, I hope you will be interested in the enclosed letter to an editor in which I outline the case against the disclaimer affidavit attached to the National Defense Education Act.

As I say there, this affidavit seems to me a distinctly un-American document. I strongly urge you to help report out a bill to repeal it.

Very truly yours,

PHILIP APPLEMAN,
Professor.

CONFUSE OATH, AFFIDAVIT

To the EDITOR:

The essential point in the N.D.E.A. disclaimer affidavit controversy seems always to be overlooked or confused by supporters of the affidavit: namely, that it is not a loyalty oath. There is, in addition to the affidavit, a genuine loyalty oath attached to the N.D.E.A., but neither the Student Senate nor the Indiana University Civil Liberties Union is pressing for repeal of that. Thus your

recent correspondent who described himself as damn happy to subscribe to an oath that I am an American would still enjoy this privilege if the affidavit were removed.

The disclaimer affidavit, on the other hand, is opposed not only by the Student Senate and by the I.U.C.L.U. but by almost every important educational group in the Nation, and for good reason. The language of the affidavit tells why; it reads: "I do not believe in * * * any organization that believes in * * * (etc.)." Contrast this with the words of the United States Constitution: "Congress shall make no law * * * abridging the freedom of speech * * * (etc.)." It goes without saying that to protect a man's speech is to protect his thought as well.

Only those who believe that Congress has a right to inquire into one's beliefs can support the disclaimer affidavit; but clearly the Constitution is opposed to such inquiry, and therefore advocates of the disclaimer affidavit are quite literally un-American. Contrary to what another of your correspondents seems to think, such a disclaimer is not required of farmers who receive loans from the Government; it is not required of businessmen who receive loans from the Government; it is not required even of members of our Armed Forces. Ironically, it is only students, to whom freedom of inquiry is absolutely essential, who are required to submit to this attempt at thought control.

It is simply avoiding the issue to pretend that, as still another of your correspondents says, "the individual has the right to choose" in this matter. In cases of financial need the only alternative to signing this repugnant affidavit may be to withdraw from school; this is no choice at all. Cooperative student action, like the vote of the Student Senate, or the petition on the I.U.C.L.U. is asking students to sign, is therefore clearly called for; Congressmen listen more attentively to large groups than to isolated individuals.

These are no doubt some of the reasons that President Eisenhower, Seceretary Flemming, Senator HARTKE, President Wells, the American Association of University Professors, and many educational groups are so firmly opposed to the affidavit.

PHILIP APPLEMAN,
Assistant Professor of English.

MARCH 8, 1960.

Hon. EDITH GREEN,
House of Representatives,
Washington, D.C.:

For your information, at the meeting on February 22, 1960, the Oregon College of Education Chapter of the American Association of University Professors voted, in a unanimous decision, to go on record as being opposed to the disclaimer affidavit of section 1001F of the National Defense Education Act and recommended that this disclaimer affidavit be deleted.

MILDRED KANE,
Secretary, Oregon College of Education Chapter American Association of University Professors.

GRINNELL COLLEGE,
Grinnell, Iowa, March 8, 1960.

Representative EDITH GREEN,
House of Representatives Office Building, Washington, D.C.

DEAR REPRESENTATIVE GREEN: I am writing to urge your support of the measure repealing the disclaimer affidavit and the loyalty oath in the National Defense Education Act. As a teacher I have observed what seems to me to be the ineffectiveness of such measures to promote loyalty. At the same time they appear to encourage timidity and cynicism. I most earnestly urge you to vote for repeal.

Your truly,

RICHARD S. WESTFALL.

Finally, in order to dispel once and for all the erroneous notion that this concern is felt only in a few colleges, or in one or two sections of our country, this listing of the schools and associations which have taken a stand against the disclaimer affidavit has been compiled by the Office of Education. The list, Mr. Speaker, is growing:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
OFFICE OF EDUCATION,
FINANCIAL AID BRANCH,
March 17, 1960.

INSTITUTIONS OF HIGHER EDUCATION PROTESTING THE DISCLAIMER AFFIDAVIT PROVISION OF THE NATIONAL DEFENSE EDUCATION ACT

The following list of institutions is the latest information we have gathered from press reports and other communications concerning colleges and universities which have objected to the disclaimer affidavit provisions of the National Defense Education Act.

Institutions participating in the national defense student loan program have not been asked to state their position on the disclaimer affidavit. Consequently, except for the list of institutions which have withdrawn from the program, the information included here is not at all complete.

In all but a few cases the protests have been against the disclaimer affidavit only, and do not include the oath of allegiance. The protests have been made either by the president of the institution or its governing board.

1. Institutions which have withdrawn from the student loan program because of the disclaimer affidavit:

Amherst College, Massachusetts.
Antioch, Ohio.
Bennington College, Vermont.
Goucher College, Maryland.
Grinnell College, Iowa.
Harvard University, Massachusetts.
Interdenominational Theological Center, Georgia.
Oberlin College, Ohio.
Radcliffe College, Massachusetts.
Reed College, Oregon.
St. John's College, Maryland.
Sarah Lawrence College, New York.
Wilmington College, Ohio.
Wesleyan University, Connecticut.
Yale University, Connecticut.

2. Instructions which declined to participate in the student loan program because of the disclaimer affidavit:

Beloit College, Wisconsin.
Bryn Mawr, Pennsylvania.
Haverford, Pennsylvania.
Mills, California.
Princeton University, New Jersey.
Swarthmore, Pennsylvania.
University of Richmond, Virginia.
Wellesley College, Massachusetts.

3. Institutions whose presidents or boards have publicly stated their disapproval of the disclaimer affidavit but which continue to participate in the student loan program:

Bates, Maine.
Boston College, Massachusetts.
Bowdoin College, Maine.
Brown University, Rhode Island.
Case Institute of Technology, Ohio.
Central State Connecticut College.
Chattanooga University, Tennessee.
Colby College, Maine.
College of St. Benedict, Minnesota.
City College of New York.
Colgate University, New York.
Colorado College.
Columbia University, New York.
Cornell University, New York.
Dartmouth College, New Hampshire.
Denver University, Colorado.
Drexel Institute of Technology.
Duke University, North Carolina.
Earlham College, Indiana.
Elmira College, New York.
Fairleigh-Dickson College, New Jersey.
Fisk University, Tennessee.
George Peabody College for Teachers, Tennessee.
Gustavus Adolphus College, Minnesota.
Hamilton College, New York.
Hamline College, Minnesota.
Hunter College, New York.
Iowa State Teachers College.
Indiana University.
Johns Hopkins University, Maryland.
Kansas State College.
Kansas State University.
Lafayette College, Pennsylvania.
Lake Erie College, Ohio.
Lake Forest College, Illinois.
La Verne College, California.
Lawrence College, Wisconsin.
Manhattan College, New York.
Marshall College, West Virginia.
Millsaps College, Mississippi.
Northwestern University, Illinois.
Pennsylvania State College.
Providence College, Rhode Island.
Queens College, New York.
Rensselaer Polytechnic Institute, New York.
Rhode Island College of Education.
Roanoke College, Virginia.
Roosevelt University, Illinois.
Rutgers University, New Jersey.
St. Cloud State College, Minnesota.
St. John's University, Minnesota.
St. Olaf's College, Minnesota.
Smith College, Massachusetts.
Temple University, Pennsylvania.
Tufts University, Connecticut.
University of Arizona.
University of Chicago.
University of Colorado.
University of Connecticut.
University of Delaware.
University of Hawaii.
University of Illinois.
University of Iowa.
University of Kansas.
University of Michigan.
University of Minnesota.
University of New Hampshire.
University of North Carolina.
University of Notre Dame.
University of Pennsylvania.
University of Pittsburgh.
University of Rhode Island.
University of Rochester.
University of the South, Tennessee.
University of Washington.
University of Wisconsin.
Vassar College, New York.
Virginia Polytechnic Institute.
Washburn University of Topeka, Kansas.
Wheaton College, Massachusetts.
Wisconsin State College.
Yankton College, South Dakota.

4. Associations reported as protesting the disclaimer affidavit:

American Association for the Advancement of Science.
American Association of Land-Grant Colleges and Universities.
American Association of University Professors.
American Council of Learned Societies.
American Council on Education.
American Jewish Congress.
Associated Students of Sacramento State College, Calif.
Association for Higher Education (NEA).
Association of American Colleges.
Association of Graduate Schools.
Association of Land-Grant Colleges and State Institutions.
National Conference on Higher Education.
National Council of Churches of Christ.
National Student Association.
New England Society of Newspaper Editors.
State Universities Association.

NOTE.—Carleton College, Minnesota, and Williams College, Massachusetts, are not participating in the program, but both have declared their opposition to the disclaimer affidavit.

The Death of Bomarc

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. WOLF. Mr. Speaker, last year it was very unpopular to be opposed to Bomarc.

Yet, I felt we must reconsider the Bomarc program at that time. I talked of this on June 5 on the floor.

I was happy to learn that the Pentagon has almost completely eliminated the development and production of Bomarc.

In today's Marquis Childs column he discusses various aspects of the Bomarc controversy.

[From the Washington Post, Apr. 13, 1960]

DEATH OF BOMARC MAY STIR DEBATE

(By Marquis Childs)

The so-called defense issue has largely vanished from sight if only because the military hero in the White House has said repeatedly that he knows more than anyone else in this nuclear-electronic age about America's security and how to achieve it.

But there is just a chance that it may be revived in connection with a decision out of the Pentagon that was largely lost in the sweep of the news. This was to cut back almost to zero the development and production of the Bomarc air defense missile. Some estimates put the amount spent on Bomarc at $3 billion.

Senator HENRY JACKSON, Democrat, of Washington, says that when the military construction bill comes before the Armed Services Subcommittee he will demand to know why the Bomarc and its allied warning system, Sage, are being abandoned after such a huge investment. He points out that Bomarc sites on the West Coast, each costing on the average $13 million, are to be abandoned.

They will stand, he says, indignantly, as monuments to a colossal error in judgment, to put the kindliest interpretation on what has happened. Among them are the Payne Air Force Base, near Everett, Wash., 44 percent completed; Camp Adair, Oreg., 67 percent completed; Travis Air Force Base, near San Francisco, 25 percent completed; Vandenberg Air Force Base, Calif., 44 percent.

The reply of the "truth squad" in the Office of the Secretary of Defense is, in effect, that development of the Bomarc was justified on earlier intelligence estimates of the number of manned bombers to be produced by Soviet Russia. The new intelligence estimate radically downgrades this number and it credits the Soviets with much greater accuracy in long-range missiles than had previously been assumed.

The total amount that will have been spent on Bomarc-Sage, according to the Defense Department memorandum, is $3.7 billion. For this there will ultimately be eight operational Bomarc bases in the East and on the United States-Canadian border, plus a warning system "ready to serve in time of war in the incredibly difficult task of sorting out enemy bombers coming in to attack."

The unofficial intimation out of the Pentagon is that Senator JACKSON has been one of the principals pressuring for the continuance of Bomarc. The Boeing plant producing and developing this missile means a large payroll in Seattle in JACKSON's home State.

Insisting that he has never at any time applied pressure, JACKSON points to the statement of the Military Construction Subcommittee nearly 2 years ago when efforts were made to get a decision out of the Defense Department as between Bomarc and its Army competitor, the Nike-Hercules.

"It is the committee's firm and unanimous opinion," said a report issued in July of 1958, "that decisions must be made to eliminate duplication or otherwise the annual cost of the defense budget will require increases beyond all reasonable proportions."

With the fierce rivalry between the two missile systems, Boeing began a campaign of newspaper advertising to resist any cuts. Primpt newspaper retaliation came from Western Electric and the Bell Telephone Laboratories involved in the production of Nike-Hercules.

Cuts in the far more modest program were resisted by Senator SAM J. ERVIN, JR., Democrat, of North Carolina. An important payroll in his State was involved and he served notice on the Military Construction Subcommittee that he would publicly challenge any attempt to eliminate Nike-Hercules.

For as long as a year and a half to a year it was widely said that the Bomarc, an air-breathing missile, would be obsolete by the time it came into full production. In overall justification of the vast expenditure on Bomarc the Defense Department argues that with the rapid shift in weaponry it is often necessary to develop systems that will be obsolete before they can be proved out. Research and development still continue on Bomarc A, big brother to Bomarc B.

That argument may be valid. But this looks like such a beautiful example of duplication, commercial rivalry, and regional competition that a really thorough, objective investigation might help the poor confused citizen to find out the facts.

Foreign Goods No Idle Threat; Rubber Imports Up 278 Percent in 1959

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article to show that imports of rubber products nearly tripled during the past year. The article appeared in the B. F. Goodrich Citizen for March 1960, which is published by the B. F. Goodrich Co. in Akron, Ohio:

FOREIGN GOODS NO IDLE THREAT; RUBBER IMPORTS UP 278 PERCENT IN 1959

You've heard of foreign competition in cars, cameras, and barbed wire. But did you know that imports of rubber products—the kind we make—nearly tripled during the past year?

During the first 8 months of 1959 rubber goods brought into this country were valued at $61.8 million. In the same period in 1958, imports of the same kind of products amounted to only $22.2 million.

The dollar volume of imports isn't so alarming yet. It's the rapidly accelerating trend that causes Americans to think twice.

CAN AFFECT EMPLOYMENT

In 1955 American auto makers weren't concerned when foreign car imports amounted to 57,115 vehicles, less than 1 percent of U.S. production. But foreign car imports have risen rapidly since then, and last year—with 668,070 cars—equaled 12 percent of America's output.

A study by the Brookings Institute shows that imports definitely affect rubber industry employment. For each $1 million increase in tire imports, there will be 45 fewer workers in the tire industry and 48 in related industries, a total of 92.

In miscellaneous rubber products, each $1 million increase in imports means 77 fewer workers in rubber manufacturing and 41 in related industries, 117 workers in all.

WHY THE RAPID RISE?

Why are rubber product imports rising at such a rapid rate?

Many factors are involved, but it boils down to the fact that our foreign competitors are making and selling their products much more cheaply.

Even after paying U.S. tariffs, foreign manufacturers can sell their products here at a price averaging 25 to 30 percent below ours, depending on the product.

MODERN PLANTS

They have modern new plants—built with war recovery dollars—and machinery that incorporates the latest technological advances. As a nation, we have shared our know-how with these countries in the interests of good will and peace.

Backed by these mechanical improvements, employees abroad have exhibited extreme pride of workmanship. For the most part, you can no longer question the quality of imported products.

As the production volume of these plants increase, their unit costs become even lower.

CONTRAST IN WAGES

But the chief factor in their lower production costs is the difference in wages paid here and abroad.

Here is how average hourly earnings, including fringe benefits, compare:

B. F. Goodrich	$3.55
France	1.01
Germany	.90
Italy	.45
Japan	.20

This disparity in wages per employee offers American manufacturers a real challenge.

How is foreign competition affecting BFG divisions? Here is the story in several:

Industrial products: For the past 5 years, BFG distributors have noticed a steadily growing invasion of foreign hose, belts, sheeting, and gloves. Prices range from 25 to 40 percent lower than BFG prices.

Continental of Germany, for example, makes and distributes a wide range of industrial products. The U.S. sales manager, who is personable and talks like an American, tours the country calling on industrial products distributors, offering price advantages hard to refuse.

Continental's steel reinforced ¾-inch steam hose sells for 76 cents per foot compared with BFG's $1.41 per foot. Continental supplies 24-inch conveyor belting at $4.85 per linear foot compared with BFG's $6.25 per linear foot.

Their products dock at Boston, New York, Baltimore, Houston, and even San Francisco. They have U.S. warehouses and can furnish nationwide delivery.

Dunlop of Great Britain and Pirelli of Italy also are aggressive in the U.S. market.

DISTRIBUTORS FACE PROBLEMS

J. K. Slingluff of Baltimore Belting Co., a BFG distributor, says foreign industrial products have been quite a factor in the Baltimore area for 4 or 5 years.

"One of my competitors handles Continental belting, and his prices run 30 to 35 percent below ours," he said. "Another competitor handles Dunlop sheeting, which is 30 percent below ours in price. Pirelli of Italy makes every size of V-belt. They stock them in New York and sell them at prices 25 percent under ours. Quality of foreign products is usually good, although a few American

companies now refuse to consider foreign bids after unfavorable experiences."

Japanese industrial products are becoming plentiful in this country, particularly on the west coast. Japanese mail campaigns have reached BFG distributors as far east as Chicago.

Tires: Imports in 1959 more than doubled those in 1958.

In the passenger tire field, small cars offer the principal competition. Because of the variety of foreign cars being imported, American tire manufacturers aren't equipped to make all of the replacement sizes needed. BFG supplements its own output by bringing in some sizes from its European associates.

In the truck tire field, Michelin of France is finding increasing favor with its long-mileage X-type tire. It not only is a top quality item, but sells for less than comparable American truck tires. Michelin has set up a national sales organization in the United States.

Footwear: Thirty-four percent of all waterproof and canvas footwear sold in the United States is now imported, primarily from Japan.

Imports have skyrocketed from 1 million pairs in 1955 to nearly 48 million pairs in the first 11 months of 1959. Quality is generally good.

Wage rates put American manufacturers at a tremendous disadvantage. Average hourly wages for the footwear industry in the United States are $2.51 per hour. In Japan the average is 20 cents an hour.

Alarmed at the rapid rise of footwear imports, members of the American footwear industry briefed Senators and Representatives in Washington recently on the problem. The industry hopes foreign manufacturers will agree to a voluntary quota before the footwear market is flooded.

WHAT CAN WE DO?

What can be done about foreign competition?

The most obvious answer is to build as much value as possible into our products at the lowest possible cost. BFG products are known for their quality; through pride and vigilance, we must maintain this quality superiority. And by working smarter, we must become more efficient and keep our costs low. BFG people can't afford to give foreign competitors any further advantage.

Resolution of Democratic Midwest Conference

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. WOLF. Mr. Speaker, under leave to extend my remarks, I would like to bring to the attention of my fellow Congressmen the following farm resolutions passed by the Democratic Midwest Conference:

FARM POLICY RESOLUTION OF 1960, ADOPTED UNANIMOUSLY BY VOTING DELEGATES, DEMOCRATIC MIDWEST CONFERENCE, DETROIT, MICH., MARCH 27, 1960

Whereas the net income from farming has been trending downward during the last 7 years, has declined by more than $20 billion relative to the rest of the economy, is now at the lowest point in purchasing power since 1934; and

Whereas unused commodity supplies have now accumulated in Government hands to the extent of more than $9 billion, costing more than $1.5 million a day to store and handle; and

Whereas, administration policies can only lead to a further excess of farm output in relation to existing utilized outlets, thus resulting in aggregate inefficiency in the use of farm resources; and

Whereas economic studies by farm economists of the U.S. Department of Agriculture and leading land-grant universities have shown that the Eisenhower-Benson-Nixon policies will certainly worsen the agricultural situation, intensifying hardship and inequity among farm families, spreading the business depression in the rural regions and ultimately threatening the entire U.S. economy; and

Whereas Republican assurances uttered time after time to farmers and the American public have all proved false; and

Whereas farm program costs under the Republican administration since 1953 now total more than all the previous combined budgets of the U.S. Department of Agriculture; and

Whereas the Republican administration has either opposed outrightly or by reluctant execution hampered the full utilization of the Nation's farm abundance to alleviate undernourishment both at home and abroad; and

Whereas it is obvious that the farm income problem must be attacked at the earliest possible moment, partly by appropriate supply programing and partly by expanded and more effective use of available supplies, to prevent the total destruction of our traditional system of family farming: Now, therefore, be it

Resolved, That the delegates of the Midwest Democratic Conference express their approval of the principles, including its fair price and income objectives, of the comprehensive all-commodity bill, entitled the "Family Farm Income Act of 1960," now pending before the Agriculture Committee of the U.S. House of Representatives, and we urge that it be promptly prepared for debate and passage by both Chambers of the Congress in the current session, so that its provisions may be effective for the crop year of 1961.

Just What Is the National Debt Problem?

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1960

Mr. LINDSAY. Mr. Speaker, the current issue of the National Home Builders Association's Economic News Notes contains an excellent analysis of the national debt management problems. It further illustrates the clear need for removal of the archaic interest rate ceiling on long-term Government bonds.

Under unanimous consent I include in the RECORD excerpts of that analysis:

JUST WHAT IS THE NATIONAL DEBT PROBLEM?

If debt is a headache to you, just consider the U.S. Treasury which handles the biggest headache of all, a $287 billion one, more and more of which has to be refinanced sooner and sooner—some $80 billion of it coming due in 1960 alone.

World War II—and the financing of much of it by borrowing, rather than with pay-as-you-go taxes—created today's large national debt. Between 1939 and 1945, the debt rose sixfold; and unbalanced budgets in some of the years since have increased it moderately to today's $287 billion level. Obviously the financing of a debt of this magnitude creates problems that go far beyond the U.S. Treasury. It is simply too elephantine a factor in our economy ever to permit the Treasury and the U.S. Government to be an impassive neutral on the economic scene. Even doing nothing is a decision that could have major business and financing repercussions. The very size of the debt itself makes Treasury operations a potent factor in the financing problems of every business in the country today.

HOW MUCH DOES IT COST?

The direct cost of financing this debt—the interest paid on it—runs about $9.4 billion a year. In 1946 the interest cost was only $4.7 billion—just half of today's cost, even though the debt was nearly nine-tenths of the current level. Higher interest rates today and the constant refinancing at these rates required because of rapid shortening of maturities have resulted in substantial increases in the cost of carrying that debt.

DEBT MATURITIES—OR WHEN DOES IT HAVE TO BE PAID OFF OR REFINANCED?

The ideal situation would obviously be to have the debt spread out more evenly over a long-time span, with Treasury short-term financing restricted to a debt of relatively temporary character. In this sense, the Federal Government's present predicament might be compared to the plight of a modest income home buyer who had to buy a home over a 20-year period—using 90-day notes.

Unfortunately the major share of the debt was incurred in a short period of time. Increasing demands for investment funds in the past decade, and the use of monetary policy to counter inflation (tight money, et cetera) have complicated management of this unwieldy debt. At the beginning of the 1950's, the average maturity of the debt was about 6 years; by last year it had fallen to 4 years four months, and today, its average life is only 4 years 3 months.

A 1918 law set an interest rate ceiling of 4¼ percent on issues of more than 5 years. The low level of debt in the 1920's, and the low level of interest rates from the early thirties until recently, meant that the ceiling had no operative effect during most of its existence. But recently that ceiling has become an important fact of economic life. As older issues expire, they require refinancing, since funds to retire them are not available at current levels of Government income and expenditures. In a period of high interest rates, it has not been possible to refinance in the long-term part of the investment market when interest rates for long-term issues rose above that ceiling, and hence the Treasury has had to refinance, at higher interest rates, in the short-term sector of the market, with consequent dislocation of the market.

October 1959 provided a dramatic—and unpleasant—example to the homebuilding industry of just what this could mean. The Treasury invaded the short-term market with a $2 billion 5-percent, 4-year, 10-month issue—the so-called magic 5s. About 108,000 individual subscriptions were received to this issue, in amounts of $25,000 or less. Total individual subscriptions to the issue reached $778 million; and many individuals investing in them withdrew funds from institutions which are major sources of mortgage funds for builders. It is estimated that at least $200 million were withdrawn from savings banks, and an additional $200 million from savings accounts in commercial banks, to purchase these securities. The remainder came from varied sources, including withdrawals from savings and loans and cashing-in of savings bonds. Obviously, the not-so-private domain of seasoned investors was heavily invaded by "thrift savers," attracted because the magic 5s paid much higher yields than obtainable from savings in thrift

institutions. In some areas of the country, such as the New York vicinity where the drain on savings deposits was heaviest, homebuilding operations and forward planning were disrupted.

Last year a Government deficit compounded the problem. This year there is some hope of a small budget surplus, which could mean some decrease in the debt, but nevertheless the refinancing problem for the rest of the year is very heavy. During 1960, $80 billion of securities comes due.

Since the budget surplus in 1960 is not expected to exceed $2 billion, most of these maturing issues will have to be refunded. The first quarter's refinancing is already out of the way, without major upsets, and the second quarter, bolstered by tax receipts is not expected to present insurmountable problems. Treasury's real test this year will come in the second half of the year (calendar 1960)—when tax receipts are lowest and revenues are expected to fall some $4 billion below expenditures. This coincides with acute concentration of major refinancing—including a peak at August 15, when a $9.6 billion note issue becomes due, and again at November 15 when $10.8 billion in bonds and certificates come due. These peaks will hit at times when business funds needs are also at high levels—for such items as contract payments on heavy summer construction, fall and preholiday inventories, model changeover investments, etc.

THE NET OF IT ALL

A vast debt of constantly shortening terms, forcing the Treasury to go to the money markets more and more often, and occasionally with considerable embarrassment, "borrowing from Peter to pay Paul" in a very real sense, as time intervals narrow.

While interest rates, on their current roller coaster, have softened recently, there is no assurance that this will continue throughout the year or that a long-term bond issue under the ceiling could succeed. Moreover under anticipated future conditions there is no assurance that the Treasury will not again attempt another issue similar to the magic 5s. Unless the Treasury can do some refinancing in the long-term sector, the situation is bound to worsen. For example, if all of 1960 financing were done with issues maturing within 1 year or less, the under 1-year debt will grow from some $80 billion at the beginning of 1960 to about $95 billion at the year's end, including one issue due in November 1961 of over $11 billion.

The old saw that death and taxes are always with us could well be modified to read "debt, death, and taxes." Whether or not the Treasury has done a good job of managing the debt in recent history, and just how it got in this bind is a matter of controversy, but at the moment it is more a matter for the historians. What should concern us is what could happen from now on out, and how this might affect the homebuilding industry as well as the economy.

Fred Seaton Boosted for Vice-Presidency

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. WEAVER. Mr. Speaker, I have always felt highly honored that among my constituents in the First Congressional District of Nebraska I can number as one of them the Honorable Fred Seaton of Hastings Nebr.

Mr. Seaton has served his country long and well in a number of capacities. He is well acquainted with the problems of the Department of Defense, having served ably in that Department. He is well aware of the many problems, big and little, which must be handled directly by the White House through his service on the White House staff as a key assistant to President Eisenhower. And he has shown a most remarkable capacity for administration as Secretary of the Interior in the President's Cabinet.

Not in many, many years has there been such a capable administrator of the Department of Interior as Fred Seaton has proved to be. It was among the wisest Cabinet appointments made by the President.

Mr. Speaker, I was further honored on March 28 of this year by taking part of the Founders Day program at Lincoln, Nebr., and sat with the Secretary and spoke from the same platform with him.

At the Republican State convention which followed our Founders Day luncheon, the Secretary received a pledge of support from the Republican Party of the State of Nebraska for the vice-presidential nomination.

On March 30 the North Dakota Republican convention, too, took action to endorse Fred Seaton for the Vice-Presidency of the United States.

I would like to include in the RECORD the two resolutions adopted by our great Midwestern States supporting my good friend and outstanding constituent, Fred Seaton. The resolutions follow:

SECRETARY OF INTERIOR FRED A. SEATON RECEIVES DELEGATE SUPPORT FOR VICE-PRESIDENTIAL NOMINEE

RESOLUTION PASSED BY NEBRASKA REPUBLICAN STATE CONVENTION ON MARCH 28, 1960

Whereas the Honorable Fred A. Seaton has distinguished himself as an outstanding Nebraskan while serving with an outstanding Republican administration; and

Whereas the Honorable Fred A. Seaton has proven himself invaluable to the Eisenhower-Nixon administration: Now, therefore, be it

Resolved, That the convention here assembled endorse and recommend the Honorable Fred A. Seaton as vice-presidential candidate of the Republican Party for 1960.

RESOLUTION PASSED BY NORTH DAKOTA REPUBLICAN STATE CONVENTION ON MARCH 30, 1960

Whereas the yardstick of measurement applied to potential vice-presidential candidates indicates that on a comparative basis, the qualifications of Fred A. Seaton are outstanding and worthy of consideration by the presidential nominee; and

Whereas Fred A. Seaton's knowledge and interest in reclamation and agricultural progress assures his future continued attention; and

Whereas his training in private life as a businessman and in public service as a State Senator in Nebraska, a U.S. Senator, an Assistant Secretary of Defense, Deputy Assistant to President Eisenhower and as the Secretary of Interior qualifies him to continue the important duties and functions of the office of Vice President; and

Whereas his close association in public life with Vice President NIXON, with whom he shares a common political philosophy, would provide a united and forceful team approach in winning the election: Now, therefore, be it

Resolved, That this convention endorses Fred A. Seaton as the vice-presidential candidate and requests RICHARD M. NIXON to give careful consideration to the advantages of selecting Fred A. Seaton as his choice for Vice President.

Our Thriving Way of Life—Is It Riding for a Fall?

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 12, 1960

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert into the Appendix of the RECORD an article which appeared in the Chicago Daily News. It was written by the very thoughtful journalist, Howard Whitman.

There is, in the United States, almost a sickness of the soul. We are following the values—in recent years—of Babylon without stopping to think, to reconsider, and to built a new America. What is needed now is a vision of a new society where people can be economically well off, but not trapped by the gadgets they buy; where all people regardless of race, creed, or color may walk together in freedom and equality and where all people may realize their individual creative potential.

If we do not try to build this kind of society and if we fail in its construction, I strongly fear that our civilization will decay quickly at best; and at the worst, the human species will be destroyed completely.

The article follows:

OUR THRIVING WAY OF LIFE—IS IT RIDING FOR A FALL?—MANY OBSERVERS FEAR WE'VE BECOME TOO SOFT

(By Howard Whitman)

We were flying across the country, looking down upon the seemingly endless panorama of thriving farms, suburban homes, and busy cities, when the man sitting next to me said softly, "What a pity."

Startled, I asked what he meant.

"What a pity," he said, "that we've lived it up so fast. From up here everything looks so right and shipshape. But down there life's gotten pretty soft and flabby. We've let ourselves get spoiled. That's what I meant by pity. It's a pity to let a great way of life like ours take a back seat."

Was this a crackpot, a crepe hanger—or worse, a Communist sympathizer—taking this dim view of the great, abundant civilization of the free Western World?

Not at all. The man sitting next to me was a businessman, a father, a homeowner, a good citizen of his Midwest city.

"I'm just trying to be honest," he continued. "We've made a great mark in the world. Our progress, our genius, our productivity will go down in history. But where do we go from here? Do we go down in history, too?

"We've soaked ourselves in luxury, we've taken to the worship of money and pleasure. We've twisted moral values to suit ourselves, we've scoffed at integrity.

"In short, we've behaved like great civilizations of the past when they've become overfat and pleasure ridden—just before they've crumbled."

THERE'S FEAR THAT WE'LL FALL

Many an average citizen has had a similar feeling, perhaps not so pronounced, perhaps just an inkling, a fear, a momentary doubt,

a niggling suspicion that perhaps our great culture has had it.

Perhaps we have hit the top and started down. Could it be true? Will future historians write of our decline and fall?

Important leaders of our time have in recent months publicly voiced the misgivings which must be shared by millions. George F. Kennan, former U.S. Ambassador to the Soviet Union, now a history professor at Princeton, gave this piercing warning:

"If you ask me whether a country • • • with no highly developed sense of national purpose, with the overwhelming accent of life on personal comfort, with a dearth of public services and a surfeit of privately sold gadgetry, with insufficient social discipline even to keep its major industries functioning without grievous interruption—if you ask me whether such a country has in the long run good chances of competing with a purposeful, serious, and disciplined society such as that of the Soviet Union, I must say that the answer is 'No.'"

Last November, Emmet John Hughes, who served as speech writer for President Eisenhower during the 1952 and 1956 campaigns, brought out a book which he said was written "with much anxiety." One can understand why. He entitled it "America the Vincible."

"Vincible" is an unusual word. We're much more used to "invincible" especially when applied to America.

But Webster tells us plainly that "vincible" means "capable of being overcome or subdued," and Hughes tells us equally plainly that America, as he puts it, is more vincible than at at any point in its history since the Civil War.

America has led a charmed life up to now. But the charm has worn off. That's Hughes' thesis.

KENNEDY GIVES HIS IMPRESSION

Senator KENNEDY, Democrat, of Massachusetts, looked over the country which some voters would like him to lead for the next 4 years and gave this capsule impression:

"The slow corrosion of luxury—the slow erosion of our courage—already are beginning to show. Our profits may be up, our standard of living may be up, but so is our crime rate. So are the sales of tranquilizers and the number of children dropping out of school."

Coincident with his retirement as commanding general of the Army Ordnance Missile Command, Maj. Gen. John B. Medaris, perhaps irked at incessant criticism of American standards in missilery and rocketry, leveled a finger at other U.S. standards.

"Have we engineered standards to take care of our agricultural surpluses, our inadequate educational structure, our 'beatniks'?" he asked. "Our standards also seem inadequate in the fields of politics, religion, and basic research."

And, taking the long view, a sociology professor at Harvard, Pitirim A. Sorokin, has stated, "At the present time, the magnificent sensate house built by Western man is crumbling, and the new integrated system of values is not yet built. Hence the crises, tensions, and conflicts of this age."

How do we react to these warnings?

We know how we reacted 2 years ago when the Russian braggart taunted, "We will bury you." We bristled. And we bristled again last fall when he explained what he had meant: that the march of civilization would tramp over us, leaving us interred like feudalism."

We bristle. But many of us also wonder in the quiet thoughtfulness of our own concern for our country, whether this could possibly be true.

There is discomfort in our reactions. We see a determined, vigorous, Machiavellian adversary, fanatical in its belief in itself, having only domination as its religion, challenging us to a duel for the future.

The gauntlet has been hurled at our feet. Will we pick it up? How will we answer the challenge?

WHAT SHOULD OUR NEW GOALS BE?

The challenge is to go forward. If we stand still the boots of new civilizations will surely tramp over us; history assures us of it. But where do wo go? Which way is forward? What are our new goals, now that we already have accomplished so much? Are we like the poor little rich boy—all dressed up and no place to go?

To some our goal is a simple one: we're rich, let's get richer.

We hear of three cars to a family, instead of two; of installment credit plans for teenagers; of 4-day workweeks and 3 days a week for amusement and indolence.

Is this the true frontier? It is questionable whether three cars will save a family from divorce, or from spiritual emptiness, or from boredom.

It is doubtful that teenage charge accounts will solve our youngsters' problems of civilized behavior, sex orientation, respect for elders, or serious preparation for adult living.

And more time for pleasure seeking than we already have would scarcely give us a greater sense of worthwhileness, as individuals, or a greater feeling of the purposefulness of our lives.

Getting richer was yesterday's frontier.

We have stayed ahead in the past because we knew when to change direction, to break out into new territory. Once we had established democracy, we didn't simply loll in it while a rival nation threatened to catch up or overtake us.

We expanded, opened new territories, built roads and cities. And when that was done, we didn't sit back either. We went on to produce goods, to create technological riches that have set the world agape.

CAN'T AFFORD TO STAND STILL

Are we going to stand still now, and let a boasting rival catch up and overtake us? Or will we move on to the new direction, the new step in our progress that will again be a trailblazer to the world?

So that when the rival does (if he does) catch up to our mechanical production of goods, we shall be far out ahead in fresh new territory—still on top and still climbing.

The new frontier is what logically follows the job of making a living (which we have done so well).

It is making a life.

This is the new territory which this series will attempt to explore: trying to find out how to live with all our products, our conveniences our mechanical servants; seeking the success of the inner man, now that we have furbished the outer man so repletely.

We shall search for new paths to family harmony, married harmony, relatedness to God and fellow humans, inner ease instead of tensions. Somewhere in that frontier territory is a sense of the meaning of life.

And out there, too, is morality, so long lost, and a purpose which includes us all.

Our work is cut out for us. No one need look down and say, "What a pity."

The Value of a Catholic Education

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 6, 1960

Mr. SANTANGELO. Mr. Speaker, on Sunday, April 3, 1960, I had the privilege of attending a communion breakfast held by the Knights of Columbus, St. Luke's Chapter, at the St. Rita's Catholic Church. The organization sponsored an oratorical contest participated in by daughters of members of the Knights of Columbus. The two young women who were selected as having written and delivered the best speech on the value of a Catholic education delivered their speeches before an audience of 250 people. In addition, Thomas Nolan, district deputy, also delivered a message to the membership as did the very effective and convincing Grand Knight Anthony Caramele.

I was thrilled to hear the stirring words of the two outstanding young women who have captured the spirit of a Catholic education. Their words were forthright, simple, and carry a message which I feel should be spread throughout the Nation. The winners were Jean C. Cullinan of 1370 Virginia Avenue, Bronx, N.Y., a senior at St. Catherine's Academy, and Deborah Flathery of 2 Stuyvesant Avenue, New York City, a senior at Cathedral High School. The contest was held on March 17, 1960, at the Lady of Mount Carmel Church and the program was sponsored by Emmet Burke, State deputy of the New York State Council of the Knights of Columbus.

The speeches of Misses Cullinan and Flathery are as follows:

THE VALUE OF A CATHOLIC EDUCATION

(By Jean C. Cullinan)

Look carefully—there it stands majestic yet delicate. It casts an eerie shadow against the dusky sky. Slender and fragile are its branches, yet strong and firm are its roots. This is a tree.

How can we judge its value? For a moment we are at a loss for words. The significance of this organism, so tangible before our eyes, eludes our yardstick. Only by surveying its purpose, and estimating its effect upon others can we hope to assess the value of that tree. Its importance will be determined then, by the amount of beauty, security, and usefulness that it brings to a world firmly implanted in the barren soil of materialism.

Education also has that intangible quality which defies man to measure its value. Here likewise must we define the ideal.

Mr. Francis J. Sheed once described it thus: "Education fits a man for living. Man exists in a universe; man is; other things are. An educated man is one whose mind is responsive to all being—to all being—to everything that is.

It will be noted that in this paragraph the words all and everything have kept recurring. This is the very essence of education. You cannot fully know anything until you investigate everything. A little knowledge is a dangerous thing, but an additional and grave danger is knowledge divorced from responsibility. To become acquainted with the whole and its concomitant responsibilities requires a Catholic education. In education where religion is not an incidental, noncredit course, but is the motivating center. This does not mean, and must not mean any destruction of the integrity of the natural sciences. It does not mean a substitution of piety for intelligence. It means a higher respect for scholarship, and a broader horizon than in institutions working within materialistic and naturalistic confines. It will recognize the significance of the natural but will see its completion in the supernatural. In the words of Dr. Edward Fitzpatrick, "The range of Cath-

olic education is the whole range of human life."

I see the men and women prepared by a Catholic education as a leaven for the great spiritual needs of our democracy—manifesting freedom of conscience and independent charity. I see them regarding public service as an inescapable and personal responsibility. I see them a working force for economic and social justice to replace social and economic injustice, wherever the poor or the rich are being exploited. I see a culture in which religion is the mother of the arts vivifying it, inspiring it, but also transcending it. I see a science with the wonder of God's universe still in its eyes, but deep and probing in seeking His truth. I see on the political, the social and the economic scene a force inspired by religion making a reality of the brotherhood of man.

It has been said that the absence of tree roots can cause a flood, while firmly planted ones can prevent it. So also can an insufficient education destroy a civilization as a thorough education can save it. Mr. Sheed has expressed the value of true education thus: "It is my opinion that a non-Catholic institution cannot give an education; it can give a magnificent mass of scholarship and rich mental training; but in the intellectual order there is one thing necessary—a comprehensive view of the totality of being; and this it cannot give."

Catholic education is heritage, a rich and cherished possession. It has given us the best fortification of the mind, a possession fundamental in human life, the truth. It has established our relationship to God, and our relationship to men, which is the first essential of an education.

THE VALUE OF A CATHOLIC EDUCATION

(By Deborah Flathery)

Spiritualize youth. Vitalize nations. A terrified world cries out to youth to save it from self-destruction. At a time when the threat of atomic war and possible annihilation dangles precipitously over the human race harried political leaders look to society's junior members for fresh new ideas to halt the impending crisis. Will youth take up the challenge? A survey of the lively youth forums held in this country and abroad would indicate that young people the world over are ready and willing to do what they can to bring about peace among nations. But good will is not enough to solve the problems of today's complex world. Young minds must be trained to clear, logical thinking, to ideas of freedom and happiness for all. Youth must be well-equipped intellectually before it can find practical solutions to current questions. Here in America the education of youth has always been a major concern as is illustrated in the opportunities offered to all by our public school system. A talented student may progress from nursery school through university free, with only a desire to learn and a will to work.

In our public schools young Americans are prepared physically and intellectually to take up their role as responsible adult citizens. But isn't something missing from this seemingly well-balanced curriculum? Youth needs more than physical and mental ability to meet its responsibilities. It must have a purpose in life to claim its energies. Here is where Catholic education steps in. It alone provides students with a truly well-rounded program, one which prepares them for a satisfying, fruitful life. A Catholic education begins and ends in God. It is geared to develop the mind that one may know Him and with the aid of this knowledge attain the final goal—union with God in Heaven. Secular education neglects the part of man that makes him a human being, a person—the soul. In the Catholic system the soul is the reason for education. Without a supernatural goal and an awareness of the dignity of each human being, of the soul in each person, youth cannot but slacken and lose courage and heart in the tremendous work and sacrifice necessary to bring about world peace. Here is the value of a Catholic education. Under divine protection and guidance it prepares today's youth to become complete persons, individuals who will assume responsibility with the zeal and ideals necessary for peace and justice among all men. Catholic education, then, has answered the call. It has truly spiritualized youth, and through them it will vitalize nations.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Address by Senator Johnston of South Carolina

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. RANDOLPH. Mr. President, I desire to have printed in the Appendix of the RECORD, and ask unanimous consent to do so, the very excellent address delivered on April 9 by our esteemed colleague, Senator OLIN D. JOHNSTON, of South Carolina, when he was the orator at the flag raising and dedicatory exercises for the District of Columbia Home for Crippled Children, the organization before which he spoke on this occasion being the Woodmen of the World.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FLAG-RAISING AND DEDICATORY EXERCISES AT DISTRICT OF COLUMBIA HOME FOR CRIPPLED CHILDREN, UNDER AUSPICES OF THE WOODMEN OF THE WORLD, CAMP NO. 4, WASHINGTON, D.C., APRIL 9, 1960

Mr. President, ladies and gentlemen, it is a real pleasure for me to participate with you in these dedication ceremonies.

The cause being served by the Crippled Children's Society is worthy and needed. Possibly only here in free America are we permitted, without restriction or hindrance, to freely give and generously support organizations of the commendable character possessed by yours.

I have been a member of the Woodmen of the World longer than any other organization to which I have belonged in my entire life, except the church. I joined the Woodmen of the World in 1913 and even when I was a soldier in France I sent my dues back regularly. For nearly a half century I have been deeply interested in the excellent work which the Woodmen of the World have accomplished for the youth of our country. So it is a special pleasure for me to be here today speaking at this exercise dedicating this flagpole upon which will fly the flag of our Nation.

Our flag, the emblem of civil and religious liberty and freedom, well deserves to fly in honor and glory over our institutions dedicated to the service of worthy mankind.

Holy Writ teaches us, "Suffer little children to come unto Me and forbid them not, for such is the kingdom of heaven."

The words of the Master imply physical fitness and mental development. We know that one's mental growth and full intellectual achievement may be retarded when handicapped by physical disabilities. To cure, mend, repair, and rehabilitate young children are to insure stronger, better, and more useful adults. The individual is served immensely by your efforts, assistance, and donations. The Nation is benefited by more useful and dedicated citizens.

You may recall the story of the visitor to a hospital for crippled children who, in talking to a little boy and trying to be considerate, asked, "Do you know many little boys and girls who are crippled?" The answer was, "I don't know any." That sort of spirit is the result of the work of organizations such as yours.

One of the happiest moments abroad is to enter our embassies or other American installations where we find Old Glory waving in the breeze. It gives you an uplift in spirit and thought. You have the same fulsome experience upon returning to America from abroad. There is always an indefinable feeling that fills your being. It was my good fortune and privilege to experience these feelings early in my young manhood as a member of our American Expeditionary Forces in France and Germany in World War I. The passage of the years has not lessened the feeling of joy or the spiritual uplift that comes to me on occasions like this. Last year Mrs. Johnston and I were on an official visit to Greece in connection with my duties as a member of the Senate Committee on Agriculture and Forestry. The authorities at the hotel, upon learning of our official visit, placed an American flag outside our window. This simple demonstration made our visit more homelike and enjoyable.

The greatness of our country, its noble aims and purposes, the dedication of its people, all find a responsive chord in our hearts when we honor our flag at our meetings and on our buildings. Every civilized nation honors its flag. Every citizen of every nation is happy to honor its presence and welcome the meaning of its glories.

The flag abounds in our Nation's Capital over public and private buildings. This is natural. This is to be expected. It is a constant reminder to us of its significance. Our free institutions are honored by its ever-present flying. We who have followed it in time of war know its meaning. We who have been baptized by fire in battle have a deep reverence for what it stands. May she, to paraphrase the words of Nathan Hale, be always right, but right or wrong, I shall follow our flag.

The flag is a symbol of the principles for which it stands. It is our duty as Americans to see that these principles are right. They have made America strong. We must transmit them unimpaired to our children and they to their children.

There is abroad in our midst those who would degrade our flag, its meaning and the principles for which it stands. Against such subversion we must be on guard both day and night.

No other flag the world over has represented the dawn of individual liberty as has our flag. It bears no symbol of force, no fierce beast—just a simple banner that pictures the faith, aspirations, and history of freemen.

To Americans—and to freemen everywhere—our flag means honor, honesty, integrity, and faith in the divine power; it represents our homes, schools, churches; it symbolizes a heritage that is ours to cherish and maintain from generation to generation; it stands for the free enterprise system and the rights of the individual as the two basic principles of our economy.

May we always accept the flag in its fullness of meaning. It is our American history, it is our Constitution, it is our Republic. Let it be our prayer and struggle that we never forget the history and tradition which have made our flag the symbol of the highest form of government ever devised by man; and may we always be proud to call ourselves a part of those valiant patriots from Valley Forge through Heartbreak Ridge who were willing to make the supreme sacrifice for the flag of the United States.

Such is the nature of our flag. Such are the obligations to it. Let it ever fly over the land of the free and the home of the brave.

The Summit and the Captive Non-Russian Nations in the U.S.S.R.

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 29, 1960

Mr. BENTLEY. Mr. Speaker, from this day on till the middle of next month, there will be increasing public discussion concerning the summit meeting in Paris. The Foreign Ministers meeting in Washington is just the first of a series of official presummit talks. But it has, nevertheless, stimulated a good deal of discussion in the press and elsewhere. This initial meeting has also occasioned the presentation of thoughts and ideas by our private citizen organizations, which cannot but serve a good purpose in estimating how many sections of American society think about the summit, its agenda, aims and significance.

One interesting memorandum which was recently submitted to the Secretary of State contains certain perspectives and views that merit the attention of every American concerned with the global struggle between the forces of freedom and those of slavery. Prepared by Dr. Lev E. Dobriansky in behalf of the Ukrainian Congress Committee of America, this memorandum emphasizes the need for a united Western initiative at the forthcoming summit and concretely proposes the courses of action to express this virile initiative. One such course involves the captive non-Russian nations in the U.S.S.R. The proposal that is made on this subject can in no way be construed by Moscow as "interference in the internal affairs of another state."

Because of its provocative intellectual nature I request that this memorandum be printed in the RECORD:

APRIL 10, 1960.

HON. CHRISTIAN A. HERTER,
Secretary of State,
Department of State,
Washington, D.C.

DEAR MR. SECRETARY: On the eve of the presummit Foreign Ministers meeting in Washington, this national committee wishes to take the opportunity to express certain

observations and ideas which it believes deserve consideration in the formulation of an agenda for the summit conference of May 16. Many of these views are spiritedly shared by millions of Americans of this and numerous other national organizations, and with them, we earnestly hope that our Government will advance these views for the attainment of the strongest prepared position at the summit.

The points enumerated below are, of course, founded on a knowledge and understanding of the Russian imperialist menace which has been elaborated by us in numberless memoranda submitted to the administration for the past 7 years. However, developments of the past 2 years, highlighted by sputniks and other basically diversionary Russian performances, cannot but cause us to recall here the apt words of Karl Marx—words which still are unquotable in Khrushchev's supposedly relaxed empire:

"They will have learned before that the idea of Russian diplomatic supremacy owes its efficiency to the imbecility and the timidity of the Western nations, and that the belief in Russia's superior military power is hardly less a delusion. There is only one way to deal with a power like Russia, and that is the fearless way."

This, to be sure, is a strong statement and, in part, exaggerated. But when one contemplates the paramount fact that, in this past century, of all the major colonial empires the Russian one was not only able to survive but also, behind the legalistic mask of the U.S.S.R., now even threatens the security of the free world, the aptness of this statement could scarcely be denied. It is most significant that this observation was made during the reign of Czar Nicholas I with whom Khrushchev now openly compares himself, as witness his address in Budapest last December.

Our views are based on the firm knowledge that the cold war techniques of Khrushchev are essentially those of Nicholas I and his other totalitarian predecessors. Nuclear blackmail threats of an East German treaty, exercises in Potemkin Village economics, and many other diplomatic strategems have their substantial precedents in the arsenal of imperial Russian diplomacy. This arsenal served to build an unprecedented empire which the Red czars have conserved and extended.

The very occurrence of a summit at this time symbolizes a victory for the pressuring propaganda and diplomacy staged by Moscow these past 2 years. The peace-at-no-price attitude shown by Moscow toward the summit indicates in itself the manner by which it seeks to exploit this given opportunity. Its propaganda machine has even gone to the length of attempting to compromise the position of Western Germany by unjust attacks upon Theodore Oberlaender, the Refugee Minister of our ally, in whose defense scores of witnesses in this country could be supplied by this committee. With no real loss to itself, it would not at all surprise us to witness 2 days before the summit a spectacular move by Moscow to dissolve its Warsaw Pact. Its carefully calculated game of bluff and bluster has reaped for it another summit: Moscow's objective now is to exploit it fully.

In urging your consideration of the following points, it cannot be too strongly emphasized that the irony of the current situation lies in the overall fact that Moscow is able to advance diplomatically and propagandawise although it is really operating from basic weaknesses and multiformed necessity. Our memories are short. All evidence shows that at the time of the Hungarian Revolution the Russian Communist empire was pitched on the edge of a precipice. It has always been the rational belief of this committee that had we been prepared for this glorious opportunity and acted with skill and adroitness—and without committing our own troops—the area of freedom would have been much greater today. Needless to say, the passage of 4 years has not erased the inherent weaknesses in the structure of this far-flung empire. Out of necessity and for time to consolidate, Moscow is pressing for Western accommodation under the spurious label of "peaceful coexistence," along with the hope that its calculated propaganda of bluff and bluster would twist any degree of Western timidity into real concessions.

Unleashing Marx at Khrushchev, our thoughts and actions, should therefore, be dominated by the guiding dictum: "There is only one way to deal with a power like Russia, and that is the fearless way." We earnestly hope that this confident spirit will permeate the present Foreign Ministers meeting and, as a result, that the agenda of the summit would embrace points of leadership which may throughout the world be respectfully viewed as bold, imaginative, and reassuring. The following points, we believe, truly evince this spirit:

(1) The captive nations: Khrushchev's overriding objective is Western assent and acquiescence to his empire. In this, his role is identical with that of Nicholas I. His emphasis upon disarmament and other subsidiary issues seeks to deflect Western attention from this basic subject. Even the omission of this subject will be propagandistically exploited in the empire to mislead the captives that the free world's interest in them has waned.

We strongly urge that our Government seize every opportunity to insist upon this crucial subject as a major point of summit discussion. Failure to do so would be, in effect, an accommodation of Moscow's empire and a victory for Khrushchev, far surpassing what any army could achieve. We would be bolstering the security of the Russian colonial system and undermining one of our most powerful deterrents against Russian aggression and a hot war, namely, the captive non-Russian nations in Eastern Europe and central Asia. The very implication of an assent to the status quo would make mockery of the Captive Nations Week resolution passed by the Congress and proclaimed by the President last year. In terms of bargaining position, the captive nations (not only just the minority captive nations in central Europe but also the majority captive nations in the U.S.S.R. and Asia) are of enormous value to the security of the free world. Any rationalization to the effect that this vital subject might be discussed later in a series of summits would not preclude the above effects.

(2) The cold war: As a corollary to the above objective, Khrushchev's additional aim is the curtailment of free world propaganda directed at his empire and also the Russian people. He might attempt what his colonial puppets have striven for years to do with their Draft Code of Offenses in the United Nations. A recent British reiteration of this idea under the cloak of a code of peaceful coexistence may be utilized by Moscow to propagandize at and after the summit for a cold war cessation.

This committee harbors no illusion about the possibility of ending the cold war. With its grounded, long-run perspective on traditional Russian imperialism, it empirically views the cold war phenomenon as an indispensable coefficient of the Russian Communist Empire. In short, a real and complete cessation of the cold war would spell the demise of the empire itself. Nevertheless, Moscow's pressure along this line should be met positively rather than negatively. We therefore urge the proposal of the idea of putting an end to the cold war, but with a rapid implementation to the extent of Moscow's dissolving its Communist parties in the free world and with a reserved intention to expand our propaganda, particularly as concerns the captive non-Russian nations in the U.S.S.R., should Moscow balk at our wholesale plan. The behavior and utterances of Khrushchev and his minions in the period of the spirit of Camp David are usable evidence for such a proposal.

(3) West Berlin: Khrushchev's efforts at empire consolidation necessarily aim at the elimination of this island of freedom. As stressed in our previous memoranda to you, both historically and analytically, the Berlin issue is an integral part of the larger problem of German reunification, which in turn is inseparable from the composite problem of all the captive nations. Moscow rightly sees it this way: We must view it in the same integralistic manner.

We thus urge a firm stand on West Berlin with flexible points of offense: namely, (a) a plebiscite under U.N. guarantees for the people of all of Berlin; (b) a subsequent generalized plebiscite for all Germans under similar guarantees to determine the government of their choice; and (c) the holding of free elections in a reunited Germany. To bargain for a free West Berlin by making concessions on nuclear test bans is not only shortsighted but also dilatory and timid. It represents the species of purchasing peace at a price to us.

(4) Disarmament: This issue is in essence a superficial one. It is usable for Moscow as a diversionary technique. Only to a minor extent is Moscow's stress on it attributable to the necessities of empire control and consolidation. As a deflector from the real, fundamental issues, it has served Moscow's purposes well, as note the spread of the coexistence or codestruction neurosis.

In the judgment of this committee, to raise the so-called disarmament problem as the chief subject of summit discussion is to play Moscow's tune and to obfuscate further the basic issues of our time. As a subject of relative secondary importance, it should be treated with subsidiary report and for comparative propaganda advantage which, indeed, primarily motivates Moscow's maneuvers in this nebulous area. Against the mountainous record of broken Russian treaties for the past 40 years, a disarmament or nuclear ban treaty with Moscow would almost signify a trained neglect of historical experience.

(5) Disengagement in Europe: As pointed out in our memorandum to Secretary Dulles on December 10, 1958, the disengagement thesis is fraught with prodigious risks for the free world in the terms that it is usually presented. We urge again that this proposal be met squarely on the basis of comparability and geographic depth. Thus to parallel a neutralized free Germany, the inclusion of Ukraine would be a necessity for fair agreement on this subject.

(6) Diplomatic relations with non Russian republics in U.S.S.R.: It is often said that we are short on ideas for a diplomatic offensive. One idea that deserves every serious consideration is the creation of diplomatic relations with Ukraine and Byelorussia, both charter members of the U.N. As an exploratory step, this idea merits Western consideration in the interest of forming bonds of peaceful relations between nations. Although, as Pope Pius XII soundly taught, we are faced with a "mirage of coexistence," this step cannot but produce long-run effects favorable to free world interests.

(7) Red China's admission to the U.N.: An additional mirage is the supposedly growing cleavage between mainland China and Moscow, as though they were entering into a mutual suicide pact. This apparition is the basis in the minds of some for recognizing and admitting Red China to the U.N. Moscow's shipment of close to $1 billion of industrial equipment to this captive area and the preparation of it for admission to the

nuclear club scarcely support such wishful thinking. In behalf of our Asian allies and our own principles, the position of our Government in this matter must be sustained at all costs. On careful analysis the dispersion of nuclear weapons is a far greater threat for Moscow than for us.

(8) The mythical Soviet monolith: It is also fervently hoped that in the summit talks every indication is given of our understanding of the uneasy multinational structure of the Soviet Union. Myths, such as "the Soviet people," "the Soviet Nation," and "the Soviets," hardly bespeak the power of understanding which can draw the respectful attention of even the Russian colonialists. Our evidence of this understanding can, more than anything else, freeze Khrushchev's play for Asian and African influence on matters of national independence and colonialism.

Only by sustained principles can our tactics remain maximally flexible. Along with countless other Americans, Mr. Secretary, we earnestly hope that for what may seem as short-run advantages of accommodation to the Russian Communist empire, we do not compromise on those principles enshrined in our own Declaration of Independence—principles which continue to make our Nation the unique vehicle of a living revolution and mankind's great experiment in freedom.

With kindest personal regards and best wishes for our stand of firm conviction and fearlessness at the summit, I am,

Sincerely yours,

LEV E. DOBRIANSKY.

Bills

EXTENSION OF REMARKS

OF

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. DOWNING. Mr. Speaker, under the present maritime law, west coast shipbuilders are allowed a 6-percent differential in the construction of all ships having a home base on the west coast.

Basically, this means that on a $10 million ship west coast shipbuilders have a $600,000 cushion before they even have to start being competitive with east coast, gulf coast and Great Lakes shipbuilders. This legislative favoritism, when it was enacted in 1936, was justified on the basis that this Nation needed shipbuilding facilities to support a two-ocean Navy and merchant marine.

At that time the west coast had no steel factories and component parts of vessels had to be shipped across the country so builders there were given the cushion to cover those extra costs.

There probably was justification then, but there is none now. The west coast now has shipbuilding facilities comparable to any area of the United States, and to allow this legislation to remain on the books is most prejudicial to the shipbuilding industries in other parts of our Nation.

Several bills have been introduced in this Congress to eliminate this differential, and testimony is now being heard by a subcommitee of the Commitee on Merchant Marine and Fisheries.

Last Tuesday, Mr. William E. Blewett, Jr., President of the Newport News Shipbuilding & Dry Dock Co., appeared before this subcommittee with documents and exhibits. He explained this unfair situation with such clarity and forcefulness that I have asked permission that his statement be made a part of the CONGRESSIONAL RECORD in order that our colleagues from other sections of the country will have the opportunity of obtaining a better understanding of the serious issue involved:

STATEMENT BY WILLIAM E. BLEWETT, JR., BEFORE HOUSE MERCHANT MARINE AND FISHERIES COMMITTEE IN SUPPORT OF H.R. 8093 AND COMPANION BILLS

My name is William E. Blewett, Jr. I am president of the Newport News Shipbuilding & Dry Dock Co., Newport News, Va., and president of the Atlantic, Gulf, and Great Lakes Shipbuilding Association. I appear before your committee in support of H.R. 8093 and companion bills which would repeal section 502(d) of the Merchant Marine Act, 1936, as amended. This section provides that under certain circumstances vessel construction contracts to which the Federal Maritime Board is a party must be awarded to a Pacific coast shipyard if its bid exceeds the lowest responsible bid of an Atlantic coast shipyard by up to 6 percent. The only bases for inclusion of this provision in the 1936 act when it was enacted were, first, shipbuilding on the Pacific coast was practically dormant in 1936 and, consequently, of no national defense value. Secondly, Pacific coast shipyards had to obtain all of the steel, machinery, and other component parts of vessels from the eastern part of the country and the overland freight rates on such material prevented the shipyards from submitting competitive bids.

We intend to show in the course of these hearings that conditions have completely changed since 1936 and that neither of these considerations obtains today. Our presentation is keyed to the following points, and exhibits will be offered to substantiate each point:

I. Today, a strong shipbuilding industry exists on the Pacific coast, consisting of almost as many active shipyards as there are on any other coast, available to meet national defense needs. Should this situation change, the Federal Maritime Board has ample remedial authority through allocation under section 502(f).

II. Today, steel, aluminum, copper, and component parts are produced on the Pacific coast area at competitive prices.

III. Even as to components produced and purchased in the East, the freight differential is no longer a significant factor of cost.

IV. Finally, we will demonstrate the 6-percent preference afforded to the Pacific coast shipyards destroys completely the integrity of competitive bidding and, if continued, will have an adverse effect on the entire shipbuilding potential of the United States by forcing shipyards on the other three coasts of the United States to cease bidding on Federal Maritime Board construction contracts to which the preference applies.

POINT I

There is no longer any national defense justification for the 6-percent preference in favor of the Pacific coast. During the hearings prior to the enactment of the 1936 act it was stressed that there had been no shipbuilding activity on the Pacific coast since the First World War. This is shown in the questioning of Alfred H. Haag, Chief, Division of Shipping Research, of the Shipping Board, in the hearings on March 20, 1935, on H.R. 7521.

"Mr. WELCH. Mr. Haag, in your answer to Judge Culkin's question as to the ability of American shipyards to construct merchant ships to meet any emergency, are you aware of the fact that not one vessel for either the foreign trade or intercoastal trade has been constructed on the Pacific coast since the war?

"Mr. HAAG. I knew of that condition.

"Mr. WELCH. And that shipbuilding for merchant ships has, in fact, become a lost art on the west coast?

"Mr. HAAG. I knew it had declined very much" (pp. 67–68).

The national defense requirement for a shipbuilding industry on the Pacific coast was the strongest argument advanced by the Pacific coast Congressman advocating the preference in the same hearings:

"Mr. HAAG. From the standpoint of strategy, it would appear there should be some yards on the Pacific coast.

"Mr. WELCH. And the Government should do something to encourage those yards as a matter of national defense. But the Government up to this time has refused every appeal made from California, Oregon, and Washington for a revival of shipbuilding on the Pacific coast as a matter of the national defense.

"Mr. O'LEARY. Have you any large yards there now?

"Mr. WELCH. Perhaps there is one yard on the Pacific coast where a vessel of magnitude or size or importance could be built, and even in that yard they would have to build ways at a cost of half a million dollars. In case of emergency tomorrow, there is not a shipyard from San Diego to Puget Sound which could lay a keel for an offshore vessel" (p. 68).

Exhibit No. 1, prepared from the American Bureau of Shipping Record, shows clearly that the national defense objective has been achieved. In 1936 there were only 3 shipyards on the Pacific coast, while today there are 7 yards with 29 ways. There has not been anything like a comparable increase in the shipbuilding capacity of the other three coastal areas. In fact, as you will note, on the east coast while the yards have increased from 8 to 9, there has been a decrease in ways to 49 active ways in 1959.

The same is true as to the actual FMB ship construction in the shipyards of the country today. Exhibit 2 reveals that there is presently under construction in the Pacific coast yards about 36.5 percent of the board's vessel construction work, although the Pacific coast is only one of four coastal areas of the United States. This striking fact alone shows the lack of need for the 6-percent preference. Exhibit No. 3 illustrates the situation even more graphically by showing the amount of the work on the Pacific coast as compared to the work in the yards on each of the other three coasts.

From these exhibits there can be no doubt that the shipyards on the Pacific coast are actively in operation today as compared to 1936 when there was practically no activity. Furthermore, these active yards on the Pacific coast afford a base which can be expanded to fully meet national defense needs of the United States. We all know that the reserve yards on the Pacific coast can be quickly reactivated in the event of an emergency and that additional ways can be constructed in the existing yards almost immediately. The ability and skill of the Pacific coast shipbuilding industry to rise to the occasion and meet national defense needs is illustrated by Exhibit 4 which shows the comparison of the vessel tonnage constructed in the Pacific coast yards and in the other yards of the United States during both of the world wars. I call your attention to the fact that while there was practically no shipbuilding on the Pacific coast in 1936, the industry was able to expand to the extent that in World War II over 44 percent of the war-built vessels were constructed in Pacific coast yards. Even more impressive is the fact shown in Exhibit 5 that the Pacific coast yards produced liberty-type vessels at a lower cost than the yards in any other area. On the basis of this record

of ability to expand and productive capacity at competitive cost, it cannot be validly argued today that the Pacific coast shipbuilding industry needs any preference in bidding or other artificial incentives to meet the national defense needs of the United States.

POINTS II AND III

In 1936 there was no steel produced west of the Rocky Mountains. Today, over 9 percent of the ingot ton capacity of the United States is located west of the Rockies. Significantly, the percentage of the overall steel production in the United States which is used in shipbuilding (both Navy and commercial) and marine equipment is only 1.4 percent of total production. Therefore, it is clear that while the west coast had no steel production in 1936, it is capable today of producing all of the steel required for shipbuilding in the entire United States. The same situation exists with respect to other materials and component parts used for shipbuilding. Exhibit No. 6 shows the tremendous overall growth in manufacturing activities on the west coast since 1939. In 1936 the Pacific coast area was primarily an agricultural, forestry, and mining economy. During the intervening years its population growth and industrial development has been far out of proportion to the rest of the country. It is my understanding that as of March 1, 1959, the State of California alone has about 26 percent of all Federal Government military prime contracts, although it is only 1 of 50 States.

In 1936 virtually all component parts necessary for vessel construction were produced in the eastern part of the country and transported to the Pacific coast. Today, not only are a large proportion of such conponents produced and delivered on the west coast at competitive prices, but they are actually purchased from Pacific coast suppliers by shipyards in the eastern part of the country at prices lower than quoted by local suppliers. This dramatic change in the flow of materials is illustrated by exhibit No. 7, which has been prepared from actual purchases made by shipyards on the Atlantic and gulf coasts and the Great Lakes.

Finally, even as to materials purchased by Pacific coast yards in the eastern part of the United States, the freight rate differential is no longer significant. Exhibit No. 8 contains copies of letters from General Electric and Westinghouse, major suppliers of turbines, gears, machinery, and electrical apparatus which are used in vessel construction, which show that the delivered price to all yards furnished by these two companies is the same regardless of point of destination in the United States. Further, Westinghouse has established a turbine plant at Sunnyvale, Calif., and when shipyards in the eastern part of the United States place an order for propulsion machinery, this equipment may be delivered from any of the Westinghouse plants, including Sunnyvale. Exhibit No. 9 is made up of excerpts from salesbooklets of other suppliers which show that freight absorption is a common practice among suppliers. To demonstrate the change in the freight rate differential situation, we have prepared exhibit No. 10 which shows the disadvantage the Pacific coast yards suffered in the delivered cost of steel in 1936, but shows that today, because of the steel production in the Pacific coast area, the differential has been reduced to an insignificant percentage. As steel represents about 10 percent of the material cost of a cargo vesesl, the 1.2 percent freight disadvantage on steel which the Pacific coast may have becomes a disadvantage of less than two-tenths of 1 percent with respect to the aggregate material cost, and less than one-tenth of 1 percent of the cost of the vessel.

Finally, to indicate the full impact of the elimination of all of the disabilities to which the Pacific coast yards were subject in 1936, exhibit No. 11 shows that, taking a vessel of the type now being constructed under the FMB program and breaking down the vessel into the major component parts, the materials which go into the construction of the vessel can be obtained on an overall basis as cheaply by the Pacific coast yards as by yards in the eastern part of the country. The insignificant difference in the delivered cost of steel and boilers which is paid by the Pacific coast yards is balanced out by the difference in their favor in the delivered prices of deck machinery, steering gear, and lumber. This demonstrates that the Pacific coast shipyards no longer labor under any disadvantage and should therefore enjoy no preference in competitive bidding.

POINT IV

The effect which the 6-percent preference has had upon the competitive bidding and which it will continue to have if retained in the law will be more completely covered by other witnesses from other shipbuilders. However, I would like to point out that as a result of the inequitable situation faced by Newport News in the award of the American Mail Line contract to a Pacific coast shipyard, it was necessary for us to give very serious consideration as to whether Newport News would respond to the invitations of the two other Pacific coast operators which were issued after the American Mail Line award.

Advice of Political Advisers

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. GOLDWATER. Mr. President, a great source of amusement for the practicing politician at this time of each election year is to review the almost daily presentations of the "smoke filled typewriters," or, to put it another way, the political advice of those whose association with practical, down-to-earth politics is practically nonexistent. The smoke-filled room used to be considered the source of political strategy, but now the columnist is the one who advises the candidates as to the position they should take. The most startling of these efforts is the general one of advising Republicans to be something other than a Republican, a position which I can assure those seers has resulted in disaster whenever tried. A columnist with political understanding writes for the San Fernando Valley Times, and this man, George Todt, has so well pointed out some of the errors of the advisers that I ask unanimous consent that this particular column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GEORGE TODT'S OPINION—NO NEW DEAL TAKEOVER FOR NIXON

"Superiority is always detested"—Baltasar Gracian.

I am always amused, in a wry sort of way, whenever New Deal Democrats in the Nation's communications media become mentors for the Republicans—and graciously show them how to "win" the next election.

A case in point is Walter Lippmann, the New York Herald-Tribune, who—unless I miss my guess—is about to become the self-appointed campaign director for Richard Nixon.

At least I gained that impression from one of Lippmann's latest expressions. He suggested that all the Vice President needs now is a half nelson on Rockefellerism. He put it like this:

"Mr. NIXON's problem is to decide how far he can move into the Rockefeller-Democratic field in order to make up for the fact that the Republicans are a minority party. This is not an easy problem for Mr. NIXON to solve. To begin with, professional politicians who control the leading Republican organizations in the States were powerful enough to force Rockefeller to withdraw. They are not going to allow NIXON to adopt many of Rockefeller's ideas."

This bears some analysis. First, Rocky didn't withdraw at the order of GOP professionals—he simply failed to generate enough enthusiasm among grassroots voters for his synthetic Republicanism to justify the waste of his time and energy in 1960. Being a smart businessman, he picked up his marbles and pulled out before any damage was done him by unnecessary defeats.

And, frankly, Mr. NIXON appears already to have been adopting some of Governor Rockefeller's ideas—which may account for the fact that his popularity is beginning to dip.

The most fallacious reasoning is bound up in the implication that the Vice President has to move into the Rockefeller-Democratic field to keep his presidential hopes alive. One does not need to be a hoary septuagenarian to recall the fiascos of Republican "me-tooism" employed by Wendell Willkie and Thomas E. Dewey in 1940, 1944, and 1948.

It was not until the Eisenhower campaigns of 1952 and 1956 that the GOP had a presidential candidate who punished the New Deal philosophy by a frontal attack—and he won going away.

Yet Lippmann today calls the "Eisenhower philosophy" old-fashioned, out of date. He suggests NIXON come up now with some new ideas. What are they? Why, a return to New Deal concepts of course. This could win an election for the Republican Party?

I do not think so and, while we are at it, let's explode another myth here. It is true that the Republicans are numerically inferior to the Democrats—mainly because of the Solid South, where there is no strong two-party system.

In presidential elections, the Democrats have been coming up with roughly 27 million votes each time since 1940. The GOP has ranged from 22 to 33 million in the same period. With "me-too" candidates it has been closer to the smaller figure. But General Eisenhower, who spoke out against New Deal philosophy in his 1952 and 1956 campaigning, won with pluralities of 7 and 9 millions.

This history indicates how far Mr. Lippmann is off-course. Republicans success undoubtedly is closely related to ability to stir millions of stay-at-home independents to go to the polls. These may be of, either Democrat or GOP complexion. But the point is that a bigger-than-usual turnout is vital.

The "me-too" Republicans of the past—and probably Rockefeller at the present time—have demonstrated conclusively that they cannot appeal sufficiently to the "great unconvinced" among the grassroots voters to accomplish this objective. How explain away that fact?

How Forest Conservation Benefits My Community—Prize-Winning Essay by Mary Cecilia Bacon

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a prize-winning essay entitled "How Forest Conservation Benefits My Community." The essay was written by Miss Mary Cecilia Bacon, of Hickman, Ky.; and it was with this essay that Miss Bacon won the county soil conservation essay competition. The essay written by this talented young lady was published in the Hickman (Ky.) Courier of January 7, 1960.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

COUNTY SOIL CONSERVATION ESSAY WINNER—HOW FOREST CONSERVATION BENEFITS MY COMMUNITY

(By Mary Cecilia Bacon)

To me, a forest is one of the most beautiful and magnificent creations in the world. It reminds me of a stately row of kings ruling the world and dominating the scenery. Forests are not made up of trees alone; some have lakes, small ponds, flowering plants and wildlife. There are several famous forests in the world such as the Black Forest in Germany, the Sherwood Forest in England, and the Redwood Forest in California. Besides adding to the color and beauty of the countryside, they are useful and beneficial to man.

Wood, one of the chief products of my community, is used to build houses, furniture, and other implements which are most essential for living purposes. After going through many processes, wood is made into various forms of paper, which is a necessary article for school students as well as for the printing of newspapers and books. Wood is also made into cardboard boxes and crates in which are shipped many of our Nation's products which we buy daily. Many of the clothes we wear are made from a material called rayon which comes from wood pulp. Indirectly, forests help give us our food supply. They protect the important elements in the soil and help save the water.

These are some of the essential benefits, but they are really secondary since my community is a farming community.

The roots of trees help to keep the soil from eroding and their leaves help to save the water supply along with the aid of watersheds. The leaves form sort of a cover which breaks the pressure of the rainfall and makes it fall softly on the ground. Then it can be absorbed slowly, and emptied into the underground springs and streams. The water from these streams is distributed widely in the soil; consequently contributing to the value of the soil. The denseness of the plants and young trees of the forest catch and hold the melting snow and water from the mountains and uplands. This action helps in preventing the floods that would ordinarily occur if the water flowed directly onto the soil.

Naturally, there are some tracts of land which will not provide the richness or necessary elements for good crops. These tracts can be made useful by planting trees and nurturing them into woodlands or forests. They can be valuable for many years if the owner leaves the undergrowth and young trees which will eventually mature. The owner can sell the full grown trees for lumber and earn good money while making proper use of his land.

Our forests provide the best homes for our wildlife. Shelter, protection, and an abundance of food are there for the rest of their lives. Rare species of fish, for instance, can live in the cool streams of the woodlands and small animals can survive in the sheltered area of the forest.

We can protect our forests by keeping alert and concerned about their importance. Fire is the greatest destroyer of forestry. It is not ignited by itself, but usually by human beings. We should try to prevent these fires by obeying the rules of "Smoky" the bear. Matches should be put out entirely and broken in two. The sparks from cigarettes, pipes, and cigars should be extinguished before throwing them away. After a campfire has been built, it should be watched carefully and when it is put out it should be soaked with water or dirt. When burning brush is spotted, it should be reported to the forest ranger of firewarden.

Fire can lay waste an entire forest, burning young trees and old. It can also destroy the life of a forest by burning the surface of its floor. In this way the young seedlings, the future of the forest, are killed. Forest fires have always been a menace to our community, private homes and human lives.

Insects are responsible for a sizable part of the losses of our forests. Some eat on the foliage of the trees; others work their way into the trunk and do their damage. The forest can be preserved if the injured trees are removed or sprayed with insecticides. This can be done by the use of airplanes.

Another enemy of the forest is disease which kills numerous trees, reduces their growth, or destroys their heartwood. By protecting trees from injury and harvesting them before they are completely destroyed, we can increase their usefulness.

There are other enemies which are destructive but their damage is not as great or serious. Animals, for example, grazing in woodlands can injure the roots of trees and snap the young sprouts. The weather can also be an enemy when the soil of the forest is soft and is not strong enough to hold the roots. Winds can blow the young trees down; snow and sleet can overload tender branches and break them.

Be assured that the value, the necessity, and the importance of forest conservation cannot be overemphasized. As private citizens, we should be made conscious of our duties and obligations and preserve and protect our forests. Individually, we should assume our role with sincerity, loyalty, and a pround sense of national pride.

The Government has set aside some of the forests as national parks. It seems only natural that this should be done. Why? Could it be that she wishes to impress upon our minds the beauty, the majesty, the potentiality, the glory of Mr. Forest? I would like to think so.

Economic Problems of Small Business

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. ERVIN. Mr. President, the trade journal Modern Packaging carried in its issue for April 1960, a significant statement by Alex M. Worth, Jr., president of the Shamrock Corp. of Greensboro, N.C. This statement contains some observations worthy of the attention of those of us who are concerned with the economic problems of small business. For this reason, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Aside from the many spectacular packaging developments of the past decade, one of the most significant developments has occurred within the industry itself: I refer to the unprecedented number of mergers or amalgamations. As president of a very small, successful company, I must state that this phenomenon causes us some uneasiness. Presently, we are not big enough to get swallowed up or perhaps even attract particular interest. Naturally, we want to grow, but I cannot help but wonder what the future holds if we do expand to the point where we would be more sharply brought to the attention of, and therefore of more importance to, some of the primary producers.

We recognize the invaluable contributions in new-product development and expansion afforded by large, diversified packaging corporations, integrated from top to bottom. Nevertheless, I am firmly convinced that if the industry is to continue to flourish, it is equally important for prime suppliers to recognize that the service requirements of the consuming markets are most adequately fulfilled by the small independent specialty converter of packaging materials.

This ingredient—service which is the main justification for the existence of small converters, is too important to be neglected and apparently it gains no benefit from bigness. We anticipate hopefully, during the next decade, a balancing trend which would give greater recognition to this fact. Toward this end, the contribution of the small converter would be considerably increased and the industry well served by the enactment of suggested legislation, permitting tax allowance for earnings, plowed back into the business.

Results of Questionnaire Mailed by Hon. John F. Baldwin, of California, to Residents of the California Sixth District

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. BALDWIN. Mr. Speaker, 2 months ago I mailed a questionnaire to every family of registered voters in the California Sixth Congressional District. The response to this questionnaire was so large that my office was swamped for weeks with returned completed questionnaires and accompanying correspondence. Many constituents not only answered the questionnaire, but wrote detailed comments on the back of the questionnaire, or attached supplementary letters. I have spent many hours personally reading all these comments, and they have been most helpful. I am firmly convinced that a Congressman can better represent his constitutents if he knows the views of his constituents on

important issues pending before Congress, than if he does not know them.

The tabulation of the questionnaire is summarized below:

1. The President has submitted a budget for fiscal year 1961 which contains an estimated surplus of $4.2 billion. Do you feel this surplus should be: (a) Applied to reduce the national debt, 64 percent; (b) applied to reduce taxes, 29 percent; (c) no opinion, 7 percent.

2. Do you feel Congress should pass a law to make illegal the rigging of television quiz shows? Yes, 58 percent; no, 31 percent; undecided, 11 percent.

3. There is now a surplus of over $3.4 billion in wheat stored by the Government under the present price support program. Would you favor legislation to lower wheat price supports in an effort to reduce such surplus production? Favor, 85 percent; oppose, 6 percent; undecided 9 percent.

4. Under present Federal law, there is no interest rate ceiling on Federal bonds of less than 5 years' duration, but there is a 4¼-percent interest rate ceiling on bonds of more than 5 years' duration. President Eisenhower has recommended legislation to remove this 4¼-percent ceiling on long-term bonds. Do you favor or oppose the removal of this ceiling? Favor, 48 percent; oppose, 32 percent; undecided, 20 percent.

5. Would you favor legislation to authorize Federal registrars to be appointed to register voters for Federal elections where local registrars have discriminated upon the basis of race or color in registering voters? Yes, 64 percent; no, 24 percent; undecided, 12 percent.

6. A "national wilderness preservation bill" is pending which would require present wilderness areas in national parks, national forests, wildlife refuges, and on public lands to be preserved from invasion or use by grazing, lumbering, mining, petroleum, and other commercial interests. Would you favor this bill? Favor, 77 percent; oppose, 14 percent; undecided, 9 percent.

7. The present Cuban Government has been seizing American-owned property in Cuba without any agreement for compensation to the owners. In view of this fact, do you feel that Congress should modify our Sugar Act to reduce our yearly commitment to import Cuban sugar at prices above world prices? Yes, 80 percent; no, 10 percent; undecided, 10 percent.

8. The present law allows the recipient of a social security pension to earn up to $1,200 per year before being disqualified from receiving the pension. Would you favor an increase in this exemption to $1,800? Yes, 88 percent; no, 9 percent; undecided, 3 percent.

9. Would you favor legislation to establish more stringent safeguards against the sending of obscene literature through the mails? Yes, 82 percent; no, 11 percent; undecided, 7 percent.

10. Would you favor legislation to require a secret ballot vote by union members before a strike is called by the union? Yes, 91 percent; no, 5 percent; undecided, 4 percent.

Answers from union members: Yes, 90 percent; no, 7 percent; undecided, 3 percent.

Answers from nonunion members: Yes, 92 percent; no, 4 percent; undecided, 4 percent.

11. Would you favor the elimination of all deductions under the Federal income tax laws (such as charitable, medical, and tax deductions), and establishing lower income tax rates which, because of the elimination of deductions, would raise the same amount of revenue? Yes, 37 percent; no, 48 percent; undecided, 15 percent.

The Ethics of Influence

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. BARR. Mr. Speaker, today I am submitting for the RECORD an editorial which appeared recently in the Indianapolis Times. In my opinion it is a straightforward statement of a problem that has caused me more worry than any other part of this job of being a Congressman.

As this editorial points out a Congressman does have considerable influence over any Bureau or any Department. We have the right to take to the floor and blast away at their policies; we can appear before different investigating committees to give a Bureau further trouble; and lastly we can try to cut off their money when appropriations are being considered. There is no question that an active and aggressive Congressman can and does have an influence on any agency of this Government.

The other side of the picture is that all of us are constantly receiving requests from our congressional districts for help in one Bureau or another. Frankly this was a matter of great concern to me when I was elected to the Congress. I made up my mind that I could cheerfully accept any criticism of my voting record or my statements on national affairs. This type of criticism can wound the vanity a bit, but it breaks no bones and leaves no permanent scars. It also offers the advantage of supplying a critical body of information and opinion on new projects and new ideas that have never been tested.

The one type of criticism that I do not want to take is criticism aimed at my personal misuse of a great office in the United States. At first I attempted to judge practically every request, but my administrative assistant, Mrs. Esther Pillen, who has had years of experience on the Hill, pointed out that I was elected not to judge but to legislate and to represent the people in my district. She also pointed out that it was the duty of the executive agencies to judge requests, and further that if I did not represent my people in requests, no one else would. I believe that she is about 95 percent correct, but I fretted that in the avalanche of requests we processed there might be a possible misuse of any power this office might possess.

To offset this 5-percent chance I have tried a few devices that I brought with me from private life. I decided literally to run my office in a goldfish bowl. In Indianapolis I have a one-room office, and the door is wide open. In Washington I have a two-room office with all doors wide open. This idea of working out in the open with absolutely no privacy is an idea that I brought back from newspaper city rooms and from the banking business.

Secondly, I publish each week every engagement for the coming week and send it to every news medium in my congressional district. I will see anyone about any problem, but it is right out in the open.

I see no other way to resolve this conflict-of-interest problem. The people of my district do have problems. They do need help, and part of my job is to help them. On the other hand there is no doubt that as a Member of Congress I do have more influence with Government bureaus and agencies than the average private citizen. The only practical way that I can see to do the public's business and still not abuse the powers of this office is to work in a fish bowl. As this editorial points out "If there is nothing wrong with helping a constituent, there is nothing wrong with having it known."

THE ETHICS OF INFLUENCE

Congress is wrestling once again with the morals, good tastes, and restraints for people who deal with the so-called regulatory agencies of the Government—those giant bureaucracies which license, prescribe, and otherwise rule much of our business world.

Laws have been proposed which, in essence, would prohibit any kind of backdoor influence, intended or inferred.

For instance, if a Congressman, say, should telephone the Federal Communications Commission in behalf of a constituent TV station, his call would be included in the official record of the case, even if he merely asked a question.

The idea is that if everything anybody did or said, officially or otherwise, were written down for all to see there would be a much less sinister influence brought to bear on these agencies. (Recent investigations indicate there has been plenty.)

Congressional investigators, the Attorney General, and the American Bar Association all have been talking about laws of this type.

However, Congressmen are the leading practitioners in this field. Their offices constantly are asking, pressuring or nagging these agencies about the affairs of their constituents.

It is a fact that the average bureaucrat will bust a gusset for a Congressman.

By a mere query, however innocent, a Congressman often can influence a bureaucratic action.

The on-the-record curbs now proposed would tend to protect a Congressman from any such implication, if he didn't mean it. If he did mean to influence an agency action, he ought to be willing to stand back of it.

If there is nothing wrong with helping a constituent, there is nothing wrong with having it known.

Republican Aid-for-Aged Plan Is Poor Substitute

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. HARTKE. Mr. President, there has been much talk recently on care for

the aged. The administration has various points of view on what type of programs we should have to assist our elderly citizens in taking care of their medical needs.

While the administration has not, to date, come forward with a plan, several Republican Senators have introduced a medical care plan which would not be self-financing but would be subsidized by Federal and State Governments. There are rumors that this plan may be adopted by Vice President NIXON and the administration.

The Evansville Press recently discussed this plan in an excellent editorial entitled "Republican Aid-for-Aged Plan Is Poor Substitute."

Mr. President, I deplore the fact that our elderly citizens must be kicked around as a political football. I believe a plan is good or bad because of its substance not because of its sponsorship, whether it be by Democrats or Republicans.

If this plan is being offered solely because the Republican Party is distressed at the appeal of the Forand bill because it is sponsored by a Democratic Congressman, as suggested in the editorial, then our elderly people have every reason to feel indignant.

I ask unanimous consent to have the editorial from the Evansville Press of April 10, 1960, printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUDGET BUSTER—REPUBLICAN AID-FOR-AGED PLAN IS POOR SUBSTITUTE

Budget-balancing Republicans have come up with a real budget buster as their answer to the Forand bill to provide hospitalization for the aged.

The Forand bill proposes self-financing, at least in theory. It would require a hike in social security payroll deductions, setting up a fund to pay hospital and nursing home bills of those over 65.

The new plan, put forward by a group of Republicans, in contrast, would be pure handout. The elderly would buy hospital insurance from private companies at a sliding scale of rates, depending on income. These fees, apparently, would pay about a fourth of the cost. Federal and State governments would pay the rest out of general revenues. This annual subsidy would amount to around $480 million for the Federal Government, $640 million for the States.

The Republican group is said to be distressed at the political appeal of the Forand bill, which largely bears a Democratic trademark. The Republicans think it is incumbent on their party to present a positive program as substitute.

We think they ought to try again.

Government by the People

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. BOYKIN. Mr. Speaker, I wish to address the House and revise and extend my own remarks and include therein a letter of April 5, 1960, to me from Mr. Ernest A. Tupper, manager of Government relations department of the American Can Co., of 1420 New York Avenue, Washington, D.C.

This letter speaks for itself but, Mr. Speaker, I am also including an address by one of the ablest men I have ever met, Mr. William K. Stolk, president of the American Can Co. He made this address before the Association of the Reserve City Bankers at far away Phoenix, Ariz., on April 5, 1960, and the title is "Government by the People."

I have read every word of this great address this Sunday morning when I am dictating this little observation, and I have never read a greater speech. I hope, and truly hope, that every Member in the Congress of the United States, who represent every human being in this Nation, will read this great speech. There was a lot of time and a lot of thought put in this wonderful talk that was made by my good friend, William C. Stolk, the president of this great corporation that has spent over $100 million down in the First District of Alabama at Naheola, Choctaw County, Ala., on the Tombigbee River.

Well, I was there with William Stolk and his directors when we dedicated this plant. I wish every man, woman, and child in Alabama and everywhere else could see what they are doing and what they are making and what they are building. In many instances, they are making practically the finest articles that can be used on this earth out of what we used to consider waste woods. Well, it is a beautiful sight, while we were there in their wonderful office overlooking the great Tombigbee River, that we are developing, Mr. Stolk and his directors and his managers and people there, announced that they would have a new expansion program of another $20 million.

Mr. Speaker, that is a lot of money anywhere, but especially down in our beautiful Choctaw County, where we used to have the Choctaw Indians there. Well, now, we have the finest people there on earth. He is using the homefolks. They not only come from Choctaw County, but Marengo County, and many other counties, and reach on over to beautiful Meridian, Miss. Many, many of the men and the women that work there live in Butler, Ala., the county seat of Choctaw County; and another county seat just across the river is Linden, Ala. Hundreds of the people live there—the people that work for the American Can Co. at Naheola, Ala.

Well, it is making that country blossom like a rose; it is bringing health, wealth, and happiness to our people there, and they are getting the help and the cooperation from men and women from every walk of life. The Governor, the Senators, and all of us there were represented when these men came from far away what was then known as the Marathon Co. to cast their lot with us, and they were joined a little later by the great American Can Co.

It's a beautiful sight; it's like going in partnership with God and building and building and building, and all of the people are so happy and they are working together so well. They have their own wonderful railroad that runs from Meridian, Miss., right to this beautiful mill the American Can Co. has there at Naheola, and then on across the river, where they have so much beautiful timber and land. As I have said, they have spent over $100 million with us there in Naheola, Choctaw County, Ala., and Linden, Marengo County, Ala., and it is appreciated, and we are helping in every way we know how.

In just talking to Gov. John Patterson and a group of his men that were here working to get money to build roads, not only to this great plant but many others, they told us how much they appreciated what these fine folks from so far away had done by casting their lot with us there in Alabama.

It was a great day when we dedicated these beautiful buildings there and it will be a great day when we dedicate that expansion of $20 million. All of our people are so happy to have these wonderful men and fine women, not only from New York, but Wisconsin, Ohio, and from all over this Nation, there helping us develop our wonderful resources there on the Tombigbee River, that we hope will soon be developed, and where we will have a direct route from Sioux City, Iowa, right on down through Cairo, Ill., and on down through the Ohio and Tennessee Rivers and right on to the Tombigbee that runs right by this beautiful mill at Naheola, Choctaw County, Ala.

I read this letter, as well as his speech, to the Alabama delegation, Senator LISTER HILL and Senator JOHN SPARKMAN, Congressman GEORGE GRANT and all of the Congressmen representing the great State of Alabama, and they feel as I do about these people and their work, and they asked me to tell them so, and of course I am telling them now, and I will send many of the men and women copies of this great speech that was made by one of our greatest men and the greatest industrialists we have in this Nation or anywhere else; and I am speaking, of course, of Mr. William C. Stolk, president of the American Can Co.

The letter and address follow:

AMERICAN CAN CO.,
Washington, D.C., April 5, 1960.

HON. FRANK W. BOYKIN,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN BOYKIN: You will be interested, I believe, in reading the enclosed speech delivered today by Mr. William C. Stolk, president of our company, at the annual meeting of the Reserve City Bankers Association in Phoenix, Ariz.

Mr. Stolk, as you will see from his speech, has an excellent appreciation of the staggering burden voters put on their friends and neighbors when they elect them to Congress.

Our public affairs program, discussed in this speech, is designed to help our employees get a better understanding of the problems of elected officials—the problems of the country—and thus of their own citizenship responsibilities.

To the extent that we and other companies with similar programs are successful, we are confident some of your problems and those of other elected officials, will be eased.

Cordially yours,

ERNEST A. TUPPER.

GOVERNMENT BY THE PEOPLE

(Address by William C. Stolk, president, American Can Co., before the Association of Reserve City Bankers, Phoenix, Ariz., April 5, 1960)

Ninety-seven years ago, on a bleak November day, Abraham Lincoln closed what he called his "little speech," the immortal Gettysburg Address, with these words: "That Government of the people, by the people, for the people shall not perish from the earth." Thus he charted the course for future generations of Americans to rededicate themselves to this concept. Today we can find solutions to the many serious problems confronting our Nation by restudying Lincoln's call for steadfast adherence to the democratic principles on which our Nation was founded. We cannot achieve government "by the people" unless the people themselves take an active interest in government and are sufficiently well informed to be able to demand good government from their elected representatives. A broader, deeper, and more fundamental approach to an informed citizenry is imperative and, in my opinion, the key to solving most of our national difficulties. This is the basis for the American Can Co.'s public affairs program.

To crystallize our thinking, let us examine one of the major problems confronting our country. International competition. I refer to this subject inasmuch as the company I represent is not directly affected by competition from overseas; this gives me an opportunity to look objectively at the problem and its possible solutions. It is significant that examination of this question cuts across our most pressing national problems. I am sure you are aware of most of them.

Prior to World War II, we Americans had developed uniqueness through the management philosophy of striving for constructive change through planned obsolescence. This philosophy made possible higher standards of living through higher wage rates without correspondingly increasing unit costs. We have long been accustomed to battle the old with new and better facilities. We deliberately quickened obsolescence through research and development. For three-quarters of a century of rapid American economic growth, our European friends looked with scorn upon our practice of tearing down facilities which had not yet worn out.

Although this part of our management philosophy was never fully understood by others and, therefore, not accepted, the obsolescent plants were effectively removed by our bombers during World War II. With the advent of the Marshall plan, American generosity undertook the task of helping to rebuild the economies of our futures competitors. We supplied them with the most advanced production facilities and also gave freely of our knowledge and techniques.

In the decade of the 1960's, our country is confronted with strong high quality-low cost competition from the European Common Market, from the countries associated in the Outer Seven, and probably from a new Latin American Common Market. We are now receiving increased imports in many product lines from Japan, and this, too, will be augmented as other Asiatic peoples become industrialized. In time, mass markets abroad will consume the products they manufacture, but before this takes place, the American people will be faced with the problem of competition from this added output. The American market is obviously the most attractive one for others to develop, so unless we can improve our own productive efficiency now, we will be in real trouble before the consumption abroad rises to a point where their domestic requirements will absorb these added goods and services.

As this competition grows—and it surely will—unemployment will become a major problem in this country.

Any failure to recognize that this problem is already upon us, that it will grow rapidly in seriousness, and any failure to start now to take basic and constructive steps toward solving it, will have the gravest kind of implications for the future of our system.

No Member of Congress, who wants to remain in Congress, can face a steadily rising volume of unemployment and refuse to deal with it. If the proper groundwork has been laid, if basic studies of the prospective developments have been completed, if an adequate educational job has been done, Congress will be able to deal with the problem calmly and wisely.

If, on the other hand, we fail to face up to this problem, if business executives follow the historical pattern—and wait for the crisis to arrive before starting to do something about it—the losses will be terrific.

Under these circumstances Congress will have no alternative—which has been so often true in the past—than to legislate unscientifically, in a highly emotionally charged atmosphere.

Pressures for action will grow and take many forms. Sponsors for the abolition of the Trade Agreement Act, who are already active, will increase their efforts. Suggestions for import quotas will develop rapidly. Bills for aid to depressed areas will gather support. Demands for newer and bigger Government spending programs, to sustain employment and purchasing power, will mushroom. Proposals to provide further artificial stimulation for the declining domestic economy will be pulled out and dusted off, and new ones will be dreamed up.

These palliatives would perhaps offer some temporary relief. However, they are, generally speaking, no more practical, nor realistic, than will be the proposals—which will certainly come—to cut wage rates.

The only practical and realistic solution—in my opinion—will be to remove legislative handicaps to business initiative. I am referring to those handicaps which were designed over the years to meet individual major domestic problems and crises, as they arose. Some undoubtedly served a good purpose in the world in which we then lived, but have no place in today's world, or in the world of tomorrow.

I also want to make it very clear that we have no desire to turn back the hands of the clock and thus open up our system to abuses which prevailed in the past.

If American industry is unfettered and its energies are directed at product and market development, it can hold its own in any field. Simple arithmetic proves that American industry must be more effective to overcome the prevailing wage level in other countries, which is fantastically low and is only a small percentage as related to our own. In addition, our statutory law requires the payment of overtime. Furthermore, we grant our workers fringe benefits and absorb countless other additional costs which are imposed by Government. Unless each hour of labor here is more productive than abroad, how can we hold our markets? It is too often forgotten that labor costs in their broad context represent 70 percent of our national income. Hence, this expense must result in high output of goods and services. No one should misunderstand my purpose. I am advocating conditions that will support a high standard of living for American workers.

In addition to the large advantage in lower labor costs, other nations have the added edge of not being subject to laws and regulations which inflate our costs of production, nor do they have the heavy tax burden we carry as a result of financing the major portion of the free world's defense.

When domestic competitors vie with each other for the home market, they are all operating under the same ground rules. Now they are threatened by strong competitors from other lands, made stronger by the advantages we have given them * * * and continue to give them. In other words, unless we come to our senses, we deserve to be put out of business. The time has come for more enlightened self-interest and less unbridled altruism.

I have great faith in America and Americans and I am firmly convinced that our ingenuity, our high standards of quality, our talents for developing and manufacturing products at high speed can compete successfully with the wage difference.

I believe the American business manager's basic competitive position in international trade is the same one we use every day here at home: "Let's compete; let's see who can produce the most of the best at highest efficiency and lowest cost; and let's see who can supply consumers in America, or anywhere else, with what they want at lowest possible prices under the influence of a risk-for-profit private enterprise economy."

Some people believe the answer is higher protective tariffs. I do not share this view. Could you have imagined a few years ago that labor unions would some day cry for tariff protection? At least three American unions are now demanding that Congress put up tariff bars on imports, and they want to negotiate contracts prohibiting American employers from handling foreign goods. These unions do not suggest, however, that they or their members try out such realistic actions as reducing inflationary pressures by holding the line on labor costs, or by reducing unit costs through higher efficiency and productivity.

This leads us into another critical area of business-manager responsibility for an all-American problem. The problem I speak of is labor union power.

To start with ourselves, management should reexamine the source of union power. When I have talked to business friends about their concept of union power, and what to do about it, I find they usually concentrate their attention on the power unions have, under Federal law, to bargain for workers in an entire industry or company and, consequently, are able to strike that entire industry or company. This attitude results from the truth that Federal law does grant union monopoly power at the collective bargaining table, and that our labor laws support the principle of monopoly. Hence, they are in conflict with our antitrust laws, which are based on the principle of competition. The suggestion therefore is frequently made that the remedy is to apply the antitrust laws to unions as well as companies. While the basic objective of fostering competition is a worthy one, we have seen the destructive impact of the inhibitions and shackles which the interpretation and the maladministration of such laws impose on the constructive opportunity for American business to operate in the best interest of the entire economy. I could find only negative solace in watching the Federal Government try to apply those particular curbs and penalties to unions. Frankly, I can't see how the government could use the current antitrust laws to deter and penalize union leaders in their monopoly use of power.

Many business managers would like to see a Federal law prohibiting industrywide or companywide collective bargaining. I hold a minority viewpoint on this. I think it would not be workable, enforcible, nor practical—and I do not believe that by itself it would effectively reduce union monopoly of bargaining or striking power. Without seeking to make policy either for my own company, or any other, as to the proper scope of col-

lective bargaining under any particular set of circumstances, I would certainly oppose any effort to assign to the Federal Government the added power to judge the size and shape of either a union's or a company's approach to the bargaining table.

A great many businessmen would be elated to see a law outlawing the union shop—preferably by Federal edict, but failing that, through State so-called right-to-work laws. Arguments on both sides of this controversy are charged with high passion. But the emotional appeals on both sides ignore one essential fact, which is that for more than 20 years Federal law and collective bargaining has given a recognized union absolute power to bargain collectively for every employee in the bargaining unit, whether he is a union member or not. The same law prevents the nonmember, as an individual, from delegating someone else to bargain for him. Nor can he do the job himself. The fact that he is not a member and cannot attend union meetings just means that he doesn't have an active voice or vote in the way the union acts for him.

I believe that people in a free society who find that certain of their interests have been delegated to someone else for collective handling should make it their personal duty to keep posted on what their representatives are doing and to let them know whether they agree or disagree. This goes for the town meeting, the State legislature, Congress, The White House—and also the union hall.

My disenchantment with the popular proposals we hear for curbing union power is that they seek to limit labor union monopoly power only by government regulation of the technical processes of collective bargaining. Union monopoly power in bargaining is a danger secondary, in my opinion, to the union leader monopoly power of control over men, achieved independently of law and not susceptible to control by law. This power results essentially from union leader control over the thinking and actions of men. Should we seek to curb this type of power by Federal law or regulation, we would, at the same time, be encouraging government to take charge of all human relationships—on the job, at the union hall, everywhere.

Union leader power over men exists because union members have delegated that power to their leaders—either deliberately, accidentally, cynically, or even by default. We should also remember that a union official, like any other politician, has to run for office and keep on running to stay in office. This being so, the only people who can influence and, in the long runs, reward or punish him are his own constitutents—our employees, who, as his union members, delegated their individual power in the first instance. On this premise, we must rely on enlightened and well informed union members to influence their own leaders to seek sound solutions to the problems which confront all of us. Take for example the so-called "work rules" or "local practices" clauses in labor agreements. Some of them dangerously restrict management opportunity to improve production efficiency; this was the major issue in the last steel negotiations. It was also critical in our own company's recent steelworker union negotiations—not to recapture, but to retain basic management responsibility for efficient, productive operations. Let me emphasize that the American Can Co. did not relinquish nor share that responsibility; we are still managing our own business.

While on the subject of our labor negotiations, let me be specific about contract settlement costs. Soon after the steel industry settled its strike, public statements by steel industry and government officials announced that the new contract would cost the steel industry 40 to 41 cents an hour for a 20-month contract.

Some of the same spokesmen went on to say that if the steel industry had accepted union demands to meet the terms of the earlier can industry settlement, this would have cost the steel industry 52 cents an hour.

To try to compute the cost of any one industry's union contract, as applied to the operating conditions of another industry, is a purely arbitrary and selective exercise of mathematical theory. The steel industry says it settled for 40 or 41 cents—and I have no reason nor basis to challenge these figures. Nor do I have any practical reason or factual basis for trying to estimate the possible cost of the steel industry settlement if it were to be applied to the can industry.

I do know, of course, what our own can industry negotiations are going to cost the can industry. We are going to pay an average 34 cents an hour for our 3-year contract. This is substantially less than the 41 cents that the steel industry estimates for its own settlement cost, and is not even close to the higher speculative estimates you may have read about in the papers.

Let us turn now to the second area of disadvantage in our cost sheets; government laws and regulations—which do not apply to our foreign competitors.

In the absence of a constructive program based on careful study and appraisal of the facts, any legislation which would accompany substantial increase in unemployment would jet-propel us along the road toward more government in business. What I am urging is the alternative to a crisis-type solution. It is a reappraisal of public policies, laws, and regulations which inflate our costs of production and which involve such things as:

Huge personal and corporate income taxes which restrict accumulation of capital needed to accelerate the growth of our economy; unrealistic tax depreciation policies; government fiscal and monetary policies which put an upward pressure on prices, thus increasing the differential between U.S. and foreign costs; unnecessary foreign-aid programs; lack of adequate laws, policies and supports designed to promote U.S. exports; laws and regulations which set arbitrary restraints on efficiency of big units; and uneconomic farm policies.

I believe that we in American business should not wait for changes to be proposed by others, but should ourselves actively explore on a long-range study-in-depth basis, some of these areas. Only then will we be able to recommend policy and legislative changes that will remove costly procedures that hamper effective competition. It is this approach to the problem of meeting foreign competition and expanding our exports that seems to offer the most promise.

I, therefore, suggest that thoughtful and intelligent men and women in all segments of our national life—government, business, finance, labor unions, agriculture, and in our colleges and universities—should develop a scientifically constructive approach to the problem of increasing international competition, and explore how government policy, laws, and regulations can be modernized to meet this great threat.

Such an approach should be completely nonpartisan. It should be undertaken by a group such as yours, and be so constituted that its work could proceed regardless of the outcome of the next election. This work should be financed by private grants, utilizing existing voluntary agencies wherever possible. I do not suggest that you gentlemen carry the entire financial burden, as I cannot imagine any industry or business who, understanding the problem, would be unwilling to support such an undertaking. In my book it is a must.

In talking about elements of cost other than labor, we naturally are led to that body of men and women in Congress who are responsible for our country's laws and regulations, and whom I like to think of as the board of directors of these United States. These are the people to whom we must communicate our ideas, our hopes, and recommendations. Based on our experience in contacting legislative members of both parties, we are convinced that they are honest, dedicated individuals. We have found no group of people who are more overworked, or more harassed by bewildering and complex problems. Few of us would leave or chosen work to take up the burdens which Congressmen assume when they are elected. How many of us are sufficiently well informed to express opinions on every conceivable issue ranging from labor relations, foreign relations, national defense, the problems of health, education, and welfare, taxes, money and banking, agriculture, minerals, public lands, to the rigged television programs or payola in radio? These are only a few of the subjects that come before Congress; yet, we elect our neighbors to represent us in Washington and request them to record their positions on hundreds of such issues during each session. They cannot say "I am sorry, this is not my specialy"—and, furthermore, they must be prepared to defend their voting records when they come up for reelection.

At the end of the 1st session of the 86th Congress, 10,676 measures had been introduced in the House and 3,161 in the Senate; 383 new public and 236 new private laws had been enacted. In addition, the Senate confirmed 43,567 presidential nominations. I cite these data as they show that the burden on a conscientious legislator is staggering. I know of no one in our organization, or, as a matter of fact, in any organization who is fully qualified in all of these fields. If such a person could be found, we would have difficulty in paying him a salary attractive enough to warrant his complete devotion to our corporate needs. Yet, we expect a Congressman or Senator on an annual salary of $22,500 to discharge his many tasks while maintaining a residence in Washington and also in his home district.

Finally, our costs are also affected by the policies of management. We who have that responsibility must make sure that our company is run efficiently, that we have a lean, hard-hitting organization, and that we have replaced the complacency and smugness of the years immediately after World War II and Korea with the realism that only the strong can survive.

The working people in this country, who influence the labor costs in our balance sheet, need and, in our experience, welcome impartial information to help them obtain enlightened union leadership. Similarly, experience has taught us that our representatives in Congress recognize fully that they can do a better job of serving as our country's board of directors with facts and advice from their constituents.

To cope with the need for information and communications with people who are so vital to our future welfare, we in American Can Co. decided to embark on a full-scale public affairs program designed to do certain things. This program has two objectives. One is to provide facts and information which will help individual citizens—particularly our employees—to formulate personal judgments as to what constitutes good government—good in the long-range interest of themselves, their families, their company and their country.

The second is to stimulate, encourage and help citizens—again primarily our employees—to work for good government. We urge them to work for their independently formulated concepts of good government, through the political party of their choice.

As we see it, working for good government involves doing four separate but related things:

1. Obtaining a correct understanding of major issues facing the Government and the probable impacts of alternative courses of Government action.

2. Standing up and expressing our convictions, regardless of occupation or profession—or position in an organizational structure—and thus give other citizens the benefits of our individual points of view.

3. Working actively through the party of our individual choice to induce the best possible people to compete for and get elected to public office.

4. Helping to supply elected officials with the information they require in order to make sound legislative decisions.

I can promise you this program of employee education will work—because after 4 years' experience in our company it is showing tangible results. We know, from the response we are getting, that our people understand what we are talking about, and they intend to make use of what we are saying. Our response has come from local union officers as well as rank-and-file employees. In many plants they have asked our management this question: "What can we, as local union officers and as employees, help do to keep our plant alive, competitive, and prosperous?"

I am also very enthusiastic about the number of people in our company who have taken a keen interest in their community politics. We have trained 80 members of our management group to lead discussions in the art of practical politics. Approximately 100 courses, comprising groups of 15 to 20 individuals, are now underway in our company. By July 1 of this year we expect that practically all of the 5,000 people in our management group will have completed this course, which consists of six 2-hour sessions.

We are thoroughly convinced that there is much to be gained by our efforts to give the people the facts. Thomas Jefferson wrote the prospectus for our public affairs program when he said: "I know of no safe depository for the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome direction, the remedy is not to take it from them, but to inform their discretion through education."

Conservatives Favor Commonsense

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. COTTON. Mr. President, the Manchester Union-Leader recently carried an interesting editorial about the activities of my colleague, Senator STYLES BRIDGES. I ask unanimous consent that the editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester Union-Leader, Apr. 7, 1960]

CONSERVATIVES FAVOR COMMONSENSE

In three brief statements on March 22, Senator BRIDGES graphically summarized the philosophy of American conservatism.

Conservatives believe that there are few finer virtues than loyalty to one's country. They favor reasonable loyalty oaths, such as the non-Communist affidavit required by the National Defense Education Act. Defending this belief, Senator BRIDGES said that while loyalty oaths "are obviously not foolproof, they do nevertheless serve a useful purpose. While they may not prevent a person from committing a subversive act, they do furnish a basis for perjury, and let us not forget that it was on perjury alone that Alger Hiss was meted out his just deserts."

The American conservative is strongly opposed to the idea that Federal aid should be shoveled out indiscriminately. Senator BRIDGES expressed his horrified amazement at discovering that the tiny African country of Mauritania has just been given a loan of $66 million by the World Bank. BRIDGES said this means that each resident of that country, which has a population about the size of New Hampshire, has been given approximately $100. The major share of this loan will come from American taxpayers.

But while opposing lavish and wasteful foreign aid, little of which reaches the people who need it most, the American conservative is just as strongly in favor of true charity. Senator BRIDGES proved the point by calling on all Americans to contribute to the current appeals of America's religious faiths for support of their worldwide overseas relief programs—the Protestant One Great Hour of Sharing, the Catholic Bishops' Relief Fund appeal—both scheduled for March 27—and the year-round United Jewish Appeal.

That's the conservative belief in a nutshell: Loyalty to country, true charity, and government economy.

Jim Sharp's Recollections of the Pony Express

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. KING of Utah. Mr. Speaker, the States along the historic pony express route this year are celebrating the centennial of that colorful mail run. In Utah, a central figure in the observance is a man who has trekked every foot of the pony expres trail in Utah many times. He is James P. (Jim) Sharp. One of Utah's most colorful citizens, Mr. Sharp also is one of the West's leading collectors of historical color and an authority on pony express. He compiled some of his recollections about the pony express—drawn from his many conversations in his youth with men who saw the pony express in operation and frequented the stations on its route—in an article which appeared April 3 of this year in the Sunday magazine of the Salt Lake Tribune. He is serving as a special adviser to the committees staging Utah's centennial reenactment of the pony express run, which will take place in July. His knowledge and his personality carry an authentic touch of the old West. His recollections of the pony express help to provide a meaningful background for this reenactment. I commend his article to your attention:

RECOLLECTION OF THE PONY EXPRESS—A HARDY BREED OF RIDERS CARRIED THE MAIL FOR 1,966 MILES FROM MISSOURI TO CALIFORNIA

(By James P. Sharp)

Just a 100 years ago today, at 6:30 p.m., William H. Russell of the famous freighting firm of Russell, Majors & Waddell, locked a letter pouch on a pony in St. Joseph, Mo., and its rider, Billie Richardson, kicked the horse into a gallop, heading west.

The first mail carried by the pony express was on its way to California, opening one of the most colorful chapters in western history.

Before that run—which began April 3, 1860—was ended, the mail would travel 1,966 miles in 10 days and would be carried by relays of horses and riders spaced along the long hazardous route to Sacramento, Calif.

That same day, mail left San Francisco, was carried by steamer to Sacramento and left just after midnight of April 3 in the saddle pouches of a horse and rider headed east.

I first heard about this amazing enterprise when a boy about 7 or 8 years old—and that was a long time ago. A group of men along in years used to gather almost every week during the summer months, their favorite gathering place being Uncle Adam Sharp's woodpile.

I went once and from then on was a regular member of the group, which numbered variously from half a dozen to 10 and 15. Some of these oldtimers would be braiding, others tieing knots, and others were just "whittling," as one or another of them would tell stories of "the good old days."

Among these oldtimers were Uncle Adam, the man Brigham Young selected to deliver the poles for the telegraph line when the contractor failed to do his work. That was the time that Brigham Young said, after looking at the contract, "Your poles will be delivered on time if it bankrupts the Mormon Church." The poles were delivered in the early fall of 1861.

My father was John C. Sharp and as a lad of 11, he went along with Uncle Adam on his trips. Later, in 1891, he took me with him in a sheep wagon and showed me where every station was—or had been—between Salt Lake City and Deep Creek.

Others whom I met during those early years, and who were connected with the pony—or said they were—included H. J. (Doc) Faust, who was station keeper at Rush Valley, only 5 miles north of my birthplace.

Uncle Horace and Aunt Lib Rockwell tended the station at Lookout, and there is where you'll find the famous dog cemetery where they buried their dogs. Yes, I knew them well, along with some of the dogs buried there—Jenny Lind, Josephine Bonaparte, Bishop, and Toby Tyler.

Oscar W. Quinn was station keeper at Riverbed and Pete Neece was the keeper at Willow Springs—now Callao.

There were some former riders in the group, too. The one I liked to best listen to was "Uncle" (every old man in those days went by the title of uncle) Bill Streeper.

He was a veteran of the old jackass mail, a mule-powered service organized by Maj. George Corpenning, Jr., Samuel H. Woodward and others to carry mail from Sacramento across the great American desert to Salt Lake City. He worked for the jackass mail from 1851 to 1854, and later "rode the pony" from Ruby Valey to Robbers Creek in Nevada. Alec Toponce rode the Slade division out of Julesburg, Colo., and also out of Fort Kearney on the Lewis division. William (Billy) Fisher, and I knew him well, brought the first mail from Fish Springs to Rush Valley, 75 miles in 5 hours.

There was another, a Goshute Indian from Deep Creek. He was Ibapah Jack (Iba means "deep" and pah means "water"). Ibapah Jack worked for me during the summer for 3 years from 1897 to 1899, and remembered seeing the first pony come in from the west, as well as the one from the east at Deep Creek.

When the pony started, there was no Colorado, Wyoming, or Nevada. Utah extended along its present northern boundary from

California to the Continental Divide. Of the 1,966 miles between St. Joe and Sacramento we had 767 miles, and of the 190 stations, we had 65. When the States were admitted Wyoming gained 9 of these, Nevada got 33, and Utah had only 23 left.

The pony riders had fast horses and were supposed to ride about 10 miles an hour. They had a special light saddle weighing about 13½ pounds and over this was a "mochila," which I have been told is an Indian word, but do not know what it meant. Anyway, it was a piece of rather thick leather about 29 inches square and had a hole cut in it for the saddle horn and another for the back of the saddle. It was placed over the saddle and the rider sat on it. On each corner of the mochila was a locked pouch or cantina. Three could be unlocked only at St. Joe and San Francisco (later Sacramento). The front left hand pouch was the way pouch and each home station keeper had a key to unlock this one so he could take any mail out for his run and put any outgoing mail in after he had collected $5 per half ounce letter postage. This was to be a weekly mail each way. There were two kinds of stations—a home station and a way station. A home station was where riders changed, and a way station was where horses only were changed. Saddles were never changed.

When a rider arrived at a home station, the keeper was allowed 4 minutes in which to sort the mail and get the rider on his way. At the way station, a horse with saddle and bridle was waiting and the rider was allowed 2 minutes to bring his charging horse to a stop, dismount, take the mochila from one saddle, place it on the other, gossip and do almost as he pleased, so long as he did not take more than 2 minutes.

As I said before, the first rider left St. Joe at 6:30 p.m. on April 3. This mail arrived in Salt Lake City at 6:25 p.m. on April 9. The mail from the West, which left Sacramento early on April 4, arrived in Salt Lake City at 11:45 p.m. on April 7.

How far one man would ride and how many horses he would have is a question, for some home stations were only 45 miles apart while others were as much as 82 miles.

Salt Lake was a home station—in fact the historical marker identifying the site is placed in front of the Tribune Building. The rider would mount a horse there, change horses at Traveler's Rest, with other changes at Rockwell, Joe Dugout's, Camp Floyd, The Pass and then on to the next home station, Rush Valley. This meant a journey of 75 miles southwest from Salt Lake City, with an average riding time of seven and a half hours.

Russell, Majors & Waddell never had a Government contract—only a promise of a subsidy—but in the spring of 1861, Congress passed the Overland Mail bill which, among other things ordered the pony to make semi-weekly trips and to reduce the rates to $2 a half ounce (some say to $1). The same Congress also declared that when the telegraph line from the East and the one from the West should be completed at Salt Lake City, the pony should cease to run.

Creighton brought the line in from Omaha on October 18, 1861, and Gamble brought his in from the West and connected the line, and as one man wrote at the time—"They murdered the pony express on the streets of Salt Lake City, October 24, 1861."

The promised Government subsidy was never paid to the pony, and it was estimated that it cost Russell, Majors & Waddell $16 to carry each letter and in return they received an average of $3, leaving a loss to the firm of $13 for every letter carried.

And now, here's a word of warning. It being the pony's centennial year, you might think it a fine idea to take the family for an outing along the old pony trail. Just be careful. Last year, I had the privilege of going from Salt Lake City to the Nevada line with some of the officials concerned with the reenactment of the pony express run this July, and found it a mighty hard trip.

After we turned off Highway 73, 5 miles south of Camp Williams, we did not meet, nor pass another car until we had reached Deep Creek, about 165 miles away. Water is available at some points, but there are stretches of many miles when it is not. And modern cars are not built for the kind of roads you'll meet up with on the trail. Better think twice.

Big Spenders Overlook the Waste in Defense

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Kansas City Star, entitled, "Big Spenders Overlook the Waste in Defense." This is a timely editorial, suggesting an objective study of our huge military and foreign aid programs for the purpose of sorting out the essential from the nonessential activities.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Kansas City Star, Mar. 16, 1960]

BIG SPENDERS OVERLOOK THE WASTE IN DEFENSE

A cult of thought is flowering which demands much larger expenditures for public—as opposed to private—spending. The high priests of this cult insist that much more should be spent on national security in particular. Still, to the average taxpayer 41 billions for defense and another 4 billions proposed for foreign aid look like a great deal of money.

We are being told that this isn't enough to guarantee our survival. The fact is, there is no such thing as absolute safety in this era of missiles and hydrogen bombs. All we can do is strive for what responsible leaders consider to be reasonable preparedness for as many contingencies as possible.

For an example of the still bigger spending approach, consider a report in the current issue of the Harvard Business Review. Its author, Manuel Helzner, had helped prepare a similar study for the National Planning Association that has been much quoted by advocates of greater spending. The new conclusion is that country has adequate resources for a $10 billion increase in national security outlays over the next 3 years, in addition to an expected increase of $2.3 billions under existing programs.

This view is widely accepted in academic circles and among critics of the administration's defense policies. Gen. Maxwell Taylor, for instance, would spend $10 billion more a year starting immediately. General Taylor, unlike some of the critics, has exact ideas on how the extra money would be used.

We don't pretend to know what the level of spending should be. It comes down to a question of individual judgments. Security is relative. It can never be absolute because it is impossible to prepare for every eventuality. This would still be true if billions were added to the price tag on defense. This is not mentioned by the defense critics. Nor do they bring up the fact that the present defense program is saddled with considerable waste.

One example is the Air Force duplication of a medium-range missile which the Army was ready to provide. Hundreds of millions were thrown away on this pointless competition. More wasteful rivalry came when the Air Force proudly shunned the Army's top-notch team of German scientists, the most experienced in the country, to start an ICBM research organization from scratch.

We would like to see an objective study made of huge military and foreign aid programs. It should be intended to sort out essential from nonessential activities. The occasional evidence of soft spots in defense and aid programs suggests that there may be others, perhaps many others, that could be discarded without jeopardizing our safety. Presumably in other departments greater expenditures will be required. The outlay for missiles has already increased enormously.

Certainly there is no assurance of greater safety in the cult of spending for the sake of spending.

I Dream of Taxes

EXTENSION OF REMARKS

OF

HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. GOODELL. Mr. Speaker, I take pleasure in inserting the following editorial, written by Mr. Roger Cramer of Jamestown, N.Y., who is Chautauqua County agricultural agent. Mr. Cramer is deeply respected by our farmers and our city folk alike in Chautauqua County. His thoughts with reference to our present tax structure are worthy of the consideration of every Congressman. Under leave to extend my remarks in the RECORD, I include the following editorial:

I DREAM OF TAXES

(By Rog Cramer)

I've tried it out on several people. I mean my tax program. The fact that not all have ridiculed it has given me the incentive to put it in print. The fact that, as yet, it is not politically labeled gives me the license to do so. The time spent in reading it should, at least, be as valuable as reading the Sunday comics.

Is our tax base outdated? Has our tax structure grown, like Topsy, like a lot of dairy barns, an L here, a wing there, a lean-to here, a dormer on one side, a pole shed on the end, until it is terribly inefficient and no modern laborsaving equipment fits? Does anyone know what we're paying to collect all the taxes we have? Does anyone know what his total tax bill is? Is it true that, eventually, every tax must come out of your pocket and mine? Is it true, that in a democracy, everyone should pay his fair share and no more?

How about taking all taxes off of real estate? This is the beginning of my tax program. Would this mean more people would own their own homes? Would this mean many would have better homes? Might we have a better looking community since the relationship between a coat of paint or some shrubbery or a fence and the assessor would be removed? Might we not have more people interested in planting trees and doing other conservation work which would result in helping to stem some of our soil erosion,

water, and land use problems? Would we have more people and families involved in wholesome outdoor recreation? Might not many older people be more secure with less dependence on welfare? How many problems like tax-free property, partial exemptions, and inequality in assessments would no longer exist? And how much is the present assessor, assessment, equalization bill that would be saved?

Then, suppose we settled for two taxes: income and sales. What would the ramifications be? What would some of the problems be that would have to be met?

Then, suppose that the Federal Government established its tax rates, the State established its tax rates, the county established its tax rates, each town and city established its tax rates, and each school district established its tax rates. Would this be far different from what we have now?

Then, further, suppose we had county government responsible for the collection of our sales and income taxes and the apportionment of these taxes to the Federal Government, the State government, the county government, the towns, cities, and school districts. Would our tax procedure be simplified? Would the cost be more or less than our present maze of Federal collectors, State collectors, county collectors, and district collectors? Would people feel the same under this system about constantly asking for more and more services, bureaus, departments, etc.?

Now we find out this isn't a tax program at all—just a lot of questions like everybody else is asking. Come to think of it, I still haven't filed my State and Federal returns for 1959 yet. Let's see, how many forms do I need?

Investigation of General Services Administration

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. CARLSON. Mr. President, recently there was a congressional hearing in Kansas City in regard to charges of mismanagement at the regional office of the Government Services Administration. Much testimony was taken at the hearing and the matter is now being considered by the committee.

In the March 29 issue of the Kansas City Times there appeared an editorial entitled "Much Ado About the GSA Probe." I ask unanimous consent that this editorial be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUCH ADO ABOUT THE GSA PROBE

The House Subcommittee on Government Operations opened its hearings Friday on the regional office of the General Services Administration with hints of sensational revelations. The chairman spoke of "a rather sordid picture of irregularities," and the word "fraud" was voiced repeatedly.

The hearings ended much more quietly. The chairman spoke of "some careless administration" and said that "it seems apparent that many of the reports of maladministration in GSA's region 6 are well founded."

The word "maladministration" means to "administer badly," and not everyone who followed the hearings closely would agree that such a condition was disclosed. But if there were evidence of maladministration it didn't justify charges of "fraud" and "sordid irregularities." There was no evidence of ill-gotten gains or profitable influence. Probably the GSA operation here could be tightened and very likely there were individual acts of carelessness. We have no doubt that the same is true of any governmental bureau on any level.

No bureaucracy is above suspicion, and congressional investigations are a valuable function of the legislative branch of government. Even when the zeal of one party is motivated by hopes of embarrassing the administration, the investigations frequently are in the public interest. But this time it didn't seem to come off.

Interest Rates and Inflation

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. KNOX. Mr. Speaker, despite the administration's request of 10 months' standing for repeal of the archaic 4¼-percent interest rate ceiling on marketable securities, inaction by Congress continues to hamper the debt management operations of the Treasury Department.

On June 8, 1959, President Eisenhower sent a message to the Congress calling for the repeal of the ceiling in the interest of facilitating economical and efficient management of the public debt in a way that would be least inflationary. The Democratic majority in the Congress has blindly refused to face up to this urgent responsibility. The Democratic majority has supported budget-busting spending measures that if enacted would result in inflationary deficit financing but the Democratic majority has refused to give to the Secretary of the Treasury the necessary tools to finance the debt in the least inflationary way.

The Democratic Party advocates cheap money regardless of the fact that it would result in higher prices and inflation. Higher prices and inflation mean less purchasing power for persons living on fixed incomes such as the aged. Thus, the Democratic Party seeks to deprive the aged of their independence and impose on them governmental bureaucratic regimentation.

Mr. Speaker, it is not just the aged who will suffer from the fiscal policies of the Democratic Party. Every living American and future generation will pay the cost of the "fiscal folly" being imposed on our Nation by the Democratic majority in the Congress. Our present national debt of $290 billion is largely the result of the spending proclivities of Democratic controlled Congresses. The Democratic Party is also responsible for the fact that the public debt is becoming shorter and shorter in maturity. By its refusal to repeal the 4¼-percent interest rate ceilings the Democratic Party has forced the Treasury Department to rely almost exclusively on refinancing the debt in the short-term money market through the issuance of securities with maturities of under 5 years. Thus, the Federal Government is compelled to compete with American consumers and business for short-term funds, thereby driving the cost of such borrowing upward for all concerned.

Mr. Speaker, in the Wall Street Journal for April 11, 1960, there appeared an editorial captioned "Shiftless Sam," referring to Uncle Sam, which deals with the interest rate problem. In the April 18 issue of Newsweek magazine in a signed opinion by Mr. Henry Hazlitt there appeared an article dealing with this same subject captioned "Cheap Money Is Dear." I will include these editorial comments as a part of my remarks:

[From the Wall Street Journal, Apr. 11 1960]

SHIFTLESS SAM

Then there's the story about the shiftless fellow who had a leaky roof. He couldn't fix it when it was raining; and when it wasn't raining, why bother?

This has been pretty much the attitude of the Democrats in Congress toward the Government's leaky fiscal structure.

When interest rates were high and rising the Treasury found it impossible to borrow any money at all on bonds at 4¼ percent, the maximum the law permits it to pay. But, said the Democrats, the law shouldn't be fixed then because it wouldn't do to let Uncle Sam pay more when money was already tight. Then when interest rates dropped somewhat, and it looked as though the Treasury might float a 4¼ percent bond issue, the Democrats said, "Why bother about changing the law?"

Now it's turned out, of course, that the Treasury can't borrow money that way in any appreciable amount. Secretary Anderson offered the public a 25-year 4¼ percent bond issue, expecting to sell a minimum of $500 million and hoping for $1.5 billion to bail him out. Mr. Anderson got offers of barely $370 million. So there you are.

Naturally, this altered the Democrats' views not a whit. With much grave shaking of heads they decided the failure of the Treasury's bond issue meant this was not the time to fix the law. In one of the most magnificent nonsequiturs of the season, Senator DOUGLAS said this was just "proof that the Treasury should develop better methods for marketing bond issues"—without the slightest intimation that meeting the market price for bonds is one of the best methods ever devised.

Oh, well. We suppose nobody should be surprised. After all, it's the same attitude that says Uncle Sam can't afford to cut his budget in hard times and in good times it ain't necessary. Shiftless Sam is just goin' to set 'till the roof falls in.

[From Newsweek, Apr. 18, 1960]

CHEAP MONEY IS DEAR

(By Henry Hazlitt)

The word from Washington is that as a result of the success of the Treasury in selling some long-term Government bonds at the legal ceiling rate of 4¼ percent, no action is likely to be taken to repeal or even modify the ceiling in this session. Such a failure to act would be irresponsible. Retention of the old legal ceiling would do no good, and might do incalculable harm.

There is no reason to suppose that the legal interest ceiling in itself saves the Government a single dollar in interest costs. It is the plain duty of the Secretary of the

Treasury to borrow at the lowest rates, at the smallest costs in the long run, that the market allows him to get. If we ever had a Secretary who was not willing to do that, or not competent to do it, the 4¼ percent legal ceiling on long-term bonds would be futile anyway; for the Secretary can borrow at any rate he chooses on securities with less than 5 years to run.

Last week I pointed to the administrative folly of retaining a 42-year-old prohibition that today simply ties the hands of the Treasury experts, in daily touch with the market, and prevents them from exercising their best judgment concerning what length maturities to offer. It forces them to glut the market for short-term securities, and rates the average rate at which they can borrow. But the economic folly is much more serious, and deserves longer examination.

CHEAP MONEY INFLATES

A policy of cheap money (i.e., a policy of arbitrarily keeping interest rates down) is only another name for a policy of inflation. The only way interest rates can be held down even temporarily to an arbitrary ceiling is by an increase in the money supply. This increase may be achieved by a direct resort to the printing press. It may be achieved by a return to the policy of forcing the Federal Reserve banks to buy at the predetermined low interest rate all the Government bonds offered. The Fed would pay for these either by creating deposits or printing notes against them. This is what is known as monetizing the national debt.

Instead of reducing or holding down interest rates by increasing the supply of money and credit, we may increase the supply of money and credit by reducing interest rates. Low interest rates encourage borrowing at the banks. Other conditions being unchanged, more projects will be undertaken and more money will be borrowed at 4 percent than at 5, or at 3 percent than at 4. When the banks lend, they create deposits against the loans; that is, they in effect create new money. Low interest rates are inflationary when they lead to an undue increase in the money supply. Conversely, the only way interest rates can be held down below the natural rate at any time is by an increase in the money supply.

WHAT IT HAS COST

This inflationary cheap-money policy cannot be kept going indefinitely. The consequent increased number of dollars, of course, cheapens the dollar in terms of goods. In other words, there is a rise in prices. As a result, cheap money eventually costs the Government far more in total dollar expenses and interest charges than tight money would have cost it. Further, if the inflation and the rise in prices is expected to continue, lenders will begin to insist on a higher interest rate as a sort of insurance premium against depreciation in the value of their loaned dollar capital.

The irony is that it is precisely the people in Congress who are now protesting loudest against high interest charges whose policies in the past have done most to raise those charges. It is their spending policies and deficit financing policies that have built up a Federal debt of $287 billion and an annual interest charge of $9.4 billion.

Whether or not Congress now votes to repeal the legal 4¼-percent ceiling on long-term Government bonds is no mere technical matter, of interest only to experts. It may be a fateful decision. It may crucially affect confidence in the dollar at home and abroad. A failure of Congress to repeal at this session may prove, in effect, a vote for inflation. If the Democratic leaders in Congress make that decision, they must bear full responsibility for it.

Federal School Funds Without Strings

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 11, 1960

Mr. PELLY. Mr. Speaker, I have introduced a bill—H.R. 11705—which is my proposal to meet the problem of financing public education without permitting Federal control in any way, shape, or form. This legislation would give Federal aid in a manner that would preclude any risk of reducing local and State responsibility for the administration of public education. Substantial and increasing amounts would be available to each State to be used as the State legislatures direct, under my plan, by the return to the respective States for education of three-quarters of the Federal cigarette tax collected by the Federal Government on each package of cigarettes sold in each State.

Some of us honestly feel that education should be administered locally in order to insure its freedom from regimentation and regulation such as once lead Japan, Germany, and Italy to thought-control and dictatorship, and is presently the basis for Communist domination of almost half the population of the world.

Aside from the risk of Federal control, however, I see no valid reason why the Federal Government should not cooperate with the States by giving up certain revenues so that the States can better meet the pressing needs of public education.

In this connection, last year I made a suggestion and introduced legislation providing for the return to each State of a portion of the amount each State contributed to the Federal Treasury through income taxes.

Objections were raised to this plan in that certain large taxpayers do not pay their taxes in the State where their profits are earned and thus branch office areas such as Seattle would not get their fair share of the money to which they would be entitled. In the meanwhile, some major school legislation is under consideration by Congress and there is much difference of opinion on various plans so that considerable doubt exists as to passage of any school bill at this session.

That the total cost of public education will require greatly increased finances I don't believe anyone denies. The Federal Government of course already is aiding education. The Library of Congress tells me that the expenditures for federally impacted areas and other school aid in fiscal 1959 was $294,490,051, so those of us who voted for such funds certainly are not flatly opposed to Federal dollars for schools. We are opposed only to controls over the dollars. We want the States to control.

Because I am convinced that the school experts are justified in seeking additional sources of revenue, I am offering this new proposal. For the convenience of my colleagues I will insert a table showing by State the money which is estimated under my new bill would be available based on fiscal 1959 cigarette sales. The total transfer to the States under this proposal would approximate $1.2 billion per annum.

The tabulation also shows the sums available the first year under three other plans. These latter ones are those feared to contain toe-in-the-door controls and that could lead to Federal regulation of public schools.

Before setting forth the comparative table showing the amount each State would receive under my bill as against various other bills, I think it would be in order to say this: nobody at the moment can foretell what action the Rules Committee will take on any education legislation. Each proponent of a plan to help the schools hopes to offer an amendment if and when a bill is considered by the House. Each would substitute or add provisions which coincide with his ideas. I hope to offer my plan.

However, while the dollars involved may not vary as between different plans, the philosophy of how and why assistance is given to public education is the basic issue. Certainly the House cannot pass a bill that does not satisfy the objections of the President. Congress could not override a veto. Of that I am sure.

Thus and in view of widespread concern of legislation which might involve Federal controls, I want to point up the philosophy and absolute simplicity of my proposal.

The objective, of course, is to strengthen State finances so each State is itself better able to provide an adequate education to every child residing in that State.

The bill clearly declares that responsibility for and over education is one of the powers not delegated to the Federal Government but reserved under the 10th amendment of the Constitution to the States.

Secondly the bill affirms and reenacts a part of article III of the Ordinance of 1787, adopted by the Confederation Congress, that religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools, and the means of education shall forever be encouraged.

Encouragement of education is then provided for by the financial strengthening of the States and in this connection the bill authorizes the Secretary of the Treasury to return to each State 6 cents of the 8-cent Federal cigarette tax.

In conclusion, let me just say that friends and foes of Federal aid to education are, so to speak, locked in mortal combat as far as the Murray-Metcalf and other school bills are concerned. But here in my proposal is a measure that both sides could agree on. It is a bill—the only one in my opinion of all the various bills—that could be enacted

into law. I hope those who are dedicated to preserving our schools from Federal regimentation, and my friends on the other side of the argument who are equally determined that each child in America have the opportunity of quality education will think this over and study my plan.

Meanwhile, here is a computation of the amount each State would receive under the three bills now being considered:

A comparison of estimated 1st year Federal allotments to individual States under various bills

	H.R. 11705, the Pelly bill to strengthen State finances for education	H.R. 22, as amended, the so-called Murray-Metcalf bill for school construction and salaries	H.R. 10128, the so-called Thompson bill for school construction	S. 8, as passed by the Senate for school construction and teachers' salaries		H.R. 11705, the Pelly bill to strengthen State finances for education	H.R. 22, as amended, the so-called Murray-Metcalf bill for school construction and salaries	H.R. 10128, the so-called Thompson bill for school construction	S. 8, as passed by the Senate for school construction and teachers' salaries
Alabama	$17,232,000	$22,275,000	$6,695,000	$25,855,000	Nevada	$3,006,000	$1,750,000	$488,000	$1,125,000

[2] Estimated total includes the new State of Hawaii and territories of the United States.

Ukrainian Nationalism Lives On

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. YOUNG of North Dakota. Mr. President, we of North Dakota are very proud of the people of our State of Ukrainian descent. Not many are familiar with the history of these great and proud people and their long and hard fight for freedom. The Bismarck Tribune of Bismarck, N. Dak., had a very fine editorial on April 1 of this year regarding these people entitled "Ukrainian Nationalism Lives On." I ask unanimous consent that it be printed in the body of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UKRAINIAN NATIONALISM LIVES ON

Few ethnic groups in America are more aggressively and proudly conscious of their heritage than the Ukrainians, of whom there are quite a number in North Dakota.

The Ukraine ordinarily is considered a part of Russia, and is today a part of the Soviet Union. Actually, say Ukrainians, the Ukraine is or should be a distinct separate political entity, with its own customs, language, and traditions.

The Ukrainian fight for independence and recognition dates far back. Before the Bolshevik Revolution, Ukrainians battled with the czars of Russia for their freedom. Today they are among the stanchest opponents of Russian Communist domination.

Dr. Anthony Zukowsky, Steele, who is president of the North Dakota branch of the Ukrainian Congress Committee of America, sees in the upcoming Federal census an opportunity for Americans of Ukrainian descent to establish their ethnic identity. He emphasized this in a recent letter to the edition.

For the first time, he pointed out, the Federal Government will recognize the Ukraine as a separate country and the Ukrainian language as a separate and independent tongue. This means that people of Ukrainian birth will list the Ukraine instead of Russia as their place of birth when the census taker calls this month. They will list Ukrainian instead of some other language as their native tongue.

Robert W. Burgess, director of the Bureau of the Census, has confirmed this information in a letter to one who inquired.

"We do plan to recognize the Ukraine as a separate entity in our coding system," he wrote. "In the case of mother tongue, Ukrainian represents a separate item in the classification and will appear in most of the tables in which data on the mother tongue are presented."

For Ukrainian-Americans, this appears to represent a triumph. Their homeland may still not be under an independent government; but as far as the U.S. census is concerned, it is an identifiable entity.

Barge Lines Face "Year of Decision"

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Patrick Calhoun, Jr., president of the Inland Waterways Common Carriers Association, entitled "Barge Lines Face 'Year of Decision.'"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BARGE LINES FACE YEAR OF DECISION

(By Patrick Calhoun, Jr., president, Inland Waterways Common Carriers Association)

The year 1960 will be a year of decision for the common carrier barge companies, Washington observers believe. During the next 12 months, men familiar with transportation problems both on Capitol Hill and in the executive branch of the Government feel, the railroads will make a determined effort to obtain changes in current transport policies.

Last year the Senate and House passed the Smathers-Harris Transportation Act because some railroads said they were in trouble. I have been looking over the recent financial statements of a number of railroads, and from these reports it is clear that during the present year they have been doing very well. In the interest of a healthy transportation system, we are pleased with this trend. To implement it, and improve their position, we feel the railroads should do everything possible to provide better service, modern equipment, and more efficient operating procedures.

Most experts in transportation think that the effects of the 1958 Transportation Act should be studied this year, and that only after it has been effective for a period of at least 1 year should any major alterations be considered. Added to this reason for delay in considering changes in the legislation is the fact that two study committees will be devoting the remainder of this year and some of next to analyzing problems confronting the transport industry.

The direction which the Senate Interstate and Foreign Commerce Committee study will take is uncertain. However, judging by past

actions of this committee and the makeup of the committee itself, all sides will be afforded full and lengthy hearings.

The study under the direction of the Secretary of Commerce, however, is an entirely different matter. Many are fearful that the new Commerce Department study will follow closely the recommendations made by the Weeks committee some years ago. They feel that the committee will be unfriendly to water and other carriers, and basically friendly to the railroads.

Railroad representatives in Washington are planning their campaign for the months ahead, and much of their planning is directed toward their relationship with other carriers. There are three particular areas in which the railroads wish to obtain special favors.

One is in the field of rates. That is, they want to lower rates where they have competition from the barge lines and other carriers, and raise them where the consumer is the prisoner of railroad service. The railroads seeks high rates in areas where low-cost water transportation is not available, to counterbalance losses they would take in places where they want to cut charges in an attempt to take business from the barge lines.

American railroads must not be allowed to punish consumers and industries in certain States in order to make possible continued financing of their own private rate wars.

Common ownership is another area where the railroads seek special advantages. The railroads' desire to enter the fields of trucking, barging, and air transportation cannot be traced to any failure of these modes of transportation to provide adequate service.

In other words, the railroads are not seeking to enter a field where the consumer is crying for help. Consumers are certainly not looking for the expansion of railroads into new fields. They are all too well aware of the antiquated railroad techniques which have brought railroad service in this country to a rather less than desirable state.

Still further, the railroads are trying to have user charges levied on river transport operators, not because it is their desire to see that revenue is brought into the Public Treasury (as a matter of fact, tolls would result in less total revenue) but in order to handicap water transportation.

It is felt that the pressure for user charges coming from the Budget Bureau and Commerce Department may be generated primarily, therefore, by friends of the railroads and the railroads themselves.

The country would be better off, we feel, if the railroads would devote their energies to running an efficient form of transportation instead of dissipating their strength and energy fighting other forms of transport. The common carrier barge lines wish to extend the benefits of coordinated service with the railroads, but have received little cooperation in this area from the rails.

The officers and members of the Inland Waterways Common Carriers Association have consistently tried to show how the regulated barge lines are rendering a maximum of public service as an important part of the Nation's transportation system. The common carrier barge lines, as they face the coming year, feel more strongly than ever before that one of the most important things river carriers can do to bolster their position is to render better service at a low cost, and to avoid pushing for legislation which would curtail or hurt other modes of transportation.

The barge lines, in an effort to be constructive, are doing everything possible to bring new companies and new plants to the rivers, and so spread the benefits of river locations still further to the American consumer.

The economic outlook for the country is one of healthy prosperity. The barge lines must be prepared, and they are prepared, to render maximum public service at a time when manufacturers and consumers will be looking for economical, efficient water transportation.

It is important that the barge lines' constructive role be recognized and appreciated. The best public relations for the industry consists of public knowledge of the good service, low-cost, modern equipment, able personnel and cooperation with other carriers for the benefit of the Nation as a whole which barge companies offer. To illustrate this approach I commend to readers' attention these constructive articles about the common carrier barge lines:

The Journal of Commerce, April 14, 1959—"Inland Waterway Traffic Gains," by Stanley Ferguson.

The New York Times, February 8, 1959—"Towboat Trade Shows Big Gain," by Jacques Nevard; January 27, 1959—"Ol' Man River Keeps on Fooling Even Most Modern Towboats," by Jacques Nevard.

The Saturday Evening Post, March 14, 1959—"River-Boat Revival on the Ohio," by James A. Maxwell.

New York Herald Tribune, February 22, 1959—"Inland Lines Head Tells of South's Vast Potential," by Walter Hamshar; February 21, 1959—"Inland Waterways See Threat in Labor Costs," by Walter Hamshar.

Owensboro, Kentucky, Messenger-Inquirer, January 25, 1959—"Coal and Barges Sparking Industrial Boom in Ohio Valley."

Traffic World, February 14, 1959—"Revolution on the Rivers," by Gordon Huffines.

The Wall Street Journal, March 24, 1959—"Barge Lines Eye New Technology in Fight to Hold Traffic Gains Despite Rising Costs, Rail Rate Cuts," by Roger Benedict.

Interested readers who may have missed one or several of these articles may feel free to write to me at the Inland Waterways Common Carriers Association, 140 South Dearborn Street, Chicago 3, Ill., and I shall be happy to send copies of the individual articles.

Pentagon Promotion for Hon. Errett P. Scrivner

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. SMITH of Kansas. Mr. Speaker, his former colleagues in Congress will be gratified to learn that after 14 months as special assistant to the Assistant Secretary of Defense, Comptroller, the Honorable Errett P. Scrivner has proven his worth and has been promoted to Deputy Assistant Secretary of Defense, Public Affairs.

A news story appearing in the Johnson County Herald, and other papers, follows:

Appointment of Errett P. Scrivner, special assistant to the Assistant Secretary of Defense (Comptroller), as Deputy Assistant Secretary (Public Affairs), effective March 7, is announced by the Secretary of Defense.

Mr. Scrivner, Kansas City, Kans., formerly a Member of Congress representing the Second Congressional District of Kansas, replaces Chauncey Robbins, who resigned February 22. Mr. Scrivner who joined the Defense Establishment on January 19, 1959, was elected to the 78th Congress in September 1943, and was reelected through the 85th Congress.

Born in Newton, Kans., March 20, 1898, Mr. Scrivner was graduated from Kansas University with an LL.B. He is a member of the Wyandotte County Bar Association, Kansas State Bar Association and of the Bar of the U.S. Supreme Court. He served overseas with the 35th Division in World War I, having enlisted in Battery B, 129th Field Artillery. He was awarded the Silver Star and Purple Heart.

Mr. Scrivner was married to Jean Lorraine Marshall in 1921. The couple has one daughter, Mrs. Nancy Lee Tiffen, who resides in Kirkwood, Mo.

Residual Oil Imports

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. RANDOLPH. Mr. President, approximately a year ago, the President of the United States issued a proclamation establishing import quotas on crude oil, petroleum products, and residual fuel oil. This step, said to have been in the interest of national security, set the amount of oil to be imported at the level of 1957—a year in which substantial quantity of oil was brought into this country. It was determined by the Office of Civil and Defense Mobilization that the level of imports in 1957 could not be greatly exceeded without endangering the stability and well-being of America's domestic fuels industries. This decision led to the Presidential proclamation.

Since that time the administration of the mandatory controls on oil imports has been a considerable problem. The quotas granted oil importers have been revised upward several times by the Department of the Interior—the executive establishment unit charged with responsibility for this program. The basis on which these revisions were made seem to have always been nebulous at best; yet a recent development with regard to imported residual oil indicates that the entire program of mandatory controls is now in jeopardy.

The development to which I refer is the decision of the Department of the Interior, on April 9, to grant additional quotas for the importation of residual oil for the months of April, May, and June 1960, despite the fact that reasonable quotas for the period January through June 1960 had already been established by that Department.

This increase appears to have been made in response to the pleas of several large oil importers who had unwisely, I believe, used up the greater part of their 6-month allowance in the months of January and February alone. The damage done the domestic coal industry—an industry of vital importance to the State of West Virginia, as well as many other States of the Union—by this quota augmentation is very serious. At a time when the coal industry is fighting for survival this decision could have far-reaching effects.

Recently, a significant letter was sent by Joseph E. Moody, president of the National Coal Policy Conference, Inc., to the Honorable Fred A. Seaton, Secretary of the Interior, which I comment to my colleagues. Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL COAL POLICY CONFERENCE, INC.,
Washington, D.C., April 5, 1960.

Hon. FRED A. SEATON,
Secretary, Department of the Interior, Washington, D.C.

DEAR MR. SECRETARY: We continue to hear disturbing rumors, perhaps inspired by international oil importing interests, that there may be an increase in residual oil import quotas for the remainder of the present 6 months' quota period. We want again to call your attention to the serious effect such action would have on the 2 million American people in this country who are dependent on the domestic coal industry.

We find it hard to believe that our Government could seriously consider an increase in quotas, which are already 26 percent higher than the level of 1957 established in the President's proclamation of mandatory controls last year, merely to meet a situation brought about by the frantic sales efforts of three or four giant international oil companies seeking to extend their markets.

It is obvious that a few of these large international companies, who have imprudently exhausted much of their half year's quotas while creating an artificial demand through sales well below listed prices, are using this rigged situation to claim that shortages will soon deprive many users of essential fuels, and are thus putting tremendous pressure on your Department further to increase allocations between now and June 30.

We do not refer to the many companies who, as Mr. Bennett pointed out in his recent letter to the president of Standard Oil Co. (New Jersey), have "fully met" a "responsibility equal to that of the Government in connection with this (program), as with other national security programs." Instead, the present situation has been created by a few companies which have expended a large percentage of their quotas in the first 3 months, and are now exerting pressures for an allotment increase which would virtually wreck the import control program and would be disastrous to the domestic coal and domestic oil industries.

We trust that imperative considerations of the welfare of millions of Americans, as well as of national security, will prevail and that these attacks on the President's mandatory control program will be unsuccessful.

Indeed, we believe the facts prove that, instead of increasing import quotas, the amount of residual oil now being permitted to be imported into this country should be materially reduced.

When the President was forced to impose mandatory quotas on petroleum and petroleum products in March in 1959, following unsuccessful attempts to limit imports voluntarily, his proclamation provided that the imports of residual fuel oil should not exceed the level of imports of that product into district I–IV during the calendar year 1957 (or 343,445 barrels per day.) The mandatory program was extended to residual oil because of a finding by the President that unrestricted imports posed a threat to the national security.

Twice since then the Department of the Interior, by administrative decision as permitted in a revision of the President's proclamation, has increased quotas above the 1957 level so that present quotas permit the import of 425,000 barrels daily. On an annual basis, this is the equivalent of 38 million tons of coal, compared to 30 million tons lost to imported residual oil in 1957.

The loss of this tonnage is a severe economic blow to the domestic coal industry. Recent press stories have pointed to the pitiful plight of thousands of unemployed coal miners in this country, and any further inroads on coal's markets by cheap imported residual could only add to their suffering. Also, it should be realized that the effect of this unemployment spreads widely throughout the communities and areas in which it exists—to merchants, school and tax districts, transportation agencies, service establishments and all who depend secondarily on a healthy coal industry for their prosperity.

Mr. George H. Love, chairman of the National Coal Policy Conference and chairman of the board of Consolidation Coal Co., Pittsburgh, recently told the annual dinner of the conference that residual imported at a level higher than that for 1957 would "tend to put the coal industry and railroads on a standby basis, and on such a basis there is no way to maintain either of them."

"Certainly the threat of war prevents us from letting our country become dependent on these importations, but even without war, governments and circumstances can change and foreign oil sources be cut off," he pointed out.

In view of all these facts, we think that the Oil Import Administration and the Department of the Interior should give serious consideration to an immediate reduction on quotas to no more than the 1957 levels originally contemplated in the President's proclamation.

Since the heavy burn season is now ending for this year, demand will be considerably less for the next several months, even despite the new consumption recently stimulated by the price-cutting marketing activities of certain importers. Therefore, we urge that the next quotas be set for a 3-month period beginning July 1, and be based on a 1957 level (daily) seasonally adjusted downward to allow for the normally low consumption during the summer. If this resulted in any legitimate shortage of stocks by fall, ample time would remain to rebuild them for heavy winter demand beginning in October.

Meantime, however, such a firm stand by the Department of the Interior would serve to convince these few large international oil companies that they must meet their responsibilities to the Nation and to national security.

It would likewise be of tremendous encouragement to the millions of American citizens dependent on the domestic fuels industries and to all those seriously concerned with a self-sufficiency of dependable fuel within our borders to meet any demands of national emergency.

Sincerely yours,

JOSEPH E. MOODY,
President.

Mr. RANDOLPH. Mr. President, I request also that a joint statement issued to the Associated Press, April 10, 1960, by my colleague from West Virginia [Mr. BYRD] and me, in response to an inquiry, be printed in the Appendix of the RECORD following Mr. Moody's letter to Secretary Seaton.

There being no objection, the joint statement by the Senators from West Virginia was ordered to be printed in the RECORD, as follows:

(Joint statement by Senators JENNINGS RANDOLPH and ROBERT C. BYRD, Democrats, of West Virginia, April 10, 1960)

UNITED STATES BOOSTS IMPORTS OF RESIDUAL OIL

The Government yesterday boosted import levels for residual fuel oil by 12 million barrels for the April 1–June 30 period.

The action came shortly after the National Coal Policy Conference asked Congress and the Interior Department to investigate what it called efforts to sabotage the oil import control program. In is protest it named the Standard Oil Co. of New Jersey, Texaco, Inc., and Hess, Inc.—the Nation's three largest residual oil importers.

The increase for the area east of the Rocky Mountains was announced by Secretary of the Interior Fred A. Seaton. He said it was needed because of higher than anticipated demands resulting from coal weather in March and the "irregular marketing pattern of a few major importers."

(After publication of the above, the Associated Press asked for comment from the Members of the U.S. Senate from West Virginia, and in response Senators RANDOLPH and BYRD jointly issued the statement below:)

"The 12-million barrel increase in the April through June quota for residual oil imports is, of course, a disappointing development because it highlights the fact that the Secretary of Interior has relied too much on voluntary response by the international oil companies to the mandatory quota system.

"But out of this situation the Senators from West Virginia were assured Saturday, April 9, during a conference with Interior Secretary Fred A. Seaton and his principal assistants, that major changes in departmental policy for administration of the import controls will be ordered.

"The most significant of the revamped procedures impending, we were told, will be a shortening of the period for which quotas will be set from the present semiannual arrangement to a quarterly basis.

"This change, while potentially helpful, we suggested to the Interior officials, will not be effective unless the Department more stringently controls inventory replacements such as the 12-million barrel addition just authorized for the April through June period.

"Assurances were given in response to this suggestion, that the Interior Department will establish a plan for bringing inventory buildup within the quarterly quotas—and hopefully at 1957 import levels. Unless this is accomplished we will consider the quota system breached and we will suggest corrective procedures."

Proposed International Center for Cultural and Technical Interchange

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. FONG. Mr. President, this morning's Washington Post and Times Herald published an editorial calling attention to the proposed International Center for Cultural and Technical Interchange in Hawaii.

I ask unanimous consent that this brief but pointed editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 14, 1960]

HAWAII MEETING PLACE

Indications are mounting of impressive bipartisan congressional support as well as stronger backing from the administration for the early launching of an international study center in Hawaii. This is good news, coming after Secretary Herter's disappointingly vague endorsement in February of the proposal to establish an institution in which students from Occident and Orient could study together and compare cultural experiences and viewpoints. But there is still danger that the plan may become submerged—and its value may be largely lost—in the mutual security legislation to which it may be attached. Properly the so-called East-West center ought to be wholly free from cold war considerations, although there is no doubt that an ambitious Soviet undertaking along somewhat different lines has given impetus to the American plan.

Missile Monitor Soon in Europe With U.S. Army

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I insert a release concerning the development and operation of the missile monitor:

MISSILE MONITOR SOON IN EUROPE WITH U.S. ARMY

Missile monitor, the first mobile electronic air defense missile fire direction system, is now being deployed to operational sites with the U.S. Army in Europe, officials of the Army and the Hughes Aircraft Co. announced today.

This completes deployment of the first missile monitor begun about a year ago with the AN/MSQ-18 battalion-level elements of the system, and will provide initial operational test information concerning on-site capabilities of the system.

Designed to operate on a 24-hour alert, the missile monitor system employs digital computer techniques for rapid and accurate information handling.

"The missile monitor system eliminates the old grease-pencil plotting and voice-telling methods to provide intelligence to air defense units. For the first time the field army has a transistorized digital control complex which permits the commanders at all echelons to observe and influence the air battle," Lt. Gen. John C. Oakes, the Army's Deputy Chief of Staff for Operations, said.

Missile monitor can pass information many times faster than manual voice-telling systems, and with much greater accuracy and less delay.

Designated AN/MSG-4 by the Army, the missile monitor can detect, track, and store information on large numbers of airborne targets within a vast surveillance volume. Targets are automatically tracked by the digital computer while weapon-assignment information is flashed through the network to the missile batteries. There, Hawk or Nike missiles may be launched to destroy the attacking airplanes.

"The missile monitor is a field-tested system capable of being modified to keep pace with the rapidly changing requirements of military science. It not only effectively directs the fire of today's missile weapons to meet today's offensive threats, but is designed for easy modification to cope with future threats as well," C. Harper Brubaker, a Hughes vice president said.

The heart of missile monitor is a corps-level air-defense command post which provides a comprehensive and accurate picture of both friendly and hostile aircraft throughout the defended zone. The command post consists of Hughes-built electronic equipment mounted in standard Army trucks and vans.

The eye of missile monitor is Frescanar, a unique three-dimensional data radar developed by Hughes for the U.S. Army Signal Corps, which provides range, bearing, and altitude simultaneously on hundreds of airborne targets with only one antenna, receiver, and transmitter. Conventional radars require two or more complete systems to provide 3-D information on a limited number of airplanes.

Other trailer-mounted units at the command post include a radar equipment trailer which houses the transmitter and receiver of the Frescanar, a radar processing center, weapons monitoring center, and associated diesel-driven power supply trailers.

The radar data processing center houses the digital computer with its associated memory drum and six detector-tracker radar screen consoles. Targets are detected on the radar-video display, identified as friend or foe, and automatically tracked. The number of aircraft within a multiple-blip video return (raid-size estimate) is also estimated here.

The digital computer employs a track-while-scan technique to produce data on a large number of targets. The digital track data generated by the computer is stored in a Hughes-developed memory drum, then converted to analog form for display as track-marker symbols on the detector-tracker consoles. This digital data, including the target's range, bearing, height, and identity, is flashed to the weapons monitoring center by means of an automatic data link.

The weapons monitoring center contains four large-screen consoles to provide corps-level command personnel with a complete graphic picture of the ground-to-air battle in the zone of defense as well as the status of all Nike and Hawk missile batteries in the missile monitor network.

From the weapons monitoring center, the main line of electronic conversation leads to four or more remote battalion-level operations centrals mounted on 2½-ton trucks. There, battalion commanders observe the air battle on two large radar display screens.

Each operations central has electronic lines of communication connecting directly to four or more Nike or Hawk missile batteries via Hughes-built coder-decoder group equipment, also mounted on 2½-ton trucks. These units may be dispersed over a wide area as required.

Battalion commanders may stand by as missile firing orders are transmitted direct from the corps-level weapons monitoring center, or may assign missile batteries to specific targets as desired to meet a changing tactical situation.

The coder-decoder group is an unmanned unit which converts the digital target assignment and position data to analog form for use by currently operational missiles. Information can be sent from the weapons monitoring center to the missile battery in the millionth part of a second, eliminating the element of human error in the old voice-telling technique, and assuring rapid destruction of attacking airplanes.

Each operations central and missile battery has its own relatively short range radar which feeds information into the system. Thus, in an emergency, a fragmented system could continue to meet an aggressive threat effectively.

Lines of electronic communication are arranged so that elements of the system may communicate with each other. Information flowing from the air-defense command post through operations central to the battery includes track data on the assigned targets, and weapons assignments. The battery sends a constant flow of information back through operations central to air-defense command post on firing readiness reports, coordinates of the engaged target, and hostile airplane destruction results.

Jesus, the Perfect Man; a Perfect Tribute by the Late C. P. Mooney of the Memphis Commercial Appeal

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. YARBOROUGH. Mr. President, with the Easter season upon us, this is a particularly fitting time for all of us to reflect over the life of the greatest man in the history of mankind.

One of the most beautiful and meaningful writings on the teaching of Christ and His impact on civilization was penned by C. P. Mooney of the Commercial Appeal (Memphis, Tenn.), just before Christmas in 1912. I have heard many tributes to C. P. Mooney by Boyce House, the author, who formerly worked with him.

The column, entitled "Jesus, the Perfect Man," has been reprinted and reread countless times since, usually around Christmas. But, I believe it is just as appropriate for study at Easter.

Recently I reread this timeless and extraordinarily powerful column in the Cotton Digest, a nationally circulated trade journal of the cotton industry, for last December. I ask unanimous consent to have printed in the Appendix of the RECORD the column, "Jesus, the Perfect Man."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JESUS, THE PERFECT MAN

There is no other character in history like that of Jesus.

As a preacher, as a doer of things, and as a philosopher, no man ever had the sweep and vision of Jesus.

A human analysis of the human actions of Jesus brings to view a rule of life that is amazing in its perfect detail.

The system of ethics Jesus taught during His earthy sojourn more than 2,000 years ago was true then, has been true in every century since and will be true forever.

Plato was a great thinker and learned in his age, but his teachings did not stand the test of time. In big things and in little things time and human experience have shown that he erred.

Marcus Aurelius touched the reflective mind of the world, but he was as cold and austere as brown marble.

The doctrine of Confucius gave a great nation moral and mental dry rot.

The teachings of Buddha resulted in mental and moral chaos that makes India derelict.

Mohammed offered a system of ethics which was adopted by millions of people. Now their children live in deserts where once there were cities, along dry rivers where once there was moisture, and in the shadows of gray, barren hills where once there was greenness.

Thomas Aquinas was a profound philosopher, but parts of his system have been abandoned.

Francis of Assissi was Christlike in his saintliness, but in some things he was childish.

Thomas Kempis' Imitation of Christ is a thing of rare beauty and sympathy, but it is, as its name indicates, only an imitation.

Sir Thomas More's Utopia is yet a dream that cannot be realized.

Lord Bacon writing on chemistry and medicine under the glasses of the man working in a 20th century laboratory is puerile.

The world's most learned doctors until a hundred and fifty years ago gave dragon's blood and the ground dried tails of lizards and shells of eggs for certain ailments. The great surgeons a hundred years ago bled a man if he was wounded.

Napoleon had the world at his feet for 4 years, and when he died the world was going on its way as if he had never lived.

Jesus taught little as to property because He knew there were things of more importance than property. He measured property and life, the body and soul, at their exact relative value. He taught much as to character, because character is of more importance than dollars.

Other men taught us to develop systems of government. Jesus taught so as to perfect the minds of men. Jesus looked to the soul, while other men dwelled on material things.

After the experience of more than 2,000 years no man can find a flaw in the governmental system outlined by Jesus.

Czar and kaiser, president and socialist, give to its complete merit their admiration.

No man today, no matter whether he follows the doctrine of Mills, Marx, or George as to property, can find a false principle in Jesus' theory of property.

In the duty of a man to his fellowmen no sociologist has ever approximated the perfection of the doctrine laid down by Jesus in His Sermon on the Mount.

Not all of the investigation of chemists, not all the discoveries of explorers, not all the experience of rulers, not all the historical facts that go to make up the sum of human knowledge on this day in 1912 are in contradiction to one word uttered or one principle laid down by Jesus.

The human experiences of more than 2,000 years show that Jesus never made a mistake. Jesus never uttered a doctrine that was true at that time and then became obsolete.

Jesus spoke the truth; He lived the truth and truth is eternal.

History has no record of any other man leading a perfect life or doing everything in logical order. Jesus is the only person whose every action and whose every utterance strike a true note in the heart and mind of every man born of woman. He never said a foolish thing, never did a foolish act, and never dissembled.

No poet, no dreamer, no philosopher loved humanity with the love that Jesus bore toward all men.

Who, then, was Jesus?

He could not have been merely a man, for there never was a man who had two consecutive thoughts absolute in truthful perfection.

Jesus might have been what Christendom proclaims Him to be—a divine being—or He could not have been what He was. No mind but an infinite mind could have left behind those things which Jesus gave to the world as a heritage.

Government Hit for Inaction on Import Problem

EXTENSION OF REMARKS

OF

HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. WHITTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Cotton Trade Journal of April 8, 1960:

COMER HITS U.S. INACTION REGARDING IMPORT FLOOD

(By Donald Comer, chairman of the executive committee, Avondale Mills)

The danger threatening us by Japan's cotton exports has been told over and over again by many leaders in our industry—Bob Jackson, Charles Cannon, Bob Stevens, Jim Chapman, Craig Smith, Floyd Jefferson, Leon Lowenstein, W. J. Erwin, Halbert Jones, W. F. Sullivan, Stanford Seabury, Ray Bell and, of course, many others, as well as many of our friends of the press and of the Congress.

The J. P. Stevens Co. recently took page newspaper ads to tell "The Influence of Uncontrolled Textile Imports on Our Economy," and ran this in 33 different papers.

All the facts should be put before every Member of Congress and before groups that these Congressmen represent and to the members of the legislatures of our several States, to the end that a commanding leadership will develop in the Congress that will not stop until the matter is fairly settled.

To quote from a recent meeting of GATT in Tokyo, "It was generally recognized that although exports of manufactured goods from the low-cost producing countries may in certain instances, create serious economic and social problems in the importing countries and it is essential to adopt liberal rather than restrictive policies to overcome those difficulties."

HEART OF PROBLEM

These two words, "liberal" and "restrictive" bring us to the heart of our problem. Let's review the matter: The present law governing our foreign trade was fathered by Secretary Hull in 1934.

It was interpreted by Mr. Hull as "nations swapping what each had in overabundance that the other needed with some three-way trading." This was called Hull's Reciprocal Trade Agreement.

When President Eisenhower asked for a renewal of this law he wrote Congressman MARTIN, of Massachusetts, that it would be administered without injury to a single American industry.

The Eisenhower claim was that we were protected by peril-point appeals to the Tariff Commission. In the past, more often than not, he has refused to accept their findings.

Recently, because of our continued complaint, he has asked the Tariff Commission to give our industry a hearing. His assistants have sold Japan our cotton at 8 cents a pound less than it costs us.

The fact that this cotton is to be manufactured into cloth by Japan at a labor cost one-tenth of ours, Senator THURMOND of South Carolina, with Senators EASTLAND, BYRD, RUSSELL, HOLLAND, MCCLELLAN, and STENNIS, asked that this hearing also include possible injury because of wage differential.

The President has just denied Senator THURMOND'S request and now we are asked to engage lawyers and to send our executive officers to Washington to prove that this situation will wreck our industry.

Arguing this injury because of the cotton differential is like being forced to go through an expensive hearing to prove that in boxing it is unfair to tie one contestant's hand behind his back. Their refusing even to allow us an argument about the wage differential is like arguing no injury in a boxing contest where both hands of one contestant are tied.

FAVORS FOREIGN TRADE

After all this waiting, the Tariff Commission began the hearing March 1. We feel, though, that our case is so obvious that in time we can win it. There are those of us, though, who feel that time is running out and we are afraid the ambulance will come before the doctor. Neither the original intention nor the President's promise has been kept.

We favor foreign trade on a reciprocal basis. We welcome original style, new ideas, new models—any improvements—but we are objecting, and with heaven's help, we will continue to resist the invasion of our market with goods, in imitation of ours, made with hours, ages and wages so far below ours.

Senator PAUL DOUGLAS asked one of our committeemen how much longer we would be before our Congress asking for help—and I replied by asking him how much longer was the Congress, which continued to fix our wages, ages and standards (the highest in the world), going to sell our cotton to our competitors at 8 cents a pound cheaper than to us.

The administration charges American mills the parity price which they pay the farmers for our cotton. They sell this same cotton to Japan at 8 cents a pound less the world price—and this loss becomes a burden on all American taxpayers, including us.

Japan manufacturers our cotton, which she needs, with wages one-tenth of ours and the administration in Washington admits these imports, which we don't need, into our market. This is not reciprocal trade.

If Japan shipped us her tea and raw silk in payment for our raw cotton, that would be "reciprocal." As a matter of interest, Avondale maintains a highway rest station with a wading pool and a sand box, with an adjacent display and sales shop for our products.

We try to make this a convenient stopping point for the traveling public from the North and West to the South, and from here and yonder, and we advertise a cup of free Japanese tea to any friends who stop to see and to rest.

If Japan shipped her cotton goods to southeast Asia and took her pay in tin, rubber, etc., or shipped her goods to South America and took her pay in bauxite, nitrates, coffee, bananas, etc., and shipped those things to us, that would be "three-way trading."

You recall that Mr. Kogiro Abe, a Japanese spinner, asked "Why Mr. Comer is not willing to live and let live?" and I answered that we were willing to go a step farther and "live and help live," and had agreed to accept a quota of his goods—100 billion yards a year—not a yard of which we needed and which would shut down some of our machinery.

I asked Mr. Abe what Japan had done to our velveteen, tuna fish and hardwood plywood industries and his growing threat to our chinaware, textile and garment manufacturers, and so on and on. I have had no answer.

To my mind our case is very clear and the administration continues in its failure to carry out his promise. Senator SPARKMAN made these same charges in a Senate debate.

We are spending $40 billion annually against the threat of a possible invasion by soldiers, while our real threat is the increasing invasion of things right now.

The President promised us restrictive measures, but his assistants have chosen the

"liberal" procedure. This is why we find it necessary to ask that the whole thing be taken out of the hands of the administration and be put back into the hands of Congress.

The Assistant Secretary of Commerce, Mr. Kearns, in a recent speech in North Carolina, indicated a policy of trading the life of one American industry because of his foreign imports in order that another American industry might live.

If my head is to be chopped off for the benefit of some foreign business, and if the claim is that it is for the general welfare, I want Congress to act and not the "Bureau Choppers" in the administration.

The Congress right now is debating the question of increasing our minimum hourly wage from $1 to $1.25 and a news item from the Associated Press has this comment: "The idea behind the law is that setting a floor under wages can assure workers that minimum income can protect employees from unfair competition from rival firms paying substandard wage rates."

Our American minimum wages and standards are fixed by our Government. The price of our cotton is fixed by our Government. These are the highest standards in the world. They help create a purchasing power that every foreign manufacturer looks at with hungry eyes.

I know of no farmer who provides a lush pasture for his cows who does not put a fence around it to protect it from encroachment (and may I add, let the farmer be sure that the fence is an American fence, for there is a lot of foreign wire coming in right now).

We resent the continuing effort of the administration to give grazing entrance permits to this, our pasture.

Our industrial wages, our subsidized farm income, are largely responsible for this purchasing power, and it is not the administration's right to trade it away except on a truly reciprocal basis.

Mr. Kearns, in his speech, mentioned other home troubles that plagued our industry, and Jim Chapman asked him how that justified another blow from him with his Asiatic imports. Mr. Kearns mentioned that there were some 2 billion underprivileged and underclad people in the world. Why not clothe these people with Asiatic goods, with our help if necessary?

We give our money to feed the hungry; why not clothe the naked, also? Japan should look for new customers and not try to crowd our already oversupplied market.

Senator KEATING, of New York, has introduced legislation to help correct this situation and is having support from Members of the Senate and the House.

I believe that Japan and our State Department should actively encourage visitors to Japan. Our tourist dollars could help bridge this trade gap.

I am hoping that what I am writing here will encourage our friends to do what is needed to protect an American industry—weaving, and garment making, employing over 2 million people, and which, profitwise, is 20th on the list of American industries, and, may I add, it is later than some Americans think.

Resolution on Americanism

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. WILEY. Mr. President, as our Nation attempts to defeat the powerful Communist campaign to rule the world, it is always welcome to learn of individuals and organizations who are voluntarily dedicating their services to combating this menace.

Through the years, a great many of our veterans and their organizations—comprised of members who have known firsthand the battles, heroism and sacrifices, in effect, the real meaning of a "hot war"—have also been in the forefront of efforts to strengthen our country during the cold war era.

Among other efforts, there has been a realistic attempt to inspire greater zeal, devotion to duty, willingness to sacrifice, awareness of the need for dedicating manpower and resources to preserving our way of life.

We recognize, of course, that in addition to dedication to the high principles, our citizens will need to translate their patriotism into realistic action programs that create a greater, stronger America.

There are, of course, many ways of inspiring our citizens to greater dedication to our way of life.

Recently, Trier-Puddy Post 75 of the American Legion, of Fond du Lac, Wis., adopted a resolution, originated by Victor T. Broome, proposing that the Nation during the period February 12 to February 22 observe Americanism Days in each year. The purpose would be to encourage the people of the Nation to rededicate themselves to our national ideals.

Reflective of the kind of grassroots patriots necesssary for preserving our freedom—finding its voice, as many times in the past, through the American Legion—I wish to bring this action to the attention of my colleagues.

I ask unanimous consent to have the resolution accompanied by a detailed, informative article from the Commonwealth Reporter, of Fond du Lac, Wis., printed in the Appendix of the RECORD.

There being no objection, the resolution and article were ordered to be printed in the RECORD, as follows:

Whereas there is prevalent in the world today those who are openly and avowedly advocating the overthrow of all forms of government in favor of communism; and

Whereas ignorance of our Communist adversaries is our greatest weakness in our struggle against the Soviet conspiracy to overthrow our Government and way of life; and

Whereas the American Legion has, through its thousands of veteran members, been dedicated to the preservation of our form of government against all aggressors; and

Whereas the principles of the American way of life are personified in the exemplary lives of George Washington and Abraham Lincoln whose birthdays occur in the month of February; and

Whereas we believe the most effective method of combating the present threat to our way of life is by observing a period of rededication of ourselves as Americans to our democratic form of government as embodied in the patriotism exhibited by two of our greatest Presidents: Now, therefore, be it

Resolved, That the period commencing on Lincoln's Birthday, February 12, and concluding with Washington's Birthday, February 22, of each year, be designated as "Americanism Days" by the Federal Government, to be observed annually by the Nation as a whole. That during such periods of rededication to Americanism, all organizations be urged to exert extraordinary efforts to apprise their members of the vitally serious nature of the Communist threat to our Nation of free people under God.

LEGION SEEKS NEW FIGHT ON SOVIET THEORY—POST RESOLUTION ALSO ASKS NATIONAL REDEDICATION TO AMERICAN IDEALS

Trier-Puddy Post 75 resolution originated by Victor T. Broome, 530 East Second Street, asking that the Nation annually rededicate itself to Americanism and the reappraisal of the threat of communism, was launched on its way through American Legion channels this week. Membership of the local post adopted the resolution Thursday night.

The period February 12–22 was selected because it falls between the birthdays of Lincoln and Washington.

The next steps for consideration of the resolution will be at the county council and sixth district levels. The goal is to have the resolution adopted at the American Legion's national convention in Miami, Fla., in August.

Broome's resolution contends that there is prevalent in the world today those who are openly and avowedly advocating the overthrow of all forms of government in favor of communism and that ignorance of the Nation's Communist adversaries is its greatest weakness in the struggle against the Soviet conspiracy to overthrow the U.S. Government and way of life.

"The American Legion has, through its thousands of veteran members, been dedicated to the preservation of our form of government against all aggressors and the principles of the American way of life are personified in the exemplary lives of George Washington and Abraham Lincoln whose birthdays occur in the month of February," the resolution continues. "We believe the most effective method of combating the present threat to our way of life is by observing a period of rededication of ourselves as Americans to our democratic form of government as embodied in the patriotism exhibited by two of our greatest Presidents."

The resolution then asked that it be resolved, "That the period commencing on Lincoln's birthday, February 12, and concluding with Washington's birthday, February 22, of each year, be designated as Americanism Days by the Federal Government to be observed annually by the Nation as a whole and that during such periods of rededication to Americanism, all organizations be urged to exert extraordinary efforts to apprise their members of the vitally serious nature of the Communist threat to our Nation of free people under God."

David M. Kuter, past commander and executive board member, was named to be contact representative to the advisory committee of Herman Nimmer, Winneconne, district commander.

In other action during the post meeting at the American Legion clubhouse, the membership decided again to offer for sale their cafeteria at Fairgrounds Park.

National Library Week Emphasizes the Importance of the Freedom To Read

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. KEATING. Mr. President, the recent observance of National Library Week has afforded the opportunity to reaffirm the basic and indispensable contribution of literature to the growth and

vitality of our free society. In drawing attention to the historic link between freedom to read and the strength of democracy, the Rochester Democrat and Chronicle of April 3 has printed a most timely and significant statement sponsored by the American Library Association and the American Book Publishers Council. I ask unanimous consent that this excellent statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WITHOUT FREEDOM TO READ, DEMOCRACY DIES

(EDITOR'S NOTE.—The following powerful statement in behalf of the freedom to read was sponsored by the American Library Association and the American Book Publishers' Council. Nothing we could say editorially could add a thing to this sharp attack on censorship and cogent defense of one of our foremost freedoms. The statement, written almost 7 years ago, is printed in observation of National Library Week.)

The freedom to read is essential to our democracy. It is under attack. Private groups and public authorities in various parts of the country are working to remove books from sale, to censor textbooks, to label "controversial" books, to distribute lists of "objectionable" books or authors, and to purge libraries.

These actions apparently rise from a view that our national tradition of free expression is no longer valid; that censorship and suppression are needed to avoid the subversion of politics and the corruption of morals. We, as citizens devoted to the use of books and as librarians and publishers responsible for disseminating them, wish to assert the public interest in the preservation of the freedom to read.

We are deeply concerned about these attempts at suppression. Most such attempts rest on a denial of the fundamental premise of democracy—that the ordinary citizen, by exercising his critical judgment, will accept the good and reject the bad. The censors, public and private, assume that they should determine what is good and what is bad for their fellow citizens.

We trust Americans to recognize propaganda and to reject obscenity. We do not believe they need the help of censors to assist them in this task. We do not believe they are prepared to sacrifice their heritage of a free press in order to be "protected" against what others think may be bad for them. We believe they still favor free enterprise in ideas and expression.

We are aware, of course, that books are not alone in being subjected to efforts at suppression. We are aware that these efforts are related to a larger pattern of pressures being brought against education, the press, films, radio, and television. The problem is not only one of actual censorship. The shadow of fear cast by these pressures leads, we suspect, to an even larger voluntary curtailment of expression by those who seek to avoid controversy.

Such pressure toward conformity is perhaps natural to a time of uneasy change and pervading fear. Especially when so many of our apprehensions are directed against an ideology, the expression of a dissident idea becomes a thing feared in itself, and we tend to move against it as against a hostile deed, with suppression.

And yet suppression is never more dangerous than in such a time of social tension. Freedom has given the United States the elasticity to endure strain. Freedom keeps open the path of novel and creative solutions, and enables change to come by choice. Every silencing of a heresy, every enforcement of an orthodoxy, diminishes the toughness and resilience of our society and leaves it the less able to deal with stress.

Now, as always in our history, books are among our greatest instruments of freedom. They are almost the only means for making generally available ideas or manners of expression that can initially command only a small audience. They are the natural medium for the new idea and the untried voice from which come the original contributions to social growth. They are essential to the extended discussion which serious thought requires, and to the accumulation of knowledge and ideas into organized collections.

We believe that free communication is essential to the preservation of a free society and a creative culture. We believe that these pressures toward conformity present the danger of limiting the range and variety of inquiry and expression on which our democracy and our culture depend. We believe that every American community must jealously guard the freedom to publish and to circulate, in order to preserve its own freedom to read. We believe that publishers and librarians have a profound responsibility to give validity to that freedom to read by making it possible for the readers to choose freely from a variety of offerings.

The freedom to read is guaranteed by the Constitution. Those with faith in freemen will stand firm on these constitutional guarantees of essential rights and will exercise the responsibilities that accompany these rights.

1. It is in the public interest for publishers and librarians to make available the widest diversity of views and expressions, including those which are unorthodox or unpopular with the majority.

Creative thought is by definition new, and what is new is different. The bearer of every new thought is a rebel until his idea is refined and tested. Totalitarian systems attempt to maintain themselves in power by the ruthless suppression of any concept which challenges the established orthodoxy.

2. Publishers and librarians do not need to endorse every idea or presentation contained in the books they make available. It would conflict with the public interest for them to establish their own political, moral or esthetic views as the sole standard for determining what books should be published or circulated.

Publishers and librarians serve the educational process by helping to make available knowledge and ideas required for the growth of the mind and the increase of learning. They do not foster education by imposing as mentors the patterns of their own thought. The people should have the freedom to read and consider a broader range of ideas than those that may be held by any single librarian or publisher or government or church. It is wrong that what one man can read should be confined to what another thinks proper.

3. It is contrary to the public interest for publishers or librarians to determine the acceptability of a book solely on the basis of the personal history or political affiliations of the author.

A book should be judged as a book. No art or literature can flourish if it is to be measured by the political views or private lives of its creators. No society of free men can flourish which draws up lists of writers to whom it will not listen, whatever they may have to say.

4. The present laws dealing with obscenity should be vigorously enforced. Beyond that, there is no place in our society for extralegal efforts to coerce the taste of others, to confine adults to the reading matter deemed suitable for adolescents, or to inhibit the efforts of writers to achieve artistic expression.

To some, much of modern literature is shocking. But is not much of life itself shocking? We cut off literature at the source if we prevent serious artists from dealing with the stuff of life. Parents and teachers have a responsibility to prepare the young to meet the diversity of experiences in life to which they will be exposed as they have a responsibility to help them learn to think critically for themselves.

These are affirmative responsibilities, not to be discharged simply by preventing them from reading works for which they are not yet prepared. In these matters taste differs, and taste cannot be legislated; nor can machinery be devised which will suit the demands of one group without limiting the freedom of others. We deplore the catering to the immature, the retarded or the maladjusted taste. But those concerned with freedom have the responsibility of seeing to it that each individual book or publication, whatever its contents, price or method of distribution, is dealt with in accordance with due process of law.

5. It is not in the public interest to force a reader to accept with any book the prejudgment of a label characterizing the book or author as subversive or dangerous.

The ideal of labeling presupposes the existence of individuals or groups with wisdom to determine by authority what is good or bad for the citizen. It presupposes that each individual must be directed in making up his mind about the ideas he examines. But Americans do not need others to do their thinking for them.

6. It is the responsibility of publishers and librarians, as guardians of the people's freedom to read, to contest encroachments upon that freedom by individuals or groups seeking to impose their own standards or tastes upon the community at large.

It is inevitable in the give and take of the democratic process that the political, the moral, or the esthetic concepts of an individual or group will occasionally collide with those of another individual or group.

In a free society each individual is free to determine for himself what he wishes to read, and each group is free to determine what it will recommend to its freely associated members. But no group has the right to take the law into its own hands, and to impose its own concept of politics or morality upon other members of a democratic society. Freedom is no freedom if it is accorded only to the accepted and the inoffensive.

7. It is the responsibility of publishers and librarians to give full meaning to the freedom to read by providing books that enrich the quality of thought and expression. By the exercise of this affirmative responsibility, bookmen can demonstrate that the answer to a bad book is a good one, the answer to a bad idea is a good one.

We state these propositions neither lightly nor as easy generalizations. We here stake out a lofty claim for the value of books. We do so because we believe that they are good, possessed of enormous variety and usefulness, worthy of cherishing and keeping free. We realize that the application of these propositions may mean the dissemination of ideas and manners of expression that are repugnant to many persons.

We do not state these propositions in the comfortable belief that what people read is unimportant. We believe rather that what people read is deeply important; that ideas can be dangerous; but that the suppression of ideas is fatal to a democratic society. Freedom itself is a dangerous way of life, but it is ours.

Secretary Herter's Stand on Disarmament

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. BRIDGES. Mr. President, an editorial published in the Chicago American of April 5, 1960, regarding Secretary of State Christian A. Herter's stand relative to the continuation of disarmament talks and the German problem is both appropriate and timely.

The editorial points out the wisdom of a firm adherence to basic western principles as we approach the summit conference.

I believe the Chicago American editorial is informative and instructive, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FIRM, CALM HERTER

In view of the Russians' refusal to consider the West's disarmament plan at Geneva, Secretary of State Christian A. Herter's suggestion that they offer a new proposal to keep the negotiations moving is entirely reasonable.

It isn't likely to get a reasonable answer, though. Valerian Zorin, the Russian delegate, probably will only reiterate his demand that the Western nations comply absolutely with the Communist program, which calls for total world disarmament in 4 years—with no provisions for insuring that everybody really will disarm.

Yesterday the disarmament conference entered its fourth week without any advance toward a compromise between the West's demands for a census of forces, inspections, and international armed supervision, and the Russians' proposal that the West take their word for everything.

It was that failure to progress that Herter had in mind when he addressed the National Association of Broadcasters in Chicago, observing that while the Geneva Conference on nuclear tests has come near reaching an agreement that could be a "historic turning point" in the quest for arms control, the disarmament meeting itself had come to a standstill.

This, as Herter pointed out, is only one of the deadlocks dividing the East and West as next month's summit conference approaches. Khrushchev is still insisting that the West must settle the West Berlin dispute on his terms—which would surrender the people of West Berlin to Communist enslavement—or he will make a separate peace with Communist East Germany.

Herter's assurance that the West will continue to insist that the whole future of Germany be settled—and settled by decision of the peoples of West and East Germany together, in a popular vote—was cheering evidence that the United States is not softening in response to British Prime Minister Macmillan's arguments for more "flexibility" in negotiating with the Russians. It seems clear that the United States is approaching the summit with a resolute dedication to its principles.

As Herter remarked, it is almost a year since he succeeded the late John Foster Dulles as Secretary of State. He has fitted smoothly into this tremendously difficult job.

Aside from this country's struggle with the Communist bloc in Europe, there are also seething tensions in Asia, South America, and Africa. None of them has eased much anywhere, and each of them must have the constant and alert attention of the Secretary of State.

To keep up with such demands, a man must have, in addition to understanding and intelligence, an objective outlook and a reasonable degree of imperturbability. Herter's performance makes it clear that he has these qualities.

Proposed Repeal of the Connally Amendment

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Abdication of Rights," published on March 3, in the Hardin County (Ky.) Enterprise.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABDICATION OF RIGHTS

Two resolutions, now pending before the U.S. Senate and House of Representatives would, if passed, strike a powerful blow at the rights of this Nation and its citizens. One is Senator HUMPHREY'S Senate Resolution 94, and its House Joint Resolution 558 was introduced on January 19 by Congressman HARRIS B. MCDOWELL, Jr.

These resolutions provide that the Connally amendment to the statute of the International Court of Justice be repealed. That amendment reserved to the United States the right to make its own decision as to whether or not a subject of litigation lies within its own domestic jurisdiction.

The dangerous and radical resolutions now pending before both Houses of the Congress would "grant the consent of the United States to the jurisdiction of the International Court of Justice to determine whether or not disputes before that Court involve matters essentially within the domestic jurisdiction of the United States."

Just how crazy can some of our lawmakers get? These resolutions, if passed, would confer upon a foreign body the power to determine its judicial jurisdiction with respect to this Nation. This is a power that has not been granted to any court in the United States, either Federal or State. These courts determine their jurisdiction only insofar as is provided by constitutional and statutory law.

Even so, within the past 30 years the United States has seen its highest court, the Supreme Court, mix sociological and political concepts with its judicial decisions. This shows how dangerous it would be to give the World Court the power to designate its own jurisdiction.

In a strong protest against passage of the resolutions, made before the Senate Foreign Relations Committee, Mrs. Wilson King Barnes, chairman of the National Defense Committee of the National Society, Daughters of the American Revolution, had this to say:

"The Supreme Court, composed of jurists trained in the same legal tradition, limited by the written Constitution to the determination of judicial matters, and applying a definitive body of constitutional and municipal law, has extended its jurisdiction into political and sociological areas. It is reasonable to believe that the International Court of Justice with no definitive body of law, no prior tradition of judicial restraint and with judges trained in different legal systems, and without agreement among themselves as to either the principles of law to be applied or the methods of applying the law, would decide cases upon a political and ideological rather than upon a strictly judicial basis."

So, in brief, if this hodgepodge court has the power to say that it will take jurisdiction over a matter that concerns the rights of the citizens of the United States, and them alone, our liberties could easily be curtailed or abolished, our system of economy be altered at will, by a foreign court. Are we going to buy a mess of pottage like this? We hope not, and we hope that at least a few people will write their Congressman and Senators about it.

Stuart McGregor, Editor of the Texas Almanac for 35 Years, Honored in Journalism Hall of Fame

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. YARBOROUGH. Mr. President, Mr. Stuart M. McGregor is the first living person to be elected to the Journalism Hall of Fame at the University of Texas. He earned the honor.

In 1857, the Galveston News, ancestor of the Dallas News, brought out the first annual Texas Almanac, a compendium of information about Texas, its history, geography, people, economics, industry, education, religion, and, in fact, every facet of Texas life.

The Texas Almanac was published annually from 1857 to 1873, sporadically from then until 1914, when it seemed to lapse.

By the drive, leadership, vision, and energy of Stuart McGregor, publication was resumed in 1925. It has been published annually or biennially ever since. Stuart McGregor has been its editor-in-chief for those 35 years. I have kept a copy of the Texas Almanac on my desk the last 33 of those 35 years. I learned to love the Texas Almanac as a boy, when my father purchased copies of the 1911, 1912, and 1914 Almanacs, during the years of intermittent publication.

Under Stuart McGregor's editorship, the Texas Almanac has expanded from a small octavo of 432 pages in 1925 to a full sized octavo volume of 704 pages in 1959. The quality of content and typographical excellence has improved even more rapidly than the size of the volume.

Not only is the Texas Almanac the best single volume source of information about Texas and all facts of its life, it is also accurate to say that one does not have the proper sources of information about Texas if he fails to keep a copy of the Texas Almanac at hand.

Mr. Stuart McGregor has discharged his editorship responsibilities ably, fairly, and with a high degree of or-

ganized intellectual discrimination. All the 9½ million people of Texas are in his debt, as well as all others needing information about that great commonwealth.

In honoring Stuart McGregor, along with Samuel Bangs, Texas' first printer, the University of Texas' Journalism Hall of Fame has reflected credit on itself.

Stuart McGregor, quiet, modest, unassuming, seldom seen in public or in public print—his name does not even appear on the title page, foreword, preface or in the Texas Almanac, as its editor—has received in his own lifetime an honor justly earned.

Mr. President, I ask unanimous consent that there be printed in the Appendix to the RECORD today an article from the Dallas News of April 3, 1960, entitled "Texas U. Honors Stuart McGregor."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS U. HONORS STUART MCGREGOR

AUSTIN, TEX.—Stuart M. McGregor, "Mr. Texas Almanac," Saturday received plaudits at the University of Texas, the first living member of its journalism hall of fame.

Also a Dallas Morning News editorial writer, McGregor has edited the Texas Almanac since 1925. He is the first journalism graduate of the university here, receiving a master's degree in 1915 after earning a bachelor of arts degree a year earlier.

The journalism department ceremony highlighted a 2-day roundup of ex-students at the University of Texas.

Samuel Bangs, a pioneer Texas printer and newsman who died more than 100 years ago, also was named to the journalism hall of fame. Selections were announced by Paul J. Thompson, director emeritus of the journalism department, and Dr. Joe B. Frantz, historian and journalism graduate, at a meeting of ex-students.

The Texas Almanac was revived in 1925, after a 9-year lapse, at McGregor's insistence. Professor Thompson described the fact book, published by the Dallas Morning News, as of great value to journalists.

Dr. H. Bailey Carroll, director of the Texas Historical Association, termed the Almanac "the finest statistical reflection of Texas and obviously the work of a man who knows how to present facts."

McGregor has been self-effacing in editing the highly regarded book. Once he asked a country editor some questions about his town and county.

The local editor handed McGregor a copy of the Texas Almanac.

"That's the best information I can give you," he said. "It's all in there."

McGregor was born at Coleman in 1892 and worked his way through the State university. He was a Navy flier in World War I, and later a public-relations man for the old Texas Chamber of Commerce, before joining the Dallas Morning News in 1923.

The names of Stuart Malcolm McGregor and Samuel Bangs will be inscribed on plaques in the journalism building, and a scrapbook containing pictures and articles concerning their careers will be on display.

Samuel Bangs came to Texas in 1817 and published newspapers in Corpus Christi, Galveston, and Houston. He died in Kentucky sometime during the early 1850's.

Awards sponsored by two Dallas foundations also were announced Saturday at the University of Texas.

Dr. Philip Levine, associate professor of classical languages, was given a $1,000 award by Alfred L. Bromberg, Miss Mina Bromberg, and Mrs. Maurice Joseph, ex-students from Dallas.

Scholarships from the Clark Foundation were announced for 25 outstanding freshman students, designated as "junior fellows." Dr. Willis M. Tate, president of Southern Methodist University, spoke at the honors day program where the awards were made.

Junior fellows winners included three from Dallas—Elizabeth Ann Hargrove, 304 South Brighton; James Horace Justice, 1738 Crowberry; and Jeanine Anne Watson, 14008 Preston.

Twenty-five are chosen annually from among outstanding freshmen. Besides scholarships, the group receives special library privileges and has special faculty advisers.

Proposed International Center for Cultural and Technical Interchange

EXTENSION OF REMARKS

OF

HON. HIRAM L. FONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. FONG. Mr. President, I ask unanimous consent that the article written by Alfred Frankenstein in the magazine section, This World, of the San Francisco Chronicle of April 10 be printed in the Appendix of the RECORD.

Mr. Frankenstein writes of the proposed International Center for Cultural and Technical Interchange in Hawaii. In his article he gives graphic observations of Hawaii as the ideal place for such a center.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BLUEPRINT FOR A CULTURAL CENTER—IN NEED OF A BLESSING

(By Alfred Frankenstein)

Something new is stirring 2,000 miles to the west of San Francisco, where the University of Hawaii is founding an international Center for Cultural and Technical Interchange. So far, this center is in the blueprint stage, but it has a director—Murray Turnbull, former head of the university's art department—it has a letterhead all its own, and it has the blessing of the government of the State. What it needs now is a few strong friends in Congress, for this is no parochial affair.

The center would provide the means of cultural and technical interchange between all the peoples of the free world, with special emphasis on the United States and the nations of Asia, Africa, and Latin America. The center would be articulated into a series of specific agencies, including an International College, where students and scholars from all the world would study ideas from all the world; an International Training Facility, making use of Hawaii's government agencies, business houses, and other institutions to provide technical instruction in various fields; an Institute of American Studies for foreign and American students; an Institute of Advanced Studies which, among other things, would stage international conferences for specialists in public health, education, public administration, and other areas; a translation bureau; and a bureau for the organization and management of study-tour whereby Americans may go to Asian countries and Asians to the United States.

The University of Hawaii argues for the proposal in the following terms:

"The concept is simple: that there be established a center whereby students, technical experts, and scholars from all areas can meet for the exchange of information and the development of better understanding. Hawaii can make a contribution in functioning as intermediary. Her role in East-West relations is inherent in the geography and history of the islands. In recent years, the political-social structure and economy of the islands have received international attention as an example of growth for the underdeveloped areas of the world.

"The University of Hawaii, aware of its unique situation, has initiated such major devices for the exchange of ideas on world problems as the East-West Philosophers' Conference, the Conference on Race Relations in World Perspective, the annual Summer Institute on Asia, and the oversea operations program. To bridge language barriers, the university offers courses in the Chinese, Japanese, Korean, Indonesian, and Thai languages as well as French, German, Latin, Russian, and Spanish. The island community in addition has been host to Asian Fulbright and Smith-Mundt grantees for six summers and to thousands of Asian trainees under the U.S. International Cooperation Program."

To all of this, I can add only one thing. Two years ago it was my privilege to teach during the summer session at the University of Hawaii where I had a student assistant named Francis who came from the Marshall Islands. One night Francis participated in a Marshall Island war dance which his grandfather danced for real, and the next night he sang Poulenc and Palestrina with the University of Hawaii choir before it set off on a tour of Japan.

Things like that were always happening at the University of Hawaii while I was there. As the university of a territory, it was actually the university of the entire Pacific island world. As the university of a State, its influence can and should be correspondingly expanded.

Resolutions by Central Cooperatives, Inc., of Superior, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. WILEY. Mr. President, throughout our history, the cooperative movement has made a constructive contribution to improving the economic status of both producers and consumers in our economy.

We recognize, of course, that questions have arisen on a number of aspects of the co-op movement, including size, method of taxation, competition with other businesses, and other challenges.

There is, of course, a real need to find realistic, equitable solutions to these questions.

Within their proper roles, however, I believe that our co-ops will continue to play a highly significant role in our economic life.

Recently, I was pleased to receive from Donald Lehtinen, manager of Central

Cooperatives, Inc., of Superior, Wis., a series of resolutions adopted at their 43d annual meeting.

Through these resolutions, are reflected the voice of more than 75,000 families represented at the annual conference.

Notably, the resolutions pertain not only to issues confronting co-ops, but also a wide variety of other problems confronting our whole Nation.

Reflecting the thinking of these individuals and families on a great number of local and national issues of concern, not only to them, but to the Congress, I ask unanimous consent to have several of the resolutions printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

FORTY-THIRD ANNUAL MEETING, CENTRAL COOPERATIVES, INC., MARCH 28–29, 1960

RESOLUTION 3—COOPERATIVE TAXATION

Whereas cooperatives have for years been handicapped by unfair attacks upon our tax liabilities; be it

Resolved by this 43d annual meeting of Central Cooperatives, Inc., That all member cooperatives and their individual members pledge themselves to continue to work against any unfair co-op tax legislation that may be introduced in State legislatures or the National Congress.

RESOLUTION 4—YOUTH PROGRAM

Whereas the teenagers of today will lead our co-ops tomorrow; and

Whereas Central Cooperatives, Inc. has established a college scholarship program to encourage the interest of these teenagers in cooperatives and in the higher education so necessary today; be it therefore

Resolved, That this scholarship program be continued and expanded as funds permit, and that member cooperatives give it their full support.

RESOLUTION 5—CO-OPS ARE ON THE CONSUMER SIDE

Whereas there has been much scandal in the past year concerning various trade practices hurting the consumer; and

Whereas cooperatives have always taken such things as honest weights and measures; sincere, capable buying; freedom from exaggerated list prices; observance of pure food laws, etc. for granted.

We pledge ourselves to continue such honest practices, and we declare that we are unequivocally on the consumers' side, definitely out to fulfill the consumers' desires for quality, fair price, pleasant and courteous service.

We further commend efforts other than our own to properly inform the consumer, and to represent him in the State legislatures and Congress, by groups including consumers testing organizations, information councils, the new consumer associations being formed in several States.

RESOLUTION 6—THE FORAND BILL

Whereas there is a lack of medical and hospital care provided for the aging through existing agencies of insurance;

Whereas life expectancy and longevity is rapidly increasing each year and it is generally agreed that the problem of providing medical care for people on social security is an ever increasing one;

Whereas there is no apparent hope of progress without national action; be it

Resolved, That the delegates assembled at this 43d annual meeting of Central Cooperatives, Inc., go on record reaffirming our support of H.R. 4700, known as the Forand bill, representing to us either Federal action, or forcing suitable action by such existing agencies of insurance.

RESOLUTION 8—CONSOLIDATION OF SMALL COOPERATIVES

Whereas the modern technique of doing business is changing at an ever increasing rate, based on large volume and fast turnover; and

Whereas distances that used to be a major factor in isolating communities have been overcome by faster methods of transportation and better roads; and

Whereas some of our very smallest cooperatives are by now in operating difficulties and must soon take drastic action to prevent eventual serious loss; be it therefore

Resolved, That this 43d annual meeting commend our cooperatives to study the possibilities of consolidations to offset this trend.

RESOLUTION 9—MINNESOTA CROSS-STATE HIGHWAY

Whereas the Duluth-Superior harbor has become an important seaport; and

Whereas transportation by trucking has become one of the most practical methods for hauling farm, timber, and allied produce; and

Whereas the present East-West truck routes in northern Minnesota are in dire need of reconstruction; and

Whereas a new route proposed by the Cross-State Highway Association passes through many lake and resort areas and is the most convenient route for the public seeking enjoyment and recreation, besides serving as a new shorter truck route; be it therefore

Resolved, That the commissioner of highways of the State of Minnesota be asked to recommend this route to the Legislature of the State of Minnesota and the Congress of the United States so that it will be added to either the State or the Federal highway system; and be it further

Resolved, That copies of this resolution be sent to the appropriate members of the Minnesota Legislature and the Congress of the United States.

Address by William G. Carr at the White House Conference on Children and Youth

---

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by William G. Carr, executive secretary of the National Education Association, delivered on March 30, 1960, at the White House Conference on Children and Youth.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHITE HOUSE CONFERENCE ADDRESS, WILLIAM G. CARR, EXECUTIVE SECRETARY, NATIONAL EDUCATION ASSOCIATION

Childhood, we like to think, is gay and simple, amusing and amazing, an altogether carefree subject. Yet, strangely enough, when adults congregate to discuss this most delightful of all topics, our customary attitude is tense and cautious, our brows furl, our lips curl (with the effort to think deeply), our thoughts turn to secretly guilty foreboding, and our sentences become responsively convoluted. And when, as on an occasion like this, we join the concept of child with the concept of White House the two together, symbols of the continuity of our country and of our humanity, send us into perfect paroxysms of polysyllables, of which these opening sentences of mine offer warning examples. We make childhood one more problem to be solved rather than an experience to be treasured.

Conferences about children do encounter issues of tremendous complexity. If you doubt that, please consider the theme which Miss Frederick and I have been asked to discuss. I quote: "The Future of Children and Youth—1960: Adapting To Change and Innovations, the Effect on Them of Science, Technology, Population Pressures, and World Events." That is what I would call an assignment. However, I must admit that the speakers may gain from such a subject a great advantage; namely, that one can hardly say anything whatever that will be completely irrelevant to the assigned topic. However, one can always try.

It is with some astonishment that I find myself participating this week in my fourth White House House Conference on Children and Youth. Little did I think when I went to Mr. Hoover's Conference in 1930, that I would survive to witness an unbroken series of four of these decennial spectaculars. In retrospect, it seems to me that each successive meeting has set a new record for the profundity of the principles uttered, for the eloquence of the sentiments expressed, for the solemnity of the vows pledged, and for the number of pages of documents produced.

A simple and candid statement about our children is a rarity in these conferences. When such a statement is uttered, it clings tightly to the memory. I can still remember, for instance, Mr. Hoover launching the 1930 Conference on the stage at Constitution Hall, and saying of our children: "We live a life of apprehension as to what their opinion may be of us; a life of defense against their terrifying energy. We put them to bed with a lingering of devotion and a sense of relief." But such delightful expressions of idealism and human interest are rare. The painful truth is that almost all of what we say here will be forgotten long before we reach home.

I have a theory as to why these great nationwide efforts are so limited in practical effect. But before I tell you what this theory is, let me say that I do not doubt that some useful results have ensued from these conferences; results that would not have occurred without the conferences, or at least not so soon or so completely. Rather, my concern is that the sacrificial efforts of so many people, of such abounding enthusiasms, profound skill, and indestructible goodwill, have not produced results more fully proportionate to the investment.

Thus for instance, I found on looking up the records that the 1930 conference was preceded by 16 months of preparatory study, engaged in by no less than 1,200 experts organized in 167 committees. Their printed reports fill more than a 3-foot shelf in our libraries.

The structure and documentation for other conferences have been on a similarly lavish scale. The preparatory activity for the 1950 conference extended over 4 years. There were over 1,000 county committees. Six months before the conference opened, 100,000 citizens were working on White House Conference projects to get ready for the big discussion. There were 35 working groups, 5 sections, and 31 panels. These were assisted at the international level by 292 representatives from 41 countries, as well as spokesmen for the United Nations and 22 other international bodies.

When we consider such enormous investments of time and money, wisdom, and devotion, surely we do no wrong to ask earnestly how the actual results in the lives of boys and girls may be more prompt, more lasting, more profound, and more widespread.

I think there are two reasons why results are not greater than they have been. The first reason is their enormous scope. The early conferences concentrated attention on some one area. Thus, the first (1910) conference dealt with dependent children, the 1920 conference dealt with welfare services, the 1930 conference, somewhat broader, dealt with health and protection. Coming nearer to the present, however, the conferences have become so comprehensive that nothing is excluded that has any relevance, however, remote, to the well-being of children and young people. The 1940 conference theme, for instance, dealt with children in a democracy. The 1950 conference gave up trying to find a central theme and merely called itself the midcentury conference. As nearly as I can tell from the preliminary literature, the conference in which we are now engaged, having found no terse, specific theme, is called merely the golden anniversary conference.

Our book of conference charts, of course, does have a subtitle, "Children in a Changing World," but even that is not what I would call a very narrow topic. We may assume, perhaps, that the 1970 conference will deal with children in a changing solar system or perhaps in a changing universe.

There are, of course, some advantages in a comprehensive theme. In any case, a single topic, with clean-cut edges, is probably no longer a practical objective for a conference held under the high auspices of the Chief Executive of the Nation. I merely point out that, unless we are very careful, a very broad theme exacts a penalty in loss of tangible results. Let me illustrate the range of topics which a conference on children and youth must face and unravel, by referring merely and only partially to one topic: the schools.

Insofar as we know, children born today have the same learning ability as those born 50 years ago, or 5,000 years ago. There are, of course, differences among the children of any generation. But we have no reason to suppose that, as a group, children today are either more stupid or more clever than we were when we were very young; or our parents, or any other generation back to the beginning of time.

However, although the children have not changed, an enormous change has occurred in the educational task. For example, the last two centuries have witnessed the rise and extension of a form of government, representative democracy, which places upon each citizen responsibilities for great and difficult social and political decisions.

In the economic realm, too, the educational task has become greater. The increase in the demand for technical training is well known. Almost every job now requires training which the comparable worker, even a generation ago, did not dream existed.

But the catalog of increased educational requirements is not closed by reference to political and vocational responsibilities. Every phase of life has become more demanding. We call these changing dimensions of human experience "the explosion of knowledge." This expansion will not continue to increase at the same rate as it has in the past. On the contrary, we may expect a constantly accelerated acceleration.

Thus while the raw materials of education, the child's nervous system and its capacities for adaptation, are not essentially different from what they were in the past, the educational job is almost infinitely more difficult.

The pressures on the schools to accomplish much broader ends than ever before, with essentially the same raw material, have been further increased by the discovery that schools make excellent channels for presenting ideas which various groups in the population think important. Such groups are not content merely to help elect school boards. Hundreds of organized groups press directly upon the schools to promote their respective programs. They organize contests, drives, collections, exhibits, special days, special weeks, and anniversaries that run all year long. They would like the public schools to give more attention (just to cite a few examples) to little league baseball, first aid, mental hygiene, speech correction, Russian in the primary grades, military preparedness, international peace, modern music, world history, local history, Canada, South America, the Arabs and the Israeli, Christopher Columbus and Lief Ericson, Robert E. Lee and Woodrow Wilson, nutrition, care of the teeth, free enterprise, the United Nations, labor relations, cancer prevention, the pony express, human relationships, atomic energy, the use of firearms, the Constitution, tobacco, temperance, kindness to animals, the control of inflation, the use of the typewriter, moral values, physical fitness, civil defense, religious literacy, thrift, law observance consumer education, dramatics, mathematics, physics, ceramics, phonics, narcotics and alcoholics.

To meet this circumstance of unchanging raw material with new and complicated specifications for the finished product, the schools, with the support of society, have reacted in the following ways:

First, they have enrolled for more children and youth.

Second, they have extended the duration of formal education by beginning at an earlier age and by postponing the age for leaving school.

A third response has been to improve the effectiveness of teaching. We have better books, better teaching equipment, better audiovisual aids, and, most important, more highly skilled teachers.

We now casually refer to this ongoing improvement of tools and techniques as quality education.

A fourth kind of educational adaptation is an effort to return to the homes and other institutions some of the educational functions which lately have been assigned to the schools.

Finally, and especially since Sputnik I, a mode of adaptation has been proposed which consists essentially of putting more pressure on the children in school. We hear talk of a get-tough policy in education, of a longer school day, 12-month schools, more homework, and less time for the arts and crafts. We hear talk of more rigorous discipline and the shadow of the hickory stick and the dunce's cap are plainly visible in the background. This movement is supported by references, often quite inaccurate, to the supposed superiority of Russian or European schools. As with most reform movements in education, there is something to be said in favor of this position. Yet, I venture to hope that this conference will not conclude that because unlimited indulgence is bad for children, absolute tyranny would be better. If the security of the United States requires that we get tough in our discipline, let's begin with the adults. I'd be willing to see compulsory homework in the first grade the day after business, industry, and government abolish the second coffee break.

I hope I have said enough about schools to illustrate the first limiting factor on the results of these conferences. That limiting factor is the expanding nature of the problems and the data in the field. There is not much we can do to control that factor.

The second limiting factor, however, is one that we could control if enough of us had the nerve to do it.

I do not know whether or not we shall; I only say that we could. White House conferences (and many other conferences) are less productive than they might be because most of us shrink from speaking out on those types of controversial questions on which action has to be taken. As long as we can keep our controversy in the realm of philosophy where no immediate action is likely or possible, we can expound our different views like ladies and gentlemen, and we can have plenty of fun without the necessity of anybody being hurt by seeing his ideas repudiated. But the penalty for this sort of aloofness from certain practical matters affecting children and youth is precisely that dilution of the effectiveness of the conference to which I have already referred. Here again, I make bold to illustrate the point from an area which I know best, although I have no doubt that it could be illustrated just as well, if I had the knowledge and the insight to do so, in many other fields.

Everybody knows that we need better education at once. Everybody knows more money is necessary in order to get better education. The evidence is conclusive that to provide funds on the scale required involves money from the National Government. It has become routine in this capital city for almost everyone who discusses the schools to declare that we should spend about twice as much on them as we do now. This statement used to call forth thunderous waves of applause. It doesn't cause much applause any more because we have learned that talk is cheap and that talk of doubling expenditures for education without facing the question of how, when, and where, is double talk in a double sense of the phrase.

The question of Federal support for education has been lurking around White House Conferences for 30 years. The 1930 White House Conference said that equalization of opportunity should be sought in all schools by all possible means. Whether "all possible means" included money was conveniently left ambiguous. It avoided a lot of discussion, I have no doubt. A similar ambiguity at this Conference will have a similar effect. The only trouble is, indecision and evasive language can make little actual difference in the kind of schools our children have and our country needs.

President Hoover, perhaps not satisfied with his White House Conference as a source of advice, appointed a National Advisory Committee on Education at about the same time. This committee produced three large volumes of studies and reported to the President that the American people are justified in using their Federal tax system to give financial support to education in the States.

But the 1930 Conference delegates, 3,000 strong, or should I say 3,000 weak, came here and went home. They neither said nor did anything clearcut about this issue, and Congress followed suit.

So we came to the White House Conference in 1940. As a kind of preparation for that conference, President Roosevelt appointed an Advisory Committee on Education. This Advisory Committee, substantially like its predecessor, reported that there are national responsibilities for education which only the Federal Government could meet. The White House Conference report of 1940, following up the Advisory Committee report, said that there must be action by the Federal Government to reduce educational inequalities within and among the States. The report avoided the approval of any actual legislation that would have acomplished this result. It was Federal action that we wanted, but we did not say exactly what kind of action because that might have stirred up controversy, and that would have lowered the feeling of unity of the Conference.

So we came to the White House Conference of 1950. The proceedings of the Con-

ference include a resolution that Federal funds be provided for educational services in tax-supported public schools without Federal control. But this was only one of 67 other resolutions, together with 8 very general resolutions, on how to follow up the Conference, a further statement of 8 points upon which it was believed there was consensus of opinion, and an eloquent pledge to children which promised the children of America exactly 27 different things, including faith in their right to seek the truth.

So now it is 1960, 10 years later, and probably later than we think. And now the questions once more are these: First, shall we state boldly what the majority of this Conference believes? And, second, shall we bluntly endeavor to get the Congress to act accordingly?

When we get pushed into an intellectual corner on a point like this, some of us try to escape by saying that after all money isn't everything; that after all some of the best schools we ever knew were not expensive; that Federal dictation in education would be very bad; that we really ought to get more results for the same amount of money; and that the States and localities should try harder. We can say these things to ourselves and to others and we can feel good about it for a few minutes, but we know perfectly well that they have no relevance to the issue at hand. The American school system needs to be quickly stepped up in effectiveness. There is no practical way to do this which does not cost money. There is no way to get more money on the scale required without Federal action. We cannot buy the education that America needs in the bargain basement. We cannot maintain a level of educational expenditure, which was inadequate even for the quiet past, if education is to help us face and surmount the problems of the future.

But this course of reasoning and its consequences in action is an extraordinarily difficult mental exercise for most of us. As a result, many of us take out our enthusiasm at this and other Conferences by giving applause to the speakers who say what we hope will happen. It seems a little beneath our dignity, a little like acting as though we really meant it, for us to walk up the hill to the Capitol of the United States where the question of school finance is being debated this very minute, and tell our elected Representatives what we think about the pending legislation.

This blinking at the stark realities of the situation, this hesitancy to take those steps which are open to every American citizen to secure action by his Government to assist him in meeting these problems, this is the second reason why, in my opinion, White House Conferences have produced far less results than are possible and reasonable in relation to the enormous investment in good will and money that we make in them.

Children in this year of the Golden Anniversary Conference need many things. I hope they get what they need in health, in protection, in education. I remind you in closing of the adage of Epictetus:

"The law has decided that only freemen shall be educated, but the gods have decided that only educated men shall be free."

Pan-American Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. MULTER. Mr. Speaker, on April 14, 1890, the Latin American Republics and the United States adopted a resolution by which the first attempt at continuing cooperation between the nations of the Americas was launched.

Today marks the 70th anniversary of that memorable occasion when the inter-American system was born.

Since 1890 many changes have taken place. The name of the Pan American Union has been changed to that of the Organization of American States. With a change in name there was also a change in policies, attitudes and programs between the nations forming this novel experiment in international relations. Mutual understanding and cooperation increased.

No longer is the inter-American system simply a clearinghouse for economic and commercial information. The measures taken by the member states since World War II to strengthen the bonds of cooperation are numerous.

It is gratifying that on the 70th anniversary of this unique institution—the Organization of American States—one of the most important projects for inter-American cooperation has been officially established. I refer to the creation of the Inter-American Development Bank. Undoubtedly economic cooperation in the inter-American system is in the forefront of our relations with our neighbors to the South.

It is impossible to view with indifference the increasing economic problems confronting the Latin American people today. Consequently, more effective cooperation of all the inter-American system in the economic field is needed today. The creation of the Inter-American Development Bank should be a great stimulus to those forces working to bring about greater prosperity and well-being to all of us in the Western Hemisphere.

Without a doubt the inter-American system has advanced a long way since 1890. Its record is one of continuous progress and positive achievements. It is a record that will also show our united determination for a happier and a better America.

Showdown on Kinzua

EXTENSION OF REMARKS

OF

HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. GOODELL. Mr. Speaker, another voice has been added once again to the chorus which demands that the Kinzua Dam project involving an appropriation of approximately $120 million be given a new evaluation by the Congress. Under the leave to extend my remarks in the RECORD, I am pleased to include the following editorial from the Buffalo Evening News of April 11, 1960:

SHOWDOWN ON KINZUA

The Seneca Indians have won some influential allies in their last-ditch attempt to have a thorough study of the Kinzua Dam project. Representatives PILLION and OSTERTAG have been impressed by the arguments for an alternative flood-control project in the Conewango Valley. And so, apparently, have Representative GOODELL and New York's two Senators in asking the Army Engineers to clarify the issues.

The charges that have been made by the engineering consultant for the Indians are so gravely disturbing as to call for some frank answers. The stakes involving the public interest, as the News said 2 years ago, are such as to justify a temporary freeze on the Kinzua funds pending a prompt airing of the claims and counterclaims in an utterly confusing and technical debate.

What is most disturbing is the contention of Dr. Arthur E. Morgan, former Chairman of the Tennessee Valley Authority and author of the Conewango-Cattaraugus flood-control plan, that his specific proposal never received careful study.

Whether this is so, we certainly don't know; but at least there was enough doubt in the minds of House Members last year to demand a new study of alternatives—a stipulation that subsequently was dropped in conference with the Senate. Surely it is not too late to pin down the facts and find out who is right about an alternative that allegedly would produce more flood-control and steady water benefits at less cost and in shorter time, and without necessitating the removal of the Senecas from their ancestral homes. Competent engineers who have no partisan interest tell us that there is enough potential merit in the Conewango proposal to give it a real study before committing $125 million or so to a giant dam.

Rehabilitation of Cheyenne River Sioux Indians

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Big Change at Cheyenne River," which appears in the March issue of NWB, a magazine published by the Northwestern Bell Telephone Co.

This article tells the amazing and heartwarming success story of the tribal rehabilitation program, which has been developed and operated by the Cheyenne River Sioux Tribe on their reservation located in north central South Dakota. It is hard to believe that such progress could have been attained in the brief span of 5 years; but, as a firsthand observer of this program, I can attest to the fact that the social and economic rehabilitation of the Cheyenne River Sioux Tribe is moving forward by leaps and bounds. This progress and accomplishment has been no mere inexplicable occurrence of fate—the success of this program has resulted from the persistence, hard work and desire of the Cheyenne River Sioux members under the intelligent and energetic leadership of their tribal chairman, "Tony" Rivers, and his predecessor in office, Frank Ducheneaux.

I congratulate the Northwestern Bell Telephone Co. for its publicity of these noteworthy accomplishments, and I know that this fine article is deeply ap-

preciated by "Tony" Rivers and the members of the Cheyenne River Tribe, who are proving that "rehab" can work. I sincerely hope that my colleagues in the Senate and House of Representatives will take the time to read this excellent article, for it very accurately depicts the intense desire of the Sioux people to become active full-share members of 20th century free enterprise America.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG CHANGE AT CHEYENNE RIVER

It is a desolate and rugged land, dotted with strange sounding places like Rattle Snake Butte, Willow Creek Camp, Fine Weather Draw, and Arrow Head. Stretching westward from the Missouri River in north central South Dakota, the Cheyenne River Indian Reservation is an awesomely primitive potpourri of butte-covered and often fenceless grassland, towns that look like horse opera movie sets.

The stranger is startled by log cabins chinked with mud, animal skins nailed to doors, scrub oaks twisted and dwarfed by the arid wind of the prairie. And yet there is a monstrous beauty about it all.

This is the land of the Sioux—more often than not, a horrendous collection of ignorance, prejudice, poverty, and the not-too-white lies of the white man.

Almost centered in this 2,300 square mile reservation is the town of Eagle Butte (population 800), new home for the U.S. Government's Cheyenne River Indian Agency. Moved 55 miles when the Missouri began backing up from Oahe Dam to the south, the new agency and tribal quarters have turned dirt-streeted Eagle Butte into a booming builder's camp. The town's population, more than doubled in the last 4 years, has gradually grown accustomed to the sprawling office, school and housing projects that have poured nearly $8 million into the area. Included: the tribe's own telephone company, an ambitious $260,000 (thus far) project that links a half dozen Indian towns, ties into NWB and rancher-owned facilities.

Eventually the Oahe-dammed Missouri will back up for over 100 miles, cause widespread flooding of lowland cattle watering and shelter areas. This soon-to-come loss has brought the Cheyenne Tribe $10 million in Government compensation. Problem: what does an Indian tribe of 5,000 (two-thirds of them on the reservation) do with $10 million?

The question can best be answered by a small, 40-year-old part-Indian named Anthony "Tony" Rivers. As chairman of the Cheyenne Tribal Council (15 representatives and a full time governing body of 3), Rivers is beating the drum for a long-range rehabilitation program. "Rehab," as the Indians call it, already has the makings of a genuine social and economic uprising.

Basic aim of soft-spoken, educated Rivers is to give his tribe a chance to live like 20th century Americans. This includes free enterprise—the opportunity to go into business. Not an easy task, Chairman Rivers has found that the Indian himself is often his own biggest problem.

"We are sometimes too busy working against one another."

There has, too, been good reason for distrust of the white man. Most Indians can tell of special discriminatory prices, personal and public humiliation. And there are some, like Tony, who can recall a sometimes brutal past.

Once lashed from head to foot because he would not confess that a dime he had was stolen (his mother gave it to him), he took the beating rather than lie. He also remembers watching a school chum bullwhipped by his non-Indian teacher. The boy died a few days later.

"These things happened as recently as the twenties," recalls Rivers. "And the cattlemen gave us almost nothing for grazing rights on our land."

Mild mannered and surprisingly philosophical about the past, Rivers asks only that the Indian now get "what is rightfully his." Like most of his people, he has grown up with a sense of racial inferiority, still looks on his non-Indian neighbors as something better than himself—"Not an easy thing to overcome," he adds.

Born in a log cabin of a Sioux mother and partly Indian father (Grandfather Rivet was a Frenchman; the name was later altered to "Rivers"), Tony grew up on the prairie, daily rode a horse 5 miles to the Moreau River, boated across and then hiked another mile to school. In 1940, after high school and 2 years of business college accounting, he joined the Army, fought in north Africa and Italy, was injured (noncombat) and sent home. Honorably discharged as a sergeant, he married an attractive girl from Mississippi named Ruth.

In 1945, Tony Rivers went to work as an apprentice accountant with the Navy Department in Washington. Scheduled for promotion to supervisor, he quit the Government job, and with only a saddle and refund from his income tax, the Rivers went back to the reservation. They received 50 head of cattle from the tribe, borrowed enough to lease nearly 6,000 acres 3 miles from his father's ranch.

"I sincerely hated the place at first," recalls Ruth. "Now I wouldn't trade this life for anything."

Later, after a year and a half as office manager within the tribe's rehabilitation program, Tony decided to run for tribal chairman—top Indian-elected post on the reservation.

Along with six other candidates he began combing back hill country. He drove thousands of miles in his jeep, talked to any that would listen—and some that wouldn't. "He was never home," remembers his wife.

Tony won the election by less than 100 votes.

The job of tribal chairman pays $340 a month, is usually a daylong series of meetings, telephone calls, complaints, and personal visits. It is a thankless job, but Rivers has turned down several $600-a-month positions to stay on. Tony, Ruth, and their 12-year-old daughter, Linda Lou, have now moved to Eagle Butte, but still get out to their ranch on weekends.

Since his election, Tony has obtained a long-delayed $300 per capita payment (over 5,000 tribe members collected) from the $10 million tribal fund—a heated battle Chairman Rivers waged all the way to Washington and the Assistant Secretary of the Interior.

Tony's mother is also a member of the tribal council, has represented the Four Bear District for the past 3 years. An intelligent woman who speaks well, she is, too, a member of the rehabilitation committee.

Initiated before Tony's election, Rehab has successfully helped the Indian go into business. Over 150 are now ranching, getting their start from the tribe's loan of 100 cattle, cash (up to $10,000) and 160 acres of land (additional land is leased from the tribe and private individuals). Failures in the cattle program have run less than 15 percent and several of these were voluntary repossessions because of illness.

Other Rehab-sponsored projects include a gas station, supermarket, recreation hall, theater, and dairy. The tribe has its own trailer court and laundromat.

Three years ago only one tribe-member was attending college. Today over 50 are studying at colleges and universities across the land, their expenses paid by grants from the tribe.

The Rehab program is a giant step for the Indian, has enabled many to actually own something for the first time.

Admittedly there are weaknesses: Some Indians signed up just to get the money. But even this has often worked favorably. As one rancher told Tony, "I was only after the money at first. Now I'm going to change * * * for the first time, I've got something to work for."

Incentives are important, but Chairman Rivers knows that "education is the foundation of success. Our people do not have it. That is why schools are the most important part of Rehab." For years many of the Indian children have come in from the hills to attend agency boarding schools in the country. Last year a new $1,637,000 consolidated school opened in Eagle Butte (830 students, about two-thirds Indians).

Not everyone has taken to Rehab, however. The new $210,000 tribal housing units for the aged (65 and over) have a 30-couple capacity, are less than two-thirds filled. Offering attractive, modern facilities, as well as excellent medical care, the homes cost the Indian nothing. Recently, an 85-year-old Sioux was coaxed in from his shack in the hills, taken on a tour of his prospective home. He flipped light switches, turned on the automatic stove, looked at the modern plumbing. "Too easy," he grunted. "I wouldn't get any exercise here."

And with that he headed back for the hills.

Telephone service on the reservation was once Government owned and operated. Now owned by the tribe, the Cheyenne River Sioux Tribe Telephone Co. has refused cheap Government loans (2 percent interest), gone ahead with its own privately financed dial conversion and rebuilding program.

Headed by Issac Halfred, and with Nathan Littlewounded as No. 2 man, the telephone company has had its difficult days. Main problem: experienced help during the complex rebuilding program. Private contractors have done most of the work, replaced every foot of in-town overhead wire and cable. Eventually service will be offered to rural areas.

Originally against the idea of the tribe owning its own telephones, Rivers has changed his mind. "It's going to pay off big * * * and we don't have the restrictions that a Government-sponsored system would require."

He says, too, that one of his people's biggest hopes lies in attracting industry to the area. Seldom an easy job, the task is even more formidable in the rugged grasslands of the reservation.

Industry-scout Rivers is ambitious about these programs, too much so for some (he's been threatened, offered bribes). But if he seems to be in a hurry, it is only because those who are behind must run to catch up.

The Cheyenne River Sioux have a lot of running ahead of them.

The Forand Bill

EXTENSION OF REMARKS

OF

HON. CHARLES E. GOODELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. GOODELL. Mr. Speaker, one of the great newspapers of our country, the Buffalo Evening News, on March 22, 1960, rendered the following editorial with

reference to the Forand bill and the general problem of our aged citizens. Although I cannot agree with several of the conclusions in the editorial, I have such great respect for the editorial policy of the Buffalo Evening News that I believe it would be helpful for all of our Members to have the opportunity to see this editorial. Under leave to extend my remarks in the RECORD, I include the following:

THE FORAND BILL

For countless older people, living on small fixed incomes or pensions, the rising cost of hospital-medical care presents an increasingly cruel and worrisome dilemma. Just at the time in their lives when they need such care most, and when the cost of providing it for them is multiplied, they can least afford it.

What to do about this dilemma is the subject of a blazing controversy in Congress over a bill known as the Forand bill. Sponsored by Representative AIME J. FORAND, Democrat, of Rhode Island, the bill is undergoing hearings before the House Ways and Means Committee. Very simply, it would provide free (that is, tax-paid) health insurance for everyone eligible for social security old-age pensions. To finance it, an additional payroll tax would be borne by every employer and employee.

The Forand bill has been vociferously supported by the AFL–CIO and all the usual labor-liberal political action groups. And it is roundly denounced as an entering wedge for socialized medicine by the American Medical Association. The Eisenhower administration has opposed the bill while conceding that the problem it aims at does exist. Health-Welfare-Education Secretary Flemming is scheduled to spell out the administration view and offer the committee an alternative approach tomorrow. Vice President NIXON is said to have pushed hard within the administration for support of a modified version of the Forand bill.

We hope the administration will come up with something solid and imaginative. For while the Forand bill does, in our opinion, need some modifying, we think it would be a bad mistake for its critics—doctors, private insurers or anyone else—to underestimate the seriousness of the problem it deals with, or the anxiety which millions of older people now experience for lack of access to adequate health protection at moderate cost.

The basic idea of using social security machinery in one way or another to extend health insurance coverage to old-age pensioners not only makes sense, but it has an aura of political inevitability. The whole history of social security in this last quarter century, after all, has been one of continuous mushrooming growth, often with too little heed paid to the cost factor. This latter objection has been raised by critics of the Forand bill, who claim that giving full health coverage to everyone eligible for an old-age pension would cost far more than the bill admits.

Quite apart from the actuarial soundness or unsoundness of the Forand bill, however, our main objection to it as it stands is that it would create a new and unnecessary Federal insurance bureaucracy. Instead of just underwriting the abnormally high cost of covering the over-65 age group in the existing plans—Blue Cross, Blue Shield, and the like—the Forand bill would create a needlessly competing system. In that respect, it is wide open to the charge of being an entering wedge for socialized medicine.

Far better, it seems to us, would be a Federal approach which aimed simply at charging the social security system the difference between the cost of providing hospital-medical care for those under 65 and the 2½ times greater cost of covering those over 65. This great difference in the use of medical care facilities by the older group is, after all, the crux of the problem. There are various ways in which that cost differential could be absorbed by society. One, for example, would be to require that all group plans offer coverage at a uniform rate regardless of age—and then bill the social security fund for whatever difference their experience tables showed between the cost of caring for those over 65 and under 65.

While the Forand bill needs substantial modifying, however, it has the virtue at least of going right to the heart of what is admittedly a very real and pressing social problem. In fact, it may well turn out to be the most insistent social security problem of the sixties. And it is the kind of problem which—for obvious political as well as sound social reasons—simply is not going to take no action for an answer.

When Money Comes High

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New Republic magazine of April 11, 1960:

WHEN MONEY COMES HIGH

It seems only a day or two ago that President Eisenhower and Secretary Anderson were nagging Congress to raise the ceiling on interest rates on long-term Treasury bonds. Congress balked but the story seems to have a happy ending for the administration after all. Interest rates in general now seem to be turning downward. Commercial bank borrowings from the Federal Reserve System have diminished; bond prices have been rising and bond yields falling; yields on Treasury bills, the shortest term of Treasury securities, have plummeted; and there are even rumors that the Treasury contemplates the issuance of 5- to 10-year bonds at rates well below the famous 4¼-percent legal ceiling.

How pleasant it would be if we could simply put a period to a confused episode whose rights and wrongs few people ever thoroughly grasped. But the effects of the high interest rates which the monetary policy of this administration has promoted linger on long after current rates begin to fall. In the perspective of the monetary managers, interest-rate variations may appear short-run only, easily reversed with each shift in the economic winds. In the lives of those who borrow when interest rates are high, the results may endure for 20 years. Take the home buyer's situation as illustration. If he took out a $12,000 FHA mortgage in 1952, his payments of interest and principal over the 20 years of the mortgage's life would have totaled $20,556. If he had waited until 1957 to move into the suburbs, the interest rate which faced him would have risen to 5 percent and his total payments would have ascended to $22,140, or an additional $1,620 in interest charges. If, less luckily still, he waited until 1960, the startling interest rate which then would have confronted him came to 5¾ percent plus a one-half percent insurance charge. His total obligation would have mounted to $23,760—a difference of $3,204 between the 1952 and the 1960 situations. What was true of the home buyer was also true of other private borrowers, generally in lesser degree, as they committed themselves to installment purchases of automobiles and consumer appliances, or borrowed from small loan companies. Public borrowers encountered many of the same difficulties. States and municipalities which endeavor to raise funds for schools and other public purposes, discovered that higher interest charges drastically elevated costs and was an important reason why voters rejected many projected bond issues.

It is plain, then, that interest-rate policy as pursued by the Eisenhower administration suffered from at least three major defects. In the first place, its short-run policies led to long-run effects on the lives of many people. In the second place, the burden of these high rates fell very substantially upon those with small or moderate incomes, for individuals in these groups by and large must borrow to purchase and are least able to postpone their decisions. It is accurate to say that high interest rates promote a transfer of income from those with relatively little to those with relatively much. Finally, existing disproportions between public and private spending are aggraviated by the higher costs of bond issues. When interest rates are high, fewer schools are built, fewer clinics opened, fewer slums cleared.

None of this should be taken to mean that interest-rate policy should never be used. But at a minimum it implies that it should be used more selectively and that at many economic junctures the fairer way to counteract recession or inflation is to employ fiscal policy—the deliberate variation of taxes and public outlays.

The Veteran and His Education

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, April 11, 1960

Mr. SALTONSTALL. Mr. President, in the Department of Health, Education, and Welfare's March 1960 issue of Higher Education, there appears an article written by the Honorable Bradford Morse, Deputy Administrator of the Veterans' Administration entitled "The Veteran and His Education."

This article, Mr. President, contains an excellent review of our programs, both new and old, for the education of veterans, including an assessment of their contribution to the Nation's manpower resources and an excellent report on the performance of veterans in academic work.

I ask unanimous consent that certain excerpts from this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE VETERAN AND HIS EDUCATION

(By Bradford Morse)

Since 1945 the armed services have discharged 20 million servicemen. Nearly 11 million of these veterans have received educational benefits under the veterans' education and rehabilitation laws administered by the Veterans' Administration. Out of

this group one of every three veterans entered college or university. In 1947 one of every two college students was a veteran, and three out of every four men students were veterans. We have still to evaluate the pervasive effects of this program on the general level of education, the Nation's skilled manpower resources, our national security, our productivity and the gross national product.

THE NEW PROGRAMS

Before we survey accomplishments and relationships, it may be useful to review the basic legislative provisions for veterans' rehabilitation and education programs.[1] They are embodied in the following:

Public Law 16, 78th Congress, now codified as chapter 31, title 38, United States Code provided vocational rehabilitation benefits for disabled veterans of World War II who needed such training in order to become employable.

Public Law 346, 78th Congress, provided education and training to veterans of World War II. Maximum duration of benefits was based on the length of the veteran's service but was not to exceed 48 months. Public Law 346 immediately was nicknamed the "GI bill."

Public Law 894, 81st Congress, also codified as chapter 31, title 38, United States Code, extended the vocational rehabilitation benefits of Public Law 16 to disabled veterans of the Korean conflict.

Public Law 550, 82d Congress, now codified as chapter 33, title 38, United States Code, provides education and training to veterans of the Korean conflict. Duration of maximum benefits is determined by time in service but may not exceed 36 months.

The current vocational rehabilitation program is a lineal descendant of World War I rehabilitation activities. Although it is enriched with the contributions of notable advances in applied psychology, essentially it has presented problems which have been encountered before. This was not the case with the GI bill. Over 16 million servicemen were in uniform during World War II, constituting practically a whole generation of Americans. At the war's end the return of this large group to civilian life presented a challenge such as the Nation had never before faced. The Servicemen's Readjustment Act cushioned the adjustment of millions of men from military to civil life. It provided for unemployment and self-employment allowances, loan guaranty benefits, and education and training. The educational benefits were based on the philosophy that men whose lives had been interrupted by military service were entitled to return to or begin their education or training.

Only a confident country like ours could have contained the tidal wave of veterans returning to formal education. Only in a system like ours was it possible to regard the flood as promise rather than as threat. The positive response of our colleges and universities to the need for expanding and adapting their facilities and programs to accommodate the large number of veterans is well known. Probably there is not a reader of these paragraphs who cannot contribute out of his own experience at his own institution stories and incidents, first of reluctance and dismay as the classrooms bulged and then of hope, achievement, humor, understanding, and dedication.

If Operation Education gave college housing authorities sleepless nights, it also electrified the social science discussion, for these men had lived close to death and had been everywhere and seen everything. While fraternity row lost some of its glamor, the college classroom and seminar increasingly became places to learn and work and achieve. The familiar sight became, not the freshman pledgee complete with beanie, but the veteran student at the window of his trailer digging into his books. Even to one outside of university life, it seems clear that we have still to assess the revolution of manners as well as the changed educational practices which resulted from this educational breakthrough.

The table shows that of the nearly 11 million veterans who entered training, 3½ million attended college or university. Colleges and universities contributed to the vocational rehabilitation and training of many veterans in ways not accounted for in the statistical table. Guidance centers based at the universities provided counseling service for veterans who pursued other than college training as well as for those who enrolled in college. Veterans pursuing apprenticeship or other on-the-job training were aided through use of school facilities such as speech correction and reading clinics. Agricultural extension teachers provided the academic training for some of the institutional onfarm trainees, and extension divisions conducted correspondence courses as related training for many veterans in the group of on-the-job trainees and apprentices.

Types of training under the various laws

[In thousands]

Type of training	Total [1]	Vocational rehabilitation		Education and training	
		Public Law 16, World War II	Public Law 894, Korea	Public Law 346, World War II	Public Law 550, Korea
Total	10,455	614	62	7,800	2,302
Institutions of higher learning	3,435	153	22	2,200	1,166
Schools below college level	4,364	149	26	3,500	824
Apprentice and other on-the-job	1,810	236	11	1,400	219
Institutional on-farm	846	76	3	700	93

[1] Totals are less than the sum of figures for each program, since an estimated 3 percent of the veterans pursued under more than 1 law.

Of particular interest to institutions of higher learning may be the fact that while less than one-third of the World War II veterans who entered training enrolled in institutions of higher learning, one-half of the Korea veterans who took advantage of educational benefits enrolled in colleges and universities.

APPROVAL OF COURSES

The traditional relationship between the Federal Government and the States in education is reflected in the safeguards erected in the veterans' education laws. Approval of institutions and facilities which offered education and training was clearly established as a function of the various States. However, the Administrator of Veterans' Affairs was authorized to approve institutions when a State did not exercise its approval function. He was also required to formulate regulations governing payments to schools and veteran enrollees.

In the majority of States the Governors designated the State department of education as the approval agency. A few Governors delegated authority to special boards and commissions.

Problems arose immediately. The country was still at war. Many State departments of education were understaffed. As originally promulgated, the law established no criteria to guide the States in their approval actions and provided no Federal funds for reimbursing States for the expenses of carrying out their approval responsibility. At the very time of greatest need for careful inspection and approval of facilities, the States were least able to perform their function.

It was during this period that many abuses developed. Opportunists opened fly-by-night schools. Some employers took advantage of the veteran to obtain cheap labor while offering little in the way of training.

Problems also arose in the field of higher education. The law authorized the institution to fix rates of tuition on a fair and reasonable basis if it had no established tuition or if its rate was inadequate. But what was a fair and reasonable rate when the school had to double its faculty and its facilities? For State institutions, when a fair and reasonable rate was agreed upon there was often State law to contend with. Some State legal authorities held that the State could not receive tuition in excess of the customary fees, on behalf of veterans who were residents of the State. Also, veterans objected to having schools reimbursed in excess of customary fees because the original GI bill provided that the amount paid in their behalf would be charged against any bonus or adjusted compensation authorized in the future. There were problems on how to pay colleges for conducting special courses designed to help veterans adjust to or accelerate their programs, on how to pay for short, intensive courses, and on what rates to pay for part-time training.

The difficulties faced by the Veterans' Administration, the State approving agencies, and the schools, were presented to the Congress. The law was amended immediately to authorize funds for the approving agencies and to reimburse schools for keeping records that would help control the program. Other amendments spelled out criteria for approval of schools and on-the-job training facilities and authorized the Veterans' Administration to discontinue payment to a veteran whenever it found that the requirements of the law were not being met. Aided by the new legislation and the cooperation of the great majority of schools, employers, and the veterans themselves, the State approving agencies and the Veterans' Administration were able to eliminate most of the abuses and solve all major problems that had threatened the success of the GI training program.

CONTRIBUTION TO THE NATION'S MANPOWER RESOURCES

Has the program helped meet the Nation's needs for trained manpower? While there is no complete answer to this question, probably as good an answer as any is contained in the report of the President's Commission

[1] In addition to benefits for veterans, the VA is responsible for providing educational assistance to war orphans under Public Law 634, 84th Cong., "The War Orphans Educational Assistance Act of 1956." This law, now codified as ch. 35, title 38, U.S. Code, provides for the education of children of those who died as a result of service in World Wars I, II, or the Korean conflict.

on Veterans' Pensions, published in September 1956:

"The serious depletion of trained personnel resulting from World War II has been largely offset by the incentives created by the GI bill of rights. We have produced hundreds of thousands of technicians, doctors, lawyers, engineers, craftsmen, farmers and business workers. These trained men and women represent a great national asset * * *.

"The veterans' educational program was a major contribution to the national welfare, and the country would be weaker educationally, economically, and in terms of national defense, if educators, veterans' organizations, the President, and the Congress had not seen fit to embark upon this new and momentous educational enterprise."

As noted elsewhere in this article, training has been provided in a great variety of fields to 3½ million veterans. A number of critical fields, however, deserve highlighting: In engineering nearly a half million veterans have received training; in physical and natural sciences, 134,000; in teacher education programs, 371,000; in medical and related sciences, 209,000—77,000 in professional medical courses. Without the men trained in veterans' programs, shortages in these fields would be much more severe than they are.

Of the total number of veterans who entered training, 676,000 pursued courses of vocational rehabilitation. Many of these disabled veterans were seriously handicapped. VA rehabilitation efforts with this group have not only resulted in incalculable benefits to the individuals but provided a striking demonstration of the potential inherent in this hitherto largely untapped manpower resource.

VETERANS' PERFORMANCE IN EDUCATION

The past hides our unwarranted fears. We have forgotten our concern about the return of the veterans to the classroom and study hall—older and removed in time and experience from the routine and discipline of study, many disabled, some bitter. We were fearful not only about the veteran's influence on the traditional college atmosphere but also about his possible inability to adjust to the requirements of academic life. Actually he seemed disadvantaged in a number of ways. His education had been interrupted for from 2 to 5 years, and he might have been poorly prepared for college work. For instance, he might have left high school in his senior year before graduation, or he might have secured high school graduate status on the basis of various equivalency tests.

The question of what actually happened is best answered by university people themselves.

Writing in the Educational Record for October 1950, Harry D. Gideonse, president of Brooklyn College, noted that veterans entered college with lower admission scores or returned to the college with poorer preservice college records than did comparable nonveterans. Nevertheless, veterans as a group maintained a slight but consistent superiority in academic performance over comparable nonveterans.

In School and Society for March 22, 1947, Edgar A. Taylor, Jr., reported that studies of achievement in freshman English courses at the University of Southern California in 1945–46 showed far smaller percentage of failures for the veteran students than for nonveterans.

Data from the University of Wisconsin showed the grade-point average for 4,201 veterans to be 1.66 as compared with 1.57 for 1,114 nonveteran students. The grade-point average for 1,021 married veterans was 1.80 as compared with 1.62 for single veteran students (Riemer in "Marriage and Family Living," February 1949).

A study of 2,020 veteran and 5,887 nonveteran undergraduate students at Ohio State University showed that the median point-hour ratio earned by veterans was 0.17 higher than that of nonveteran students (Journal of College and University Registrars, January 1947).

Comparison of 857 veterans with 846 nonveteran students at the University of Michigan—1944–46—revealed no significant differences when all academic levels were considered (Tibbets, Clark, and Hunter, School and Society, May 10, 1947).

A comparative study of grades obtained by veteran and nonveteran students of comparable ability in 10 colleges led the Educational Testing Service investigators to conclude that veterans tended to achieve higher grades than nonveterans of equal ability but that the magnitude of the difference was small. (Psychological Monograph No. 347, Educational Testing Service, 1952.)

A comparison of grades of veteran and nonveteran students at UCLA during spring and fall semesters 1946 showed that performance was appreciably higher for veteran than for nonveteran students in both semesters for all groups of students except for science majors in the fall semester. (Atkinson in the Journal of Educational Research, December 1949.)

An article in the July 16, 1946, issue of Life, "GI's at Harvard. They are the Best Students in the Colleges' History," is more impressionistic, but perhaps it is equally telling:

"The window gazers and the hibernators have vanished" says one professor. "This crowd never takes its eyes off you" says another. A third says, "You've got to be awfully careful. These kids have been everywhere; they have stored up an enormous amount of information." A fourth finds, "Sure, there are plenty of radicals but there's not much ideology. These men don't want to tear everything down; they want to make the existing system work better." And Provost Buck, who has been on the faculty for 20 years, has decided, "There is a strong strain of idealism in these young men. They want to do a good job."

Little more need be said. The story of veterans' accomplishments in school is, after all, recorded in the experience of personnel in higher education. It is clear that veterans did as well as or better than nonveterans.

IN PERSPECTIVE

The effects of these vast programs on numerous other facets of our social, economic, and cultural life remain for thoughtful consideration and assessment. At this time we lack the data for evaluation. Yet it stands to reason that this multibillion-dollar program affecting millions of persons must have had profound effects on us.

A central tenet in our way of life is that an informed citizenry is an essential for democratic government. Education is an obvious means to this end. In our country, moreover, we can begin to look toward man's fulfillment of needs that are particularly human, considerably beyond the need to satisfy hunger and to be protected from the elements. The awareness of cultural and esthetic values must be increasing as a result of the program.

Educational technique and perhaps also basic educational philosophy have been affected in many specific ways. Although experimentation in admission practice was underway before the veteran influx, it was shown that under the press of need, useful changes could be made to the enrichment rather than the distadvantage of formal education. In many ways the veteran students foreshadowed the great press of students now knocking on university doors. Perhaps we can be more optimistic about our ability to provide higher education to this new population as a result of the experience with veterans. The effect on our economy, in terms of manpower skills and competence, increase in earning power, greater tax returns, and increase in gross national product may be all but inestimable, but it is there.

On the whole, we have dealt with the veteran of our wars, in rehabilitation and education, as in other benefit programs, in such a manner as to enrich him in many critical ways. The Nation is richer for it.

Man and Space

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. GOLDWATER. Mr. President, since the days of the introduction of automated flight, prophets have been visualizing the end of man's usefulness in the handling of aircraft. Particularly true has this been since the rapid development of guided missiles. But today, as we reevaluate the place of man in the space picture, it is reasonable to assume that the Air Force pilot of this age will carry the big stick of deterrence into the arenas of space.

Brig. Gen. Charles H. Terhune, Jr., vice commander of the Air Force Ballistic Missile Division, has written an excellent article on the subject of man and space, which appears in the April issue of Air Force/Space Digest. I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE SOARING SIXTIES: MAN IS ON HIS WAY UP

(By Brig. Gen. Charles H. Terhune, Jr., USAF, vice commander, Air Force Ballistic Missile Division)

Since man first appeared on this planet he has capitalized progressively on his God-given advantages—physical dexterity, rational intellect, and the exercise of free will—to extend his horizons and broaden his capabilities. He has ventured into one frontier after another, and has conquered obstacle after obstacle. Immensely adaptable, he has used the forces of nature to his own benefit. Yet the wider his knowledge has become, the greater have been the challenges.

At this point in time, man is confronting his greatest challenge—the challenge of the vertical frontier. This decade already is being heralded as the "soaring sixties." Man is on his way up.

In the emphasis that has been placed on technology, it is easy to lose sight of a fact that should be apparent. It is simply this: Man does have a place in space. He has a role to fulfill in the distant reaches beyond our atmosphere just as surely as he has pioneered in the exploration and exploitation of the land, the sea, and the air. Our ultimate objective in this sunset side of the 20th century is not man in space, but men in space. As Lt. Gen. Bernard Schriever has said:

"Despite the talk of pushbutton technology, whether in industry or the military, it is the man who counts, and not the button. You just can't build creative ability into a machine. You can't design a circuit to take the place of courage. Above all, you

can't enclose dedication to freedom in a magic black box."

As long as man and machine have toiled together, we have sought continually to get the most out of their relationship. In reaching upward, in attempting to rise above terrestrial limitations, we have pushed the machine virtually to the limit. A jet aircraft, for example, will accommodate man at altitudes up to 70,000 feet. But beyond that the operation of today's jet engines, as we know them, is marginal.

Yet while progressing from the Jenny to the jet, we have also gone from Kitty Hawk to Canaveral. And suddenly we have at our technical fingertips new machines—machines which carry their own atmosphere with them. Now we look once more to man, to train him to fit the capabilities of these machines.

We are doing a great deal to bridge the thin air between earth and space. It is a tribute to man's resourcefulness that he has learned to sample artificially the unknowns of new frontiers, without serious risk to his own well-being. Machines are expendable. No tears are shed over tubes and transistors.

If, in the past, we had decided to channel our resources—without regard for costs—toward the development of spacecraft (and by that I mean advanced man-carrying vehicles) we could eventually have done aerodynamically what we are more rapidly achieving through ballistic missile and satellite programs. Our sights are set on our goals. If we can attain them by quicker, more effective methods, then there is little justification for following the slower, more traditional patterns.

Let me illustrate. In the evolution of aircraft we have gradually achieved ever greater range, continually higher altitudes, increasingly faster speeds. We have perfected jet power, and we cracked the sound barrier.

But two major breakthroughs, occurring in recent years, suggested a reorientation of our efforts. We harnessed the power of the atom, and we aroused ourselves to the practical advantages of rocket engines. And because a potential enemy was turning great strides in the direction in which these developments pointed, it suddenly became not only expedient, but virtually essential, that we move in the same direction. As a result we have penetrated the gravity barrier. We have proved the feasibility of reentry; and we shall soon demonstrate that man, too, can pierce the heat barrier and survive. In addition, a fourth obstacle—the radiation barrier—is now recognized as a serious problem.

The facilities, weapons, and equipment we have put together in our mammoth ballistic missile program do indeed provide us with a base for space. It is a broad base, serving both as a deterrent and as a solid foundation for raising us step by step toward our goals in space. Studies being conducted now, at the Air Force School of Aviation Medicine and at other research centers, are aimed toward acclimating man to the peculiarities of space.

The men now being selected as the Air Force test pilots of the future are pioneers just as surely as Langley and Lindbergh and Mitchell and Doolittle were pioneers in their day. The fact that these illustrious names belong to our century makes me confident that we shall see—in my lifetime—man as firmly established in the medium of space as he is now in the medium of air.

Man tends to be pessimistic regarding things he knows little about. When the airplane was new, intelligent people conceded it might someday be practical for man to fly, but surely not more than a few miles and certainly not with any weight greater than a thousand pounds.

In 1943, when the first American jet aircraft took wing, few, if any, realized its true significance. That jet brought dramatic changes. New, broader characteristics of speed, of altitude, of endurance, of pilot techniques—all dictated fresh concepts and, consequently, new tactics. These breakthroughs required exploring, understanding, and learning.

Once accepted, however, jets came quickly into their own. Their dynamic impact as a deterrent force and as an offensive instrument emerged out of the transitory thinking that marked the conversion from hot to cold war. Modifications in both technologies and tactics have led to jet bombers of intercontinental ranges, and these have flowered commercially into airliners of similar speeds, ranges, and carrying capacities.

Still another graphic example was the breakthrough achieved in nuclear energy. The atomic bomb was developed during World War II and finally employed as a means of resolving decisively the war with Japan. It was used initially in its most primitive fashion and peaceful applications which control of the atom would yield had not yet been given the consideration they were later to receive. Throughout history many has suffered from a shortage of power, and suddenly he was faced with an awe-inspiring source of new power. In a short 15 years the fantastic energy derived from the atom has been used to fashion a new base for deterrent strength. It has been put to use in powerplants and in medicine. It has made possible submarines of great endurance. And the expansive commercial applications of nuclear energy still lie ahead. We never dreamed when we tackled the enigma of the atom that one of our problems was going to be an excess of power—a problem requiring discrimination and subtle employment in the exploitation of this new-found source.

Our thinking at this tender point in the aerospace age may be just as naive as these examples. Yet here we are, in 1960, with another newly developed technology at our command. We have built and demonstrated workable ballistic missile weapon systems. Even the experts who made up the Strategic Missiles Evaluation Committee in 1954—in their most optimistic moments—believed that an operational ICBM could not be produced in less than 6 years. Our Atlas, launched by a Strategic Air Command crew just 5 years and 2 months from the time the accelerated development effort began, not only exceeded this expectation, but it has attained performance, accuracy, and reliability standards far better than originally specified.

This is an era ripe for progress. It is ready now, not by accident but by intent. The lessons of the recent past should make it crystal clear that unparalleled opportunities are ours for the taking.

Now, why should man go into space—and how will he benefit himself and his country once he is there?

Man is already taking a big part in the overture to space. The trip begins at the beginning—on the ground. The boosters, the space vehicles, the instruments they carry—all germinate in the minds of men. Men of many talents must create, develop, build, test, operate, and maintain them.

Already space has had a tremendous impact on long-accepted doctrines of military strategy. The potentials of robot military vehicles have been illustrated vividly in the Discoverer series, and future uses are clearly predictable. Past accompilshments and visible prospects are equally stimulating.

The ballistic missile and strategic space systems we are building today are intricate. But this does not mean that we are piling complexity upon complexity. Rather, in the interests of reliability and economy, we are continually seeking simplification. Our coming Minuteman ICBM, for instance, will be much easier—and cheaper—to build, maintain, and operate than the liquid-fueled Atlas and Titan.

The remarkable fact emerging from our current developments is not the conquest of challenging technologies alone. More significant is the fact that people accustomed to traditional patterns of development have been able to accept and react to drastic departures in technologies, methods, and procedures. We have been faced with an intense challenge to our learning processes—the necessity to expand hurriedly but productively into new sciences and new career fields.

Short years ago electronic brains were the province of a few. Today the use of giant computers is becoming common, and people who may not necessarily comprehend their complexities are proficient in this operation. A pilot not familiar with the cockpit of a B–52—or a 707—may be dismayed by the array of dials and instruments that surround him. Yet he soon discovers that these devices make his job easier, simpler, and safer.

I cannot imagine the Air Force operating without planes, or various forms of manned vehicles, at any time in the foreseeable future. I believe that the Air Force will come to depend upon a broad, flexible, well-balanced "mix" of aircraft, ballistic missiles, satellite systems, and man-carrying spacecraft. And we should not be so shortsighted that we fail to recognize both the vistas of opportunity and the extension of responsibilities which this mix entails.

We are expanding the regions in which man can become militarily and commercially proficient. To succeed we must plan for advanced manned systems—systems which will enable us to perform in space the kinds of missions we have been conducting at the lower altitudes. This calls for versatile forces, both aloft and at ground level, which are capable of fulfilling a growing variety of exacting duties.

Those who think that the aircraft needs defending have pointed to certain operational requirements which can now be satisfied only by conventional manned vehicles. For example, aircraft can be launched when an attack appears imminent, and recalled if that attack fails to materialize. Aircraft, en route, can divert from one target to another. They can strike multiple targets and perform combined tasks on a single sortie. They have the ability to search out, locate, and attack targets of uncertain location. And aircraft are not expendable on a single mission.

Yet here is an important fact not generally recognized: In looking realistically to the future, we are laying technically practical plans to incorporate into the Nation's force structure manned or unmanned space systems which can accomplish, or improve on, every one of these capabilities traditionally related to aircraft.

Through recoverable boosters and nonexpendable spacecraft, we will be able to inject man—safely and economically—into our space programs. Man's dexterity and judgment applied to these far-ranging systems will broaden this scope, reduce their costs, and enhance their practicality. In the true mastery of spaceflight, the personal capabilities of man will replace complex and expensive equipment.

The rational ability which man can bring into play will be far better than the most intricate devices ever conceived. Man is still the best all-purpose computer servo-system known. His brain is equal to 10 billion electron tubes. He is unsurpassed in evaluating, reasoning, interpreting and reacting to complex situations.

Man's performance in space will complement and protect man's progress on earth. The crews of our Strategic Air Command fly long hours over great distances in the interest of national security. As human boundaries have receded, human responsi-

bilities have increased. It is reasonable to assume that the Air Force pilot of the space age will carry the big stick of deterrence into the arenas of space.

Above the atmosphere, too, man can widen his knowledge and extend his abilities in the fields of communications, intelligence, navigation, and meteorology. He can perform in superior fashion the functions of reconnaissance and early warning soon to be carried out by our Samos and Midas satellite systems. He can raise his scientific and engineering capabilities to new heights, maintaining and utilizing the growing number of artificial satellites which will be joining the space-traffic pattern. He can look into the universe unhindered by the atmosphere.

As our ascent in the vertical dimension lengthens, characteristics change. But the pilot remains the essential link between aspiration and achievement.

Like our curent earth satellite programs, any manned space system should begin, and end, in the lower atmosphere. We have determined that the best vehicle to carry man into space will be one which he can control and maneuver and land. The earliest such craft will undoubtedly be similar to the skip-glide kind of vehicle now envisioned in the Air Force Dynasoar program.

In the latter years of this century, the people who will support these manned space-flights will probably be performing many of the same kinds of tasks now being done in support of aircraft and satellite systems.

Near Sunnyvale, Calif., the Air Force satellite test center is already in operation. It is the Nation's first organization set up exclusively to satisfy the launch, tracking, acquisition, and recovery requirements of a satellite program. A nerve center for an electronic network that extends around the would and into space itself, the center is linked to instrumentation squadrons in Hawaii, to tracking stations in California and Alaska, and to a launch squadron at Vandenberg AFB.

Already marked for expansion, this satellite test center will take on increasing responsibilities in the months ahead. The staffs of NCO's who keep electronic fingers on the pulses of these systems will grow significantly as the systems increase in number and in complexity.

Similarly, men who service and maintain our fighters, bombers, and cargo planes will be matched by men technically trained to the demanding job of readying space vehicles for flight—work which requires the ultimate in quality and attention to detail. Others will be needed for ground support, control, and communications.

Already we can acquire, during a single pass of an instrumented satellite, enough scientific and performance data to keep processors and evaluators busy for weeks. More and more, skilled computers will be needed to extract vital information from the infinite mysteries of the universe.

Tracking, control, and communication with orbiting vehicles will demand manpower and brainpower in hitherto unmatched quantities. During research and development, these are functions accomplished primarily by civilian technicians; but with operational systems, these jobs will belong to the men—and women—who wear Air Force blue.

Never let it be said that the flying Air Force is a dying Air Force. Nothing could be further from the truth. Man will go into space. The work which the Air Force does today and in the years just ahead will strengthen our national security and enhance the progress of our civilization. And men will be shaping, building, operating, and administering the aerospace force which is emerging today as our strong lifeline to peace.

Man has ranged the length and breadth of the land. He has descended to the depths of the sea; climbed to the heights of Everest. He has raised himself to the limits of the atmosphere. Man has been the instigator and the benefactor of every breakthrough against technical, social, and geographic frontiers. He will not stop short of the last great frontier.

Dental Research

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. WILEY. Mr. President, recently I was privileged to receive from Dr. J. M. Donovan, editor, Wisconsin State Dental Society, a resolution proposing increased appropriations for dental research.

All of us recognize the significant role the dental profession plays in our community helping to maintain and improve the health of our people.

To give my colleagues the benefit of the resolution adopted by the Wisconsin State Dental Society, I ask unanimous consent to have the resolution forwarded by Dr. Donovan, accompanied by a letter from Dr. A. E. Kopp, president of the society, printed in the Appendix of the RECORD.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

WISCONSIN STATE DENTAL SOCIETY,
Neenah, Wis., April 7, 1960.

To: Senator ALEXANDER WILEY, Washington, D.C.

Subject: Request for increasing appropriation for dental research.

Reason: We as members of the dental profession feel that due to our expanding population and to the limited number of dentists being trained, it is necessary to expand our facilities for research in dental health. We wish to ask your support for legislation to further this purpose and to increase the present appriation.

Thank you.

Yours truly,

J. M. DONOVAN, D.D.S.

WISCONSIN STATE DENTAL SOCIETY,
Milwaukee, Wis., March 30, 1960.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I understand that Federal budget items for support of research and training in our dental and medical schools are presently being reviewed. It has been urged that $5 million be added to the President's proposed budget for fiscal year 1961 for the National Institue of Dental Research. On behalf of the membership of the Wisconsin State Dental Society I wish to voice our approval of this increase.

It is contemplated that $3 million of this increase would be allocated to the dental schools for training dental students in the use of auxiliary personnel, particularly chairside assistants. This procedure would be a worthwhile investment to substantially improve the dental health of our growing population in the future. It would be one way of helping to solve the dental manpower situation.

I most earnestly trust that you will give this increase your most earnest consideration, and that you will arrive at the opinion it should be approved.

Sincerely yours,

WISCONSIN STATE DENTAL SOCIETY,
A. E. KOPP, D.D.S., *President.*

"We Must Do Everything in Our Power To Make America Grow," Says Michael F. Widman, Jr., Assistant to the President, United Mine Workers of America, in an Important Public Address

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. RANDOLPH. Mr. President, I invite the attention of our colleagues to these cogent sentences spoken Tuesday by an assistant to the president of the United Mine Workers of America:

We must do everything in our power to make America grow. Extending our thoughts to a broader field, the old struggle between capital and labor is, or should be, as dead as the proverbial dodo bird. There is no reason for it here. Besides, cooperation has much sweeter fruits than discord. A richer America is a better America, for capital, labor, and that great and often indistinguishable mass—the general public.

So declared Michael F. Widman, Jr., director of the Research and Marketing Department of the United Mine Workers of America, in an address to the Division of Gas and Fuel Chemistry of the American Chemical Society at Cleveland, Ohio, April 12, 1960.

Mr. President, those remarks by Mr. Widman represent further manifestation of the spirit which permeates the National Coal Policy Conference—an organization of producers and workers of the coal industry, the coal-hauling railroads, and equipment manufacturers allied with the coal industry.

I underscore, too, Mr. Widman's pertinent remarks concerning the necessity for more research and the essentiality of a national fuels study. We have measures pending in committees which I earnestly hope will be cleared for action by this body at an early date to further the research and fuels policy study.

Mr. Widman's address is replete with hope, challenge, and forthrightness. Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF MICHAEL F. WIDMAN, JR., DIRECTOR, RESEARCH AND MARKETING DEPARTMENT, UNITED MINE WORKERS OF AMERICA, TO THE DIVISION OF GAS AND FUEL CHEMISTRY, AMERICAN CHEMICAL SOCIETY, CLEVELAND, OHIO, APRIL 12, 1960

Gentlemen, it is with some hesitation that I venture to address you this afternoon.

After all, I come before this assemblage as a layman, a novice speaking to experts in the field. But I feel that we have a great deal in common, you and I. The times have welded unbreakable bonds around us. These bonds impose upon us, indeed upon all Americans, the gravest responsibility since the foundation of our Republic.

Consider for a moment the era in which we live. Obviously, it is a dangerous time. The realities of the cold war are constantly before us. The ominous threat of atomic extinction looms not too distantly in the background. It is a challenging period. The Nation has grown tremendously, but with this growth has come problems of seemingly insoluable proportions. The responsibilitis of the United States, not only to our own people, but also to the rest of the free world, demand from every citizen maximum effort. In return for this effort, I say to you today, the future of this Nation is brighter now than at any other time in our history.

To you has been given a special responsibility. For in order to grow we must invent, we must improvise, we must find new and better ways to solve age-old problems.

Look about you. The world is literally straining at its bonds. Nations are arising from areas which, a short time ago, were little more than jungles. Scientists all over the world are being taxed to the utmost to wring from mother earth the resources necessary to sustain and nurture this growth. Already the eyes and hopes of men have transcended the earth and are dwelling on the distant stars and planets. Who can say what the future will bring? Hundreds of years of progress have been compressed into the last 50 years. Each day brings further progress, with more problems and greater potential for the satisfaction of human wants.

But there are also in the world two conflicting ideologies. Each school of thought is in a period of dynamic and sustained growth. Each seeks to mold the world in its own shape. There is a war being fought for the hearts and minds of people, a war in which the only alternatives are freedom or slavery.

NEW TYPE OF CONFLICT

You are in the forefront in this war. For this is a new type of conflict. It is being fought in the factories, on the farms, and in the marketplace. It is an economic war—different, but no less deadly.

To win we must produce. Just as in every other war, production of the sinews of battle determines who will emerge victorious and who will fall.

The weapons of this new warfare are different. Oh, to be sure, we still have tanks, artillery, airplanes, and the like. But the mutual threat of destruction by the atom and hydrogen bombs have forced us into different channels.

Our principle reliance for national survival is on our ability as a nation to produce an ever increasing standard of life for those who live in our economy, or who benefit directly from it. This is what we must do to win. Mobilization of every resource at our command must be mustered to meet the contingencies imposed upon us by the war. America has an unparalleled record during past conflicts. We know that we must rise again to meet the challenge of the enemy.

Here again you and I have something in common. For you have helped to provide the many products which have brought America to her present status. We, in the labor movement, have constantly struggled to give to those who produce the goods and services of our opulence a share in the prosperity of the Nation.

But, as I have stated, the job has really only begun. We must not look backward. Leave looking backward to history. Rather, we must strive to meet our future, its problems, its rewards, and its setbacks.

We have a job, you and I. We must do everything in our power to make America grow. Extending my thoughts to a broader field, the old struggle between capital and labor is, or should be, as dead as the proverbial dodo bird. There is no room for it here. Besides, cooperation has much sweeter fruits than discord. A richer America is a better America, for capital, labor, and that great and often indistinguishable mass—the general public.

GROWTH ESSENTIAL TO SURVIVAL

Growth, then, is essential to survival. Aside from its strategic connotations, growth is desirable of itself. In fact, each age has tried to expand, to enjoy a little more of the material benefits of the earth.

Each succeeding age in our history has been characterized by inventions which shaped the destiny of that era. There were the cotton gin, the steamboat, the railroad, the automobile, and many others too numerous to mention. This age, however, is far more complicated. Scientists have literally unloosed a Pandora's box upon mankind. There are a host of inventions in production, in distribution, and in consumption. More are coming in an almost frightening array. No one invention can be singled out as more prominent than several others. The sum total has meant an almost unbelievable standard of life for us all.

However, our competitors have not been asleep. Their scientists and engineers have also reached, as it were, for the stars, in both the literal and figurative sense. But in so doing, they have neglected the material welfare of the people. They have sacrificed human rights for economic progress. The challenge before you then, is to further economic progress by promoting human progress.

These two ends, although many times considered incompatible, are really complimentary. For a few minutes consider the steps taken by the coal industry to further its own economic progress and the welfare of its employees at the same time. The strides made in coal are worthy of imitation. For in coal's emergence are combined all the elements of a successful formula for national growth.

Ten years ago bituminous coal had reached a low ebb. Production had fallen, labor strife was widespread, markets were feeling the eroding effects of gas and oil. Obviously, the life of the industry depended upon a revolution. To effect this revolution, both labor and management pledged their unceasing efforts.

During the following period coal has lost two of its major markets. This loss in one case is all but complete. In the other outlet, coal faces a most serious decline in demand. We refer, of course, to the railroad and the domestic space heating fields.

The old steam engine is well on its way to becoming a quaint museum piece. The diesel is now the mainstay of every major railroad in the United States. With the disappearance of the steam locomotive a market of over 100 million tons has been lost.

Most new homes in the United States are now being heated with either oil or natural gas. This process is a natural result of our rising standard of living. Coal has become associated with bygone eras of drudgery and toil. In fact, to suggest to many homeowners and housewives today that they dirty their hands with coal is closely akin to being a subversive. So despite the rapid strides made by coal in designing and manufacturing modern stokers, oil and gas continue to replace coal in the basement.

No amount of argument seems to be able to stem the tide. Coal equipment may be automatic. It may be clean and convenient. It may be the least expensive of all the fuels. It may be dependable under any and all conditions. While, assuredly, it is all of these things, yet we have witnessed a headlong flight from this fuel in new home construction and a great amount of conversion in existing homes.

COAL INDUSTRY LEADS IN PRODUCTIVE EFFICIENCY

Coal faced these problems. It had to. From them coal found the incentive it needed to modernize its productive facilities. Today the coal industry stands alone at the head of all industry in productive efficiency.

This productive record of coal is no less than an industrial revolution. The average miner in America today produces almost 12 tons per day. Compare this to the record of about 1 ton for a European miner and you can visualize the record of our industry. American coal can undersell German coal in Germany. In fact, many European nations have tariffs or other trade restricting devices on American coal to protect their domestic coal industries. This is indeed different, in an age when America is supposedly faced with the challenge of foreign competition.

The coal miner benefited by the mechanization of the mines. The miner today is the highest paid industrial worker in the world. He has a welfare and retirement fund which provides for his medical needs, his retirement, and for many other services which he and his dependents may require from time to time. All of this is included in the price of coal. And, yet, the f.o.b. mine price of coal has actually declined during the past 10 years. Amazing, incredible, but it is true.

All of this has been accomplished by research finding new and better ways to do things. But the United Mine Workers of America has always maintained that the new and better ways must include more benefits for the men who work for a living. So, we did not fight mechanization. We welcomed it. Through it we envision a new and better life for our members and the Nation.

However, our industry is just beginning. Research has found ways to produce coal cheaply. Now research must find ways to use coal in more and more ways. This is the job that is in store for coal. I hope that some of you will be a part of the program to expand coal usage through research. Believe me when I tell you that your career will be most satisfying. One thing I can promise—it will never be dull.

Three years ago the United Mine Workers of America established a research and marketing department. The purpose of the department was to aid the coal industry in its search for new markets. It was the feeling of our organization that, while coal had been farsighted in production, it had failed to keep apace in the utilization of its product. In the 3 years since the founding of the department, it has made some startling progress which should help our economy in its program to grow and prosper.

UMWA ESTABLISHES UNIQUE DEPARTMENT

The idea of a marketing department in a labor organization is, in itself, an innovation. The fact that the industry has allowed a union to engage in activities, once considered to be exclusively management's domain, is a tribute to the changed attitude of the former protagonists in coal. The formation of the research and marketing department could only be possible after the two sides had reached a plateau of cordial labor relations. The industry has not had a major strike in 10 years. During this period an understanding has been reached wherein each side accepted its responsibility to promote the good of the industry and the men who work in it. Within this framework was born the idea that together more could be accomplished than separately. We may still

have our family feuds, but to the outside world there is no distinction between capital and labor in coal.

In the intervening period the United Mine Workers of America has done much to assist the coal industry in its constant battle to maintain its competitive position. In the course of this we have definitely come to the conclusion that coal is the fuel of the future. Furthermore, with some basic research, coal can easily become the foundation stone for the progress I envisioned at the beginning of this address.

It probably would be interesting to you for me to illustrate how we have somewhat reversed the tables upon our former competitive tormentors. In the domestic space heating field, for example, coal is on the way back. Not only are we coming back, but we intend to compete with gas and oil on their own terms, comfort and convenience. How do we intend to do this? We say this to you prospective homebuilders. If you want the cheapest and most convenient of the fossil fuels consider coal. However, if you want the ultramodern, the very best, why then "coal by wire", or electricity, is for you.

What has happened essentially is that coal has become the principle fuel used for the generation of electricity. Today, for example, coal generates about 55 percent of the total in the United States, including hydro. The utilities consume over one-third of our total production each year, amounting to about 160 million tons. Experts predict that by 1975 this total will jump to about 475 million tons, or more than our existing present production.

The implications for the home heating market are clear. An average residential user today consumes about 3,500 kilowatt hours or 1½ tons of coal equivalent. If that same household lives "all-electric", including electric heating and cooling, his usage could easily jump to 22,000 kilowatt hours, or 11 tons of coal equivalent. It is of little consequence to us if the coal is burned in the basement, or under the utility boiler. Either way coal serves the American public and in so doing prospers.

Naturally, our department has encouraged any inventors who come to us with ideas. We believe that the best way to progress is to judge every idea objectively, no matter how idiotic it may sound on the surface. There may not be merit in any except one, but we dream of that one. Some of these ideas may surprise you. But, we think that a great many of them have future potential of staggering dimensions.

WILL COAL AGAIN POWER LOCOMOTIVES?

An engineer has patented a coal-fired diesel engine. Actually, a small diesel was recently run on a mixture of coal and oil at Virginia Polytechnic Institute. Currently tests are being considered at the Catholic University in Washington, D.C. Needless to say, successful conclusion of these tests will not only put us back on the railroads, it could also revolutionize the internal combustion field. The growth of an industry and the progress of a nation may well be accomplished through research.

There is currently under consideration in Congress a bill to provide money for coal research. A similar bill, which passed both Houses last year, was vetoed by the President. This year we look forward to a more successful culmination to our efforts to find new uses for coal. Certainly the Nation will benefit, the industry will grow, and the mineworker will be in a much better position.

There are literally hundreds of potential uses for coal. What we want is for the American people to have the full use of the product with which nature has so lavishly endowed our Nation. There are over a thousand years of coal reserves. To you, the scientists, goes the task of utilizing it.

There is one final word which I believe should be said here. Every nation should make maximum use of their natural resources. We, as a nation, have not done this. Even today, in our energy fuels, we are wasting valuable and irreplaceable products by indiscriminate use. I refer to the practices of dumping natural gas under utility boilers and the wholesale importation of residual oil. Each of these practices is bad from a conservation standpoint. Natural gas is in short supply. To use such a premium fuel under a boiler, when there are so many substitutes with many hundreds of years reserve, is a waste of the most base sort. The use of residual fuel oil, if continued at its present pace, will go a long way toward crippling the domestic coal and petroleum industries. The President has seen the harm this has caused and has placed a ban, though hardly adequate, on the wholesale importation of foreign oil.

NATIONAL FUELS STUDY IS NEEDED

We would suggest that in light of these developments, the Congress conduct a national fuels study to consider the proper use of all of our fuels. Such a course of action would go a long way toward assuring our Nation the energy it needs for long-term growth.

To promote a national fuels policy and all other activities for the good of coal, the coal operators, the coal-carrying railroads, the coal equipment manufacturers, the coal-burning electric utilities, and the United Mine Workers of America have formed the National Coal Policy Conference. This group is another tribute to the new era of cooperation in coal. Its activities have already done much to promote coal's welfare by acting as a forum where all parties may meet and discuss problems. The idea for the conference emanated from Mr. John L. Lewis, who suggested that coal needed one voice. Coal now speaks with that one voice.

The coal industry has made progress through innovation and a willingness to try something new. We have done it in many ways and will continue to do it. For in expanding our horizons, we will provide for a better life for ourselves and the world. It is truly an age of plenty for those who progress by providing better things for themselves and the Nation.

Dissemination and Application of Information on Environmental Cancer Hazards

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following address delivered by Dr. Wilhelm C. Hueper before the Science Writers' Seminar in Louisville, Ky., on March 30, 1960. Dr. Hueper is Chief of the Environmental Cancer Section of the National Cancer Institute:

DISSEMINATION AND APPLICATION OF INFORMATION ON ENVIRONMENTAL CANCER HAZARDS

(By W. C. Hueper)

Present efforts toward a control of cancer are heavily loaded with salvage measures against cancers in being. Doubtlessly, to cure cancer victims is more exciting, more tangible, more glamorous, and more immediately rewarding than prevention even if failures of cancer therapy are still frequent. Prevention of cancers from being formed by eliminating or containing cancer-producing agents is obviously less spectacular and less attractive. However, primary cancer prevention is definitely more humane and can be made not infrequently even with the limited existing knowledge of cancer causes much more effective than cancer cures.

Since a considerable amount of reliable information is available on chemical and physical carcinogens being constituents of our natural and artificial and mainly industrial environment and on their distribution in the human environment, a sound factual foundation exists for instituting a practicable and economically feasible cancer-control program by applying preventive measures. Exposure to environmental carcinogens is not limited to a few small population groups, but is present to varying degrees for the population at large. Preventive cancer control therefore should be everybody's concern for purely selfish reasons.

A principal step in launching such a program consists of a comprehensive educational campaign by disseminating through all means of communication the available facts on environmental cancer hazards not only to a few specially interested parties but especially to the general public which will furnish the cancer victims. The general public must be alerted to the health hazards which are associated with the development of modern industrialism. Mankind has to be made aware of the introduction of new manmade disease-producing agents which have become superimposed on the natural environmental pathogenic spectrum. Preventive medicine properly applied against these new industry-related health hazards can become as effective as it has been in the past against communicable diseases.

It is gratifying to know that Dr. A. Lanza recently expressed in a foreword to a monograph on industrial carcinogens by Dr. Eckardt similar sentiments when he stated that "Knowledge—made as widely available as possible—is still the major weapon in this attack." There can be little doubt that a part of the confusion and controversy which surrounds the present public and legislative discussion concerning control measures of cancer hazards associated with additives and contaminants of food, cosmetics, and drugs are the result of highly defective or totally lacking recording of experiences made on man with carcinogenic substances produced, processed, and used in industry, which are reaching through the medium of industrial waste products and consumer goods in a usually mitigated form the general population. It may therefore be appropriate to list some of the sins and omissions of the past so that we may benefit from them in the future.

The American dye and rubber industries have been manufacturing and using in preceding decades carcinogenically highly potent aromatic amines, i.e., naphthylamines, benzidines, and 4-aminodiphenyl, which were employed in the production of dyes including food and cosmetic dyes and of rubber antioxidants. These chemicals were made in millions of pounds and can elicit cancers of the bladder upon contact to microgram quantities. Except of a brief report on the occurrence of some bladder cancer among 4-aminodiphenyl producers published a few years ago, the American literature contains no information on the occurrence and number of such cancers and the type of workers involved for the last 25 years. Quite complete and thorough studies on this subject, on the other hand, were published during recent years from English industrial investigators.

Not only is the scope of the aromatic cancer hazard for workers, users, and consumers of these chemicals and the products made with such carcinogens an unknown quantity,

but the medical director of one of these chemical companies has gone out of his way also to block the presentation of such evidence before an International Cancer Congress in 1929 by threatening me with legal prosecution of divulging company's secrets. In 1948 he declared in a letter to the Public Health Service that my publications revealed communistic leanings and that for this reason I would never be allowed to enter any plant of his company. Somehow he was not successful in his attempted character and professional assassination. Occupational bladder cancer among several hundred dyeworkers is on record in files of chemical companies. Representatives of the dye industry refused at two occasions to divulge the number of bladder cancers which had occurred among the employees of their companies.

Coal tar cancer of the skin and of the lung is, as far as American workmen are concerned, an almost nonexisting occupational disease. The unpleasant fact is that their occurrence has merely not been reported. After I had some years ago an opportunity to study the cancer records of workers employed in a coal tar distillery I followed this experience by visiting one of their customers. However, as a matter of precaution I stopped first at the State Health Department to consult there the official cancer records kept regarding the occurrence of skin cancers among workers of this large papermill. Its management first denied the existence of a cancer hazard and conceded it only when I confronted them with the official evidence of their State Health Department. Similar observations were subsequently made in another papermill located in another State. Some 15 manufacturers and processors of coal tar banded together some 10 years ago to sponsor experimental studies on cancer hazards. These investigations for which I devised the plans and which were executed by a private research organization have been carried out during the past decade. Nothing has ever been published about the results obtained in studies on man and animals.

A similar situation prevails in connection with published records on carcinogenic properties of products of the petroleum industry. Although the occurrence of skin cancer among paraffin pressers of American oil refineries belongs to the oldest observations on occupational cancers, there elapsed 30 years between 1930 and 1960 before the continued existence of such cancers was again placed on record. Nevertheless, one must appreciate the relative broadmindedness of this particular company, because it is the only one during the last decades which has seen fit to make some of its clinical and experimental observations on oil cancers public property. In recent litigations on cancers of the skin from contact with cutting oil the confession was made by the chief investigator of prolonged and extensive experimental studies on various products of the petroleum industry sponsored by the American Petroleum Institute that none of the results concerning carcinogenic properties of such materials made during the last 12 years have been published and have therefore been made available to the medical profession at large for analysis and application.

Experiences of similar nature are available for other industrial carcinogens, such as asbestos, arsenic, chromates, nickel, isopropyl oil, and others. Some of the recently published statistical investigations on lung cancer among asbestos workers and railroad employees are of peculiarly colored quality and contain most dubious statistical data.

There remains the question whether governmental agencies facing similar problems are immune against such manipulations. Apparently they are not, according to my own experiences during the past 12 years. When in 1948 I advocated a thorough survey of our uranium miners in the Rocky Mountains for evidence of lung cancer hazards, a high medical official of AEC declared such an undertaking as nonsense and tried to block it, although unsuccessfully. When in 1951 I had been invited by the Colorado State Medical Society to address its annual meeting in Denver on cancer hazards in Colorado and had included in my communication a description of the circumstancs accounting for the highly excessive lung cancer incidence among radioactive ore miners in Saxony and Bohemia observed and published since 1879, I was requested to omit these references as being "not in the public interest" and not sufficiently confirmed and applicable. The delivery of my paper was made dependent on complying with this demand. Since I refused to be made a scientific liar by omission, I canceled my talk as being censored. I have been told that someone in AEC asked then that I should be dismissed for using allegedly "bad judgment." Since about that time Dr. Sebrell, former Director of NIH had objected to my appearance as a private citizen for giving testimony before the Delaney Committee in matters of cancer hazards from food additives, my punishment consisted of having my promotion to a higher grade rescinded and of being removed from all further fieldwork on occupational cancer, i.e. I was forbidden to contact State health departments and industry. This arbitrary order almost killed, also, my experimental work on environmental cancer hazards, although it was quite effective in obliterating almost the entire epidemiologic work on occupational cancer hazards at the National Cancer Institute since 1952.

My most recent experience on this line came from the Food Protection Board of the National Research Council. After I had been instrumental as a member of an ad hoc committee to establish the scope and nature of cancer hazards from food additives, I was excluded from becoming a member of the permanent committee because of objections raised against me by some members of the Board. After exchanging some personal correspondence with the chairman of the committee on this point, one member of the Board, Dr. King, executive director of the Nutrition Foundation, addressed a letter to Mr. Larrick, Commissioner of FDA in which he bitterly complained about my activities in declaring irresponsibly in papers and speeches that carcinogens were getting into our food supply, that I had criticized allegedly competent scientists and members of the National Academy of Sciences on that account. He seemed to consider them apparently as some sort of unfallible and untouchable scientific holy cows. Finally he suggested that his denunciation might be submitted to Mr. Folsom, at that time Secretary of the Department, apparently in the hope that my further services might be dispensed with by the USPHS. Well, a copy of his letter drifted down through channels and seems to rest peacefully now in some file cabinet.

This is the record of some types of present-day efforts to disseminate information on environmental cancer hazards and to support cancer prevention.

Through such a distortion of occupational cancer epidemiology, the seriousness of this problem for modern industry is conveniently minimized. Attention is thereby, moreover, diverted from investigating and assessing properly the role that industrial and industry related carcinogens play in the present-day cancer panorama.

Farm Legislation Need

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. JENNINGS. Mr. Speaker, the members of the Virginia congressional delegation met yesterday with approximately 200 farmers from our State, the occasion being planned by the Virginia Farmers Union.

The president of this organization, which has the welfare of the Nation's and Virginia's farmers uppermost in mind, presented an excellent statement at this meeting. It deserves the attention of the entire House.

Under leave to extend my remarks in the RECORD, I include this statement on the need for farm legislation:

STATEMENT BY JOHN B. VANCE, PRESIDENT, VIRGINIA FARMERS UNION AT A MEETING OF STATE FARM LEADERS WITH THE VIRGINIA CONGRESSIONAL DELEGATION, WASHINGTON, D.C., APRIL 13, 1960

Gentlemen, although I am privileged to be personally acquainted with most of you gentlemen here this afternoon, perhaps the first thing I should do is to identify myself.

I am John B. Vance; I am president of the Virginia Farmers Union, which as I am sure you know is one of Virginia's two major farm organizations covering more than two-thirds of the geographical area of our State with a membership of approximately 20,000 farm people. I have been asked to act as first spokesman for the group.

On behalf of the group assembled here this afternoon, may I express our most sincere appreciation to you gentlemen for granting us a few minutes of your time. We fully appreciate the important positions you occupy in our Government and the tremendous responsibilities you must carry. Certainly it is not our wish to add to your burdens but instead we want to be as helpful as possible in assisting to resolve some of the very serious problems with which we farm people are confronted today.

Also, may I say that Virginia is justifiably proud of its representation in the Congress of the United States. We feel that in you gentlemen we have a congressional delegation second to none in this entire country.

Gentlemen, the group you see assembled here this afternoon are real farmers. In fact I think they are the cream of Virginia agriculture. These people are not part-time farmers. They are not city farmers. They are not hobby farmers. Nor are they people who farm the farmer. These people are honest to goodness dirt farmers who attempt to make their living from the land they till. There are little farmers in this group. There are big farmers here. There are Farmers Union members here. There are members of other farm organizations here, and yes, there are people here who are members of no farm organization. Almost every type of agriculture in our State is represented—tobacco, peanuts, fruit, vegetables, small grain, corn, cotton, dairy, hogs, beef cattle, poultry, and others. I bring these facts out because I think it important for you gentlemen to know that you have seated before you one of the most representative cross sections of Virginia farm leadershhip I have ever seen together in one group in my entire life.

May I also say that we welcome among our group a delegation of fine outstanding farmers from the great State of North Carolina. These gentlemen learned of our visit with you here this afternoon and expressed a desire to participate. Obviously we are delighted to have them with us.

Gentlemen, we have made this trip to Washington to see you because, very frankly, we are deeply concerned with what we see happening to the family farmer and to the rural areas and towns of Virginia. We are concerned and grieved when we see our neighbors selling out and leaving the farm; when we see the country stores being closed for lack of patronage and when we see the country churches vacant because there is no one left to attend services. Let me hasten to add that I am not attempting to be dramatic. I am simply trying to portray for you a trend which if not arrested and reversed is going to destroy the family farmer just as surely as night follows day. Let me also point out that Virginia's traditional conservatism is nurtured among its rural people. Most of you here today will attest to the correctness of that statement. Do you not see that as our rural population is depleted, as the ranks of the farmer is thinned, the greater the danger not only to the economic welfare of the farmer but to the very roots of our free democratic society which was born and nurtured in our beloved Commonwealth.

Each of us know that the existing farm program is not working. It is not working satisfactorily for farmers. It is not working satisfactorily for Government and it is not working satisfactorily for the taxpayers. Except for the tobacco program, which you in Congress had to pass twice before you got it enacted, none of the other parts of the farm program with which we in Virginia are concerned is working at all adequately.

Let me make it crystal clear that we did not come up here to Washington to be critical of anyone, not even Secretary of Agriculture Ezra Taft Benson who will undoubtedly go down in our history books as the worst Secretary of Agriculture this country has ever known. The time for criticism is past. The time for constructive action is here.

As I have stated the present farm price support programs built around the theory that the way to reduce surpluses, increase farm income, reduce cost to the Government and hold down consumer costs is a proven failure. No one can deny this. Actually the opposite has happened. The lower farm price supports have been reduced, the more farmers have had to produce. They had no other choice, the more surpluses have been created and the higher the cost to the taxpayers.

I am not going to bore you gentlemen with a lot of statistics. All of us know that net farm income is down 40 percent since 1952. We know that the parity ratio is down to 77 percent and that the farmer's share of the consumer dollar has dropped from 47 cents in 1952 to only 37 cents today. We know that 3.5 million farm people have left the farm since 1952 due primarily to economic pressure. We know that farm debt has jumped from $14 billion in 1952 to $20.8 billion today.

On the other side of the page we also know that Commodity Credit Corporation losses today are 15 times more than in 1952. We know that the U.S. Department of Agriculture has added about 20,000 new employees since 1952 and we also know that total expenditures from USDA in 1952 was $1,242 million as compared with $7,341 million in 1959. These are cold, hard facts and figures I have picked up from official publications of the Department of Agriculture, the Presidents Council of Economic Advisers and the Budget Bureau.

But above all, gentlemen, we know that while the prices of the commodities we have to sell have been dropping lower and lower, the cost of the items we have to buy have been rising higher and higher. I know that you gentlemen in Congress have a pretty good idea how much the cost of operations on the farm have gone up. Several of you own farms yourself and know this. But just for the record, let me say, every last thing that farmers have to buy has gone up in price—everything from the cost of medical attention to the price of plowshares.

It simply stands to reason, gentlemen, that this trend cannot be allowed to continue if we are to prevent economic disaster to the family farmer. Farmers have just about taken all the economic shock treatment they can stand. About this, make no mistake. If you should doubt my word, then I invite you to talk with any farmer here today. Or better still the first time you are back home in your district take a tour of some of your farm areas and see what they have to say.

It takes considerably more money to produce a crop of peanuts than it did 8 years ago. And there was very little profit in peanut production for the dirt farmer even 10 years ago; he was lucky to make enough to cover his cash operating expenses and have enough left to pay taxes, debt repayment and a relatively modest standard of living.

The situation has worsened almost every year since 1954. Every year the support level has dropped and unless Congress acts to improve the situation the end is not yet in sight.

While we do not grow much corn in Virginia in comparison to Iowa, the disastrous effects of the present corn programs is going to bring disaster to Virginia hog and cattle growers as surely as night follows day. As you know all controls were removed from corn and the price support level was dropped. What happened? The acreage and production went up. The same as would happen if acreage controls were taken off peanuts and tobacco.

Corn production was record high in 1959. I'm told that a record production is expected again in 1960. At first this will just cause a rapid buildup of corn in CCC inventory, but inevitably this will also mean a great buildup in the supplies of corn which will certainly be fed to hogs in the major areas of corn production. And this can only mean heavy downward pressure on hog and cattle prices; and this will affect us here in Virignia just as surely as it will affect the hog and cattle farmer in Iowa.

Gentlemen, as sincerely and firmly as I can say it—we do not see any sense in a farm program that continues to build up Federal Treasury expenditures while reducing farm income to a lower and lower level. Really, this is a ridiculous situation.

Well, you might ask, Why try to do something about this now? We know that Congress has tried, only to be met by repeated vetoes. Why make an effort now, wait until next year and we almost surely will have a new and better Secretary of Agriculture?

Gentlemen, that might be all right for some of us who are fortunate enough to have a little more comfortable margin of financial resources than the average farmer. Those of us that are left have been hanging on for 7 years. Now, possibly some of us could hang on for another year or so. But gentlemen, there are many farmers—up to a hundred or more in every county in Virginia—that can hang on no longer if something is not done this year. Some of the rest of us will be on the skids within a few years if something in the way of an improved farm program is not gotten underway as soon as possible.

To the best of our ability we have been studying and discussing the situation among ourselves. We do not presume to pose as agricultural economists or experts. Sometimes we are inclined to think we have too many of this sort anyway. Perhaps farmers would be far better off if they started "thinking for themselves"—as the cigarette commercial goes—instead of sitting passively by and letting someone else do it for them.

We hope you will be able to bring about enactment of the Poage farm income bill before you adjourn. As it stands this bill will not be an immediate solution to our income problems but at least it will give our peanut producers, our hog producers, our manufacturing milk and cream producers, our egg and broiler and turkey producers an opportunity to start this year to develop a program for each of their commodities that can be placed into effect by the beginning of the next production and marketing year, after the producer developed program is approved by Congress.

It seems to us that the Poage farm income bill is the best chance we've got for legislation that will be of long-term help to the Virginia farmer. And we need to get the bill enacted at this session so that work in setting up the programs can get underway this year for consideration next year. If we wait still another year it will be 1963 before we can start operating under adequate long-range farm programs. If we wait this long a lot of farmers who are here today will not be around.

As badly as we need to get started on setting up a good long-range program, we also need to get enacted some kind of immediate emergency legislation so that many of our present farmers can stay on their places long enough to still be there when the improved long-term program goes into effect.

As a minimum this year, as late in the season as it already is, we need to set up some kind of emergency economic disaster credit program so that farmers who cannot obtain loans from regular sources can have funds available to finance this year's crop. Many good Virginia farmers are having real difficulty this year finding a place where they can even borrow money; it is not just a matter of interest rates, it is actually a scarcity of money to be had at any rate of interest. If you can find an acceptable way of doing it we need to work out someway to improve 1960 farm income from the low level now forecast.

And certainly if we start now we have enough time to enact a bill that can extend an emergency credit program and set up a 1-year stopgap income improvement program for the 1961 crop year.

Finally, gentlemen, let me make one point crystal clear. We as farm people are not asking to be given anything. We do not want something for nothing. All we are asking is that Congress formulate and adopt legislation which will extend to us the opportunity to make a decent living for our families comparable to that of nonfarmers.

We are strong believers in the strictest kind of economy in Government. We did not ask for nor do we approve of the so-called soil bank program. We urge you to delete the $500 million requested in the administration's current budget request. Any program which pays anyone for doing nothing is both economically and morally wrong. This program has resulted in the waste of billions of dollars of taxpayer's money and is having the effect of drying up the rural community.

We believe that farm programs similar to that we now have for tobacco should, with necessary adaptations, be made available to the producers of all commodities. This program has worked satisfactorily. It has cost

the Government nothing. The producers are satisfied as evidenced by their better than 90 percent approval for the past 25 years and above all it lets the producers decide for themselves whether or not they want the program.

Living in an administered economy and with the rapid advancement in agricultural technological know-how, farmers have no choice but to restrict production to what the market will absorb at a livable price. This can only be accomplished through rigid production control programs, administered by the farmers themselves, coupled with realistic and workable price supports. This should be the basic philosophy around which future farm programs are built. Any program to be workable and acceptable must in our opinion provide the following: (1) Realistic and strict production control so as to hold production in line with market demands, thereby reducing cost to the taxpayers, (2) price supports only on those commodities where growers in a democratically conducted referendum have chosen to restrict their production to what the market will absorb, (3) no price supports whatever should be made available on any commodity where growers have refused to restrict production, (4) administration of all farm programs by the farmers themselves through democratically elected farmer committees. These are only what we consider the basic essentials of a sound farm program.

In closing our statement, gentlemen, let me say that we believe that once and for all Congress should decide on a basic farm policy. That policy should be clear cut. It should either be based on (1) the preservation of the family farmer or (2) the conversion from family farming to corporate farming such as we are witnessing with the trend toward vertical integration. Then once and for all we farm people would know where we stand.

If we are to go the family farmer route, keep the family farmer on the land and preserve our rural society, then improved legislation is a must at the earliest possible date.

If we are to go the other route, then no action is required. All we need to do is to continue in the direction we have been going these past 7 years.

On behalf of the group assembled here this afternoon, may I again express our most sincere gratitude for your indulgence and patience.

Don M. Leary, Sr., a Dedicated Employee of the Federal Government

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 4, 1960

Mr. HOLIFIELD. Mr. Speaker, there are more than 2,300,000 civilian employees of the Federal Government. Today, I will speak briefly about one Federal employee from that great number.

Although I often hear disparaging remarks about the average Federal employee, from my personal experience I find them, in most instances, undeserved. During my 17 years as a Member of Congress, I have had occasion to make many requests for governmental services from many Federal employees. As a member of the Post Office and Civil Service Committee for many years, I have listened to and read a great amount of testimony from legislative representatives of Federal employee groups.

I am convinced our Federal employees represent the most efficient, the most loyal, and dedicated group of employees in the world. I would challenge any great private industry to match the capabilities and the high standard of character possessed by our Federal employees.

In February 1943, as a freshman Congressman in Washington, I moved my family to a house in nearby Alexandria, Va. We soon became acquainted with our next door neighbors, Mr. and Mrs. Don M. Leary, Sr., and their son and daughter. Mr. Leary had been employed by the Federal Government some 8 years at that time. In the summer of 1945 he started working at the National Airport as an operating engineer in the air-conditioning and heating department. He was dedicated to his family and his job. For the past 15 years he has worked at the airport and he has become the superintendent of his department.

Hours of work meant nothing to Don Leary. I know he was on call day and night for emergencies of different kinds at the airport.

Don began the week of April 4, 1960, like all the previous weeks for 25 years, with a heavy schedule of work. He had reached the age of 69 in March of this year, but he worked with the vigor of a man of 40. His hours of work were long each day of that week. On Friday, April 8, Don worked his full day; went home for dinner and then returned to the airport where he worked until midnight.

On Saturday, April 9, he left for work at the usual hour of 8 a.m. and worked until 1:30 p.m. At about 1:30 p.m. Don crawled into a large new air conditioning duct to inspect the work of his men. One of the younger men asked to be allowed to crawl into the pipe to do the inspection job for him, but Don wanted to be sure everything was perfectly done and insisted on doing the job personally.

We do not know what happened exactly. His men heard him call to them—then silence. Don Leary's devotion to his work ended at that moment. His crew lifted him from the air duct. He was unconscious and almost immediately his heart beat no more. Later, the doctor's autopsy revealed his sudden death was caused by an acute coronary attack.

Don Leary could have retired with a pension 4 years ago, but he chose a different course. He loved his work and respected his responsibility for the safety and comfort of the millions who rush through the crowded corridors of our great national airport each year.

When Don Leary's labors ceased he had an accumulated sick leave of more than a thousand hours. He was entitled to take those hours off with full pay on the many days when he did not feel so well, but he never did. A person who does not understand love of one's work, nor dedication to the job which needs to be done, might say that Don was foolish. They might say Don should have used those hours for rest, a rest to which he was entitled.

His family will receive no compensation for his more than a thousand hours of sick leave. They are lost forever to Don and his family. However, they represent only a small part of that extra loyalty which one Federal employee gave to his employer, his family, and to the best ideals to which most of our Federal employees subscribe.

Don Leary was a quiet man with the dignity that comes from goodness. He bore no high-sounding title, but his life of love for his family and his dedication to his work gave him a high measure of respect and love from hundreds of fellow workers and friends who grieve because he walks no more among us.

In the sadness of his passing, like all those who were privileged to know him, I feel a deep sense of pride in knowing he considered me a friend.

There are many Federal employees who possess the same type of loyalty and devotion to their work. Whether they knew Don Leary or not, they can be proud their fellow employee, Don M. Leary, Sr., lived the life he lived and set the example he set for all of us to follow.

Bigger and Better

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. RODINO. Mr. Speaker, at this cherry blossom time here in Washington I should like to call the attention of my colleagues to another cherry blossom display in the district which I am proud to represent, in Newark, N.J. I like cherry blossoms wherever they are, and I certainly do not want to minimize the beauty of the cherry blossoms which grace the tidal basin, but I have heard it said that our blossoms in Newark are even bigger and better.

There can be no dispute, at least, that we in Newark have a great many more. Sometime next week over 2,000 trees will burst forth in full, luxurious bloom in Branch Brook Park, only a stone's throw from my home. The newspapers report that over 100,000 people visited the display in just one afternoon last April.

One of our patriotic Newarkites, Herman Davis, pointed with pardonable pride to our fine display in an advertisement in a Washington newspaper. Mr. Davis invited all District residents to come to Newark to see for themselves.

The rest of us in Newark will certainly underscore Mr. Davis' suggestion. All cherry blossom lovers will be most welcome in Branch Brook Park and we guarantee them a sight of unforgettable magnificence. As a matter of fact, if visitors will let me know in advance, I will be glad to escort them to the scene personally.

The following editorial recently appeared in the Newark Evening News:

MORE AND BETTER

A New Jersey voice sounds a discordant note in Washington's Cherry Blossom Festival. Herman Davis, a public-spirited citizen of Newark, has paid for an advertisement in a Washington newspaper inviting residents of the capital to come to Newark if it's cherry blossoms they want to see.

Mr. Davis, a city employee, has seen Washington's trees and he insists they are surpassed by those in Newark's Branch Brook Park, in number, variety, and beauty.

He has a good case. Branch Brook has 2,200 trees, as compared with Washington's 750, and many agree that they make a more dramatic display. They were given to Essex County by the late Mrs. Felix Fuld and grow more luxuriant every year and every year attract increasing numbers of visitors.

The cherry trees are the glory of a park that is one of Newark's—and Essex County's priceless assets. It exists, a green and gracious expanse of lawns, trees, shrubs, playfields, footpaths and winding roads, because of the foresight of the early park commissioners who created it from swampy wasteland.

The Branch Brook Park cherry trees should be blooming in a week or so, and we second Mr. Davis' invitation to District residents. If any of them come they will understand why Branch Brook was visited by more than 100,000 on a single afternoon last April.

One Way To Get Area Development Program Started

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. SAYLOR. Mr. Speaker, for several years, I have been pleading with the Congress to act upon measures I have introduced in the House to assist surplus labor areas. I have requested that some sort of a start be made in getting this program underway. Depressed area legislation is urgently needed and I hope the leadership of the House will schedule early action on a bill that can become law.

As part of my remarks, I would like to include an editorial from the Johnstown Tribune-Democrat, and call its contents to the attention of my colleagues:

[From the Tribune-Democrat, Apr. 6, 1960]

ONE WAY TO GET AREA DEVELOPMENT PROGRAM STARTED

Seven House Republicans, including Representative JOHN P. SAYLOR of this district, Representative JAMES E. VAN ZANDT, of Altoona, and Representative JAMES G. FULTON, of Pittsburgh, have asked the House Banking Committee to release the Eisenhower administration's area development bill.

There are numerous bills in Congress to aid depressed areas. One, passed by the Senate nearly a year ago, called for $389.5 million to start this long-delayed program. It was revised down to $251 million by the House Banking Committee, and has been awaiting action by the Rules Committee since the middle of last May. The third is the administration bill, which calls for $57 million.

With respect to industrial development alone, the bills are not so far apart—$100 million in the Senate bill, $75 million in the House revision, and $50 million in the administration bill. The Senate bill would, however, provide $100 million for loans to distressed rural areas, the House revision $75 million, the administration bill nothing. Both Senate and House bills would also provide grants and loans for public facilities, which are not covered in the administration bill.

Also, the Senate and House bill would finance not only land and buildings, but equipment and machinery, up to 65 percent of the cost; whereas the administration bill would provide only 35 percent of the cost, and would exclude equipment and machinery on the grounds that industry could finance these itself, on liberal terms.

These are the basic disagreements which caused President Eisenhower to pocket-veto a bill passed in the closing hours of the 85th Congress, in the summer of 1958. And it is almost certain they will cause him to veto such a bill if it is passed at this session. Therefore, the seven Republicans say, the administration bill should be passed by the House, and an attempt should be made to produce a bill in Senate-House conference committee which the administration will accept.

Had this approach been used earlier, a start could have been made on Federal aid for depressed districts as long as 5 years ago, and much experience could have been obtained by now on which to base its expansion. This type of legislation has been before Congress since 1955.

If the Democratic-controlled Congress persists in passing another bill certain to be vetoed, it will be clear that it is looking for a political issue, rather than legislation to make a start toward area development. In two previous Congresses—the 84th and 85th—bills introduced at the beginning of the 1st session were held up until the closing days of the 2d, a year and a half later. The same thing is happening in the 86th Congress.

This legislation is both experimental and highly controversial. In a minority report last year, three Democrats and three Republicans on the Senate Banking and Currency Committee noted that it cost from $10,000 to $15,000 in plant and machinery to create one job; and instead of the proposed $389.5 million it would require from $3.9 to $5 billion—of which the Government would furnish 65 percent—to provide jobs for the estimated 390,000 unemployed in depressed areas alone.

Other questions were raised: For example, the areas to be helped would be determined on the basis of 6 percent or more unemployed over a period of years, so that cities with a larger volume but a lower percentage of unemployed would be excluded. The minority group said this would put the Federal Government in the position of influencing the location of industry without adequate safeguards to existing developed areas. An antipirating amendment proposed by a Connecticut senator was defeated on the ground that it would cause southern Senators to oppose the bill in the belief that it would finance businesses in staying where they are and not creating new employment opportunities in the South.

Another northern Senator said the classic pattern of area aid, such as that in the Pennsylvania State government, had been to acquire land and buildings but not machinery. Machinery can become obsolescent long before the term of the loan. Senator JAVITS, of New York, said the inclusion of machinery and equipment would cause legitimate suspicion of an attempt to raid the industrial States.

No one could be more interested in aid to areas of chronic unemployment than this newspaper. We have pointed out before, however, that this aid program could have begun on a moderate scale years ago, had some of the controversial questions been compromised.

We sincerely hope—though we do not expect—that Congress will produce a bill this year which provides at least a moderate start, instead of passing a bill certain to be vetoed. The problem of chronic unemployment exists in many places, and needs to be corrected.

The Pennsylvania Industrial Development Authority is showing the way by lending up to 30 percent of building, land, and improvement costs. Republican Senate Leader EVERETT DIRKSEN said, a year ago, that the administration bill was "geared to what happened in Pennsylvania and elsewhere at the State level."

Nixon's Open-City Approach Supported

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 14, 1960

Mr. LAIRD. Mr. Speaker, the March 31 edition of the Wisconsin State Journal of Madison, Wis., contained a very worthwhile column by Prof. Edmund Zawacki.

Professor Zawacki recently spoke in my hometown of Marshfield, Wis., and supported Vice President NIXON's open-city proposal. I have had many letters from people attending this meeting commending Professor Zawacki on his speech.

The column which appeared in the Wisconsin State Journal—the official State paper—is as follows:

ADENAUER HAS OWN SUMMIT AGENDA IDEAS—BY URGING "OPEN SKY" ACCEPTANCE, HE LENDS WEST HAND, THROWS REDS OFF

(By Edmund Zawacki)

On March 26, out of a clear sky, as it were, Chancellor Konrad Adenauer challenged Khrushchev to accept President Eisenhower's "open sky" proposal made 5 years ago at summit conference I.

What is the German chancellor driving at?

With summit conference II scheduled to begin on May 15, revival of the "open sky" idea at this time must have some purpose. But the "open sky" in its original formulation by President Eisenhower had nothing to do with Germany. Has Adenauer discovered something new?

It is characteristic of the German chancellor that his thinking is pretty much limited to pursuit of German national interest, and he has spoken now, too, with German interest dominant. He does not want the morally delicate problem of East German boundaries to be taken up at summit conference II. Khrushchev does.

Given the history of World War II, Adenauer knows that diplomatic defense of German territorial claims in the east against Poland and the U.S.S.R. would be morally embarrassing to the West and, therefore, weak. The allies' interest in German affairs has for some time been focused exclusively on their own important rights in West Berlin, and they have avoided taking a final position on the smouldering boundary dispute between Germany and Poland.

Khrushchev knows all this, too, as is evident from his blunt behavior in France with De Gaulle. The moral force of justice is clearly on the Slavic side of the eastern German boundary dispute, and Khrushchev will be quick to take advantage of this fact at the summit. He will try to put the German problem high on the agenda.

Adenauer's best hope is to crowd out the German question, if he can, by raising a

tremendous issue, one not only urgent but central to world peace. His challenge to Khrushchev is shrewd, and deserves Western support.

The prime feature of Ike's "open sky" idea in 1955 was not, as is commonly supposed, the exchange of unlimited aerial photography, but the prior swap by the United States and the U.S.S.R. of complete blueprints of all military installations, including bases. The "open sky" was to be not mere legalized espionage (prevention of surprise attack), but total moral disarmament by the two top military powers. The photography was only intended as a verification and cross check of the blueprints.

Since Khrushchev in his U.N. speech last August made the spectacular proposal for "Total universal disarmament in 4 years," it is really not Adenauer but Khrushchev himself who, indirectly and perhaps unwittingly, has done most to put the open sky idea massively on the summit agenda. Our side evidently has been aware of this for some time. After all, it is impossible to disarm totally without first knowing what the total armaments are, which calls inexorably for a prior swap of complete military blueprints, i.e., total moral disarmament—the 1955 open sky idea.

In the final analysis, it was Vice President NIXON'S two ideologically explosive speeches inside the Soviet Union last July, broadcast by radio and printed in Izvestia, that forced Khrushchev's hand and precipitated his spectacular but morally defensive "total disarmament in 4 years" proposal in August. Khrushchev was trying to regain the initiative in the war of ideas.

Mr. NIXON'S ideologically explosive reference to the open sky over the Moscow radio is worth careful scrutiny today, especially by those commentators who never understood the big American open sky idea in the first place:

"To me," said the Vice President to the Russian people, "the concept of coexistence is completely inadequate and negative. Coexistence implies that the world must be divided into two hostile camps with a wall of hate and fear between.

"What we need today is not two worlds but one world where different peoples choose the economic and political systems that they want, but where there is free communication among all the peoples living on this earth.

"Let us expand the concept of open skies. What the world also needs are open cities, open minds, and open hearts."

Big ideas do not dry up and blow away. They gestate in men's minds until their time ripens.

The Vice President's timing turns out to have been right. It is clearly in the interest not only of the American people but of the Russian people (for that matter, of the whole world) that an expanded concept—"open skies, open cities, open minds, open hearts"—should dominate the discussions at summit conference II. Concrete means of implementing it are known. In this direction lies a realistic self-enforcing peace for the hydrogen age.

The German problem is peanuts by comparison.

Let George Do It?

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. ERVIN. Mr. President, the Trailways magazine for March–April 1960, carried a noteworthy editorial entitled, "Let George Do It?" I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Trailways magazine, March–April 1960]

LET GEORGE DO IT?

In a small New Jersey community not long ago, an election was held for positions on the school board. Only 7½ percent of all the people registered and eligible to vote actually went to the polls. The other 92½ percent were apparently content to have the issue decided for them.

The significance of these figures lies in the fact that they constitute a trend that threatens every one of us. The trend is voter apathy.

It's obvious that democracy will not work in America if people don't care enough to make it work. If too many of us behave like that 92½ percent and sit back to "let George do it," the crucial decisions of our time will be made only by the small groups willing to organize and speak out. Their decisions may not always reflect the true will of the people.

So far in this century we have fought three wars—and expended a great deal of effort—to defend a system of government that urges every man to speak out on issues that concern him. Yet, paradoxically, we seem to spend only a small fraction of this effort in exercising the very right we defended so strongly.

Our record as a nation bears close examination. For a recent major election in Austria, 95 percent of the people turned out to vote; for a similar contest in Italy it was 93.8 percent; in France 89 percent, and in Turkey 87.7 percent. Yet in our own 1956 presidential election, nearly 40 percent of those registered and eligible to vote just didn't bother.

The temptation to "let George do it" is a dangerous one indeed. It is a symbol perhaps of a society where decisions are being made by increasingly complex machines, a society so big and bulky that individuals more often than not are tempted to feel that one vote here or there will count for nothing in the final tabulation.

The fact is that participation by all the people is the lifeblood of democracy. Let one man neglect his obligation and an artery will somewhere be severed; let a thousand men forget and the jugular vein of our democratic system will suddenly be exposed.

Nineteen hundred and sixty is an election year—an opportunity for all of us to express our individual opinions on the relative merits of candidates and issues. Let's not let George do it for us.

The Lion Magazine Strikes a Blow Against the Smut Racket

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 14, 1960

Mr. MUNDT. Mr. President, another forceful voice comes to the front in the campaign against those who are perpetrating the vicious and evil racket of obscene mailings upon the American public, and particularly upon the youth of our land.

I refer to the April 1960 issue of the Lion, the official monthly publication of Lions International.

Mr. John Read Karel, senior editor of this fine magazine, has put his powerful pen to work against the smut racketeers through a striking editorial report on what the terrible traffic in pornography and obscene materials is doing to the moral structure of our citizens, and specifically to those who are living in the golden age of youth.

Mr. President I ask permission to have Mr. Karel's outstanding editorial printed in the RECORD, for I believe it contains a message of such importance that it should be read by every Member of Congress, as well as every mother and father in our country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Lion magazine, April 1960]

THE LION MAGAZINE STRIKES A BLOW AGAINST THE SMUT RACKET

(By John Read Karel)

As the father of three school-age boys whom I am attempting to bring up with clean minds in clean bodies, I would like to talk with my readers for a few minutes about a serious moral problem facing all parents of children today. It is a vicious challenge to decency which you and I can no longer ignore.

I am talking about the problem of pornography—the steadily increasing sale and distribution of filthy, smutty materials to our boys and girls. I am talking about the steadily increasing horde of perverts, hoodlums and smut merchants who have discovered that the dirtying-up of kids' minds is a profitable business. Not somebody else's kids, but yours and mine.

Maybe you don't know what I'm talking about, but the Postmaster General of the United States does. "The increase in pornography being sent through the mails," he says, "is comparable to the narcotics traffic in its damage to our youth." He estimates that a million youngsters a year are receiving mail solicitations from the smut merchants; mail that offers dirty books and pamphlets, phonograph records, movies, and photographs, colored slides, cartoon books and a hundred other things that you, as adults, would be ashamed to be caught looking at.

The Kefauver committee investigating juvenile delinquency knows what I am talking about. "Almost every conceivable device that can be used to pander to the base, illicit and immoral tendencies of human beings has been utilized and merchandised by licentious and conscienceless individuals who play upon normal and abnormal passions for profits."

Who is peddling this filth? The Chicago jobber who made $144,000 a year selling smut to local retailers, the New York pornographer who owns several bookstores frequented by kids and took in over $1,500,000 last year from the traffic, the Los Angeles mail-order peddler of dirty pictures and films who did a $3,000 business per day. Now maybe you know why the hoodlums, the vice gangs, the dope peddlers, and sex perverts have latched onto this beautiful racket of selling dirty, vicious, suggestive junk to your children—and why their take amounted to at least half a billion dollars in the United States last year.

They can't get at my kids, you say? Don't sit there dreaming. Let your boy order a cheap mail-order model plane, or bargain stamps for his collection. Let your daughter innocently send away for a doll dress or a cheap purse and bang, they're on a filth list and the next mail brings a pricelist of per-

verted popular cartoons or books on what happened to Tina, the beautiful sophomore, in the deserted warehouse. These aren't decent mail-order merchants who advertise in reputable papers and magazines; they are the fly-by-night smut merchants whose ads appear in the cruddy publications sold at the corner newsstand, under the counter, to kids. Do your youngsters tell you they get this unspeakable filth? Nope, they are ashamed—but normally curious—so they hide it under the clothes in the dresser drawer until mother finds it and gets sick to her stomach. Last year the Post Office Department received more than 45,000 letters from parents complaining about obscene mail received by their children; the only way, incidentally, under our postal laws that these purveyors of smut can be investigated.

The mails aren't the only weapon of the perverted fast-buck boys. The newsstand operator who is forced to take filth books along with the good ones; the candy-store owner without a conscience; the back-alley passion peddler; the student moron who writes the phone number of his pornography boss on the washroom wall; the itinerant photographer who works small towns to get school kids to pose for his rotten art; all these, and many more, are contributing to this deliberate assault upon the decency of our children. Maybe the father and mother who leave "Lady Chatterley's Lover" and the naked sweetheart of the month lying around the living room, or play suggestive records on the hi-fi while the kids are still awake, are unconscious agents of the scummy bums who would pervert their own daughters for a fast and slimy dollar.

I can't stand in the doorway of my home and slug those filth merchants who want to sell my boys the idea that all women are tramps and all love is lust, because they don't dare come up my driveway. They work from the sewers and the dingy loft mail-rooms, the brothels and their pornographic studios, smearing their filth on the minds of our children.

I hope you dads and mothers will join me in helping the forces of decency—already at work—to wipe them out. In next month's Lion I'll have somebody who knows the answer tell us how to do it.

Government by the People

EXTENSION OF REMARKS
OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. GOLDWATER. Mr. President, on April 5, of this year, Mr. William C. Stolk, president of the American Can Co., addressed the Association of Reserve City Bankers, at Phoenix, Ariz. I ask unanimous consent that a copy of this speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNMENT BY THE PEOPLE

(An address by William C. Stolk, president, American Can Co., before the Association of Reserve City Bankers, Phoenix, Ariz., April 5, 1960)

Ninety-seven years ago, on a bleak November day, Abraham Lincoln closed what he called his "little speech," the immortal Gettysburg Address, with these words: "That Government of the people, by the people, for the people shall not perish from the earth." Thus he charted the course for future generations of Americans to rededicate themselves to this concept. Today we can find solutions to the many serious problems confronting our Nation by restudying Lincoln's call for steadfast adherence to the democratic principles on which our Nation was founded. We cannot achieve government "by the people" unless the people themselves take an active interest in government and are sufficiently well informed to be able to demand good government from their elected representatives. A broader, deeper, and more fundamental approach to an informed citizenry is imperative and, in my opinion, the key to solving most of our national difficulties. This is the basis for the American Can Co.'s public affairs program.

To crystallize our thinking, let us examine one of the major problems confronting our country. International competition. I refer to this subject inasmuch as the company I represent is not directly affected by competition from overseas; this gives me an opportunity to look objectively at the problem and its possible solutions. It is significant that examination of this question cuts across our most pressing national problems. I am sure you are aware of most of them.

Prior to World War II, we Americans had developed uniqueness through the management philosophy of striving for constructive change through planned obsolescence. This philosophy made possible higher standards of living through higher wage rates without correspondingly increasing unit costs. We have long been accustomed to battle the old with new and better facilities. We deliberately quickened obsolescence through research and development. For three quarters of a century of rapid American economic growth, our European friends looked with scorn upon our practice of tearing down facilities which had not yet worn out.

Although this part of our management philosophy was never fully understood by others and, therefore, not accepted, the obsolescent plants were effectively removed by our bombers during World War II. With the advent of the Marshall plan, American generosity undertook the task of helping to rebuild the economies of our future competitors. We supplied them with the most advanced production facilities and also gave freely of our knowledge and techniques.

In the decade of the 1960's, our country is confronted with strong high-quality low-cost competition from the European Common Market, from the countries associated in the outer seven, and probably from a new Latin American common market. We are now receiving increased imports in many product lines from Japan, and this, too, will be augmented as other Asiatic peoples become industrialized. In time, mass markets abroad will consume the products they manufacture, but before this takes place, the American people will be faced with the problem of competition from this added output. The American market is obviously the most attractive one for others to develop, so unless we can improve our own productive efficiency now, we will be in real trouble before the consumption abroad rises to a point where their domestic requirements will absorb these added goods and services.

As this competition grows—and it surely will—unemployment will become a major problem in this country.

Any failure to recognize that this problem is already upon us, that it will grow rapidly in seriousness, and any failure to start now to take basic and constructive steps toward solving it, will have the gravest kind of implications for the future of our system.

No Member of Congress, who wants to remain in Congress, can face a steadily rising volume of unemployment and refuse to deal with it. If the proper groundwork has been laid, if basic studies of the prospective developments have been completed, if an adequate educational job has been done, Congress will be able to deal with the problem calmly and wisely.

If, on the other hand, we fail to face up to this problem, if business executives follow the historical pattern—and wait for the crisis to arrive before starting to do something about it—the losses will be terrific.

Under these circumstances Congress will have no alternative—which has been so often true in the past—than to legislate unscientifically, in a highly emotionally charged atmosphere.

Pressures for action will grow and take many forms. Sponsors for the abolition of the Trade Agreement Act, who are already active, will increase their efforts. Suggestions for import quotas will develop rapidly. Bills for aid to depressed areas will gather support. Demands for newer and bigger Government spending programs, to sustain employment and purchasing power, will mushroom. Proposals to provide further artificial stimulation for the declining domestic economy will be pulled out and dusted off, and new ones will be dreamed up.

These palliatives would perhaps offer some temporary relief. However, they are, generally speaking, no more practical, nor realistic, than will be the proposals—which will certainly come—to cut wage rates.

The only practical and realistic solution—in my opinion—will be to remove legislative handicaps to business initiative. I am referring to those handicaps which were designed over the years to meet individual major domestic problems and crises, as they arose. Some undoubtedly served a good purpose in the world in which we then lived, but have no place in today's world, or in the world of tomorrow.

I also want to make it very clear that we have no desire to turn back the hands of the clock and thus open up our system to abuses which prevailed in the past.

If American industry is unfettered and its energies are directed at product and market development, it can hold its own in any field. Simple arithmetic proves that American industry must be more effective to overcome the prevailing wage level in other countries, which is fantastically low and is only a small percentage as related to our own. In addition, our statutory law requires the payment of overtime. Furthermore, we grant our workers fringe benefits and absorb countless other additional costs which are imposed by Government. Unless each hour of labor here is more productive than abroad, how can we hold our markets? It is too often forgotten that labor costs in their broad context represent 70 percent of our national income. Hence, this expense must result in high output of goods and services. No one should misunderstand my purpose. I am advocating conditions that will support a high standard of living for American workers.

In addition to the large advantage in lower labor costs, other nations have the added edge of not being subject to laws and regulations which inflate our costs of production, nor do they have the heavy tax burden we carry as a result of financing the major portion of the free world's defense.

When domestic competitors vie with each other for the home market, they are all operating under the same ground rules. Now they are threatened by strong competitors from other lands, made stronger by the advantages we have given them and continue to give them. In other words, unless we come to our senses, we deserve to be put out of business. The time has come for more enlightened self-interest and less unbridled altruism.

I have great faith in America and Americans and I am firmly convinced that our ingenuity, our high standards of quality, our talents for developing and manufacturing products at high speed can compete successfully with the wage difference.

I believe the American business manager's basic competitive position in international trade is the same one we use every day here at home: "Let's compete; let's see who can produce the most of the best at highest efficiency and lowest cost; and let's see who can supply consumers in America, or anywhere else, with what they want at lowest possible prices under the influence of a risk-for-profit private enterprise economy."

Some people believe the answer is higher protective tariffs. I do not share this view. Could you have imagined a few years ago that labor unions would some day cry for tariff protection? At least three American unions are now demanding that Congress put up tariff bars on imports, and they want to negotiate contracts prohibiting American employers from handling foreign goods. These unions do not suggest, however, that they or their members try out such realistic actions as reducing inflationary pressures by holding the line on labor costs, or by reducing unit costs through higher efficiency and productivity.

This leads us into another critical area of business-manager responsibility for an all-American problem. The problem I speak of is labor union power.

To start with ourselves, management should reexamine the source of union power. When I have talked to business friends about their concept of union power, and what to do about it, I find they usually concentrate their attention on the power unions have, under Federal law, to bargain for workers in an entire industry or company and, consequently, are able to strike that entire industry or company. This attitude results from the truth that Federal law does grant union monopoly power at the collective bargaining table, and that our labor laws support the principle of monopoly. Hence, they are in conflict with our antitrust laws, which are based on the principle of competition. The suggestion therefore is frequently made that the remedy is to apply the antitrust laws to unions as well as companies. While the basic objectives of fostering competition is a worthy one, we have seen the destructive impact of the inhibitions and shackles which the interpretation and the maladministration of such laws impose on the constructive opportunity for American business to operate in the best interest of the entire economy. I could find only negative solace in watching the Federal Government try to apply those particular curbs and penalties to unions. Frankly, I can't see how the Government could use the current antitrust laws to deter and penalize union leaders in their monopoly use of power.

Many business managers would like to see a Federal law prohibiting industrywide or companywide collective bargaining. I hold a minority viewpoint on this. I think it would not be workable, enforcible, nor practical—and I do not believe that by itself it would effectively reduce union monpoly of bargaining or striking power. Without seeking to make policy either for my own company, or any other, as to the proper scope of collective bargaining under any particular set of circumstances, I would certainly oppose any effort to assign to the Federal Government the added power to judge the size and shape of either a union's or a company approach to the bargaining table.

A great many businessmen would be elated to see a law outlawing the union shop—preferably by Federal edict, but failing that, through State so-called right-to-work laws. Arguments on both sides of this controversy are charged with high passion. But the emotional appeals on both sides ignore one essential fact, which is that for more than 20 years Federal law and collective bargaining has given a recognized union absolute power to bargain collectively for every employee in the bargaining unit, whether he is a union member or not. The same law prevents the nonmember, as an individual, from delegating someone else to bargain for him. Nor can he do the job himself. The fact that he is not a member and cannot attend union meetings just means that he doesn't have an active voice or vote in the way the union acts for him.

I believe that people in a free society who find that certain of their interests have been delegated to someone else for collective handling should make it their personal duty to keep posted on what their representatives are doing and to let them know whether they agree or disagree. This goes for the town meeting, the State legislature, Congress, the White House—and also the union hall.

My disenchantment with the popular proposals we hear for curbing union power is that they seek to limit labor union monopoly power only by Government regulation of the technical processes of collective bargaining. Union monopoly power in bargaining is a danger secondary, in my opinion, to the union leader monopoly power of control over men, achieved independently of law and not susceptible to control by law. This power results essentially from union leader control over the thinking and actions of men. Should we seek to curb this type of power by Federal law or regulation, we would, at at the same time, be encouraging government to take charge of all human relationships on the job, at the union hall, everywhere.

Union leader power over men exists because union members have delegated that power to their leaders—either deliberately, accidentally, cynically, or even by default. We should also remember that a union official, like any other politician, has to run for office and keep on running to stay in office. This being so, the only people who can influence and, in the long run, reward or punish him are his own constituents—our employees, who, as his union members, delegated their individual power in the first instance. On this premise, we must rely on enlightened and well-informed union members to influence thheir own leaders to seek sound solutions to the problems which confront all of us. Take, for example, the so-called work rules or local practices clauses in labor agreements. Some of them dangerously restrict management opportunity to improve production efficiency; this was the major issue in the last steel negotiations. It was also critical in our own company's recent steelworker union negotiations—not to recapture, but to retain basic management responsibility for efficient, productive operations. Let me emphasize that the American Can Co. did not relinquish nor share that responsibility; we are still managing our own business.

While on the subject of our labor negotiations, let me be specific about contract settlement costs. Soon after the steel industry settled its strike, public statements by steel industry and Government officials announced that the new contract would cost the steel industry 40 to 41 cents an hour for a 20-month contract.

Some of the same spokesmen went on to say that if the steel industry had accepted union demands to meet the terms of the earlier can industry settlement, this would have cost the steel industry 52 cents an hour.

To try to compute the cost of any one industry's union contract, as applied to the operating conditions of another industry, is a purely arbitrary and selective exercise of mathematical theory. The steel industry says it settled for 40 or 41 cents—and I have no reason nor basis to challenge these figures. Nor do I have any practical reason or factual basis for trying to estimate the possible cost of the steel industry settlement if it were to be applied to the can industry.

I do know, of course, what our own can industry negotiations are going to cost the can industry. We are going to pay an average 34 cents an hour for our 3-year contract. This is substantially less than the 41 cents that the steel industry estimates for its own settlement cost, and is not even close to the higher speculative estimates you may have read about in the papers.

Let us turn now to the second area of disadvantage in our cost sheets; government laws and regulations—which do not apply to our foreign competitors.

In the absence of a constructive program based on careful study and appraisal of the facts, any legislation which would accompany substantial increase in unemployment would jet propel us along the road toward more government in business. What I am urging is the alternative to a crisis type solution. It is a reappraisal of public policies, laws, and regulations which inflate our costs of production and which involve such things as:

Huge personal and corporate income taxes which restrict accumulation of capital needed to accelerate the growth of our economy; unrealistic tax depreciation policies; government fiscal and monetary policies which put an upward pressure on prices, thus increasing the differential between U.S. and foreign costs; unnecessary foreign aid programs; lack of adequate laws, policies, and supports designed to promote U.S. exports; laws and regulations which set arbitrary restraints on efficiency of big units; and uneconomic farm policies.

I believe that we in American business should not wait for changes to be proposed by others, but should ourselves actively explore on a long-range study-in-depth basis, some of these areas. Only then will we be able to recommend policy and legislative changes that will remove costly procedures that hamper effective competition. It is this approach to the problem of meeting foreign competition and expanding our exports that seems to offer the most promise.

I, therefore, suggest that thoughtful and intelligent men and women in all segments of our national life—government, business, finance, labor unions, agriculture, and in our colleges and universities—should develop a scientifically constructive approach to the problem of increasing international competition, and explore how government policy, laws, and regulations can be modernized to meet this great threat.

Such an approach should be completely nonpartisan. It should be undertaken by a group such as yours, and be so constituted that its work could proceed regardless of the outcome of the next election. This work should be financed by private grants, utilizing existing voluntary agencies wherever possible. I do not suggest that you gentlemen carry the entire financial burden, as I cannot imagine any industry or business who, understanding the problem, would be unwilling to support such an undertaking. In my book it is a must.

In talking about elements of cost other than labor, we naturally are led to that body of men and women in Congress who are responsible for our country's laws and regulations, and who I like to think of as the board of directors of these United States. These are the people to whom we must communicate our ideas, our hopes and recommendations. Based on our experience in contacting legislative Members of both parties, we are convinced that they are honest, dedicated individuals. We have found no group of people who are more overworked, or more harassed by bewildering and complex problems. Few of us would

leave our chosen work to take up the burdens which Congressmen assume when they are elected. How many of us are sufficiently well informed to express opinions on every conceivable issue ranging from labor relations, foreign relations, national defense, the problems of health, education, and welfare, taxes, money and banking, agriculture, minerals, public lands, to the rigged television programs or payola in radio? These are only a few of the subjects that come before Congress; yet, we elect our neighbors to represent us in Washington and request them to record their positions on hundreds of such issues during each session. They cannot say "I am sorry, this is not my specialty"—and, furthermore, they must be prepared to defend their voting records when they come up for reelection.

At the end of the 1st session of the 86th Congress, 10,676 measures had been introduced in the House, and 3,161 in the Senate; 383 new public and 236 new private laws had been enacted. In addition, the Senate confirmed 43,567 presidential nominations. I cite these data as they show that the burden on a conscientious legislator is staggering. I know of no one in our orgainzation, or, as a matter of fact, in any organization who is fully qualified in all of these fields. If such a person could be found, we would have difficulty in paying him a salary attractive enough to warrant his complete devotion to our corporate needs. Yet, we expect a Congressman or Senator on an annual salary of $22,500 to discharge his many tasks while maintaining a residence in Washington and also in his home district.

Finally, our costs are also affected by the policies of management. We who have that responsibility must make sure that our company is run efficiently, that we have a lean, hard-hitting organization, and that we have replaced the complacency and smugness of the years immediately after World War II and Korea with the realism that only the strong can survive.

The working people in this country, who influence the labor costs in our balance sheet, need and, in our experience, welcome impartial information to help them obtain enlightened union leadership. Similarly, experience has taught us that our Representatives in Congress recognize fully that they can do a better job of serving as our country's board of directors with facts and advice from their constituents.

To cope with the need for information and communications with people who are so vital to our future welfare, we in American Can Co., decided to embark on a full scale public affairs program designed to do certain things. This program has two objectives. One is to provide facts and information which will help individual citizens—particularly our employees—to formulate personal judgments as to what constitutes good government—good in the long-range interest of themselves, their families, their company, and their country.

The second is to stimulate, encourage, and help citizens—again primarily our employees—to work for good government. We urge them to work for their independently formulated concepts of good government, through the political party of their choice.

As we see it, working for good government involves doing four separate but related things:

1. Obtaining a correct understanding of major issues facing the Government and the probable impacts of alternative courses of Government action.

2. Standing up and expressing our convictions, regardless of occupation or profession—or position in an organizational structure—and thus give other citizens the benefits of our individual points of view.

3. Working actively through the party of our individual choice to induce the best possible people to compete for and get elected to public office.

4. Helping to supply elected officials with the information they require in order to make sound legislative decisions.

I can promise you this program of employee education will work—because after 4 years' experience in our company it is showing tangible results. We know, from the response we are getting, that our people understand what we are talking about, and they intend to make use of what we are saying. Our response has come from local union officers as well as rank-and-file employees. In many plants they have asked our management this question: "What can we, as local union officers and as employees, help do to keep our plant alive, competitive and prosperous?"

I am also very enthusiastic about the number of people in our company who have taken a keen interest in their community politics. We have trained 80 members of our management group to lead discussions in the art of practical politics. Approximately 100 courses, comprising groups of 15 to 20 individuals, are now underway in our company. By July 1 of this year we expect that practically all of the 5,000 people in our management group will have completed this course, which consists of six 2-hour sessions.

We are thoroughly convinced that there is much to be gained by our efforts to give the people the facts. Thomas Jefferson wrote the prospectus for our public affairs program when he said: "I know of no safe depository for the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome direction, the remedy is not to take it from them, but to inform their discretion through education."

The Responsibility of America and the Needs of the United Nations in the Atomic Age

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Responsibility of America and the Needs of the United Nations in the Atomic Age," delivered on February 25, 1960, at the University of North Carolina, by the Honorable Frank P. Graham, formerly a Member of the U.S. Senate, and now a United Nations mediator.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE RESPONSIBILITY OF AMERICA AND THE NEEDS OF THE UNITED NATIONS IN THE ATOMIC AGE

(Speech by Frank P. Graham, United Nations mediator, at U.N. mock assembly, University of North Carolina, at Chapel Hill, February 25, 1960)

In the world of atomic power we must all learn to live together in equal freedom, mutual respect, and productive cooperation or die together in universal annihilation. We must see ourselves in the vertical perspective of the evolutionary processes of the long past and in the horizontal perspective of the revolutionary forces sweeping across the earth today. Deep in the subconscious nature of man is the primitive inheritance of hundreds of millions of years as animals, hundreds of thousands of years as savages, and scores of thousands of years as barbarians. Only in recent thousands of years has there been a deepening of the consciousness of the fatherhood of one God and the brotherhood of all people.

Just as man with his capacity for good and evil, with his physical descent and his spiritual ascent, needs high religion and the development of the humane spirit for the sublimation of the savage deep in the nature of man and for the fulfillment of his higher nature so the national states with their capacities for good and evil need the United Nations for the control of their absolutism for war and destruction and for the fulfillment of their higher natures for survival and progress, freedom and justice, compassion and peace. Against the background of the evolution of millions of years of man's primitive inheritance, the United Nations has become a primal necessity today for the mastery of the explosive potential of man's primitive inheritance and present possession of atomic power.

Moreover, in the evolution of political states in recent thousands of years from tribal states to city states to empire states of ancient and medieval times to the nation states of modern times, the nations today are confronted with the question as to whether the next transition will be from the nation states to a totalitarian world police state or more creatively to a more effective cooperation of nation states in a more adequate United Nations for the more inclusive collective security of freedom, justice, and peace on the earth.

In the last 500 years the commercial revolution of the 16th, 17th, and 18th centuries, the industrial revolution of the 18th, 19th, and 20th centuries and the atomic revolution of the mid-20th century have tied together the continents and oceans, nations and peoples in one fatefully interdependent world in which there can be no isolation from the skies above, the oceans around or the continents beyond. Instead of staying on the outside and being drawn into the world wars after they start, the people of the United States decided to join the United Nations and try more effectively on the inside to prevent the beginning of a third world war. In vertical perspective for millions, thousands, hundreds and tens of years a stronger United Nations has become a moral imperative in the atomic age.

In the horizontal perspective of the present world we see 2,800 million people living on our shrinking little planet, two-thirds of whom are colored and live in Asia and Africa. What America does about colored people here and in the world determines in vital part what we do about our own Judaic-Christian and democratic heritage and hopes in American and what peoples of Asia and Africa do about our leadership for freedom and peace in the world.

We live in an age of revolution. The United States was born in an age of revolution out of which came the liberation of the people of North and South America. The United Nations was born in an age of revolution out of which has come and is coming the liberation of the peoples of Asia and Africa. Thermonuclear power has raised in our time the question of liberation for what? The universal annihilation of peoples or the more effective cooperation of nations? This is a supreme question for this generation.

In the midst of the poverty, hunger, illiteracy, disease, and misery of hundreds of millions of people, the burning fuses of colonialism, racialism, national absolutism, and totalitarianism can, if not checked by the responsible self-determination of people and the effective cooperation of nations,

blow the world to pieces. A panicked press of a button can end the existence of people, their children, and treasures, and all their dreams and all their songs as the winds of the world carry the hydrogen fallout to wipe out the last remnant of people as they huddle on the remotest island and the farthest igloo.

In such a world in such a crisis we look both homeward and across the earth and listen to the revolutionary and universal faith of the great Virginian whose prophetic words went ringing around the earth and down the centuries, and are still singing in the hearts of the people in two hemispheres.

When human rights are conceived as trespassing on property rights it should be recalled that property rights are securer and individual rights are freer when human rights are fairer. States rights, an honored heritage from Jamestown and Plymouth Rock was unsheathed by Jefferson as the sword of liberty against the hysteria of the alien and sedition laws, later became the shield of human slavery in the South, and later still in the North the weapon of corporate privilege and power against humane legislation, and in our time the armor of massive resistance against the revised judicial interpretation of human rights under the Bill of Rights.

The flag of representative government, first unfurled on the banks of the James River in old Virginia, is, as massive resistance gives way to wise and increasing steps in democratic fulfillment, again flies its flag, higher and freer, in the modern world. States rights are moving to become more truly States responsibilities for the equal rights, freedom and opportunity of all people. In the choice between the beginning of integration and the ending of public education, the mothers of Atlanta are mustering for the children whose only schools are the schools of the people.

The American Republic, as we learned in our history, in its beginnings, was a political oligarchy of landed, propertied, Protestant, white, and male adults. From Rhode Island, Maryland, and Pennsylvania came ideas and attitudes, which in the Jeffersonian movement were given an impetus toward the removing of religious barriers and the admission of Jews, Catholics, and unbelievers to the rights of suffrage and public office. The ongoing Jacksonian democracy opened wider the doors of suffrage and office to the landless and propertyless people. The Civil War amendments abolished the disqualification of race, color, and previous condition of servitude. The women's rights movement later admitted half of the adult people to the rights of equal suffrage. The removal of the barriers of creed, property, color, and sex transformed in successive epochs the old monopolistic political oligarchy into an expanding, advancing democarcy. The barriers of the poll tax and registration remaining in some communities against the equal right to vote cannot forever hold back the spiritual momentum of 2,000 years and the democratic momentum of a century and a half of American history.

America has taught the Negro youth the heritage and hopes of America and in her heart of hearts she would not have them forfeit that heritage or deny that hope. In their day and generation they are renewing springs of American democracy fresh and resurgent as they write a chapter in the fulfillment of the American Revolution with its universal declaration of human rights that "all men are created equal and are endowed by their Creator with certain unalienable rights and that to secure these rights governments are instituted among men deriving their just powers from the consent of the governed."

While America, because of her fear of subversion, stood aloof from the great Bandung Conference of Asian and African people the eloquent Sukarno welcomed the conference with these opening significant words: "We meet today on the 181st anniversary of the midnight ride of Paul Revere as he rode forth in the beginning of the first successful revolt against colonialism in modern times."

We need to make clear to ourselves and to the world that the advancing faith of the American Revolution and the widening meaning of the American Bill of Rights are not only the historic and past but are also the present and living sources of America's faith in herself, the world's faith in America and America's moral influence and power in the world.

Human pride, prejudice and discrimination are as old as history and as wide as the world. Across the centuries in successive periods, prejudice was variously expressed in the classification of peoples as: Jews and gentiles, Greeks and barbarians, Romans and provincials, Iberians and people to the north of the Pyrennes who were white in color, tall in height, and considered by the cultured Iberians to be low in intellect, the celestial Chinese and the noncelestial other people, high-caste and low-caste Indians, Anglo-Saxons and the lesser breeds without the law, and Aryan-Nordic-German-Nazis and the allegedly inferior races of the world. In the present world are tensions between yellow and brown, brown and black, colored and white. Not in justification or rationalization of racial injustice and inhuman wrongs, but in explanation and for understanding and cooperation of the races for ending the wrongs and the betterment of relations of all human beings, as children of one God and brothers of all people, four factors are found to be somewhat correlated with the extent of interracial tensions: (1) the ratio of numbers, (2) the degree of the visibility of the differences, (3) the differences in historical and cultural background, and (4) the economic competition between low-income groups.

Without a Marshall plan; with full responsibility in difficult decades for the pensions and rehabilitation of Confederate veterans; with part responsibility for the pensions and rehabilitation of Union veterans; with the disproportionate loads of tariffs and discriminatory freight rates; and with the responsibility during recent decades of education one-third of the Nation's children with one-sixth of the Nation's financial ability, the southern people, amid almost the universal poverty of the war's desolation, rose from the ruins as unconquerable in spirit in the duties of defeat as they were brave on the battlefields against the heavy odds of a long and exhausting war. As part of this story of the risen South is the fact that though only one-tenth of the Negroes in the world are in the United States, more Negroes are in colleges and universities in the United States than in all the rest of the world.

As a vital part of the southern people, the Negro people, despite all the wrongs to these people, compounded by centuries of slavery and discrimination, have in the recent decades of their freedom and labor, made a progress unsurpassed by any people in a like period in human history. In their spiritual faith and patient upward struggles, their zest for living and laughter, songs merry and sad, and creations of enterprise and spirit, they have revealed the innate capacity of a great people in their rich, various and enduring contributions to the making and meaning of America.

In the free minds and generous hearts of millions of southern people of both races, who have long cooperated in human relations and works of personal loyalty and kindness, will live and grow the unfulfilled teachings of our religion for the equal freedom, dignity, and opportunity of all human beings, the struggles of freedom for a higher freedom, and the renewing faith of the American dream, with its message of hope and brotherhood in this age of suspicion and fear.

The gospel of love and understanding preached by Martin Luther King, who draws his inspiration from Jesus, his techniques from Gandhi, and his advice from his noble teacher, Benjamin Mays of Morehouse College, will yet prevail in our time over fear and hate. The cross, warm with the blood of human brotherhood, will triumph over all the burning crosses lighted with the hot oil of prejudice, privilege, and power.

In the Old South, where slavery made one of its last stands in the modern world, industrialism is making fresh beginnings on virgin soil. We have the lessons in the tragedies of one and the opportunities in the power of the other to work out together nobler human relations than have yet characterized the history of industrialization in either Europe or America. As the schoolhouses open wider their doors, and as the factories move into the waste places and the rivers come rushing from the mountains with the power for the electrification of our civilization, may we place in the center of it all, not the pleasures of today but the children of tomorrow, for theirs is the Kingdom of Heaven.

Amid the global tides which surge upon our shores, east and west, no less hazardous than the outer spacious threats of tyranny from the highest heavens, is the complacency and possible decay of our own falsely affluent society of private prosperity and public poverty. Billions of private wealth go into damaging pleasures and wasteful excitement to the neglect of long-run investments in educations, research, libraries, hospitals, playgrounds, and conservation of soils, forests, and water resources in multiple services of the people. The slowing down of the rate of economic growth and industrial production in America is a setback to the dynamics of American leadership in the world.

The economic slowdown, the lagging retreat of human prejudice and the old colonialism, give emphasis and impetus to the rapid advance of totalitarianism and the new colonialism. The hazard of the precarious peace of deterrent terror make imperative the unyielding hopes and struggles for effective universal disarmament. The absolutism of nations and the drift toward the self-extermination of peoples must yield to the self-determination of peoples and the unresting struggle for the peace of nations.

Just as States rights, which was first used, as a sword of human liberty, became the shield of human slavery and just as the barricades which were originally erected for the self-determination of the French people for liberty, equality, and fraternity, became in Algiers obstructions to the self-determination and equality of the Algerian people, so the theory of national sovereignty which has served the cause of law, order, and the general welfare of the people of a nation, became at tenor the basis for national isolation, the U.S. reservation in joining the World Court, and the hazards of international disorder.

The hazards and hopes of the world situation, in a world in need of world law and order, require consideration of a more effective international program as follows:

1. Large long-range economic development programs in addition to more adequate support of the Specialized Agencies of the United Nations in their moral equivalent of war in great campaigns against poverty, hunger, illiteracy, disease, racial discrimination, colonialism, armaments, and the war system itself.

2. A standby United Nations peace force, not only to salvage but to help prevent disaster.

3. Promotion of progressive steps in effective disarmament so as to supplant the old vicious circle of fear, armaments, war and annihilation with a new circle of faith, disarmament, economic development, and international cooperation in productive and humane programs.

4. Other procedures failing, resort to and emphasis on the moral power of a two-thirds vote of the General Assembly of the United Nations in regard to membership, disarmament, and the settlement of international disputes.

5. Promotion of the self-development and the responsible self-determination of colonial people and non-self-governing territories.

6. United Nations jurisdiction over the international problems of the polar region and outer space.

Ohio River Valley Projects

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1960

Mr. FULTON. Mr. Speaker, the Appropriations Committee of the House is now considering the allocation of funds to public works projects on or connected with several of our main rivers. These are important projects, to industry as well as to the residents of the river valleys which they will affect.

My friend, Raoul E. Desvernine has appeared before the committee and made an excellent statement on behalf of the projects proposed for the Ohio River Valley.

Under leave to extend my remarks in the RECORD I am calling this statement to the attention of my colleagues in the Congress and the American people:

STATEMENT OF RAOUL E. DESVERNINE ON BEHALF OF NATIONAL STEEL CORP. BEFORE THE SUBCOMMITTEES ON PUBLIC WORKS OF THE SENATE AND HOUSE APPROPRIATIONS COMMITTEES IN SUPPORT OF VARIOUS PROJECTS IN THE OHIO RIVER VALLEY, 1960

Mr. Chairman and members of the subcommittees, my name is Raoul E. Desvernine. My office address is 839 17th Street NW., Washington, D.C. I am Washington counsel for and representative of the National Steel Corp., which has its executive offices in Pittsburgh, Pa.

The National Steel Corp., with its several subsidiary companies and divisions, is the fifth largest steel producer in the United States. In 1959 it produced 5,331,500 tons of ingots and had net sales of $736,978,650. The Weirton Steel Division of National Steel, located at Weirton, W. Va., owns and operates iron and steel manufacturing plants on the Ohio River at Weirton, W. Va., and Steubenville, Ohio. The Great Lakes Steel Co., located at Detroit, Mich., a subsidiary of National Steel, owns and operates similar plants on Lake Michigan at Detroit, Mich. The Hanna Furnace Corp., another subsidiary of National Steel, operates blast furnace plants on Lake Erie at Buffalo, N.Y. Another subsidiary, the Midwest Steel Corp., has a steel plant in construction at Portage, Ind., on Lake Michigan. National Steel also owns and operates, through subsidiaries and affiliates, coal mines in Pennsylvania and Kentucky and ore properties in Minnesota, Michigan, and Wisconsin, and also has ore-transportation facilities.

The sites of the producing plants of the Weirton Steel Division were selected primarily because of the availability of an essential water supply[1] and adequate navigable water transportation. Low-cost water transportation has been a vital factor in attracting an enormous growth of basic industries in the Ohio Valley.

Many other steel-producing companies located their plants in the Ohio River Valley for these same reasons, making the Ohio River Valley, with the Pittsburgh-Youngstown area, the largest steel-producing area in the United States. The Pittsburgh-Youngstown district of the steel industry must be included, as it is heavily dependent upon the Ohio River for shipping raw materials, coal and coke, fuel oil, and finished products. Many other industries also located their operations in the Ohio River Valley for the same reasons. The Ohio River Valley has become one of the great industrial production centers of the country and the Ohio River is one of the chief arteries of commerce in the Nation.

Commercial navigability depends upon a system of locks, dams, and harbors with flood-control facilities adequate at all times to assure shipments into a steel plant of raw materials, coal and ore; and also shipments out of the plant of its manufactured products to its national and foreign markets. Consequently, such locks, dams, and harbors are not only useful facilities but essential facilities to the steel production in this area. They are capital investments without which a large part of the Nation's industrial and steel production would cease.

Furthermore, these locks, dams, and harbors must be maintained as efficient modern facilities. Obsolete and wornout installations must be replaced or repaired and rehabilitated. The hazard of the stoppage of navigation through failure of these facilities must be foreseen and provided for.

New and enlarged navigation facilities must be built from time to time to meet the ever-increasing transportation plant demands as those plants expand to meet the Nation's increasing requirements for commercial peacetime use and for war and defense purposes. The actual and announced expenditures since 1950 for new and modernized plant facilities in counties bordering on the Ohio River and its navigable tributaries in the iron and steel industry alone are $2,228,700,000. These river facilities must be kept apace with the rapidly expanding needs for steel production and at all times adequate to meet foreseeable demands. In fact, the present program is already inadequate to meet foreseeable requirements and an acceleration of a greatly enlarged replacement and rehabilitation program is urgently required in the public interest.

National Steel's industrial life is vitally dependent upon an adequate water supply from and upon the uninterrupted navigability of the Ohio River and its tributaries—the Monongahela and Cumberland Rivers. This is likewise true of all other steel producing companies operating in the Ohio River Valley.

You have before you for your consideration and action requests for appropriations for the authorized facilities (locks, dams, and harbors) in the Ohio River Valley enumerated in schedule A below now in process of construction, modernization and repair with partial funds previously appropriated.

Additional appropriations to maintain construction schedules for fiscal 1961 to carry forward the construction of these facilities are now sought from your committee.

Appropriations sufficient to meet construction schedules for fiscal 1961 (as estimated by the Army Engineers) on all projects enumerated in schedule A have been approved and recommended by the Army Corps of Engineers and are provided for in the 1961 budget; except the budgetary allowances for the Markland and Meldahl projects which are insufficient to maintain efficient construtcion schedules and for which additional funds are asked.

Your committee's approval of these appropriations is now required to make funds available.

Schedule A: The projects in the Ohio River Valley modernization program, now in process of construction, which are of vital concern to National Steel, are specifically the following:

A. Projects for work in process

	Recommended for fiscal 1961
1. New Cumberland project (Ohio River)	$6,180,000
2. Markland project (Ohio River)	13,900,000
3. Capt. Anthony Meldahl project (formerly known as New Richmond project) (Ohio River)	18,000,000
4. Greenup locks and dam (Ohio River)	9,959,000
5. Lock and dam project No. 41 (Ohio River)	9,700,000
6. Pike Island project (Ohio River)	9,000,000
7. Barkley project (Cumberland River)	18,000,000

Not to maintain construction schedules of projects in schedule A above during fiscal 1961 and not to then carry forward construction to completion would not only deprive the national economy and the operations of National Steel of the benefits to be derived from the use of these facilities when completed, but would also imperil the capital thus far invested in them. To interrupt or delay work short of completion by not now making appropriations sufficient to maintain construction schedules would not only be economic waste but it would be an indictment against Congress' original judgment in authorizing these projects and appropriating funds to initiate construction.

Each year, your committee, in full understanding of the necessities, has appropriated sufficient funds for the next fiscal year to carry forward construction on the projects referred to in schedule A, thereby assuring an efficient and continuous construction schedule. We have no doubt your committee will do likewise this year, fiscal 1961.

Schedules B and C: The following listed projects for new construction (schedule B) and for planning money for new projects (schedule C) are also of vital concern to National Steel.

B. New planned constructions

	Recommended for fiscal 1961
1. Belleville project (Ohio River)	$750,000

Planning money was provided last year. Appropriation of funds to start construction is now required. Budget for fiscal 1961 contained planning money but no appropriation to start construction. Unless appropriation is made to start construction a serious delay and reduction in the rate of progress of the modernization program will result in total disregard of the mounting traffic congestion which threatens to cut off further growth within the present decade.

	Recommended for fiscal 1961
2. Opekiska project (Monongahela River)	$500,000

The estimated cost of this project is $24,100,000. Funds in the amount of $272,000 have been previously provided for completion of planning. The fiscal 1961 budget makes no provision for funds to start con-

[1] It takes 30 tons of water to make 1 ton of steel.

struction. The construction of this project will complete the present program for the modernization of the upper Monongahela. Vast reserves of metallurgical coal lie in the area along this portion of the river.

	Recommended for fiscal 1961
3. Maxwell project (Monongahela River)	$1,500,000

One million five hundred thousand dollars is requested to complete planning and to commence construction. This is an increase of $100,000 over the $1,400,000 requested in the fiscal 1961 budget. The total estimated cost of this project is $32 million, of which $463,000 has been appropriated. This project is the initial step in the modernization of the middle reaches of the Monongahela River.

C. Planning money required

	Recommended for fiscal 1961
1. Cannelton project (Ohio River)	$150,000
2. Opossum Creek project (Ohio River)	200,000
3. Racine project (Ohio River)	50,000
4. Uniontown project (Ohio River)	200,000
5. Dam No. 4 project (Monongahela River)	150,000

The Army Corps of Engineers has recommended planning money for all of the above facilities in schedule C. On the other hand, the budget contains no approval of any appropriations for planning money for any of the facilities on the Ohio River projects listed in schedule C above.

Neither the Public Works Appropriation Acts for fiscal 1959 and 1960 nor the President's budget again for fiscal 1961 made provision for any funds for planning, advanced engineering and design work on the projects noted in schedule C. Yet, it must be borne in mind that there is not only an existing inadequacy of facilities to cope with current and increasing demands but many of the existing facilities are in such a deteriorated and wornout condition as to present the threat of possible stoppage or slowdown in traffic with irreparable loss and dire consequences to the industrial life of the Ohio River Valley and, in deed, the national economy in general. For instance, the Corps of Engineers has pointed out the existing hazardous approach conditions at the Uniontown project (dam No. 48) and has emphasized the need of immediate replacement. It should also be noted that each of these enumerated facilities replaces either two or three existing locks and dams ranging in age from 33 years to 49 years.

Furthermore, it must be borne in mind that there is usually a time lapse between the appropriation of planning money and completion of the construction work of about 8 years.

I refer to the statement of Mr. William J. Hull on behalf of the Ohio Valley Improvement Association, Inc. (submitted to your committee on these hearings) for full detailed information in respect of the present program for the modernization of the Ohio River and its tributaries with details respecting each of its component projects. Those set forth in schedules A, B, and C above are of primary concern to National Steel. Mr. Hull's statement gives in respect of each project the estimates of the Army Engineers for their completion as well as estimates for fiscal 1961 to maintain construction schedules and also for planning money. We emphatically endorse the recommendations contained in Mr. Hull's statement.

All of the facilities set forth in schedules A, B, and C above are essential to the commercial navigation and the commercial operations of National Steel.

All of these facilities are interrelated and interdependent and each is a part of one integrated system of water transportation. A failure or deficiency of any one facility could interfere with the free flow of river traffic over the entire Ohio River Valley system. For that reason, it is submitted that each project cannot be judged singly but must be viewed from the overall perspective of its relationship to the whole integrated system.

Nevertheless, I single out the plants of the Weirton Steel Division at Weirton and Steubenville as examples to illustrate the magnitude of the operations utilizing and dependent upon the use of the Ohio River and its tributaries, the Monongahela and the Cumberland Rivers.

The Weirton Steel Co. Division consumed about 2,651,067 net tons of coking coal in 1959, all of which were transported to its plants by water from mines to the north and to the south of the plant. In addition, the Weirton plant produced 1,831,580 net tons of coke products.

It also transported to its Weirton plant by water raw materials and operating supplies, such as iron and steel scrap, ingot molds, fuel oil, and acid amounting to 535,092 net tons for 1959.

It also moves substantial quantities of its outbound production by water to points on the Ohio and Mississippi Rivers and to the Southwest. The outbound steel production in 1959 amounted to 2,617,408 net tons of which 291,537 net tons were shipped by water. Also Weirton produced and shipped about 7,938,276 gallons of benzol, toluol, and other byproducts. Weirton also shipped by water 129,108 tons of tar and 14,591 of ammoniun sulphate.

Weirton employs on the average about 13,000 persons and its coal mines about 600 more.

And bear in mind that Weirton is only one division of National Steel and only one of several thousand industries, large and small, which are located on the Ohio River system because of its stable water supply and transportation facilities.

Furthermore, National Steel is engaged in a large expansion program, started in 1959 and scheduled for completion in 1961. This will substantially increase its production and, consequently, its demands upon the water and navigation facilities of the Ohio River Valley. These increased demands must be foreseen and provided for.

On behalf of the National Steel Corp., its divisions and subsidiaries, we earnestly petition your committee, for the reasons herein set forth, to make or approve appropriations for fiscal 1961 sufficient—

(a) To carry forward the construction during fiscal 1961, in accord with construction schedules, of all facilities set forth in schedule A above now under construction; and

(b) To start construction on projects set forth in schedule B above; and

(c) To plan, engineer, and design all projects set forth in schedule C above.

We appreciate this opportunity to present our views.

Pan American Day 1960

SPEECH

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 12, 1960

Mr. BOLAND. Mr. Speaker, on the occasion of the 70th anniversary of the founding of the pan-American system, it gives me great pleasure to extend my best wishes and sincere feelings of friendship and admiration to our sister Republic south of the Rio Grande. Pan American Day has come to be a commemorative symbol of the sovereignty of the American nations and the voluntary union of all in one continental community.

It should be restated that the Latin Americans are in a special position with relation to us. They constitute the one really effective regional organization—in the full sense of that term—that exists in the world today—an organization with a long, historical tradition that on many occasions has demonstrated its effectiveness. It is not a mere military alliance, for the inter-American regional system has far broader purposes and objectives.

It is my dearest hope, therefore, that the unity, friendship, and understanding, that has traditionally characterized the pan-American system, will be increased and strengthend. Thus, on this memorable day I move to ask all of the Americas to join in a common effort to fortify this free and unique association.

U.S. Lady of the Year—Dortha Soule

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, April 14, 1960

Mr. GOLDWATER. Mr. President, this year a lady I have known for a great many years, who was born in Arizona, was selected as U.S. Lady-of-the-Year by the magazine U.S. Lady.

I ask unanimous consent that the article, which deals with her recognition, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. LADY OF THE YEAR—DORTHA SOULE

(By Arthur L. Schoeni)

The sociologist who once declared "big families usually get the most fun out of life," might have had in mind ones like that of Dortha Soule, chosen "U.S. Lady of the Year."

Eleven children, seven of her own and four adopted when her twin sister was killed in an auto accident 6 years ago, make up the busy and happy family of this outstanding mother. She is the wife of Comdr. Robert M. Soule, U.S. Navy, Assistant Bureau of Naval Weapons representative at the Chance Vought Aircraft plant in Dallas, Tex. Dortha was chosen as the No. 1 lady by a committee composed of wives of the service Secretaries and the Joint Chiefs of Staff—the first Navy wife to be so honored.

The Soules and their "stair-steps" brood of lively youngsters, ranging from 3 to 18 years in age, reside in Breezy Hill Manor, a 3-story 7-bedroom house resembling the family dwelling in the movie, "Giant," with overtones of Mount Vernon.

Dortha had three children of her own when her sister, Dorrie Peterson, was killed in an Arizona auto accident. Her husband had died 2 years earlier. She went to Arizona and brought back the four youngsters to live with her own and since then has added four more Soules, the last two being twins, Debbie and Denise.

When Commander Soule was transferred to Dallas last July, the problem of finding a home large enough to house a family of 13 persons presented itself. A doctor's former

residence atop a hill, with lots of space all around it, proved the answer. Three cars, three television sets, four horses, a lake to fish in and room for the youngsters to run in help solve transportation and recreation problems. The horses belong to others but the children get in plenty of riding on the Texas prairies.

The family includes Gayle 18, Lynne 17, Gary 15, and Dee 10, all children of the Peterson branch of the family, and Vicki 16, Bobbie 13, Ronnie 9, Dorris 6, Kent 5, and the 3-year-old twins.

Not only does Dortha find time to care for her large family but she has been active in PTA, church, and scouting groups and has won her 100-hour Navy Relief pin several times over. She goes bowling each week at the naval air station and is one of the top scorers in her league.

Being a Navy wife, she has moved her family across the country several times and once to Adak, Alaska. Her big ambition is to take them overseas for duty, but the Navy rule against transporting large families such distances has not made that possible as yet.

Sea duty being what it is in the Navy, with her husband commanding fighter squadrons aboard aircraft carriers in far-off waters, Dortha has had to do much of the rearing of her family herself. On one stretch, Bob was away from his family for 27 months, with only a 3-month break in the absence. Before coming to Texas, he was stationed in Newport, R.I., while attending Naval War College. On arrival there the family lived out of suitcases for a month until their household effects arrived. "You get pretty tired of the same old clothes at a time like that," Dortha said.

When Bob transferred to Dallas, it was the first service duty change he had made that did not involve shipping his household effects and family all the way from one coast to the other. But even the transfer to Dallas produced a minor crisis.

Bob had come to Texas ahead of time to obtain housing for his family. When he returned to Rhode Island to bring another car and a couple of the boys back, he left the buslike Goliath car at Amon Carter Airport at Fort Worth. Dortha and nine youngsters flew down to Texas—but their plane landed instead at Dallas, 30 miles away. On top of that, Dortha had lost the keys to the Goliath. Luckily, Bob had left a set of keys with an officer in the Navy office at Chance Vought and a phone call to him brought the needed wheels to Love Field in Dallas.

A few months after they had settled down in their new home another crisis arose. A cold wave hit Texas, sending temperatures down to 20 degrees. The family's huge house is heated by butane gas and the tank supply ran out at 10:30 p.m. The Soules bundled the smaller children into one room and tried to keep it warm with a small electric heater. The rest of the family just shivered through the long, cold night and into the next day until a new gas supply could be obtained.

"We can laugh about it now, but it wasn't funny at the time," Dortha commented wryly.

"In spite of having an extra large family," she explains, "we try to treat each child as an individual. They have various kinds of amusements, parties, and frequent overnight guests. I may be pretty busy, but not too busy to do those things for them."

On the day U.S. Lady went out to take pictures of Dortha and her family they had, besides the 13 members of the group, another of Mrs. Soule's sisters and her small son, plus a visiting Navy ensign who was calling on one of the attractive daughters.

Since they live short of the boundary line where school buses will pick up their children, the Soules have a transportation problem that keeps both busy as chauffeurs. The parents run shuttle service to get their eight school-age youngsters back and forth to classes.

As is the case with most large families, the elder children are helpful in looking after the younger ones and as assistants doing household chores.

Both Bob and Dortha are natives of Arizona. They were high-school sweethearts since the days when Bob was drum major for the school band and the twin sisters were majorettes. Besides his other affiliations, Bob is a member of the Society of Experimental Test Pilots, organized recently in the Dallas area. He is a graduate of the Navy's test pilot school at Patuxent River, Md.

Minnesota School Boards Association on Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 6, 1960

Mr. QUIE. Mr. Speaker, recently the board of directors of the Minnesota School Boards Association drew up a series of statements and a resolution on the subject of Federal aid to education which I believe would be of interest to the Congress.

The text of the statements and resolution follows:

MINNESOTA SCHOOL BOARDS ASSOCIATION,
ST. PETER, MINN.

The board of directors of the Minnesota School Boards Association, at their regular meeting of April 4, 1960, approved the following statements, and adopted the following resolution relative to Federal aid to education.

The board of directors recognize that:

1. We have in the United States a moral obligation to afford every child a public school education, commensurate with his ability, regardless of race, color, religion, or geographic area.

2. Some school districts appear to be negligent in providing a minimum standard of education which should be the obligation of every school district in the Nation.

3. The Federal Government has a broader tax base than local school districts or State governments. Approximately 75 percent of the total tax dollar is now controlled by the Federal Government.

4. Flexibility of school boards to finance their educational programs is restricted to the property tax dollar. It would appear that in some areas the local property tax cannot absorb heavier obligations of any sizable amount.

The board of directors also wish to point out that:

1. By Constitution, education is a function of the State. Through its legislature, it has created public school districts and delegated control of these districts to locally elected school boards.

2. It has been demonstrated that the majority of States have resources necessary to finance adequately an improved program of education.

3. The State of Minnesota could provide a greater financial base for the support of its public schools by its own legislative action. The expediting of reorganization of school districts would be a first step in this regard.

4. Minnesota would receive less money in any Federal-aid program presently suggested than its citizens would pay in taxes to support such a program.

5. Many States which are operating a dual system of education because of segregation would receive greater benefits than Minnesota under any plans presently proposed.

6. Many of the States which offer special tax exemptions to Minnesota industries to relocate within their borders are likely to receive the greatest benefits from Federal aid.

7. Moneys have been distributed under the National Defense Act to private and parochial schools. It should be pointed out that some States now allow free transportation and others free textbooks to these schools. It is therefore apparent that under present policies Minnesota tax moneys would be used to support private and parochial schools in other States.

8. Federal aid to education necessarily brings Federal controls.

In view of the above statements: Be it

Resolved, That the board of directors of the Minnesota School Boards Association oppose any legislation that would provide additional Federal moneys for education except for federally impacted areas; be it further.

Resolved, That in the event the National Congress passes additional programs of Federal assistance to education, the moneys be definitely designated for public schools only; and be it further

Resolved, That as we recognize that Federal controls will inevitably accompany Federal aids to education, we recommend that any further Federal assistance be directed into those phases of the educational program where such controls will least affect the autonomy of local school boards.

Sunrise Easter Services

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1960

Mr. BOW. Mr. Speaker, nearly 200 years ago in the village of Schoenbrunn, near the present city of New Philadelphia, Ohio, Moravian missionaries and the Christian Indians, among whom the Moravians lived, celebrated what was surely one of the first sunrise Easter services in frontier America.

Sunday at Schoenbrunn and in the Moravian churches at nearby Gnadenhutten and Tuscarawas this traditional service will be repeated.

Easter dawn will be heralded by the sound of 18th century trombones from the church tower in Gnadenhutten. Later the trombone choirs will march through the village, calling the faithful to worship. Services beginning in the churches will be concluded in nearby cemeteries just as the first rays of the sun appear.

The liturgy used in these services is the most complete statement of creed that the Moravians have.

The special character of this traditional service in Tuscarawas County recalls to us the splendid contribution of religious faith, spiritual strength, and rugged individualism, for which all Ohio is indebted to its earliest Christian settlers.

City Where Everything Is: Dallas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following first in a series of articles from the Dallas (Tex.) Morning News by James Lehrer, April 10, 1960, which speaks for itself:

CITY WHERE EVERYTHING IS: DALLAS

(By James Lehrer)

(EDITOR'S NOTE.—The once-in-a-decade Federal census, now underway, will testify statistically to Dallas' amazing growth in recent years. But what's the story behind the statistics? This series, by News staff-writers who are specialists in their fields, shows where Dallas is today, how it got there, and where its future lies.)

An east Texas farmer was asked why he went to Dallas to do his shopping instead of Houston, Shreveport, or some other city.

"It's the natural thing, mister," he drawled. "Dallas is where everything is."

That homely phrase, probably, sums up present-day Dallas as neatly as possible. What is not already here is either on its way or plans are being laid to get it.

The pedestrian walking down Main or Elm knows and can feel it. The downtown section, which has added more office space in the 1950's than any other city in the Nation besides New York City, continues to expand.

The motorist driving through the residential and outlying business and industrial districts is aware of it. There's hardly a block in the city that does not reflect growth with a new building, a house, an apartment.

The businessman—large or small—can see the proof in the new addition to his building or in his increased list of employees.

A look at his paycheck, the newer car he's driving and the larger house he's living in is enough for the Dallas workingman.

Some call it "Big D"; to others it's "Dynamic Dallas." The words, "dazzling," "diversified," and even "delirious" have also been heard and read before Dallas.

No matter the name, Dallas is a city—a grownup city whose stature grew simultaneously with its population and wealth.

When a Paris or London businessman makes out his itinerary for a trip to the United States it now reads, "New York, Chicago, Los Angeles, and Dallas."

For the world, including Dallas itself, has finally realized that this city is more than Neiman-Marcus, 20 or 30 millionaires and the State Fair of Texas.

It's a city with a population of more than 700,000 supporting a metropolitan area of more than 1 million persons. When the Bureau of the census finishes nose counting this month, the tabulation is expected to show a 706,000 tally for Dallas, 955,800 for Dallas County and 1,090,000 for the four-county metropolitan area.

The rise has been spectacular. It seems almost inconceivable that only 60 years ago Dallas had a population of 42,638. By 1940 it had risen to 294,734, and the 1950 count was 434,462.

And now, 10 years later another 300,000 have been added.

The county's growth goes from 82,726 in 1900 to 398,564 in 1940 and to 614,799 in 1950.

Now included in Dallas' sphere of strength and influence is the metropolitan area, which takes in Collin, Denton, and Ellis Counties in addition to Dallas County. The U.S. Bureau of the Budget last year officially recognized this area as part and parcel of metropolitan Dallas.

The nontraveling easterner would probably look at Dallas' population figures and clip off an observation like: "That's an awful lot of cowboys."

He would be surprised to find that more than 27 percent of the city's working force is connected with manufacturing, according to Texas Employment Commission figures released in 1958.

Then come the retail employees with 15 percent, folowed by those in services; transportation, communications and utilities; finance, insurance, and real estate; construction; professional services, wholesale; cafes and filling stations.

No mention of cowboys.

And when each of these workers sits down behind his desk or turns on the machine at his job he contributes to and is part of the growth that has made Dallas the Southwest's leader in just about everything.

It's the manufacturing, the financial, and the trade and distribution center. It leads in construction, in transportation, in oil, and research.

The Dallas resident can absorb his culture and be entertained here in just about any manner he chooses. The city is dotted with live-theater productions and art museums. The resident with an ear for music can listen to the Dallas Symphony Orchestra, opera, or dance bands at the hotels and night clubs.

Mr. Dallas can send his children to modern schools—public and private—where the teachers, by comparison, are well paid and well trained. When college time comes there's Southern Methodist University and the University of Dallas.

Regardless of his faith, he can find a place to practice it in one of the approximately 750 churches in Dallas. Long regarded as the place where everybody goes to church, Dallas has the largest churches in the Nation in three major Protestant denominations—Southern Baptist, Methodist, and Presbyterian.

When the Dallas man, woman, or child gets sick there's no longer a need to go east for treatment. The medical facilities—both in research and in individual patient care—are the best in the Southwest and among the best in the country. There are more than 40 hospitals and clinics in the city, ranging from the large general hospitals—Parkland Memorial, Baylor Medical Center, St. Paul's and Methodist—to small clinics specializing in everything from alcoholism to lung and eye diseases.

The sports fan has it made here. This fall he will be able to watch two professional football teams and topnotch Southwest Conference ball in the Cotton Bowl. By summer of 1961 a major league baseball team, the Dallas-Fort Worth Rangers, will be throwing the ball around in the new Continental League.

And if he's a sports participant there are many bowling alleys, tennis courts, golf courses and amateur leagues in football, baseball, softball, basketball and just about every sport known to man.

Name it—Dallas has it.

It's a complex, hard-to-describe city that has risen to its leading position rapidly. But it's no gold rush-type boomtown, boasting size but lacking depth.

To some it's as conservative and substantial as Boston, to others as freewheeling and light as Miami. Dallas residents can take their pick and live accordingly because as the man says:

"Dallas is where everything is."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Wasteful Government Spending

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 13, 1960

Mr. WIDNALL. Mr. Speaker, nowhere is the fight against reckless and wasteful Government spending being waged with greater determination and zeal than in grassroots newspapers throughout the Nation. Wasteful spending proposals ostensibly aimed at improving economic conditions pose the greatest threat to those conditions.

The American Press in its current issue performs a vital and needful service by publishing the results of a poll of editors of grassroots newspapers on a number of key issues now before the Congress. While I may disagree with the majority view on a few of these issues, I respect the editors' rights to their views and appreciate this further evidence of their interest in and efforts toward achieving sounder government.

Mr. Speaker, I feel keenly that every Member of both bodies of Congress should have, in his deliberation of these crucial matters, the benefit of the stand taken by those editors responding to the questions posed in the American Press poll. Accordingly, and under leave to extend my remarks, I submit the American Press article:

A large majority of the editors of America's grassroots newspapers would like to see their Congressmen vote as follows on controversial issues now before Congress:

1. For a law to apply antitrust laws to unions and thereby ban industrywide bargaining.
2. Against any Federal aid to education.
3. Against increasing the appropriation for ballistic missiles.
4. Against an appropriation to keep bombers constantly in the air.
5. Against an increase in the gasoline tax for roadbuilding.
6. For taxing cooperatives on all earnings.
7. For reducing price supports for farmers.
8. Against any increase in the soil bank.
9. Against continuing loans to veterans for homebuilding.
10. Against any increase in first-class and airmail rates.

On some issues included in a questionnaire sent to a cross section of the Nation's editors there was a wide difference of opinion. But on all of the questions summarized above over 60 percent were in agreement.

Replies received from almost 400 editors to a three-page questionnaire indicate that the country editors are as vehement as ever in their opposition to federally sponsored welfare programs; they feel that labor unions must be curbed further; they would like to see farmers gradually go back to a supply-and-demand status; they favor debt reduction before tax reduction; and they think greater Post Office efficiency should come before further rate increases.

As far as defense is concerned, most realize that they are not in a position to determine our needs and are willing to accept the judgment of the President and his advisers.

Answers and comments indicate that the country editors are as fervent as ever in their desire to reverse current trends and go back to what they define as "the principles on which this country was built."

"How wonderful our free system in America would be," writes Bill Plourd, of the Fullerton (Nebr.) Journal, "if it were not for the selfish pressures of highly organized groups determined to enjoy special privileges regardless of the rights of others or of the country's welfare. The politician who places his party's advancement above his country's well-being, the monopolists in the fields of both labor and management who are determined to take and not to give regardless of the effect upon the consumer, and the groups who operate on the theory that more Federal appropriations are the answers to all our difficulties—these are responsible for the problems that bedevil us in America today."

Such sentiments, which might bring a "quit dreaming" sneer from today's sophisticates, would win hearty applause from any group of country editors, it is made clear from their comments in the American Press survey.

The gripe of the country editors is that the country is losing its moral stamina and the things which they consider to be obviously good are being circumvented.

Over and over again were comments such as that of Edward M. Perkins of the LeRoy (N.Y.) Gazette, who said:

"The greatest need of the Nation today in Congress, State legislatures, and county units of government is for men who will vote their honest and considered opinions rather than voting the way that promises to best assure their reelection.

"We are bedeviled today with too many who are thinking in terms of pleasing the gimme-gimme crowd and who will not stand up and and be counted for the things that are best—yes necessary—for the preservation of the Nation as a whole."

Fifteen questions were included in the questionnaire sent to approximately 1,200 editors representing every State in the Union. The 397 replies received at the time the results were tabulated represent a good cross-section of all areas of the country.

The results are being sent to all Members of Congress. Similar polls made by the American Press in past years have proven to be of great interest to many Senators and Representatives, and it is expected that the views expressed here on subjects which Congress is debating this year will be of equal interest.

The questions and answers follow:

Question 1: "Several suggestions have been offered to prevent reoccurrence of nationwide strikes, such as the steel strike. Which, if any, of the following would you like to see Congress approve?"

Answers:

(a) Enaction of a law to apply antitrust laws to unions and thereby ban industrywide bargaining, 66 percent.

(b) Setting up of a Labor Court with power to hand down final decisions when labor and management cannot reach agreement, 25 percent.

(c) Compulsory arbitration of labor disputes, 15 percent.

(d) Use of factfinding boards to recommend strike settlements, 17 percent.

(e) Appointment of a presidential commission, when a strike threatens, to study the dispute and make recommendations based on the public interest, 23 percent.

(f) Other or no answer, 7 percent.

(The totals here are greater than 100 percent because some voted for more than one suggestion.)

Question 2: "Do you favor increasing the minimum wage to $1.25?"

Answers: Yes, 17 percent; no, 77 percent; no answer, 6 percent.

Question 3: "Several bills for Federal aid to education have been introduced. Which, if any, would you favor?"

Answers:

(a) A bill to authorize grants of $500 million a year for school construction? 12 percent.

(b) A bill to authorize $800 million a year for increasing teachers' salaries? 9 percent.

(c) A bill to help States pay bond interest on bonds for school construction? 12 percent.

(d) No Federal aid to education, 66 percent.

(e) No answer, 5 percent.

Question 4: "Do you favor, as do some Congressmen, increasing the appropriation for ballistic missiles and space exploration beyond the amount requested by the President?"

Answers: Yes, 37 percent; no, 60 percent; no answer, 3 percent.

Question 5: Gen. Thomas S. Power, head of the Strategic Air Command, has recommended that the United States spend $750 million a year to keep bombers constantly in the air as a deterrent against attack. Would you vote for this program?"

Answers: Yes, 29 percent; no, 63 percent; no answer, 8 percent.

Question 6: "The President's budget predicts a surplus of $4.2 billion. For which of the following purposes would you prefer the bulk of this surplus be used?"

Answers: (a) To reduce national debt, 80 percent.

(b) To increase defense expenditures, 11 percent.

(c) To lower taxes, 18 percent.

(d) For greater social welfare programs, 6 percent.

(e) For Federal aid to education, 2 percent.

Question 7: "Representative WILBUR MILLS, chairman of the Joint Committee on Internal Revenue Taxation, favors a major tax change which would wipe out all present deductions, except for personal exemptions, and would thereby permit a tax reduction of 40 percent. Does this sound like a good idea to you?"

Answers: Yes, 39 percent; no, 48 percent; no answer, 13 percent.

Question 8: "Last year the President asked for a 1½-cent boost in the gasoline tax (to 4½ cents) to carry on the interstate highway program. He got only 1 cent. He now claims this is slowing down the program and the extra one-half cent is needed. Do you favor this increase?"

Answers: Yes, 38 percent; no, 47 percent; no answer, 4 percent.

Question 9: "The President has asked that all corporate and excise taxes due to expire

in June be extended for another year. Do you favor this?"

Answers: Yes, 49 percent; no, 47 percent; no answer, 4 percent.

Question 10: "Proposals have been made to tax cooperatives on all earnings, before cash distributions, or to tax them on retained earnings. How do you feel about this?"

Answers:

(a) Tax cooperatives on all earnings before cash distributions, 71 percent.

(b) Tax cooperatives on retained earnings only, 20 percent.

(c) Don't increase their taxes in any way, 5 percent.

(d) No answer, 4 percent.

Question 11: Those who receive dividends argue that dividends are the only form of personal income taxed twice. The large corporations pay 52 percent tax on earnings and shareholders then pay a personal tax on dividends. Do you think dividends should continue to be taxed?"

Answers: Yes, 47 percent; no, 46 percent; no answer, 7 percent.

Question 12: "Do you favor reducing farm price supports, decreasing them, or leaving them as they are now?"

Answers: Leave as they are, 18 percent; reduce, 74 percent; increase, 5 percent; no answer, 3 percent.

Question 13: "Do you think funds for the soil bank should be increased to get more land out of production?"

Answers: Yes, 15 percent; no, 82 percent; no answer, 3 percent.

Question 14: "Over 150,000 loans have been made to veterans for building houses. Total outstanding is now about $1 billion. The President believes there is no further need for this readjustment program and has asked that it be terminated. Do you think it should be terminated?"

Answers: Yes, 71 percent; no, 27 percent; no answer, 2 percent.

Question 15: "The annual Post Office deficit is now estimated at $55 million a year. The President has asked for an increase of 1 cent in first-class mail and airmail to help offset it. Do you favor these increases?"

Answers: Yes, 35 percent; no, 64 percent; no answer, 1 percent.

Milwaukee Journal the Third-Ranking Newspaper in the Nation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1960

Mr. WILEY. Mr. President, recently a poll of the Nation's newspaper editors selected the 15 outstanding dailies in the country for "most superior news coverage, integrity, and public service."

We in Wisconsin are particularly proud that one of our State's fine newspapers, the Milwaukee Journal, ranks third in the national poll. Of course, we Badgers know that it is a fine newspaper. Now we are glad that the Nation recognizes its excellence.

With a circulation of more than 375,000 copies daily, and over a half million copies of its Sunday edition, the Milwaukee Journal is bringing to homes, businesses, and particularly to our individual citizens, a wealth of news, special features, editorials, and reports on international affairs, as well as items on almost all aspects of American life. For it outstanding record, the Journal and its splendid staff deserve the plaudits, not only of the people of Wisconsin, but also of the country as a whole.

In recognition of the Journal's outstanding contribution to a better informed citizenry, I request unanimous consent to have printed in the Appendix of the RECORD the following: First, an article from the Christian Science Monitor listing the 15 top-randing daily newspapers of the Nation—in which the Journal ranks third; and second, an article from the Milwaukee Journal itself, outlining ways in which it is expanding its activities to better serve the public.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Apr. 1, 1960]

EDITORS' POLL PICKS 15 U.S. TOP-RANK DAILY NEWSPAPERS

NEW YORK.—A poll of the Nation's newspaper editors conducted by Scholastic Magazines has selected the 15 daily newspapers in the United States most superior for news coverage, integrity, and public service.

The poll was conducted in connection with the special issue of "How to Read Newspapers," published annually by Practical English, one of the scholastic magazines for high school students.

In order of preference, the newspapers chosen were: New York Times, the Christian Science Monitor, Milwaukee Journal, St. Louis Post-Dispatch, Washington Post and Times Herald, Louisville Courier-Journal, Wall Street Journal, Atlanta Constitution, Chicago Tribune, Des Moines Register, Kansas City Times-Star, Baltimore Sun, Miami Herald, Chicago Daily News, and Los Angeles Times.

The poll was taken in two parts. First, a list of all newspapers in cities with 200,000 population or more was sent to all daily newspaper editors in the United States. They were asked to check the 12 newspapers which, in their opinion, were most superior for news coverage, integrity, and public service. Room was allowed for write-in votes.

A run-off ballot was then drawn up, including newspapers which polled at least 12 votes. (Write-in candidates with two or more votes also were included.) More than 335 editors voted in the final run-off ballot.

The results of the run-off showed such a close vote that 15 newspapers were chosen instead of 12.

JOURNAL'S EXPANSION TO COST $11,525,000—SIZE OF PLANT WILL DOUBLE; START IS NEAR—LARGEST BUILDING EXPENDITURE DOWNTOWN IN 25 YEARS LOOKS TO FUTURE NEEDS

The Journal Co. will start next week an $11,525,000 expansion program which includes a $5,755,000 addition to the Journal Building at the southwest corner of North Third and West State Streets, and $5,770,000 worth of new equipment.

The building and its equipment are expected to be in use before the end of 1961.

The go-ahead on construction, under planning for 5 years, was voted at a special meeting of the Journal Co.'s board of directors Tuesday.

INFORMATION DINNER HELD

Announcement of the plans was made by Donald B. Abert, vice president and general manager, at the annual business information dinner of the Journal Co.'s Unitholders Council Tuesday night at the Milwaukee Athletic Club.

"The Milwaukee Journal, under the late L. W. Nieman, its founder, and Harry J. Grant, its board chairman, has been keenly interested in the development of this community and of our State," said Irwin Maier, executive vice president and publisher. "Presently, among other things, we share the general concern about the deterioration of downtown Milwaukee. Our new building program is tangible evidence of our faith in Milwaukee and our belief in the future of Milwaukee's downtown."

The new Journal Building, more than doubling the size of the present six-story building, will be the most expensive built in downtown Milwaukee for more than a quarter of a century.

BUILDINGS TO BE CONNECTED

The contemporary styled building, of reinforced concrete and faced with pink Kasota limestone, black granite, and gray brick, will extend 170 feet on West State Street and 200 feet on North Third Street, covering the entire quarter block. Its north half will be three stories; its south half, six. It will contain 221,000 square feet and 2,926,000 cubic feet.

The structure will be connected with the present 192,000 square-foot Journal building, at North Fourth and West State Streets. The present Journal building, completed in 1924, also is faced with pink Kasota limestone. The connection between the new and existing buildings will be at all levels except that a truck court will run through the center of the combined structures at ground level. All alley openings will be retained.

Into the new building will go full air conditioning, elevators, two new eight-unit presses with color decks for run of paper (ROP) color reproduction and other installations for the mailroom, loading dock, composing room and the stereotype, paper and ink, engraving and other departments.

The prime architect is the firm of Eschweiler & Eschweiler; the consulting architect, Pereira & Associates, Chicago. The work will be in three phases: excavation, pile driving, capping and construction of the basement slab, to start immediately; next, construction of the new building; third, remodeling of the present building to coordinate with the new facilities.

"We believe we will have one of the finest, most up-to-the-minute newspaper plants in the country, designed in every detail to meet present and future production needs quantitatively and qualitatively," said Abert. "Our present building, which Harry J. Grant conceived and developed, has served us well since 1924. This addition to it will enable us to provide improved service just as the existing plant met our growth needs up to the present.

"We shall have the plant to take our growth in stride, to produce more editorial content and to hurdle the growing circulation and advertising volumes with relative ease and at reasonable cost.

"The move also symbolizes the Journal Co.'s community leadership and its confidence in Milwaukee's and Wisconsin's future."

BIG CHANGES PREDICTED

The steadily growing need for the new structure was pointed out in talks by Wallace Lomoe, vice president and executive editor, and Robert K. Drew, vice president and business manager.

"The next 10 years will be a period of great change in newspaper content and possibly in news gathering organization," Lomoe said. "The material demands of the populace will be more fully met and people will turn more and more to examining their ways of life and seeking more knowledge on all subjects. We are going to be called upon to report and interpret in more fields."

Last year, more than 90,000 tons of newsprint was used. Its 1960 cost will approach

$13 million, Drew said. "Advertising rose to 55,689,107 lines last year, headed for 58 million in 1960. Circulation was up 50,737 copies of the daily Journal and 89,972 Sunday in 10 years.

"We will be housing approximately 500 more people than 10 years ago, 140 of them in the production department alone," Drew said. "Our growth pattern over the last decade is further borne out by the 10-year trends in production volume: Total columns produced in the composing room, up 23 percent; total pages printed in the pressroom, up 44 percent—almost 4 billion pages."

REAL ESTATE ACQUIRED

Abert continued the growth story:

"The seeds of our expansion program were sown during World War II when we were doing some postwar planning. No one imagined then how vigorous and dramatic would be the Journal Co.'s growth after the war. It was then that we st arted to acquire contiguous real estate.

"Our recordbreaking years in the early fifties made it evident that * * * we would have to control the whole block for future plant expansion, and we set about the difficult assembly of what now is known as Journal Square." (The block bounded by North Fourth, North Third and West State Streets, and West Kilbourn Avenue.)

The new building is designed so that the pressroom can some day be extended in one long line along North Third Street from West State Street to West Kilbourn Avenue.

The Federal National Debt

SPEECH
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. HALEY. Mr. Speaker, will the gentleman yield?

Mr. STEED. I yield to the gentleman from Florida.

Mr. HALEY. Mr. Speaker, I am glad to join with my colleague from Oklahoma in this matter. It has been a very disturbing thing insofar as the gentleman from Florida is concerned that in a time of high prosperity in this Nation, the greatest that we have ever known, we continue to operate this Government on the basis of a deficit financing.

At the beginning of the 1st session of the 86th Congress I introduced a bill, H.R. 5203, that would make it mandatory for the President of the United States to submit to the Congress a balanced budget and require the Secretary of the Treasury to set aside the first 5 percent of the income, based on the income of the previous year, to apply on the national debt. Of course, the gentleman realizes that under the proposition of the income of the Federal Government now being approximately $80 billion, we could apply approximately $4 billion a year toward this tremendous debt. I think it is about time that the Members of the Congress begin to take cognizance of this tremendous, staggering debt. We have shirked our responsibility in that regard and have continued to finance the Government on a deficit operation, thereby placing on the shoulders of future generations the responsibility of paying this staggering amount of money. I commend the gentleman for his interest in this matter. I might say that the bill that I introduced has been referred to the Committee on Government Operations, and I hope the gentleman will join me in an attempt to dislodge that bill, or at least have some hearings, so that the American people will know that some of us in the Congress are interested in this very vital situation. Let us assume some fiscal responsibility in our own time and not pass along this huge debt for future generations to pay.

Mr. STEED. I thank the gentleman for his contribution, and I am happy to know that we share this concern together. The legislation we are sponsoring has the same general purpose, and I do hope that we, as he suggests, can get some favorable action in that direction. I think it is certainly high time to do so.

National Defense Education Act Loyalty Oath

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1960

Mr. BRIDGES. Mr. President, it now appears evident that before this session of Congress adjourns we will be called upon to take up active consideration of a measure to delete the disclaimer affidavit provision from the National Defense Education Act.

I have stated repeatedly in this Chamber my unalterable opposition to S. 2929, which seeks removal of this provision from the act.

I am pleased to point out at this time, however, that I am not alone in my stand in favor of retaining the disclaimer affidavit. Many national organizations and, indeed, a great number of college students and faculty members, share my sentiments in this regard.

In a recent issue of the Manchester Union Leader, a letter to the editor over the signature of Mr. Blaylock Atherton, of Nashua, N.H., embraces a resolution recently passed by the National Society of the Sons of the American Revolution. The resolution praises the National Student Committee for the Loyalty Oath for their efforts in opposing S. 2929.

Mr. President, I think this resolution, as well as the introductory remarks of Mr. Atherton, president of the New Hampshire Society of the Sons of the American Revolution, warrant the attention of the Members of Congress. Therefore I ask unanimous consent that the letter to which I have alluded, entitled "Students Proud of U.S. Loyalty Oath," be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Manchester Union Leader, Mar. 9, 1960]

STUDENTS PROUD OF U.S. LOYALTY

To the EDITORS:

One of the most impressive features of the trustees' meeting of the National Society of the Sons of the American Revolution in Washington was the presentation concerning the loyalty oath made by two university students at the noonday luncheon. These men represent the fighting National Student Committee for the Loyalty Oath. They are contacting students throughout the country, and report an overwhelming percentage are in favor of retaining the oath.

The society strongly supports retention of the loyalty oath (Resolution No. 19 at Pittsburgh Congress). Its repeal is now before Congress. The more students who express themselves the stronger is the opposition to the repeal.

I strongly urge college or university students in this State to contact their Senators and Congressmen to urge them to vote against repeal of the oath.

The following resolution was adopted by the board of trustees of the National Society of the Sons of the American Revolution, February 13, 1960, at Washington, D.C.:

"Whereas the National Society of the Sons of the American Revolution at its 69th annual congress in Pittsburgh, Pa., in May 1959 adopted Resolution No. 19, which approves the taking of the oath of allegiance and the loyalty oath by an applicant for direct financial assistance from the U.S. Government as a condition to receiving assistance; and

"Whereas there has been formed a bipartisan National Student Committee for the Loyalty Oath, which is composed of students at various colleges and universities across the Nation who are proud to declare their loyalty and allegiance to the United States, and whose purpose is to coordinate all student activities defending the loyalty oath and affidavit clause in the National Defense Education Act and to bring such activities to the attention of Members of Congress and the American public: Now, therefore, be it

"Resolved by the National Society of the Sons of the American Revolution, by unanimous vote of its board of trustees at its regular meeting in Washington, D.C., on February 13, 1960, That it approves the efforts and actions of the National Student Committee for the Loyalty Oath in opposing Senate bill 2929, which, if adopted, would repeal the nonsubversive affidavit requirement in the National Defense Education Act; and be it further

"Resolved, That copies of this resolution be transmitted to the presidents of each State society, to Members of the Congress of the United States, and to the National Student Committee for the Loyalty Oath."

BLAYLOCK ATHERTON,
President, New Hampshire Society, Sons of the American Revolution.

NASHUA.

Appleton, Wis., Goes on Record for Better Pay for Postal Employees

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1960

Mr. PROXMIRE. Mr. President, I ask unanimous consent that a resolution of the Common Council of the City of Appleton supporting a pay increase for

postal employees, in as concise and persuasive an exposition of the case for a pay increase as I have read, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas the increasing cost of living has wiped out any advantages which were gained in the last pay raise given to the postal employees; and

Whereas the last increase in pay, given to the postal employees over 2 years ago, contained the agreement that 2½ percent was only a temporary increase; and

Whereas the postal employees have been largely ignored by the trend toward higher profits and higher wages, therefore making it necessary for four out of five seeking part-time work just to finance their basic needs; and

Whereas we are aware of the great devotion to duty these postal employees exhibit, and we also recognize that they add to the pride of any community: Therefore be it

Resolved, That the city council of Appleton, Wis., go on record favoring a just and equitable pay increase for our postal employees, and that copies of this resolution be forwarded to the President of the United States, Postmaster General Summerfield, Senators Wiley and Proxmire, and Congressman Byrnes.

FINANCE COMMITTEE.
Alderman ERVIN BOGAN, *Chairman.*
Alderman ALVIN TEWS.
Alderman DOUGLAS OGILVIE.
Alderman ROBERT STUMPF.
Alderman KENNETH LOOS.

Persecution of Teenagers in Hungary

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 14, 1960

Mr. WIDNALL. Mr. Speaker, in the relative security of military might, in the luxury of unparalleled living conditions, in preoccupation with earning a living and otherwise utilizing their time, the good people of the United States may not be sufficiently aware of the crimes perpetrated—and being perpetrated—against people of Hungary whose only crime was to value freedom more than personal safety, and who, in 1956, fought unsuccessfully, and against staggering odds, for that freedom.

Some of our youth of today are not waiting until their tomorrow arrives to assume an active role in good citizenship and an active interest in achieving peace and freedom for mankind everywhere. In this connection, I have just received a petition drawn and circulated by students of Don Bosco High School, Ramsey, N.J., to which more than 1,500 signatures have been affixed protesting execution of teenagers in Hungary.

The petition stresses four points: First, that Congress pass a resolution condemning the persecution of teenagers in Hungary; second, that the United States urge Soviet leaders that as long as Hungarian minors remain in prison for the crime of wanting freedom there can be no effective agreement on any point; third, that a week be set aside and dedicated as Hungarian Youth Week; and, fourth, that during such week all teenagers offer prayers in memory of the young, heroic dead of Hungary and offer thanks for the freedom of America.

That secret trials and execution of Hungarian freedom fighters have taken place is not an open question but a known—and admitted—fact. The Hungarian Communist Government denies that executions have included teenagers, and the State Department's best intelligence is unable to prove these repeated denials to be erroneous, as are so many Communist protestations. But, adding to the Hungarian leaders' undeniable record of brutality the fact that they refuse to allow United Nations investigators to enter the country to find out for themselves, at the very least raises much doubt as to the truthfulness of the Communist denials. Sir Leslie Munro of New Zealand, special representative of the U.N. for Hungary, himself drew that much of a conclusion in a press conference on April 8 in Geneva. He has been trying to gain entry into Hungary in order to investigate the repeated reports coming from behind the Iron Curtain that teenage freedom fighters—who were little more than children when imprisoned as a result of the 1956 revolution—are executed upon reaching the age of 18. Even Sir Leslie could not categorically confirm such execution of teenagers. But in discussing the whole subject of reprisals in Hungary, giving names of adults found guilty and executed, he reasoned that if the Hungarian Communists had nothing to hide there was no reason to keep him out of the country.

It is easy to understand the horror and repulsion generated by reports that teenagers are being placed before firing squads. Confirmed or unconfirmed, this does not detract one whit from the wanton killing of adult freedom fighters. One human life is as precious as another. The Communist crime is no less a crime when carried out against adults.

Mr. Speaker, I commend the students of Don Bosco High School, and the school's Americana Discussion Forum which has spearheaded this drive for moral action, for their concern for the enslaved people of Hungary and for their efforts to advance the cause of universal freedom. I offer for inclusion in the RECORD the texts of both the letter I received from Peter Schmid, president of the Americana Discussion Forum, and the petition that was signed by more than 1,500.

AMERICANA FORUM,
DON BOSCO HIGH SCHOOL,
Ramsey, N.J., March 29, 1960.

HON. WILLIAM B. WIDNALL,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN WIDNALL: On behalf of the students of Don Bosco High School, and with full approbation of the faculty, I am sending under separate cover, signed petitions which we sincerely hope will bring about some action against the current brutality in Hungary, where youngsters, upon reaching their 18th birthday are put up against the firing squads for having participated in the fight for freedom.

We strongly feel that action of this type should be taken immediately or else the entire gamut of talks, conferences, mouthings of peaceful coexistence will always be but useless and worthless political tactics of evasion in the cause of expediency and not truth.

We likewise feel that America should take the lead, and take it courageously, in expressing some righteous indignation in the true cause of freedom, based on justice, and the belief in the intrinsic integrity of man.

We are further convinced that Congress will see the need for definitive moral action in this regard, and that you will place the action indicated in our petition on your agenda for immediate disposal.

Yours very truly.

PETER SCHMID,
President, Americana Discussion Forum, Don Bosco High School.

We, the undersigned, respectfully request that the Congress of the United States pass a resolution condemning the persecution of teenagers in Hungary. Further, we urge that the Russian leaders be given to understand from the floors of both Houses of Congress that there can be no effective attempt at agreement on any point so long as Hungarian minors remain in prison for the crime of wanting freedom. We request that one week be set aside and dedicated as Hungarian Youth Week. During this week, all Americans, especially teenagers, will offer prayers in memory of the young, heroic dead of Hungary, and will offer thanks for the freedom of America which we so cherish.

(Signatures omitted).

Rural Exodus—More Farmers Give Up, Move to Jobs in Cities As Their Incomes Fall—Auctions Rise 50 Percent in Idabel—Iowa Farm Town Slumps; Tight Credit Is a Factor—"It's Too Big a Gamble"

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. COOLEY. Mr. Speaker, under a front-page headline which I have placed above these remarks, the Wall Street Journal in its edition of Tuesday, April 12, sets forth, in calm and dispassionate reporting, the penury, poverty, and hopelessness which now embrace a large part of our agriculture at a time when other areas of our economy are enjoying unprecedented prosperity.

Under leave to extend my remarks I am placing this article in the Appendix of the RECORD. I hope that this report on the tragic conditions on our farms may serve to dispel differences among us in this body and to suspend all political consideration, so that in this session of the Congress we may enact legislation to restore stability to agriculture and to enable the farm families of America to share equitably in the rewards of our free enterprise system.

The article follows:

RURAL EXODUS—MORE FARMERS GIVE UP, MOVE TO JOBS IN CITIES AS THEIR INCOMES FALL—AUCTIONS RISE 50 PERCENT IN IDABEL; IOWA FARM TOWN SLUMPS; TIGHT CREDIT IS A FACTOR—"IT'S TOO BIG A GAMBLE"

(By John F. Lawrence)

WEBSTER CITY, IOWA.—In a scene reminiscent of the dust bowl days of the thirties, Willard Whiteaker, a 47-year-old tenant farmer, packs his wife, six children, and all their belongings in the family car and their farm truck and heads for Eugene, Oreg.

This lean, ruddy-faced farmer has lined up a job there as an apprentice carpenter at $90 a week. Last year, he averaged less than $30 a week working a 320-acre farm here in central Iowa. "I couldn't see much hope of my income going up this year," he says.

The Whiteaker family is part of a vast flight from the farm that stems not from drought and dust but to a large extent from producing too much corn, oats, pork, and other farm products.

Before Mr. Whiteaker departed for Oregon he relaxed and analyzed the problem.

"It seems everything we buy goes up and everything we sell goes down. When I started farming in 1948, I bought a tractor for $2,000. Hogs brought 20 cents a pound and corn was $1.25 a bushel. Now I'd have to pay $3,500 for the tractor but corn's down to $1 and I only got 12 cents for the hogs I sold last winter."

NUMBER OF AUCTIONS RISES

The sharp rise in the number of auctions held last winter indicates the migration from the farm was one of the heaviest in recent years. Farms usually change hands in the winter for occupancy just prior to the start of spring planting. When a farmer decides to leave the farm, an auction is generally held to dispose of machinery, tools, and livestock. Two out of three auctioneers, local farm organizations, and rural newspapers in 15 States surveyed by the Wall Street Journal, said the number of sales were higher during the past winter than a year earlier. The average increase was 50 percent, but some auctioneers reported holding twice as many sales as in the winter of 1958–59.

Last winter's exodus marks an acceleration of a decline in farm population that has been going on for a quarter of a century. The Nation's farm population, at last count on April 1, 1959, was 21.2 million, down from 32.4 million in 1933. The decline has averaged 430,000 annually over the past decade.

This drop in the number of farmers shrinks the rural market for refrigerators, washers, clothing, and the thousands of other consumer products these people buy. As the number of farms put on the market climbs, it tends to weaken rural real estate prices which, until last winter, had been going up since World War II. Paradoxically, crop output tends to rise as the number of farmers declines, providing new problems for Federal farm glut cutters. Most of the farms sold are joined with other units run by better farmers who succeed in coaxing more out of the land.

Here in Webster City's Hamilton County, there are slightly more than 2,000 farms now, 70 fewer than in 1953. Yet production of corn, the biggest crop, topped 10 million bushels last year, 1 million more than in 1953. Yield per acre was 74 bushels last year, up from 57 bushels 6 years earlier.

IMPACT OF LIVESTOCK DECLINE

The biggest exodus has taken place in the Corn Belt, a region that takes in Ohio, Indiana, Illinois, Iowa, Missouri, and parts of surrounding States. This heavy hog raising and cattle fattening country bore the brunt of last year's skid in livestock prices. This decline dragged down 1959 net income per farm in Iowa to $3,357, 29 percent below 1958. Farm income nationally was off 16 percent.

"I've had 50 auctions this winter compared with 33 last season," reports Melvin Wehrheim, who runs the Wehrheim Auction Service in Webster City. "I started in business 25 years ago and this is the biggest season I've had," he says. "As usual," he says, "most sales were for elderly farmers who were retiring. But this winter 23 farmers were quitting to get other jobs, compared with 15 who left for that reason a year ago," he explains.

"We've had close to 100 sales in DeKalb County this winter, twice as many as a year ago," says E. E. Golden, an agent for the Department of Agriculture in DeKalb, in northern Illinois. One DeKalb auctioneer was booked solidly 6 days a week in January and February. When more farmers decided to sell out, he had to book two sales on some days, morning and afternoon affairs.

Auctioneer Hugh Campbell, of Chillicothe, in western Missouri, has handled 56 sales since the first of the year, about 10 percent more than a year ago and the most since shortly after World War II. The area's big crops are corn, hogs, and wheat.

The trend also is apparent in farm areas outside the Corn Belt. "I've never seen so many sales for fellows who shouldn't be quitting," says Alvin Kohner, Winona, Minn., auctioneer. "In one stretch this winter 9 out of 10 sales were for farmers under 40." Winona is in a heavy dairy cattle and poultry region.

MORE AUCTION ADS

In Texas, another key farm State, Joe Pinson, editor of the Clarksville Times, reports, "We've been running about 20 percent more farm auction ads than we did last year. It's the most we've had since the 1930's. Just across the Red River at Idabel, Okla., the McCurtain Gazette reports about a 50 percent jump in the number of auctions. The papers serve a major cotton producing area.

The drop in income that prompted Mr. Whiteaker to abandon farming is the major reason farmers are selling out. Many farmers are experiencing a similar income squeeze.

Nationally, farmer marketings in 1959 reached 127 percent of the 1947–49 average. But prices farmers received for their products were only 82 percent of the 1947–49 base period. Reflecting higher prices for tractors, increased labor rates, and an upward trend in many other expenses, farm costs last year jumped to 145 percent of the 1947–49 level.

The result was a drop in 1959 farmers' profits, or what Government economists call net farm income, to $11 billion, 28 percent less than the average for 1947–49. Actually, net farm income trended steadily downward throughout 1959, reaching an annual rate of $10.9 billion in the fourth quarter. That was 17 percent below the rate in the final 3 months of 1958. Farm income reached a record high of $17.3 billion in 1947.

With heavier production failing to boost profits, some farmers figure it's useless to continue trying.

"When prices go down, you have to increase production some way; so you buy more cattle to fatten and work longer hours," relates Maurice Hemmen, who just sold his farm to become a salesman for a steel farm buildings manufacturer in Webster City. "With prices still going down this year I just decided to quit beating my head against a wall and get out."

TOO BIG A GAMBLE

The big investment also adds to farming risks. "It's become too big a gamble," contends auburn-haired Alice Burkhart, wife of another farmer near Webster City. "You have $5,000 tied up in fertilizer before you even begin to plant. Then you're at the mercy of the weather." Her husband, R. E. "Curly" Burkhart, climbs from a grain bin, reeking of moldy corn, and says: "The winter was so damp the corn never dried." He lost about 2,500 bushels, 10 percent of his crop. He's packing up to move to Jewell, Iowa, 10 miles south, and run a bowling alley.

With incomes so low, jobs in the city naturally look more attractive. "Incomes were poor around here last year and many of the younger farmers realize they'd be better off in factory jobs," states Bernard Hart of Frankfort, Ind., secretary of the National Auctioneers Association. "Some of the older farmers are quitting, figuring they may as well go on social security a little early," he adds.

"Farming was getting to be a rough life," relates Duane Burtnett, 35-year-old Iowa farmer who moved to Webster City this winter to drive an oil company service truck. "I made only $2,400 in 1958 on the farm and $1,400 less than that last year. I'm a farm boy, never lived in town until now, but my outlook here certainly is better than on the farm." A father of four, he'd been forced by low returns on the farm to hold a part-time city job the last few years.

"I'm going to work for a national credit rating association at a starting salary that's a good bit more than the most I made in any year farming," says Dale Mott on his 160-acre rented farm just west of Williams, Iowa. He expects his income to be steadier from the city job, too. Last year the drop in hog prices hurt him on the farm. He bought 200 head, purchased the feed for them and wound up losing $8 a head when he sold them in the fall. "That pretty well wiped out last year's profit," he says.

TIGHTER CREDIT CURBS

Tighter credit restrictions at the banks this year are another reason for the increase in the number of farmers taking flight.

"We have about 10 percent less to lend this year compared with a year ago; the big pinch will be in the next 30 to 60 days when demand for loans normally is at a peak," reports Lorenz A. Horn, president of the First State Bank in Webster City. "Our loans are up to 62 percent of deposits now instead of the usual 50 percent because farmers haven't paid up last year's notes."

"The banks have been riding along with some of these fellows for several years, hoping income would turn up; now they're trying to shed some of them," says Robert Lehman, who heads the Production Credit Association here. The group makes short-term loans with money obtained from the Federal Intermediate Credit Bank, a quasi-Government agency. The association currently is lending about $450,000 a month, 50 percent more than a year ago. "Farmers turned away at the bank are coming across the street to us," Mr. Lehman explains.

Few farmers have been forced to sell out by anxious creditors, but many have sold voluntarily because they realized they were rapidly becoming overextended. The association has quietly advised a few of its farmer members to sell, confides Mr. Lehman.

"A lot of young farmers around here who bought expensive equipment on time the last couple of years figured they could sell out this year, pay off their debt and still have a few dollars left over," says Mr. Campbell, of Chillicothe, Mo. "They were afraid if they stayed another year they might come out of the auction still in debt."

GROWING MECHANIZATION

The decline in farm population has been spurred by growing mechanization, which reduces the need for manpower on the farm. Since the war, farmers have mechanized at almost breakneck speed. Small farms have been combined so bigger machines could be worked to capacity. Many farmers with small acreage sold out to more prosperous neighbors.

With so many farmers leaving for town, there's more land available for sale or lease this spring and demand for it is weaker.

Very little of the land left behind will stand idle, auctioneers and real-estate men say. This is because there still is a good demand for land from farmers who want to increase the size of their operations in the hope this will improve efficiency. Land that isn't sold by the time planting begins probably will be rented at the last minute to neighboring farmers, they explain.

But many of the small communities that grew up before the automobile whittled the distance between outlying farms and the county seat face a bleaker outlook. In a dimly lighted drug and variety store in the center of Williams, Iowa, a tiny community 9 miles east of Webster City, R. O. Bauman stands under an old wooden sign that reads "Poultry and livestock medicines" and complains: "A lot of people that have been dealing here are gone and those who replace them just won't have the loyalty. They'll go off to bigger towns." He made only $1,200 on his business last year. When he started out 15 years ago he made about $4,000 a year. Roughly 70 percent of his business is with farmers.

Most farmers who've come to town this winter have had little trouble finding new jobs. But, if the trend continues, their search may become more difficult. "In the past 3 months 25 farmers have been in here looking for full-time city jobs, 40 percent more than last year," reports Val Ewing, manager of the Iowa State Employment Service office in Webster City. "Many of these farmers have no other skill and we've had to find them jobs where they'll be trained. We've placed them all so far."

What sort of jobs are they getting? Two are selling insurance, two others are selling feed for livestock, another is working as a mechanic in a farm equipment dealership, and several are taking janitorial jobs in a local frozen foods factory, says Mr. Ewing.

Not all areas are experiencing the upswing in farm sales. Especially in areas where last year's farm profits were equal to or more than 1958, the auction season was about equal to a year ago. In California, for example, the number of auctions increased in dairy and poultry farm areas where incomes were poor, but held about even with the previous year in regions concentrating on orchard crops, where returns were more favorable.

In Georgia, auctioneers report fewer sales than in the previous season. Both plenty of farmers are leaving for city jobs, they say. "Farmers are putting the land into the soil bank instead of selling out," says George E. Collins, a Decatur, Ga., auctioneer.

Where Blame Lies

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial appearing in the February 15, 1960, edition of the Portland (Oreg.) Orgeonian.

Mr. Speaker, blame placing seems to be the favorite sport of politicians when they start discussing the problems facing agriculture.

It would be so much better for the American farmer if we could forget the partisan view long enough to tackle the real job of getting sound, economic farm legislation out of this Congress.

Unfortunately, day after day we hear the same old, worn-out theme about Secretary Benson's administration of farm laws or about the virtues of discredited, unimaginative programs which would get us in even more trouble than we are already in.

So it was with interest that I read this editorial "Where Blame Lies," that reflects my own feelings.

The editorial follows:

[From the Portland (Oreg.) Oregonian, Feb. 11, 1960]

WHERE BLAME LIES

Presidential Candidate HUBERT HUMPHREY says, "There's not a thing wrong with agriculture that another election can't cure."

This ought to rate near the top among silly campaign statements. Senator HUMPHREY is a veteran Member of Congress. He might have said, "There's not a thing wrong with agriculture that Congress couldn't cure."

The Democratic campaign technique of blaming the Republican administration for outdated farm policies adopted by Democratic Congresses, while refusing to give President Eisenhower and Secretary of Agriculture Benson the key legislation they have sought, is beginning to wear on the public nerves.

So is the "me too" denunciation of Secretary Benson by Republican Members of Congress from the Farm Belt States who have helped sabotage the Benson programs.

President Eisenhower gave Congress all the latitude it could ask in his farm message Tuesday. He outlined the failures of the present program with great simplicity and his proposals for reform were clear. But he did not tie the hands of Congress. He said he would sign any alternative legislation which provided a constructive solution of costly surpluses.

This is a challenge which Congress will find trouble in attempting to convert to political ammunition. The President was right on the beam when he said the American people have every right to expect Congress to act promptly and effectively to avert the very "real danger this entire program will collapse under the pressure of public indignation."

Alfred Kohlberg

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1960

Mr. BRIDGES. Mr. President, with the recent untimely death of Alfred Kohlberg, the Nation has suffered the loss of one of her most diligent fighters against the Communist conspiracy.

His battle against the menace of international communism commenced during the latter part of his lifetime, but this did not deter in any way his vigor and singleness of purpose in trying to awaken the American people to this danger.

There have recently appeared two outstanding columns about Mr. Kohlberg which I feel are worthy of the attention of every Member of this body. The first is an editorial entitled "He Did Not Pass by on the Other Side," written by publisher William Loeb of the Manchester (N.H.) Union Leader, and the second is a column, "The China Lobby," written by George E. Sokolsky.

Mr. President, I ask unanimous consent that these excellent commentaries about Mr. Kohlberg's life be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Manchester Union Leader, April 13, 1960]

ALFRED KOHLBERG: HE DID NOT PASS BY ON THE OTHER SIDE

(By William Loeb)

Alfred Kohlberg, who died late last week, is worthy of front page space because he was an example of an American businessman who did not think communism was not his business. Kohlberg was a successful businessman who, until he was approximately 60 years old, had never realized the extent of the Communist conspiracy in this Nation and in the world. Then, to his amazement, when he stumbled on a small segment of the Communist conspiracy, he was so outraged that he decided to do something about the overall menace.

For the remaining approximately 15 years of his life Kohlberg devoted most of his time and income to attempting to awaken the rest of the United States, and especially the business community, to the fact that the Communists are very close to a take-over of complete power in this country.

Much to his surprise, Kohlberg found himself battling principally wealthy men, business leaders and their lawyers. Kohlberg was amazed and puzzled to the end of his days by the fact that publishers of great newspapers, the owners of great magazines and the presidents of huge corporations opposed almost to a man what he was trying to do.

To Kohlberg it was incomprehensible, as it is to any logical-minded individual, how the chief beneficiaries of the free enterprise system could be so stupid where the question of communism is involved.

Of course Kohlberg soon discovered the answer. The answer is a combination of complacency, conceit, and complete ignorance.

Kohlberg could do nothing about the two former traits, but he did do a great deal in his lifetime in seeking to remove the ignorance which so many American leaders displayed toward communism.

Kohlberg's awakening could well serve as a pattern for other American business leaders. Kohlberg found in the beginning when he came up against the Communist conspiracy in this country that he had very little knowledge of the background of that conspiracy. By patient study he made himself an expert on the ins and outs of the Communist line and how it comes in inherent and deadly conflict with everything for which this Nation stands.

The great difficulty that Kohlberg discovered was that most business and professional leaders are simply too busy in their own careers to be bothered with spending any time even to consider for a moment that they, themselves, are in danger from the Communist conspiracy.

It was against this preoccupation with the immediate, material things and with the neglect of the safety of our Nation that Alfred Kohlberg fought so dedicatedly and so devotedly during the last years of his life.

Even after a severe heart attack a number of years ago he did not slacken in his efforts to awaken this great and dear land of ours before it is too late.

Alfred Kohlberg did far more than his share to save this Nation. It can only be hoped that his example will lead others to follow in his train. Once awakened from their deadly sleep, it will be easy for the United States to save itself, but there are needed many Alfred Kohlbergs because this Nation's slumber is deep.

No, Alfred Kohlberg did not pass by on the other side—on the side of indifference. He left no opportunity go by to save his beloved country from the Communist conspiracy.

THESE DAYS—THE CHINA LOBBY

(By George E. Sokolsky)

Alfred Kohlberg was an American merchant who traded with Nationalist China. His specialty was textiles. His business grew to fair dimensions and he joined various organizations which concerned themselves with Far Eastern affairs. Among others he joined the Institute of Pacific Relations and found therein something which contradicted his experience. He was not particularly interested in politics and his discoveries surprised him, for he had heretofore respected great names.

He thereupon set out to investigate the Institute of Pacific Relations not knowing especially what he would find. This one event set off a whole series of congressional investigations including those of the McCarran committee and the McCarthy committee.

Kohlberg had stumbled on a truth, which rarely happens to any of us. He found that many public organizations of the American people, private organizations with high-sounding names and headed by distinguished men, were infiltrated by Communists, on the administrative level, who formed each organization's policies and determined its goals. Kohlberg took up the fight and never stopped until he died last week.

Naturally Kohlberg was called many ugly names. These he accepted as labels of distinction, but the one that pleased him most was "China Lobby." He proclaimed himself to be the "China Lobby" and challenged all and sundry to investigate him. I do not know how many thousands of dollars of his own money Kohlberg spent advertising himself as the "China Lobby" and demanding an investigation. A man of means and integrity, he, of course, would not have accepted a cent from Chiang Kai-shek or Mao Tze-tung or anyone else to support his opinions. He was a man of strong convictions with enough cash on hand to back them up.

A merchant, not a scholar, he was without any interest in the sectarian attitudes of the various anti-Communists. He was really not so much a doctrinaire anti-Communist as he was pro-American. He did not split the fine hairs of definitions; it was sufficient for him that he had witnessed what the Communists did to China and he did not want them to do the same to the United States. For Kohlberg, it was sufficient that he regarded the Communists as indecent and profane.

A Jew, he organized the American Jewish League Against Communism. He insisted that he could not understand how a Jew could possibly be a Communist or sympathetic to communism. He expected the entire Jewish people to rally to his organization. They did not.

This disappointed Kohlberg but until the moment he died, he continued to finance various organizations and groups in the battle against Soviet Russia. He must have spent a fortune of money; he gave of his health and even after he had had several coronary failures, he kept his work going. He retired from his business but he never retired from the cause which he had made his. He was a little David fighting a world of Goliaths, and he fought well.

Where does the moral strength come from which transforms a merchant into a battling leader of men in a cause to which many devote their lives? Kohlberg reminded one of the prophets of old, the men who feared not the mighty, who rejected power, who never considered themselves. No great orator, no powerful writer, nor organizer of movements, a man with a delightful sense of humor, whose wit led him into many arid fields, Kohlberg, with a profound sense of justice, developed an enormous and significant following of men and women, some publicly important in their own right, who turned to him for counsel and advice.

And it is one of those peculiarities of life that many who hated him as a fanatic who destroyed their shortcuts to the truth, in his last years recognized the intuitive patriotism of Kohlberg. He knew no divided loyalties. The United States was his country; he rejected affinity for any other. If he labored for Nationalist China, it was because he believed that was best for the United States.

And now Alfred Kohlberg is dead. He will no more trouble bureaucrats with his investigations or his wit. He, who burst the blubber of many puffed up officials, is no more to plague them. But what Kohlberg started will never die.

Baring Telegraphs Question on Advisability of Narrows Bridge Bond Flotation While Charges Remain Unrefuted

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD a telegram I sent on April 16, 1960, to Dillon, Read & Co., Inc., attention, Mr. Frederic H. Brandi, president; White, Weld & Co., attention, Mr. Philip M. Neagle, partner; W. H. Morton & Co., Inc., attention, Mr. William H. Morton, president; and Allen & Co., attention, Mr. Charles Allen, Jr., partner. All addresses are located in New York City.

This telegram refers to the well-documented charge, among others, that the Narrows Bridge is improperly placed and would provide the key to a planned waste of $453 million in public roadbuilding funds.

The various charges have been made known to the superintendent of public works of the State of New York; to various members, I am informed, of the Legislature of the State of New York; and to the Governor of the State of New York.

None of the charges has been refuted.

On the contrary, the New York Times, April 16, 1960, reports that the Governor of the State of New York signed on April 15, 1960, a bridge bond bill to lift the 4-percent interest limit on securities sold to speed work on Narrows span.

In light of the increasing knowledge of the highway program scandal now spreading across the United States and as further revealed by the editorial and lead article "New Roads and Urban Chaos" in the April 14, 1960, Reporter magazine, it appears that attention to the charges discussed in this telegram and an investigation of the facts by members of the underwriting investment and banking professions and by the investing and general public at large can only be to their personal, the public, and the national interest.

The first of the four identical telegrams follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., April 16, 1960.

DILLON, READ & CO., INC.,
New York, N.Y.

Attention: Mr. Frederic H. Brandi, president.

As I have been informed that you are actively seeking to implement a financial program of the Triborough Bridge and Tunnel Authority and are seeking to arrange the sale of its bonds for its proposed Narrows Bridge, and as I understand charges of misstatement of engineering fact and exaggeration of representation of Narrows vehicular traffic flow have been made in connection with the proposed Narrows Bridge and its proposed associated Seventh Avenue Brooklyn approach, and against the desirability of the Narrows Bridge arterial plan itself, and as I understand these charges have not been answered, and as the Seventh Avenue approach if constructed is to be financed in part with Interstate Highway program Federal funds, and as false information concerning the status of demolition activity on the Seventh Avenue approach was presented to me by the superintendent of public works of the State of New York, and as this false information was baselessly alleged to me to be accurate by the city construction coordinator who was then and now is chairman of the Triborough Bridge and Tunnel Authority, and as a special committee of the Congress is now in existence to examine the Interstate Highway program, do you believe your best action in connection with the Narrows Bridge would be to withhold further support until said charges have been answered or refuted?

WALTER S. BARING,
Congressman for Nevada.

Wisconsin Youth Conclave, April 21–23, 1960

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1960

Mr. WILEY. Mr. President, we recall that the National Youth Conference—recently adjourned in Washington—made a variety of recommendations for improving the outlook for the youth of America.

The big challenge now is to translate the program from the conference rooms into the daily lives of people in local communities.

As an illustration of constructive effort at the State level, Wisconsin is holding its seventh State youth conference, April 21 through the 23d at Stevens Point. Sponsored by the Wisconsin Youth Committee, the theme of the conference is to increase "Youth Participation in Community Affairs."

Recently the La Crosse Tribune, an outstanding Wisconsin newspaper, published an article reviewing the constructive program of the upcoming meeting in our Badger State.

The article reflects a realistic, creative effort to help our young folks resolve the many problems confronting them in this complex age. I request unanimous consent to have the article printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the La Crosse Tribune, Apr. 8, 1960]

STATE YOUTH CONCLAVE TO BE HELD APRIL 21-23

"The Growing Concept: Youth Participation in Community Affairs" is the theme of the seventh State Youth Conference, which will be held in Stevens Point April 21-23 under the sponsorship of the Wisconsin Youth Committee for Community Youth Participation.

The statewide youth conference is held every 2 years, alternating with the Governor's Conference on Children and Youth.

Its purpose is to encourage interest of youths in participating in community planning and assuming active roles in civic affairs.

In addition to a program of speakers, including Gov. Gaylord Nelson, there will be forums on the challenge of the space age, the psychology of prejudice, and investing in values for the future.

There will be workshops on developing teenage codes, examining the teenage dilemma, student councils, understanding mental health, service projects, vocational planning, social activities, developing wide interest in youth participation, citizens of a democracy, understanding delinquency.

Youth councils, community recreation, spiritual growth, understanding the value of money, understanding the space age, student exchanges, school guidance programs, exploring youth-adult relationships.

Developing understanding of rural-urban relationships; and studying the field of mass communication, such as "rigged" television, payola, false advertising and their effect on the community.

The Wisconsin Youth Committee is composed of 40 youths elected from 10 districts in the State.

This area is in District 7, consisting of Pepin, Buffalo, Trempealeau, Jackson, Clark, Monroe, La Crosse and Vernon counties.

A feature of this year's State conference will be a report on the 1960 White House Conference on Children and Youth held in Washington, D.C., March 29-April 2.

Economic Growth a Legitimate Issue

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 18, 1960

Mr. PROXMIRE. Mr. President, this morning's New York Times sets forth clearly and concisely why the economic growth of this country is an essential issue in the coming campaign and that the discussion of the issue does not, as the New York Times points out, represent a diabolical plot by those primarily concerned with securing greater Government intervention in our economic life.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECONOMIC GROWTH AS AN ISSUE

The earlier indications that the issue of our Nation's future economic growth would become one of the major topics of this year's Presidential campaign are rapidly being borne out. Only this past week Vice President Nixon, Adlai Stevenson, and Senator Kennedy have all discussed the question. All three made clear they believe substantial growth in our output is a necessity, thus rejecting the strange view recently advanced that an emphasis on this issue is in some way a diabolical plot by those primarily concerned with securing greater Government intervention in our economic life. How best to secure this needed growth will undoubtedly be a topic of sharp debate in the months ahead, but on the question of need there is now agreement.

Why we need rapid economic growth, perhaps as much as 5 percent annually, was well spelled out some time ago in the Rockefeller Brothers Fund report on this subject. Our population is growing rapidly. We need increased output to clothe, feed, house, and otherwise provide for the additional tens of millions who will join our Nation. But that is not all, for even now there are millions of Americans whose low standard of living is a reproach to the great majority who enjoy the blessings of an "affluent society." We need tremendous investments in additional social capital, in schools, hospitals, libraries, roads, and the like.

But these domestic needs are only part of the reason we will require rapidly rising output. Barring some real settlements of the major causes of international tension, our defense costs are likely to rise because of the growing complexity of modern weapons. Space exploration has added a new domain demanding heavy expenditures. Both because of moral considerations and because of the political requirements for survival, we are obligated to provide—through private and Government investment both—great sums of capital for the underdeveloped countries whose burning desire for industrialization is one of the great dynamic forces of the contemporary world.

Finally, but not least important, we need more rapid economic growth because of the challenge posed by the continued swift rise of Soviet economic capabilities. It was not a good omen that last week's news brought word of an 11 percent gain in Soviet industrial output during this year's first quarter, while our own industrial production declined last month.

Salisbury, the New York Times, and Birmingham—An example of Irresponsible Journalism

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 18, 1960

Mr. HUDDLESTON. Mr. Speaker, on Wednesday, April 12, there appeared in the New York Times an example of the most severe type of irresponsible journalism. Harrison E. Salisbury wrote what purported to be an accurate account of the race situation in Birmingham, Ala., my district. The article, which was entitled "Fear and Hatred Grip Birmingham," was, no doubt, widely read throughout the country and many people who were unaware of the true facts received an entirely erroneous impression of the conditions in Birmingham. In an effort to correct some of the damage which has been done, and all acts of irresponsible journalism do damage, I am inserting herewith in the CONGRESSIONAL RECORD an editorial written by Mr. E. L. Holland, Jr., editorial page editor of the Birmingham News. This editorial appeared in the Birmingham News on April 13, 1960. At that time, Mr. Holland was at Princeton University attending a conference on industrialization in the South.

[From the Birmingham (Ala.) News, Apr. 13, 1960]

BIRMINGHAM?—A CITY GRIPPED BY FEAR, HATRED

(By E. L. Holland, Jr.)

PRINCETON, N.J.—You go north to Princeton, storied, ivied manse of the intellect, a community, you are told, largely southern in some ancestry. But what hits you in the face is the New York Times of Tuesday, April 12, the day of arrival.

It is a gory mess, journalism. You have come north from the South, riding high and glorious in a winged silver bird aboard which they shove champagne at you before you attack filet mignon. The sky is clear; the clouds are slight; the sun shines, all's right with the world.

You pay off this fellow and that on the trip from Newark to Princeton (the railway porter will tote your bags at 35 cents per), and you must take two trains to make the 30-odd miles. There, at the place where Scott Fitzgerald whiled away his time before becoming the novelist Hemingway pouted at most, you find all the brown ivy intact, the kids walking around in snowwhite tennis shoes and looking as if knowledge was whipped cream.

You passed acres of dingy two-story houses, factories, overhead wires of one electrical sort or another; you have seen grime and wondered why somebody didn't do something about it.

But this impression disappears on the Princeton campus where all is orderly and neat and clean and windswept.

Still, you run into that New York Times story on page 1 of the historic journal in which Harrison E. Salisbury reports, the headline says, that "Fear and Hatred Grip Birmingham."

You have just come from Birmingham and you do not know what Salisbury has in mind. You read his story and you still do not know.

Salisbury is a famous newsman, an ex-Moscow reporter for the Times. You have a feeling that he hasn't quite got home.

He notes that whites and blacks walk the same Birmingham streets, but that those streets, the water supply, and the sewer system are about all that the two races share.

You read that every channel of communication, every bit of middle ground has been fragmented, and that this is reinforced "by the whip, the razor, the gun, the bomb, the torch, the club, the knife, the mob, the police and many branches of the State's apparatus."

Telephones are tapped, Salisbury reports, and whites and blacks don't talk freely. Watchmen, Salisbury says, guard Negro establishments. Federally handled mail is

stymied and sometimes it does not reach its destination. The eavesdropper, the informer, the spy have become a fact of life.

Salisbury says some Negroes have nicknamed Birmingham the "Johannesburg of America."

The business goes on. Businessmen, says Salisbury, told him to watch how he reported. "Lives are at stake."

He fetches back to recall Roy Cohen and Florian Slappey stories, this to snipe and wickedly. He takes note of the Birmingham-Southern College situation, regarding students and the Negro problem, and he gives young student Reeves a martyr's halo. He cites a pair of Negro preachers picked up and the image yankeeland gets is one of utter horror.

This report from Jersey need go no further at this point. What this writer wants to ask of Salisbury is: Whom did you talk with? What Negroes and whites gave you this garish picture of a peaceable southern community?

The reason for this prompt response, be it noted, is that on Princeton arrival we were told that among faculty members, this page 1 New York Times story was a hot topic of gossip.

This comes most inappropriately, when a conference of southerners and others is beginning at this fine old school, discussing industrialization in the South.

It comes but a handful of days after the elected officials of Alabama raised questions about distorted charges in an advertisement in the New York Times—an ad sponsored by those who would defend the Reverend Martin Luther King against an accusation that he had committed perjury in connection with income tax returns. Salisbury may have made this trip. He may have talked with various Birmingham people. We say this though, and flatly:

Other northern newsmen have come South in this racial hegira. Virtually all have checked in with local newsmen to discover the sources of information.

These, invariably, have been offered. We have not seen Salisbury. If he was in Birmingham, he worked quite secretly.

Certainly he knew what he was out to get. He got it—or had it before he began writing.

Here we stand, at Princeton, ready with others to talk southern industrialization.

But on page 1 of Tuesday's New York Times is a thrust which pictures a decent southern community, perplexed as are many with racial problems, as a city shot through with fear.

That headline says worlds: "Fear and Hatred Grip Birmingham."

This is the big lie. Perhaps the biggest of all. Salisbury has done his damage. Radio Moscow please copy. And, brothers and sisters, have no doubt they will.

Oshkosh Northwestern Hits Congress Extravagance With Self

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 18, 1960

Mr. PROXMIRE. Mr. President, the Oshkosh Northwestern has established an excellent and consistent reputation as a champion of thrift and fiscal prudence in government at all levels—local, State, and National.

Recently it spoke out vigorously against an extravagance that is both the most conspicuous and the least defensible by this Congress: The expenditure of huge sums on sumptious, luxurious quarters for Members of Congress itself.

I ask unanimous consent that this unusually persuasive editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAILFINS

An argument prevalent now, as always, in Washington and which cuts across party lines concerns whether America needs greater public or private spending. In the argument the word "tailfins" appears—auto tailfins being used as a symbol of the silly things Americans will buy when the Government doesn't spend all their money for them.

Those in favor of greater public spending are fond of stressing that the Government should sponsor or subsidize art, music, and the "finer things." Whether a Bach bureau or a new WPA theater project touring company would make more Americans happier than a new car with tailfins, does not even seem debatable. Communities that really want music or drama have it, and can have as much more as they are willing to pay for. What they aren't willing to pay for, many people contend, shouldn't come out of the taxpayers' pockets through payroll deductions.

But politicians are hardly in a position to ridicule or complain about tailfins, because we have a tailfin Government. Right now the United States is preparing plans for a new office building in New York with the cost set at $68 million—much more than larger privately built structures are costing. This added cost, it is presumed, results from lavish use of marble, bronze, and the other costly materials that go into Government structures—the bureaucratic equivalent of tailfins.

What is more, the debaters are riding to and fro between the Senate and the Senate Office Building in a miniature subway line on which they managed to spend $3 million, and on which they must spend $3 million more. It is true that the subway cars boast no fins but there is no evidence that a finless austerity has taken over the thinking of our legislators.

Statement by Congressman Edward A. Garmatz

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 18, 1960

Mr. BOYKIN. Mr. Speaker, I ask unanimous consent to revise and extend my own remarks and include in the RECORD a statement made at a Merchant Marine and Fisheries Committee hearing by one of the greatest Congressmen in this Nation. I have known and served with him for many long, wonderful years. I have traveled to shipbuilding plants and repair plants in many lands with my old friend, Congressman EDWARD A. GARMATZ, of Maryland.

Mr. Speaker, this man has brains and ability and an unlimited supply of energy and he is one of the greatest Americans that I have ever known, and I wish every one of his constituents could know, as I know, what he has done for his district, his State, and his Nation.

Mr. Speaker, I believe we will wipe out this 6 percent differential that the west coast has on shipbuilding. It should have been wiped out long, long ago, but now we have the Great Lakes and the east coast joining with us on the gulf coast, and I am sure we will put an end to this very unfair, unfavorable, and uncalled-for 6 percent differential which has been granted to the west coast for so long. There was a time, Mr. Speaker, when the west coast needed this differential and I joined with a great Congressman on the west coast in helping to give it to them. That was the great Congressman Dick Welch, of California, who has gone to his reward. I will guarantee you, if Dick Welch were living today, he would vote to abolish this 6 percent differential. I do not want any part of this great Nation to have an unfair and unjust advantage of any other part of the United States. It is just like two people doing business with a bank—one that had to pay interest at 6 percent and one that did not have to pay any interest at all. You could not compete with the man who had the advantage of the 6 percent that the west coast is getting.
